BRADBURY, WILKINSON & COMPANY, LIMITED.

Head Office and Works:
WEST BARNES LANE, NEW MALDEN, SURREY.

Designers, Engravers and Printers of
Bank Notes, Postage Stamps, Bonds, Share Warrants, Coupons, Letters of Credit, Cheques, Bills of Exchange, and all Monetary Documents.

Telegraphic Address: BRADBANK, NEW MALDEN
City Office: 10/12, Copthall Avenue, E.C.2.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East and of Africa, and in Oriental and African History, Religions and Customs.
For particulars apply to THE SECRETARY.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment, of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALI-IMLI PURE WOOL

Makers of the famous Lali-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Great-coat Cloths. All requirements in Wool at lowest prices consistent with quality.

Cawnpore Woollen Mills Co.,
CAWNPORE.

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.

The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

Cawnpore Cotton Mills Co.,
CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO.,
CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mills Co.,
DHARIWAL.

NOTES OF THE WEEK.

Egypt and the Sudan.

Anglo-Egyptian relations have absorbed the chief interest in Near and Middle Eastern affairs during the past week. The emphatic declaration of Lord Parmoor in the House of Lords on June 25 that the Government was not going to abandon the Sudan in any sense whatever was the official reply to Zaghloul Pasha's increasingly aggressive declarations of what he was going to do and was not going to do when he came to London to negotiate with the British Government. As long as it could, the latter has very carefully abstained from any statement on the pending negotiations, and the British public and Parliament have been urged not to prejudge the questions at issue before the representatives of the two countries could meet and exchange views. The Egyptian Prime Minister, however, immediately the subject of a conference was raised, proceeded to adopt an attitude which could be justified only if he had been coming to London as a conqueror to a defeated country for the purpose of dictating terms of surrender. This may not have been Zaghloul Pasha's intention, but it was certainly the impression conveyed at this end by his provocative speeches. Possibly he hoped to keep his own followers quiet, and trusted to Great Britain's ignoring what he said. If so, he overlooked the effect of his speeches on others, and in particular on the Sudan itself. Never would silence on any subject have been more golden than when the responsible heads of two countries arrange to discuss amicably points of issue between them.

The Fate of the Negotiations.

The bluntness of the British Government's statement regarding the Sudan has come as a shock to Egyptian opinion. At a meeting of the Chamber on Saturday Zaghloul Pasha expressed somewhat naïvely his disappointment that a Labour Government in Britain should endorse the policy of its predecessors, and went on to declare that "Egypt will not cede the Sudan as long as she lives," but would safeguard her rights against "the usurper" in every legitimate way. A further asseveration that Egypt would never "cede" the Sudan suggests that the British Government, in reply to Zaghloul Pasha's inquiries regarding the proposed negotiations, had informed him that Egypt was to be called upon to "cede" the Sudan. It would be interesting to know whether any such suggestion was officially made to Zaghloul Pasha; if it were not, his repeated use of the word "cede" would constitute grave misrepresentation deliberately calculated to inflame the minds of his hearers and to deceive public opinion in Egypt. His speech, however, carried the whole of the Assembly with him; he was accorded a unanimous vote of confidence, and when subsequently he handed to King Fuad the resignation of the whole Cabinet it was naturally and very properly refused. The question arises whether Zaghloul Pasha will now undertake the negotiations. The matter rests entirely with him, for it would be manifestly untrue, after the vote of confidence accorded to him, to urge that he is in any way hampered by the Assembly or by public opinion. We are convinced that it is in the interests of Egypt, as well as of Great Britain, that the negotiations should take place, and we trust that Zaghloul Pasha will decide to come to London. It would be useless, however, to attempt to disguise the fact that British public opinion—and, therefore, presumably official opinion—would be quite indifferent to the cancellation of the conference. The object of the negotiations is to modify —in Egypt's favour as far as possible—the *status quo* in regard to three subjects, and to draw up a fresh agreement regarding a fourth subject. If this is not done things remain as they are. Certainly, in the case of the Sudan, it is not in Egypt's power to effect any change except by agreement with Great Britain. Ordinary prudence, therefore, to say nothing of wise statesmanship, ought to have prompted an entirely different attitude towards the British invitation from that hitherto adopted by Zaghloul Pasha and the Assembly.

The Egyptian Case.

It has never been supposed in responsible quarters in Great Britain that Egypt would not be able to make out a case for her claim to the Sudan. What has been perfectly certain all along is that her case could not be properly put by mere assertion in the Assembly or on public platforms, nor indeed could the British side of the question be adequately investigated before it had been officially stated.

585507

Digitized by Google

As a result of the Egyptian tactics, what has happened is this : In response to the British request for "free discussion and friendly accommodation on both sides to conclude agreements" in regard to certain questions, including that of the Sudan, Egypt has declared that she is going to have the Sudan, and will not discuss it; after her Prime Minister has publicly repeated this statement some half a dozen times, the British Government has retorted by pointing out that it has not the least intention of abandoning the Sudan to Egypt. If on reflection Egypt and her Prime Minister are content with their method of handling an admittedly difficult question, there is nothing more to be said. If, on the other hand, they have any belief in the soundness and justice of their claim, they will recognise the strength of the British position and will see that their case is adequately put at a round-table conference. They can show that the reconquest of the Sudan was formally undertaken by Great Britain on Egypt's behalf, and that it was in the name of the Khedive of Egypt that Lord Kitchener required Major Marchand to withdraw from Fashoda. Then came the Anglo-Egyptian Convention of January 19, 1899, which laid it down that Great Britain, by right of conquest, was entitled "to share in the settlement and future working and development" of the Sudan. Thus it was Great Britain, and not Egypt, who caused the authority of the Turkish Sultan to be excluded from the Sudan, and with it the capitulatory régime which held good in Egypt itself. Clearly here is a subject for reasoned argument, and not for undignified bluster. The amenities of international intercourse ought always to be safe in the hands of a Prime Minister, declaim his followers never so loudly.

Britain's Point of View.

A dignified and masterly exposition of the British attitude towards the proposed negotiations with Egypt was given in the House of Commons on Monday last by Mr. Ramsay MacDonald. The Prime Minister said that he had been hoping that the questions still outstanding between an independent Egypt and Great Britain might have been settled in the calm conditions of personal negotiations. He expressed regret that "statements have been made to the Egyptian Parliament, and action taken to create trouble in the Sudan, which can only be explained as an attempt to force our hands and deprive Zaghloul Pasha of liberty to negotiate": and, after declaring that he had desired to say nothing which would have limited the freedom of discussion, he continued : "In view of what has happened, it is necessary that I should make it clear to all concerned that I do not believe that this House would accept any arrangement which would break our pledges given to the Sudan or jeopardise the present administration and development of that country."

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 26 of this issue.

Indiscipline in Greece.

The Greek republican Ship of State continues to experience stormy weather, and the Prime Minister has had to ask the Chamber for a vote of confidence on three occasions within a month. After surviving a revolt in his own Cabinet, M. Papanastasiou is now confronted with a strike of naval officers. Nearly seventy per cent. of the combatant officers of the Greek Navy have resigned as a protest against the administration of the Minister of Marine, whose immediate resignation is demanded, and thereafter the appointment of a civilian Minister. The incident cannot fairly be used as an argument against the republican system, but it suggests that the spirit of public indiscipline so successfully inaugurated seven or eight years ago by M. Venizelos will not easily be exorcised from modern Greece. No section of the community is likely to suffer more than the Army and Navy from the absence of authority above party politics of the day. Favouritism may not have been unknown to the monarchy, but there were more potent checks against open protests than seem to exist in a régime in which the son of the President resigns his naval commission as a protest against the appointment as one of his senior officers of the Prime Minister's brother-in-law.

The Indian Extremists.

The manœuvres of the various sections into which the Indian extremists have divided are still in progress as we write, and it would be unprofitable to attempt a forecast of the outcome, but in any case they must be allowed to have led India some little way forward along the arduous path of reality, because the rivals have begun to say in public what they really think about each other, and, in, doing so, some of them occasionally hit upon the truth. A striking example is the contention of the "parliamentary Swarajists," as we suppose they must now be called, that Mr. Gandhi, however saintly he may be, is a man unfit to take part in practical politics. A live democracy would have noticed that obvious fact some years ago, but in India the sense of political discrimination is still largely undeveloped, and the saint has loomed through the mist like a statesman, with decidedly unfortunate results. By and by we may hope for a clearer recognition of the principle of division of labour. It is the saint's business to inspire and purify politics, but not to construct platforms. Mr. Gandhi's amateur carpentry is now widely distrusted, and he will do more to promote his own honourable ideals, if he will leave platforms to the professionals, and concentrate his efforts on his proper work.

Hindus and Moslems.

Another advance in the direction of reality is, we fear, indicated in the news that the Punjab Government finds itself compelled to prosecute two journals for inflammatory religious propaganda. Press prosecutions are hateful things to administrators, and we may be sure that Sir Malcolm Hailey would have nothing to do with them if he could help it, but the truth is that in the Punjab, and also in some other parts of India, large numbers of Hindus and Moslems are ready to fly at each other's throats, and journalists who exploit such embittered feelings need not expect sympathy from their profession as a whole. We notice that some of the Indian politicians now in England still affect to ignore the acuteness of the existing religious tension. They would do their country much better service if they would take the trouble to ascertain the facts, to trace the causes at work, and endeavour to remove or counteract them. It is the

Digitized by Google

knowledge of continued religious bitterness which, more than any other factor in the situation, discourages those Englishmen who wish to see India go steadily forward, and they look, not for paper compromises drawn up by politicians, but for such effective work among the people that compromises of that sort may be rendered unnecessary.

The Sikhs and the People.

Religious harmony is wanted always and everywhere in India, but there is a peculiar demand for it in the Punjab at the present moment, so that the unusual tension there is all the more unfortunate. We believe that if the Hindus and Moslems were on even moderately friendly terms, the pressure of their joint opinion would have enabled the reasonable Sikhs to withstand the wild men who have brought their community into such general discredit. As things stand, however, Hindu and Moslem opinion may be said to cancel out, while the fomenters of disorder on each side look to the wilder Sikhs for support, so that these latter find themselves confronted only by the police, instead of by an irresistible volume of public opinion, with the police ready to assist in its expression. The cables have hinted recently that Sir Malcolm Hailey is going to tackle Sikh lawlessness in earnest, and, if the anticipation is correct, he will have behind him the good wishes of the friends of India on this side, but for practical purposes it would be much more to the point if he could count on a united Legislature in his own province, and we fear that is just what he cannot do.

THE WEEK AT HOME.

London, Tuesday Morning.

The Position of the Government.

Almost the only diversion that we have in politics nowadays is the weekly defeat of the Government, but as this is never over a question of "principle" (whatever that may mean), it is of undiscernible significance. It was Berkeley who said that there was no matter, and Byron who therefore asserted that it was no matter what he said; but in our time Mr Ramsay MacDonald acts well up to that philosophy, and it really seems impossible to catch the Government out on a real basis. Any catch that is made is, so to speak, from a no-ball.

This last week the Government were defeated on two issues—the London Traffic Bill and Housing. The first is of continual recurrence, and does not matter in the least, but the second, involving as it does the failure of Mr. Wheatley, is of much more vital importance. One says the failure of Mr. Wheatley, and not of Mr. Wheatley's plans, because the Government is so rich in plans and so poverty-stricken in agents of those plans. Mr. Wheatley was one of the Government's brightest stars, and now that he too is dimming we must, I suppose, prepare for a more general crepuscule. Dusk seems without much doubt to be gathering round the heads of the Government, and the one question that remains—and there is as yet no sign of its being answered—is which planet is strong enough to swim into our ken. The Conservative sun is still a-sleeping, and the Liberal moon shines in impossibly remote splendour.

What is loss to this Government is nobody's gain.

Die-Hards and Communism.

There was a little breeze in the House of Commons last week, when the mention of Communism brought Mr. Lansbury to his feet with a vehement denial of its general existence in this country. It is doubtless a silly notion which makes out that men cannot feel revolutionary, or, indeed, go out on unauthorised strike, unless they be Communists, and, in spite of the fact that Mr. Lansbury may perhaps as easily as anybody be deceived in the matter, one is bound to agree with him. The best way to make Communists in this country is to call such those who are not so yet.

The Die-Hards have had their chance since the War, and they badly messed it. It is, one is forced to conclude, a psychological affair. These ultra-Conservatives have a certain amount of intelligence and any amount of pluck, but their philosophy, founded as it is in false dogmas, is almost utterly puerile.

The Independence of Members.

Members of Parliament are getting quite concerned about their moral integrity. Not only are they getting what is sometimes extravagantly known as "busy" about the questionnaire nuisance, but now Mr. Hore-Belisha is stirring them to resist the appeal made by most constituencies for donations and subscriptions.

Everyone knows, of course, what a pest these subscription-hunters are, but the boot is not wholly always on one leg. If a sufficient number of votes is the return for the gift of, say, a cricket field, the member may be not unwilling to avoid public exposure of the worries to which he is afflicted. It is doubtful, in fact, whether members of Parliament have so much respect for their own creations, Acts of Parliament, that you can make them moral by them.

Real independence can descend upon members only when the party system and the caucus are abolished. Until this is done, all so-called reforms of abuses are but shams. Parliamentary self-respect cannot be very great until members think and act as their own brains tell them.

Licensing Reform.

Not only the sunshine and the general heat have been the causes of the past week's thirst, for the air has been full of talk of licensing. First there has been the Bill of the Bishop of Oxford. It has had a pretty severe handling in the hands of the critics. Englishmen as a whole are by no means convinced of the benefits of local option, for even in these after days the love of individual liberty is still very strong. The moderate manner in which this Bill has been introduced, with all its parade of impartiality, and of the need for getting all points of view represented, has not screened from people its true nature, which is that of a piece of class legislation, and a wolf of tyranny in the guise of a liberty-loving lamb.

Without question the supporters of this Bill are sincere, and it is something to have made the problem a non-party one; but they simply do not understand the spirit of England.

The Public-house.

To the Bishop of Oxford men are saying, as in days past they used to say to the world in general, "Why should we drink but one day?" "Why should we drink but in one place?" and there were one or two events last week which were much more heartily observed than is the progress of the Bill in Parliament. One was the dinner of the Vintners' Company in London, at which was toasted the "immortal memory of our brother and benefactor, Benjamin Kenton," the first man to bottle beer for export. He was Master of the Company in 1776. One wonders how our overseas men fared before that time.

Another thing that brought gladness to these drab times was the announcement that Sir Arthur Cope had painted a sign for a public-house—the very thing that I was advocating last week. The Fellowship Inn has been opened at Catford, and it appears to be an ideal public-house, where a man can take his wife and children and his food and drink together. In other words, it will humanise our fundamental habits, which have recently been in danger of being forced into underground channels. This is true reform. Make the conditions of drinking decent and the decencies will be observed.

The Channel Tunnel.

Certain excitement was caused the other day by the Premier's announcement that the project of the Channel Tunnel, which was turned down in 1907 and again in 1914, is to be put before the Committee of Imperial Defence. Generally speaking, public opinion in this country seems to be in favour of such a tunnel, although it applauds Mr. MacDonald's wisdom in first submitting the issue to a body of strategic experts. It is a little difficult to see the objections that could be raised, except by those who are convinced that a long-standing agreement with France is impossible. Certainly none of the old arguments, such as the necessity of maintaining our isolation, is now of avail. If the scheme is started in the lifetime of the Labour Government, it will be a great feather in its cap.

Conscience and the Law.

It is unfortunate that during the régime of a Labour Government—some of whom developed during the War a strong tendency to make the dictates of "conscience" supreme—a case should arise which is in essence one of conflict between the course of the law and that of conscience. For Lord Haldane is pressing for the removal from the magistrates' bench of a certain East Riding magistrate who is also a "passive resister." The Lord Chancellor's contention—and to the ordinary mind it is unassailable—is that no man is fitted to administer the law who is not willing on all occasions to obey it. Some faint show of justification for the retention by the passive resister of his post has been made by a Liberal newspaper, which attempts to make out that because Lords Birkenhead and Carson once advocated resistance to the law, they should, correspondingly, be debarred from holding office under the Crown.

But two blacks do not make a white. It will be interesting to see how the Labour Government gets out of its difficulty. In all probability, it will do just what other Governments do in similar circumstances—that is, forget all about its foolish past.

America and Championships.

No one during the last week or so seems to have talked or read of anything but sport—golf, tennis, and cricket. And of the first two it is the saddest thing in the world to have to record that America looks like bagging the championships in both. In the golf, indeed, Hagen has already confirmed our worst fears, and the fact that Mr. Brookes, after an historical triumph over "hurricane" Mr. Hunter, has now gone under, leaves M. Lacoste alone to bar an American victory at Wimbledon. There is, unfortunately, no fluke about this; America patently deserves her victories.

ALTER EGO.

NEWS IN BRIEF.

The British squadron arrived in Phaleron Bay on June 27.

The Metropolitan of Kieff has arrived in Jerusalem to regulate the affairs of the Church of Russia in the Holy Land.

The former head of the Albanian Government, Ahmed Zogu, arrived in Belgrade last Friday, accompanied by twelve officers and his secretary.

Chiraranjan Das, son of Mr. C. R. Das, who took part in the disturbances at Tarakeswar, has been sentenced to two months' imprisonment for obstruction.

The Afghan newspaper *Aman-ib-Afghan* announces the award of the Sardar-I Ala Medal by the Amir of Afghanistan to Colonel Humphrys, British Minister at Khost.

An agreement has been signed by Hungary and Yugoslavia according to which, as from July 1, the most favoured nation treatment regarding Customs tariffs shall be applied in all trade between the two countries.

Nousret Bey, who succeeds Dr. Adnan Bey, to whom he has been acting as legal adviser, has arrived in Constantinople to take up his position as representative of the Turkish Foreign Officer at the Porte.

Mr. Robert Campbell, of Rounton, Watford, Herts, chairman of the National Bank of India, Bishopsgate, E.C., left estate of the value of £240,101, with net personalty £233,197. The will was made on one side of a sheet of notepaper.

Gabriel Rabbat, a native of Damascus, who was convicted of forging in Vienna last December Bank of England notes for £515,000 sterling, has been sentenced to nine years' imprisonment by the Vienna Court. Three accomplices received shorter sentences.

The Armenian (Lord Mayor's) Fund, of 96, Victoria Street, S.W.1, has been nominated by the Government to be the official British Committee to receive money to be devoted to the settlement of Armenian refugees from Greece in the Republic of Armenia, Transcaucasia.

The Poetry Society has been notified by the Greek Government that Mr. Galloway Kyle, the society's representative at the Byron Centenary celebrations in Greece, has been created a Knight of the Order of the Redeemer as a token of appreciation of the Poetry Society and the important part taken in the Byron Commemoration.

The Secretary of State for India announces that no decision has yet been taken in regard to the reduction of Indian Army pensions, which was due on July 1. The eventual decision will have effect from that date, and meanwhile reductions are being made provisionally and subject to adjustment later. Notices are being issued by the India Office to all officers to whom this applies.

The Near and Middle East.*

From Our Own Correspondents.

YUGOSLAVIA.

Liubliana, June 18.

External Politics.

Events in Albania are to the fore in claiming public attention just now, and the Belgrade Press is taking the Government to task pretty sharply for being too slack in looking after Yugoslavia's interests. Whatever the internal causes of the Albanian revolution, one thing is certain, and that is that Ahmed Zogu's Government was friendly to Yugoslavia, whereas among his opponents are to be found the bitterest foes of that country, such as Bairam Tsuri, the leader of the irredentist Kossovo Committee. Moreover, many Yugoslavs believe that the insurgents are on the best of terms with the Bulgarian *komitaji*, and that they are supplied with arms and funds from Bulgaria. So now the Belgrade Press takes up the following line :—

A ring of enemies is being forged around Yugoslavia. At two points this ring has at one time given way. Once at the Bulgarian frontier, when Stamboliski carried out the conditions of peace with Yugoslavia; and again in Albania, under Ahmed Zogu. But then Italy took a hand and eliminated Stamboliski, just as she now aims at eliminating Ahmed Zogu by the revolution. Italy is, in fact, repeating the old policy pursued by Austria-Hungary towards Serbia; and therefore Yugoslavia in her turn is bound to repeat Serbia's policy towards Austria-Hungary. She must contemplate passing from the defensive to the offensive, and at every treaty with Italy be mindful of the fact that the latter is her chief enemy. This consciousness must be the keynote of Yugoslavia's policy. To every Great Power may economic concessions be granted, Italy alone excepted. For the same reason all Italian loans must be refused, and only British or French capital accepted.

Internal Politics.

The position remains unchanged. Within the Radical Party the adherents of a policy of conciliation towards the Croats are steadily gaining ground. And since M. Svetozar Pribitchevitch is the advocate of the so-called "strong hand" policy in dealing with all Opposition, the coalition with him is becoming more and more unpopular in the Radical Club. Even to-day a considerable majority of Radical deputies are probably opposed to it, but the authority of M. Pashitch, who is in favour of M. Pribitchevitch, is still predominant. How long the majority in the Radical Club will be silent is another matter, however, for it is becoming increasingly recalcitrant. This state of affairs shows quite clearly in the reconstruction of the Cabinet, which M. Pashitch is not able to achieve, despite all his authority.

Everything goes to show that the real solution can only be found in a Liuba Davidovitch-Yovanovitch Cabinet. Beyond a doubt the whole country would welcome this solution, because the great problems that Yugoslavia has to deal with can only be solved by following a middle course.

The Affray at Trbovlye.

The three young Nationalists who were killed in the unfortunate affray with Communists at Trbovlye on June 1 were given a public military funeral in Liubliana after lying in state for two days in the hall of the Narodni Dom. Sympathy with the victims was general, and the public missed no opportunity of showing it. The Communist victims were buried at Trbovlye. An inquiry is being made.

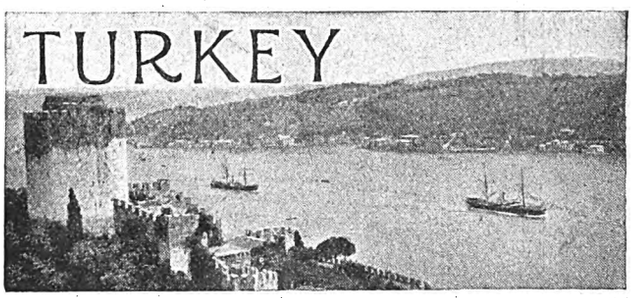
ALBANIA.

Tirana, June 27.

The New Government.

The excitement following the revolution has quickly died down, and Monsignor Fan Noli's Government seems well established. Ahmed Zogu and his band of followers have, as anticipated, crossed the frontier into Yugoslavia, and now there is no part of Albania outside the control of the Central Government. Manifestations and demonstrations of loyalty to the revolution are reported from every Prefecture, and great satisfaction is expressed throughout the country at the terms of the Government's programme (which is summarised elsewhere in this issue).

It remains to be seen how the new Government will fulfil its promises. One thing, at any rate, can be said. It starts on its work with better prospects of success than any previous Government since Albania became an independent State.



Constantinople, June 24

The Effect of the Weather.

The weather which has been spoiling the cricket at home has not been confined to the British Isles. Two weeks of the month of June here, which would normally be absolutely rainless, have been marked by a series of continuous and torrential downpours of rain mixed with hail, punctuated by terrific bursts of thunder and lightning. The results in the lower parts of this very hilly city, which requires a skilfully engineered drainage system and has to carry on without anything worthy of the name, have been disastrous, for torrents of water have flooded whole quarters and

rendered roads impassable. The effect upon the growing crops is difficult to estimate, as reliable information is difficult to come by, but serious floods in the Meander Valley have already been reported.

The unusual weather would appear to have tried the tempers of a good many people, for several instances of bad temper on a large scale have taken place. The other day there was a pitched battle between two parties of dock porters numbering about a hundred, which was waged merrily with revolvers and knives until a large force of police arrived on the scene. A few days later a gentleman of some fame as a pugilist in his quarter of Stamboul held up the tram service by attacking the driver, conductor, and an inspector on one of the trams, and then followed up his exploit by beating up the occupants of a police-station in the presence of a large crowd in the street outside, after which he quietly walked out and went home. The Minister of Public Instruction has chosen this moment to present an ultimatum to the Jewish schools proscribing the use of the French language as a subject and a medium of instruction and enjoining the use of Hebrew. It is difficult to decide whether he is acting from bad temper or a gently malicious sense of humour. On taking into consideration all the trouble endured as a result of the activities of Hebrew Nationalism in Palestine, Englishmen may find it difficult to repress a smile when they read the impassioned protests of the Oriental Jews against this action of the Turkish Government, but that will not blind us to the fact that the tendency of the measure is to lower the efficiency of the Turkish citizens and to alienate the good will of a valuable and useful section of the community which has always been distinguished by its loyalty to successive Turkish Governments. *Quem Deus vult perdere . . .*

Jerusalem, June 14.

Jewish Unemployment.

The Palestinian Zionist Executive announces a rapid decline of Jewish unemployment, with a consequent relaxing of the worry and strain felt in Zionist circles during the winter. When matters were at their worst, during last November, the registered unemployed numbered close on two thousand (a huge number bearing in mind the normally very limited industrial possibilities), whereas by the end of last month the numbers were between 300 and 400, including 200 in Jerusalem. "To a slight extent the improvement was due to the renewal of activity in the building trades. Chiefly, however, the problem of the unemployed was solved by the advent of the tobacco season, which has not only given opportunities for work for those in the country, but has also permitted the increase of Jewish immigration, which since then has been growing steadily from week to week." The estimated immigration during May is 900, thus equalling the state of things during the palmiest days of Jewish immigration in the winter of 1920-1. "In the spring work was energetically begun on tobacco plantations, which has increased considerably this year, and has yielded extensive possibilities of employment both for unemployed in the towns and of Chaluzim (Jewish immigrants), who were needed to meet the demand in this branch of agriculture. The tobacco work in its various branches is able to provide employment continuously for six to nine months in the year, income from this work giving a minimum living wage."

The Arab Congress.

No definite agenda have yet been published for the forthcoming Seventh Arab Congress, but from the innumerable recommended programmes in the Arab Press it is clear that this will differ from preceding congresses mainly in confining itself to home politics. And this is largely confirmed by a statement attributed to Mr. Sakhakini, the secretary of the Arab Executive, to the effect that the Seventh Arab Congress will discuss the question of radical changes to be made in the organisation work of the Executive :—"We shall follow the methods of the Zionist Organisation : we shall seek for assistance from the Arab world outside Palestine, raise funds by a 'Golden Book' [a Jewish roll of honour, in which names of well-known Jews are inscribed if a sufficient sum is subscribed for this specific purpose by their admirers], and other donations, and also make propaganda for an army as Mr. Jabotinsky does. We shall have departments : political, economic, educational, etc., as does the Zionist Executive, and our workers will be paid in order to enable them to devote all their time to the National Movement." For the rest, attention in Arab circles seems to be concentrating on the Palestinian Budget, the revised currency proposals, peasant taxation (which everybody, Arab and non-Arab, agrees is disproportionately heavy on the land cultivators), education (which is, apart from foreign philanthropic efforts, now almost exclusively in the control of the Government, whereas in pre-War days local bodies could play a considerable part), the Rutenberg Concession, of course (which is forging ahead, in spite of past Congress anathemas and resolutions), the Moslem Supreme Council (arousing much uneasiness in Arab circles owing to its indefinable position), and the need for properly and regularly re-elected municipalities (in which demand Jews and Arabs agree, each thinking that they are suffering from the present condition of things, in which mayors and town councillors are, I believe, usually nominees of the District Governors).

The New Peasant Party.

A new "Peasant Party" has just come into existence and announced its programme. It is

quietist in its attitude to higher Palestinian politics, and aims only at improving the status and agricultural education of the peasant, and relieving him of some of his present burden of taxation. It also appeals to the Government to go ahead with the Legislative Council, authorised under the Palestine Constitution, and hitherto obstructed by organised Arab policy. These proposals come from the leading Arab landowners in the Hebron district (the first Peasant Party, formed about a year ago, hailed from Nablus). The Arab Press has declared war upon this new party and dubbed it a creation of the Zionists. Not only the Arab Executive, but also the "National Party" and the earlier "Peasant Party," have tabooed it because of its declared willingness to submit to the Balfour Declaration.

IRAQ.

Baghdad, June 11.

Report of the Treaty Committee.

The report on the Treaty, prepared by a special committee composed of one deputy from each *liwa* or province, strikes the casual reader as an extraordinary document, not only by reason of its remarkable length, but because of the unsophisticated manner in which it is drawn up The committee unanimously agrees that Iraq in her present state is in need of assistance and support from Great Britain, and that she can achieve economic and political development only by alliance with another Power. At the same time the members so alter and excise the clauses of the Treaty—that is to say, the terms on which England is prepared to furnish the assistance required by Iraq—as to suggest that they do not need any such support, or have entirely overlooked the fact that Britain is already spending £6,000,000 a year on Iraq, a sum almost twice as large as this country's total income. Again, the declaration that the people are prepared to make great sacrifices to safeguard their national sovereignty compares oddly with the reminder that England has not yet fulfilled all her wartime promises, and the plea that she will grant further favours—presumably for nothing. But though a perusal of the report may give opportunities for cynicism, the real state of Iraq demands sympathy. One sees a few ardent idealists striving their utmost to lead to complete independence a nation which is not only unable but unwilling to make the necessary sacrifices for the attainment of that end. Three centuries of Turkish misrule account both for the desire of the few for full independence and for the lethargy which makes the nation as a whole unwilling to shoulder the responsibilities entailed by it.

The report is too long to be dealt with in detail, but as the clauses which are subjected to the severest criticism are the financial ones, a few comments on this aspect of the Treaty may not be out of place. During the War the British Government spent vast sums on creating a port at Ma'gill, near Basra, on constructing railways throughout the country, on building bridges and roads, on installing telephones and telegraphs, and on excavating certain canals, for the purpose of feeding the Army and so saving sea transport. On the conclusion of peace all the above, though strictly war measures, became works of public utility, and as such the British Government intended, under the Treaty, to sell them to Iraq at a reasonable valuation, payable by instalments spread over about twenty years. The Treaty committee, on the other hand, claimed, not altogether without reason, that these works were undertaken with no other end in view than that they might bring nearer the attainment of victory. Similar works, they pointed out, were constructed in the war areas in Europe, and on the withdrawal of British troops were abandoned without any demand for payment. Hence, in view of the stringency of Iraq's financial position, the committee considered that Britain might well waive her claim to these works.

Another item is the share of the Ottoman Public Debt, which, by Section 46 of the Treaty of Lausanne, has to be borne by Iraq. This will saddle the country with an annual payment of about £450,000 for the next twenty years—by no means a small matter with a Budget in which receipts barely, if at all, exceed expenditure. Left to herself, Iraq would probably have repudiated her share, on the ground that the country has in no way benefited from the Ottoman Public Debt; hence the committee's opposition to her pledging herself to the payment of so large a sum at a time when money is most urgently needed for developing the agricultural resources of the country.

Iraq's financial difficulties also led the committee to object to the payment of half the cost of the High Commissioner's office and staff, and to suggest that the number of British officials employed by the Iraq Government should be reduced from 150 to 37. Besides the doubt whether the latter suggestion would lead to eventual economy, its enforcement would certainly add considerably to the great difficulty already experienced by the Iraq Government in finding suitable Iraq officials, at once competent and honest, to fill the senior administrative posts.

The High Commissioner, on a recent visit to the Constituent Assembly, stated that though amendments to the Treaty could not be considered at the present time, Iraq could rely, when once it had been ratified, on obtaining from Great Britain some modification of the financial clauses.

Public Opinion in Baghdad.

No further demonstrations have taken place in Baghdad during the past week, though there has been an undercurrent of excitement. Armed police are conspicuous, and occasionally a small crowd of hooligans and boys, headed perhaps by an anti-Treaty Deputy, will parade the streets, chanting some such refrain as "We will sever the hand of him who signs." Fear is at the bottom of these exhibitions, for the ignorant mob, incapable of understanding what the Treaty is about, have been misled by its opponents into believing that it is a device which will enable the English to interfere with the sanctity of Muslim homes.

Ratification of the Treaty.

For over ten weeks the Constituent Assembly has been unable to make up its mind whether to ratify or reject the Treaty. Some thought that it did not go far enough to meet the national aspirations of the people, others that it went too far by perpetuating the present form of native administration. Some wished by opposing it to embarrass the present Cabinet, others genuinely thought that some of its clauses were too severe, many hoped still to gain some personal end, while the only concern of others was to vote with the majority. Some three weeks ago a time-limit was fixed for the Assembly's deliberations on the Treaty—namely, midnight on June 10. The Assembly met on June 9 for, it was hoped, the last time as far as

the Treaty was concerned, but after an indecisive sitting the meeting was adjourned until the morning of June 10. A two hours' debate behind closed doors, and a further public discussion, only had the usual result—a postponement until the following day. Such a postponement, disregarding as it did the time limit, was regarded as tantamount to rejection. Meanwhile vigorous lobbying was taking place. A meeting of the Assembly was announced for 4 p.m. By 8 o'clock only thirty-two deputies had arrived, nineteen short of the necessary quorum of fifty-one. Motor-cars dashed in all directions hunting up recalcitrant deputies. By 10.30 a quorum had been formed and the discussion began. A resolution that consideration of the Treaty should be postponed until the Mosul question had been settled was rejected, as was also Yassin Pasha al Hashimi's motion to the effect that the Treaty should be accepted if the amendments proposed by the committee, of which he was President, were adopted *in toto*. Finally, on a motion supported by the Prime Minister and other members of the Cabinet, the Treaty was ratified, with 37 minutes to spare, by 36 votes to 25, eight members abstaining from voting. The form of the resolution, as it appeared in the *Baghdad Times*, is as under :—

This Assembly considers many of the clauses in the Treaty and the agreements so severe that Iraq cannot undertake the responsibilities of an ally such as is required from the Iraq people. But it relies upon and is confident in the honour of the British Government and the right dealing of the honourable British people, confident that they would not oppress the Iraq people, nor disregard their desires and Iraq's reliance upon Britain.

This feeling alone has caused Iraq to accept the explanations given to the Assembly by H.E. the High Commissioner, on behalf of the British Government; that is to say that, after the Treaty has been accepted, the Financial Agreement will be modified as soon as possible in the generous spirit for which the British people is famed.

Wherefore, the Assembly requests H.M. the King to ratify the Treaty, the Protocol, and the Agreements: provided that His Majesty shall, after the ratification, at once begin negotiations with the British Government, to gain the modifications proposed by the Committee of the Assembly. And this Treaty and its Agreements shall be invalid, if Great Britain does not protect Iraq's rights in the Vilayet of Mosul in its entirety.

The decision was received without excitement. The sole desire of the deputies is to return to their homes, regardless of the fact that the Organic Law has still to be ratified, as has also the Electoral Law for the new Parliament.

PERSIA.

Teheran, May 25.

Aeroplanes.

The past week might well be called "Aeroplane Week," for during it Teheran has seen more activity in the air than ever before. Early in the week two of the German biplanes, purchased in Russia, landed here, having taken about an hour and three-quarters to fly from Enzeli, a distance of well over 200 miles, and in the air they looked very like the normal British two-seater bombers, D.H.9A's, with the familiar Allied circular markings, adopted by the Persians, with an outer circle of green instead of blue. The body and rudder also have the lion and sun painted on them. Then two more German planes arrived, Junker monoplanes in aluminium, with accommodation for four passengers; and, lastly, one of the French planes, bought last year and landed in Bushire two or three months ago, arrived this morning from Luristan. This plane, in charge of one of the French pilots, left Ispahan (where it had landed previously after a non-stop flight from Bushire) last week, and was expected in Teheran, but breaking his compass over Kum the pilot lost his bearings and finally landed near Hamadan, from which place the military utilised it in Luristan in connection with the operations against the Lurs, at present being conducted in the neighbourhood of Burujird and Khorramabad.

This afternoon all roads led to Ghaleh Morghi, the aerodrome prepared on the plain two miles to the west of the town, on the site chosen for the British planes which came from Baghdad last summer. A notice published in the Press by the Ministry of War invited all and sundry to witness the flights of the five planes, and the Teheranis flocked out in their thousands to be present at what might be termed the inauguration of Persia's Air Force. On the road was a continual stream of cars, carriages, and pedestrians throughout the afternoon, and I have seldom before seen such a concourse of people in Teheran. The Prime Minister, who is also Minister of War, arrived on the ground about 3 p.m., and examined and inspected the aeroplanes, which were ranged up in a row at one end of the ground, on the north side of which a rough hangar has been constructed. Sardar Sepah appeared to take a lively interest in the planes, and spent some time examining them closely. Shortly after he had retired to the shade of one of the marquees erected on the ground for the spectators, the French aeroplane, a Breguet two-seater bomber, made the first flight, with the Chief of the Staff, General Amanollah Mirza, as a passenger. As soon as it landed, the second machine went up, and after each of the five had made flights they all took the air together, a sight which had never before been seen in Teheran. There was no lack of eager passengers for the few available seats, and the novelty of seeing the capital from the air seemed to be fully appreciated. Everything went off without a hitch, and the Ministry of War is to be congratulated on a very creditable exhibition. The Air Force should ultimately prove of great utility to the Army.

World-Flights.

Bushire, on the Persian Gulf, has been a landing place for the British, French, and Portuguese "world-flighters." The latter was detained there three days, as the Persian Government had not been advised, and consequently permission had not been given to the foreign airman to land on Persian soil.

While so many world-flights are in progress it is rather refreshing to come across a party of six Parsees, members of the Bombay Pioneers, who set out from Bombay last October with the intention of cycling round the world on "push bikes." They have just arrived here, and their route lies through Mesopotamia, Palestine, and Egypt, to Italy, through Europe to the United States, and thence back to India through Japan, China, and Burma.

THE WOMEN'S INTERNATIONAL ZIONIST ORGANISATION.

On June 25 and 26 a garden fête was held, under the auspices of the Women's International Zionist Organisation, in aid of women's and children's welfare in Palestine, at Caen Wood Towers, Highgate, N.6 (by kind permission of Sir Robert and Lady Waley Cohen). The fête was opened by Mrs. James de Rothschild and Dr. Ch. Weizmann respectively, and Mrs. Philip Snowden and Sir Wyndham Deedes presided. The W.I.Z.O. is devoting its present efforts to the establishment of an agricultural farm school for girls at the Jewish colony at Nahalal.

THE NEW ALBANIAN GOVERNMENT.

The following is a translation of the programme of the new Albanian Government telegraphed to the Albanian Legation in London by the Prime Minister, Archbishop Fan Noli :—

The destructive policy of the last Governments had created such despair in the country that insurrection and fratricide were at last the outcome. The results of the late Administration are a ruined budget with a large deficit, disorganisation of the State in all its departments, insecurity throughout the country, anarchy among the organs of the State, and the creation of personal powers outside and above those of the State, together with assassination and attempted assassination of citizens and foreigners. These uncontested facts had endangered the foundation of the country, discredited us at home and abroad, and cast a doubt in the mind of both Albanians and foreigners as to the capacity of our State to live. In order to crown the salutary work of the insurrection, and relying upon the confidence placed in us by the people, we accepted the heavy burden of directing the affairs of the State entrusted to us by the High Council of Regency, and hereby do promise to our people by the application of the following programme the gradual recovery from the critical state created by the destructive work of our predecessors :—

The general disarmament of the population without exception.

The establishment of tranquillity, order, and sovereignty of the law.

To exalt the authority of the State over any personal and extra-legal power.

To uproot feudalism, free the people, and establish democracy definitely in Albania.

To introduce radical reforms in all branches of the administration both civil and military.

To simplify the organisation of the bureaucracy, to retrench, and to purify the administration; besides ability and morality, the patriotism of individual employees shall be taken into account.

The security of the rights of the employees and the determination of their responsibilities shall be established by a special law.

To organise the communes so as to improve the conditions of villages and villagers, granting to the latter wide powers in local affairs.

To balance the budget by radical economies.

To modify the system of collecting taxes in a manner favourable to the people.

To ameliorate the condition of the farmers so as to ensure their economic independence.

To facilitate the introduction of foreign capital, protect and organise the wealth of the country.

To raise the prestige and the credit of the country abroad.

To grant real independence to the tribunals.

To introduce judicial reforms.

To construct new roads and bridges and take special care of means of communication throughout the country.

To organise the sanitary conditions of the country in order to combat the diseases which ravage the population.

To organise the department of education on modern and practical lines so that the schools should produce capable citizens, good patriots, and able workers.

To entertain friendly relations with all the States, and particularly with those of the neighbouring countries.

On the return of normal conditions we shall appeal to the country at a general election, and by secret and direct and entirely free vote the people shall give their verdict in regard to our action, to which verdict we are prepared to bow.

NEAR EAST BOOKSHELF.

SPORT IN ASSAM.

"Sport and Service in Assam and Elsewhere." By Lieut.-Colonel Alban Wilson, D.S.O. (London: Hutchinson and Co. 18s.)

The greater portion of Colonel Alban Wilson's book is descriptive of shooting and fishing in the Province of Assam, where the author was for many years an officer in a Gurkha regiment. His "service" was, one gathers, in the nature of interludes among a long series of shikhar trips, during which he shot specimens of most of the big game in which the North-Eastern Province abounds, and also of much small game—particularly duck, geese, snipe, and woodcock. He claims that "Assam undoubtedly offers the best and most varied *mahseer* fishing in India," and certainly he took full advantage of his opportunity of enjoying it.

It is difficult to discover whether Colonel Wilson intended his book to be of use to other sportsmen, or merely a record of his own achievements; if the former, it may prove rather tantalising, for often insufficient information is given on how, when, and where to shoot or fish to be of real value. For instance, one would like to have known the name of the river in which the *sobedar* caught the 49½ lb. *mahseer;* and again and again one's curiosity to know exactly what rifles, guns, and cartridges were used has to go unsatisfied. Now and then, however, one is grateful for the hints given, such as, for example, the danger of using too small bore a rifle for elephant shooting, and the general insufficiency of single wire traces for *mahseer* fishing.

The unexpectedness of political comments in a book of this character causes them to be read all the more closely, and one can scarcely congratulate the author upon their inclusion. He complains, for instance, that the deterioration in the duck shooting of Assam is due to "the success of the Montagu-Chelmsford reforms in stirring up racial feeling"; and one wonders whether this is really the case, or whether, by the exercise of a little tact and with a knowledge of the vernacular, the necessary assistance cannot be obtained from the boatmen as before. Again, the lurid picture of what would happen if the British left India was surely superfluous here. And it is extremely regrettable that he should have indulged himself in the remark that "all Orientals seem to be naturally cruel," particularly in view of the fact, demonstrated by Colonel Wilson's own admissions in this book, that he would not seem to have been in a position always to criticise the conduct of others.

Of Colonel Wilson's knowledge of Indian customs we may single out, as being of the most general interest, his reference to the wearing of the ring by the Tongkhul Nagu. It is a fascinating subject, which has been dealt with, with perhaps more discretion, in an appendix of Hodson's "Naga Tribes of Manipur." Colonel Wilson would appear to be definitely wrong in his explanation of this ring, the wearing of which with these tribesmen was probably equivalent to the assumption of the *toga virilis*.

However, in spite of certain defects that we have ventured to point out, Colonel Wilson's book is decidedly interesting. He includes some beautiful photographs, especially those of river scenery.

June 20, 1924 (Old Style).
Julkaada 30, 1342, A.H., of the Moslem Calendar.
Tamuz I, 5684, of the Jewish Calendar.

The Aga Khan has left the Ritz Hotel for the Continent.

The Persian Minister has returned to London from Paris.

Prince Karamjit Singh of Kapurthala has left the Savoy Hotel for Paris.

Sir Herbert Samuel left Jerusalem last week for England on three months' leave.

The Raja of Pudukota, after making a short stay in Paris, has returned to London.

General Sir Walter Congreve, the new Governor, arrived at Malta on June 29, and took the oath of office and allegiance.

General Sir Claud Jacob (Chief of the General Staff, India) had the honour of being received by the King at Buckingham Palace on June 27.

Major-General Sir Lee Stack, Governor-General of the Sudan and Sirdar of the Egyptian Army, had audience of the King at Buckingham Palace last Saturday morning.

It is announced in the *Gazette* that Lord Willingdon, upon whom a Viscounty was recently conferred, has taken the title of Viscount Willingdon, of Ratton, in the County of Sussex.

Major Duncan McCallum, until recently British Liaison Officer with the French High Commissioner in Syria, is due to arrive in London during the first half of this month on leave, after four years' service in Syria. He was associated with Mr. Norman Nairn in the determination of the motor route across the desert to Baghdad.

Mrs. Charles Hancock and Major C. G. Hancock gave a small luncheon party last Friday at the Automobile Club. Among those present were the Persian Minister, the Minister of the Serbs, Croats, and Slovenes, and Madame Gavrilovitch, the Greek Minister, Sabit Bey, and Mme. Sabit, of the Egyptian Legation.

The King has granted authority for the wearing of the insignia of the following decorations:—Order of the Nile.—Second Class.—Mr. William Duncan Lund Roberts, Inspector-General of Irrigation, Sudan Government. Fourth Class.—Mr. Tomlin Joyce Campbell, Chief Inspector, Survey of Egypt.

The marriage arranged between Major Arthur Walter Barratt, K.S.L.I., Reserve, late Assistant Military Attaché to Roumania, elder son of the late Mr. Walter Edward Barratt, and Mrs. Barratt, of Linley Hall, Bishop's Castle, Shropshire, and Frances Erskine, youngest daughter of the late Charles Cuningham Scott, and of Mrs. Scott, of Halkshill, Largs, Ayrshire, will take place at 2.30 p.m. on July 8 at Holy Trinity, Sloane Street.

The annual dinner of the Anglo-Egyptian Association will be held at Prince's Restaurant, Piccadilly, on Thursday, July 10. Viscount Milner, K.G., will preside, and ladies are invited to attend. The dinner is open to past and present officials and non-official British residents in Egypt and the Sudan. Applications for tickets (13s. 6d., exclusive of wine) should be made immediately to J. F. G. Hopkins, 12, Holborn Viaduct, E.C.1.

The annual luncheon and reunion of the Aligarh Muslim University Association, London, was held at the Savoy Hotel, June 25. The guests included the Right Hon. Syed Amir Ali (president of the association), the Hon. Mr. S. Aftab (vice-chancellor), the Right Hon. H. A. L. Fisher, Sir Ali and Lady Imam, Sir Shadi Lall, Lord and Lady Meston of Agra, Lord Olivier, Sir Mohamed Rafique, Sir E. Dennison Ross, Sir Dadiba M. Dalal, Mr. Imtiaz Mohamed Khan (hon. secretary), Dr. Wali Mohamed, Sir Thomas and Lady Arnold, and Sir Arthur Shipley.

The following officers were present at the dinner of the Central India Horse, which was held last Friday at the Cavalry Club:—Major-Generals W. A. Watson, A. J. Douglas, and J. B. Edwards, Brigadier-Generals H. B. Birdwood and C. G. Hoare, Air Commander D. G. Pitcher, Squadron-Leader Sir Norman Leslie, Colonels Sir Neville Chamberlain, F. C. Grant, D. H. Cameron, the Hon. H. Napier, A. H. O. Spence, W. D. Daunt, A. P. Browne, A. Hewlett, and A. M. Kettlewell, Majors J. Pinney, W. B. White, Sir T. Lawson Tancred, and G. Henderson, Captains M. Cox and R. George, and Mr. H. Taylor.

APPOINTMENTS, PROMOTIONS, ETC.

The King has been pleased to approve the appointment of Mr. William Carr, I.C.S., to be a Puisne Judge of the Burma High Court, in succession to the late Mr. Justice H. E. McColl, I.C.S.

Mr. Robert Arthur Graham, C.S.I., has been appointed a member of the Executive Council of the Governor of Madras, in succession to Sir Charles George Todhunter, K.C.S.I., who has resigned.

Mrs. Annie Besant has been appointed Kamala Lecturer at Calcutta University for the current year.

Mr. Pierre Crabites, an American judge in Cairo Mixed Tribunals, has been run over by a tramcar. His right foot has been amputated; and he is standing the shock well.

Some anxiety is felt about the health of Mr. Bhupendra Nath Basu, Vice-Chancellor of Calcutta University.

THE SUDAN ISSUE.

It is a fundamental law of dynamics that to every action there is an equal and contrary reaction, and occasionally it happens that the law is applicable to the political sphere. A little more than two years ago an arrangement was made between Egypt and Great Britain by which, at a suitable time, negotiations were to take place between the two Governments in regard to four clearly defined subjects. As an opportune moment for the discussions seemed to have arrived, an invitation was sent to Zaghloul Pasha to come to London for a friendly conference with Mr. Ramsay MacDonald, with whom he is personally acquainted. The subjects to be discussed had two years ago been "reserved," as it was recognised by both parties that they were not at that time easy of adjustment; and it seemed reasonable to suppose that a solution would present fewer difficulties when a better understanding prevailed between the two countries. Of the improved feeling between Egyptians and British a few months ago there could be no doubt, and for the success of the negotiations—by which is meant that agreement satisfactory to both sides should be reached—it was only necessary that nothing should be done in the interval before the Conference opened in London to impair the good relations. Unfortunately the invitation to Zaghloul Pasha let loose a flood of oratory in the Egyptian Assembly which, unless dammed at the outset, could only produce the equal and contrary reaction familiar to the world of dynamics. Nothing would have been simpler than for the Egyptian Prime Minister to have refused to be drawn on any single subject that was to form an item of discussion in London. It would have been a straightforward, dignified course to adopt, entirely in keeping with diplomatic usage and, indeed, with the dictates of ordinary courtesy. Instead of adopting this plan, Zaghloul Pasha has seemingly allowed a large part of the time at the disposal of the Legislature to be devoted to frenzied but purposeless discussion of the pending negotiations and the questions involved, and has sought to make good his political position at home by proving himself as uncompromising as the most irresponsible extremist among his followers.

Little or no attention would have been paid in Great Britain to anything that the rank and file of the Nationalist or any other party in Egypt said; but it was liable to give rise to misunderstanding—quite apart from any consideration of national dignity—if the British Government took no notice of the strange attitude adopted by the Egyptian Prime Minister. He had been invited to negotiate. He chose, however, to inform his followers and the world at large, in effect, that he was going to England not to negotiate, but to dictate. Some allowance must always be made for misconceptions arising from inadequate translations from one language to the other, and an isolated remark here or there would not have been regarded as unnecessarily provocative. The cumulative effect of Zaghloul Pasha's speeches over many weeks, while the British Government has awaited his reply to an invitation, must, however, be regarded as having, in the opinion of the British Government, left it no alternative to a pointed reminder that there are clearly defined boundary lines in the dealings between nations which international courtesy does not allow to be crossed, as well as limits to Britain's good-humoured tolerance. A superfluous "interview" in a German paper, the outbreak in Omdurman of disturbances engineered by outside agents, and another provocative speech in the Egyptian Assembly provided the British Government with its opportunity. After an impressive utterance in the House of Lords by Lord Grey, who called upon the Government for a definite pledge that Britain would not abandon the Sudan, Lord Parmoor, on behalf of the Government, stated that the Government were not going to abandon the Sudan in any sense whatever. They recognised, he continued, the obligations which had been undertaken toward the Sudanese, and regarded those obligations as of such a character that they would not be abandoned by Great Britain without very serious loss of prestige. This statement has since been confirmed in weighty words by the Prime Minister himself.

If at any time the Egyptian Prime Minister has committed himself to the statement that he would immediately break off the negotiations if the British Government did not at the outset agree to his demand for the complete evacuation of the Sudan, the two statements could hardly fail to bang, bolt, and bar the door to all negotiations. Zaghloul Pasha has apparently appreciated the awkwardness of his position, and, after receiving the unanimous support of the Assembly, presented the resignation of the Cabinet to King Fuad, who refused to accept it. It would be a grave misfortune for Egypt if the negotiations did not take place. There are still one or two points that have to be settled by negotiation with Great Britain to round off the independence of Egypt. By no stretch of the imagination can the Sudan be regarded as one of these; that the condominium must be reconsidered in the light of the independence of Egypt is admitted, but the present system has worked satisfactorily for the last twenty years, to the manifest advantage of Egypt, and might continue for a further period without harm to any of the three parties concerned. There is, therefore, nothing to be gained by delaying the complete independence of Egypt for the sake of political aims, whether Egyptian or British, in the Sudan. For the moment, however, the point at issue is the seemly conduct of negotiations. The condominium in the Sudan rests on a Convention between Egypt and Great Britain. If it is to be modified, this must be done by mutual consent, and not by the hurling from Cairo of charges and abuse at the British. We can well imagine that, if there had been no public discussion of the subject in Egypt, Zaghloul Pasha's presentation of the Egyptian claims in regard to the Sudan might have impressed the British Prime Minister, and some workable compromise might have been evolved. As things are, the forceful insistence, before the negotiations, upon Egypt's rights in the Sudan has caused the British Government to be urged on all sides to yield no ground, and the chances of a compromise become remote. It is not too late, however, for Zaghloul Pasha to change his tactics. Both parties have been goaded into utterance; but that is no reason why the negotiations should not take place and should not be conducted on amicable and sensible lines.

THE REPARATIONS COMMISSION IN BULGARIA.

Early in May the question of the future of the Inter-Allied Commission for Bulgarian Reparations was raised in the House of Lords. The spokesman of the Government pointed out that, although the most difficult part of its task had been accomplished, the labours of the Commission could not be regarded as over; attention, however, was being paid to administrative economy, and it was hoped that the cost of the Commission to Bulgaria for 1924 would be within £16,000, representing a reduction of more than 50 per cent. on previous annual charges. At that time a meeting of the Commission was due to be held at an early date in Paris, and it was anticipated that a formal decision would then be taken to effect the necessary alterations in the composition of the Commission in Sofia with a view to reducing its cost to £16,000 a year. When that meeting took place, however, unexpected difficulties appear to have arisen. Neither the French nor the Italian delegation had welcomed the British proposal to reduce the cost of the Commission. but in the absence of any valid reason for continuing to mulct Bulgaria in an unnecessarily heavy charge they could not oppose the scheme. When the meeting took place in Paris a noticeable change had come over the attitude of the French and Italian delegates. Instead of challenging the reduction of the Commission, they favoured such drastic changes that there would inevitably result a complete break in the continuity of the work accomplished by the Commission during the last three years. Such a proposal was entirely foreign to the British idea, and would have courted the risk of undoing much of what the Reparations Commission in Sofia has been able to accomplish, both in the interests of Bulgaria and to its own credit.

As a result of three years' working there is abundant evidence that the Commission has come to be regarded in Bulgaria as a friendly and useful link with the outside world, and much of, if not all, the resentment not unnaturally entertained at first against a foreign institution imposed to supervise the fulfilment of certain peace conditions has vanished. Apart from the fact that through the agency of the Commission the amount of the indemnity that Bulgaria had to pay under the Treaty of Neuilly has been considerably reduced, and the cost of the military occupation of the country has been settled by mutual agreement, the Bulgarians are indebted to the Reparations Commission for an invaluable piece of legislation. At its instance the Government introduced into the Sobranje, and passed, a law prohibiting the issue of paper money above a certain amount (the figure recommended by the Commission) without the consent of the Commission. The effect of this measure has been to introduce some measure of stability into Bulgarian exchange, and certainly to prevent the financial collapse experienced by other ex-enemy States. The service rendered to the country by this self-denying ordinance is to-day appreciated by the thinking section of the Bulgarian nation and its indebtedness to the Commission acknowledged. Another salutary measure brought about by the latter was the abolition of the Grain Consortium, which had proved a serious handicap to the export trade. In these circumstances it will be readily understood that Bulgaria by no means shares the view of Lord Newton, who raised the matter in the House of Lords last May, that the Reparations Commission is merely an imposition on Bulgaria, of which she is now entitled to be relieved. It may be true that no Bulgarian Government wishes to pay £36,000 a year for a service that it can obtain for £16,000, and if it were offered choice between a Commission costing the latter amount and one costing £8,000 a year, it might feel obliged to choose the cheaper. It would, however, be unnecessarily invidious to submit such a choice to any Government. The pertinent fact is that the Bulgarian Government does not make any official protest against the continued existence of the Commission; but unofficially is prepared to subscribe to its utility to the country.

With the active encouragement of the Commission the Bulgarian Government has succeeded in balancing its Budget. The task has proved sufficiently onerous to justify the suggestion—with which the Bulgarians will not hesitate to agree—that for the next few years it will prove invaluable to the country to have an outside stimulus working for budgetary equilibrium whatever party may be in power. A second sphere of usefulness for the Commission, in the interests of Bulgaria herself, will be to see that no attempt is made to repeal or to evade the provisions of the Law dealing with the banknote issue, to which reference has already been made, and generally to give the country the benefit of the Allied Powers' experience in matters of finance. Further, there is ample scope for the Commission to play an important part in the development of the country; for it will be readily understood that for any reproductive enterprise which secured the endorsement of the Inter-Allied Commission Bulgaria would stand a much better chance of obtaining financial help in the money markets of London, Paris, and Rome than she would if she could not rely upon the backing of such a body.

It stands to reason that, for the Commission to play the part indicated above, it must continue to command the authority and respect that it has had in the past, and also to have at its disposal as much as possible of the experience gained during the last three years. The first effect of the drastic reductions now urged by the French and Italian delegations would be to render this impossible. Already they have shown a curious lack of appreciation of the rôle that the Commission has attempted to fill by allowing their seconds-in-command to give up their posts shortly before the time arrives for the chief delegate of each country to resign. If this course were adopted by the British delegation as well, there would be a break of continuity in the Commission's labours. Moreover, for the sum which it is now proposed by France and Italy to charge Bulgaria, it might be possible, having regard to the scale of salaries ruling in the respective countries, to obtain the services of a French and

ASK FOR WHITE HORSE WHISKY BY APPOINTMENT.

Digitized by Google

an Italian official of the standard considered adequate by their Governments for the future work of the Commission; but it is certain that the amount would not be sufficient to attract any British official of the right standing.

For the present, as far as is known, the whole question remains in suspense. The Reparations Commission has presumably reported its differences to the Council of Ambassadors, with whom will rest the next step. In view of the statement on its behalf in the House of Lords, it is to be hoped that the British Government will consider that its honour is involved in the matter, and that it will spare no pains to persuade the French and Italian Governments to its own way of thinking. As both their chief delegates were known to be in favour of an indefinite prolongation of the Commission in its original composition, it is difficult to find any adequate explanation of the sudden desire to cut down the Commission to a point incompatible with its continued usefulness to Bulgaria; for it is not to be supposed that any Government in similar circumstances would allow its action to be prompted by mere pique or a desire to "score off" the Power that had been the first to suggest an act of justice to Bulgaria. The improved relations between the British and French Governments afford an opportunity of settling the question satisfactorily, with due regard to the fact that well-informed opinion in Bulgaria recognises that the money it will be called upon to pay for an efficient Commission in the future will be money well spent. In the event of any further delay in a settlement it will not pass unnoticed in Bulgaria that the French and Italian Governments retain their original chief delegates in Sofia, and that the cost of the Commission for 1924 will, therefore, be considerably over the £16,000 to which Great Britain has been trying to reduce it.

The Government has taken Mrs. Arthur Sassoon's house in Albert Gate, Knightsbridge, for the reception of Ras Tafari, the Prince Regent of Abyssinia, who will shortly be the guest of this country.

The work of repairing the Yawuz, formerly the German cruiser Goeben, at Constantinople has been postponed because two of the most favourable tenders, one British and one German, both demanded an outlay greater than allowed in the Budget. It is expected that a Bill authorising increased credits will be laid before the Angora Assembly when it meets in the autumn.

MOSLEM HOLY PLACES.

To the Editor of THE NEAR EAST.

Sir,—With reference to the paragraph on "Moslem Holy Places," in your Palestine letter, in to-day's issue, I am glad to see that this matter is being aired. Agitation against the irritating charge for admission is well justified.

Apart from its religious associations for others as well as Moslems, it is the beauty spot of the Holy City, and one which, I feel sure, both residents and visitors who enjoy a prolonged stay in Jerusalem desire to visit frequently. It was my good fortune to be in the latter category a few months ago, both prior to and at the beginning of the tourist season, and the introduction of this new "regulation" nearly involved me in serious consequences.

I write regulation in inverted commas because the pamphlet which is thrust before one on entering does not, or did not at that time (early in March last) specify a regular charge for admission, but merely stated the price of the booklet, 15 P.T. Believing this to be a new kind of Oriental extortion, I remonstrated, and after a little parley was allowed access. I had been in the sacred precincts about five minutes when I was accosted by a fanatical water-carrier demanding my "ticket." This not being forthcoming, he became excited and threatening, and a scuffle was only avoided by the providential arrival of a policeman who happened to be well known to me.

I understand that after the War access to the Haram was permitted freely, but that restrictions were gradually introduced culminating in this last, and one expects sooner or later to hear that admission will be prohibited altogether.—I am, etc.,

The Sudan at the Exhibition.

THE RESOURCES OF THE SUDAN.

An Interesting Display.

The Sudan Court in the East African Pavilion at Wembley strikes a note uniquely its own. It is like nothing else in the Exhibition. In some of the pavilions it is difficult not to come away with the impression that there are too many exhibits. That cannot be said of the Sudan Court, where the products of the country have been set out in such a way that it is possible to see everything without difficulty. One would not look, of course, for stands packed with exhibits, such as are to be seen elsewhere, for the Sudan's products are relatively few in number, though of great importance, and the country is still, so to speak, on the threshold of its development. But the exhibits make a brave show, and, as a result of their extremely good arrangement, will go a long way towards educating people with regard to the products and possibilities of the Sudan. The principal products of the country include, of course, gum, cotton, oilseeds, hides and skins, dura, and ivory, and the full range of them can be seen in the court on stands, behind each of which is an illuminated scene depicting some aspect of the economic life of the country. It would be difficult to praise these scenes too highly. They are quite the outstanding feature of the Court, and are, indeed, one of the things that those who go to Wembley ought not to miss, whatever else they have to omit. Their inclusion gives the Court the atmosphere of the country, and is certainly a most praiseworthy innovation. Vividly realistic and charmingly executed, it is small wonder that many visitors linger looking at them a long time.

It would be difficult to find an apt parallel in British history for the rapid economic advance of the Sudan. Certain it is that in that country British administration and British enterprise have secured a success which will bear comparison with any similar achievements elsewhere. In the Sudan it has been a question of building practically *ab initio*, and in a relatively brief space of time really remarkable results have been achieved. It is an axiom that trade follows the development of communications, and the history of the British connection with the country is one long record of ceaseless endeavour in this direction. Besides the work of extending the Kassala Railway, undertaken some time ago with the object of serving a cotton-growing region of great potential importance, a scheme is under consideration for the linking up of the

Kassala-Gedaref line with the Makwar line, in which junction, as pointed out elsewhere, it is proposed to make the new dam serve as a bridge. The development of communications and of agriculture may be said to have gone hand in hand, for it has been the requirements of the country's staple industry which have, of course, determined the extension of railways and roads. In a country with centuries of civilisation behind it, it is a feasible proposition to develop communications in any reasonable place and leave it to the surplus population to justify their existence, but not so in a region like the Sudan, where new railways and irrigation projects must naturally be determined by the potential productivity of the regions they are destined to serve. Policy, in a word, must be utilitarian to succeed, and the statistics of the Sudan over the last decade afford the best possible proof of the correctness of the methods pursued. It would still be incorrect to say that we have made the waste places of the Sudan "blossom like the rose"; it could be said with truth that they are within measurable distance of doing so. Whatever objections may be raised elsewhere to cotton as a staple crop, there is no question that it is suited to the Sudan, and that it promises, under favourable conditions, to be an abundant success there and to bring to the country wealth that it could not obtain through any other medium.

The valid objection may always be raised that statistics covering the last fifteen years are unreliable as data because of the incidence of the war years, and because subsequently inflated prices give the returns a wholly misleading significance. No one would wish to overlook, or to underestimate, either of these factors, but if the even tenour of statistics over a period has suffered serious dislocation on this account, it cannot be maintained that the figures of the Sudan, taken as a whole, and making allowances for the effects of the war, can justly give rise to any other than an optimistic conclusion with regard to the future of the country. Where a country depends on agriculture with all its vicissitudes, and to a growing extent on a crop so subject to fluctuations as cotton, it goes without saying that the trade returns will be liable to vary to a greater extent than in the case of a country which mainly looks for its exports to manufactures or to commodities whose prices are more or less stabilised. Up to 1914 the figures for the commerce of the Sudan disclosed a fairly regular progress, while the "boom" years of 1918 to 1920 saw all previous figures easily surpassed, both as regards imports and exports. The inevitable depression followed, and for 1922 the imports amounted in value to only double those of 1913 at £E4,252,890, while the exports were valued at £E1,993,436, as compared with £E1,105,186. The figures for last year, however, made a much improved showing, and suggest, in short, that as far as the Sudan is concerned, the worst of the trade depression has been overcome, and that henceforward, given the maintenance of satisfactory prices for cotton (as to which for the next few years, at any rate, there seems little doubt), a rapid expansion of the trade returns may be looked for. The figures for 1923 have, of course, appeared in these columns, but it is of interest to recall them. Imports were valued at £E4,669,004 and exports at £E2,562,091, the adverse balance of trade being thus considerably less than in 1922. With the development of cotton production it will probably not be many years before this feature gives place to a favourable balance, but the period will naturally depend very largely on new works of development that may be undertaken entailing vastly increased imports in the shape of machinery, etc.

Cotton is, of course, the predominant feature in the Sudan Court, as it ought to be, not on account of the present production of this commodity, but because of the outlook for the future, since, if present indications go for anything, the Sudan is going to be one of the countries that count as regards cotton growing. If Lancashire is ever to reach a position approaching independence of the American crop it is likely to be in the main through what happens in the Sudan. Four models depict developments in regard to cotton growing that are now going on in the country, two of them being large scenic models. One shows the Sennar Dam and the other illustrates work in the cotton fields in the Gezireh. A scale model of the dam and a small model of one of the sluice gates are also on view. There are also numerous examples of cotton and cotton seed from the different areas, while a pleasing note is given to the exhibition by the specimens of cotton plants that are shown.

Gum arabic comes mainly from the Sudan, about three-quarters of the amount utilised in certain manufactures hailing from that country. The export of this commodity amounted in 1922 to 14,569 tons, while the output in 1923 was in the region of 23,000 tons. Well over fifty varieties of gum arabic are shown, while the collection and the sale of gum at El Obeid are illustrated by a model. Another interesting model shows a dura market. Dura, the principal food grain, may be practically described as a rain crop. This commodity ranks next to gum and cotton in the export trade. In the best year on record 80,000 tons were exported, and it is of interest to note that Great Britain is an importer on a considerable scale. The value of the exports in 1921 was £E235,283, and in 1922 £E240,444. A distant view of Port Sudan, the principal centre of the trade of the country, is

shown in a model depicting a group of "Fuzzi Wuzzies" in the foreground, the port being in the far distance. Mention must also be made of the full-sized section of a Sudan Government Railway sleeping-car which is on view, a very modest reminder of the important part played in the Sudan by the excellent railway system and its worthy colleague, the river steamship service.

In addition to the products mentioned above, the exhibits include beeswax, castor seed, dates, fibres, ground nuts, ivory, senna, pepper, rice, sheepskins, sesame, and wheat, and even this lengthy list does not exhaust the exhibits of this character that are to be seen. There are also samples of the minerals that are found in the Sudan, and here, too, there is occasion for surprise at the variety. There is copper ore from Hofrat en Nahas, gypsum from Rawaiya, gold ore from Gabait, and gold (ring shaped) from Roseires, also limestone, ironstone, salt, graphite, and loess clay. Truly it is a goodly list. Then examples are shown of the timbers that are produced in the Sudan, such as mahogany, ebony, and a host of others whose names would be unfamiliar. There are also exhibits of silverware from Omdurman, bedsteads and stools, elephant and giraffe hair bangles, and basketwork. A touch of colour is added by specimens of the bird life of the country, and by the heads of game that are on view. Among the curios shown may be mentioned spears and guns from the battlefield of Omdurman and some Shilluk spears, while the interesting exhibits of antiquities include faience cups from the Nuri pyramids, Ethiopian and Meroitic beads, Kerma bronzes, and black-topped red ware cups. Pictures and photographs also play their part in an exhibition which gives a notable record of the Sudan as it is to-day and of its potentialities.

This review of the exhibits of the Sudan would be incomplete without mentioning the financial support the Sudan exhibit has received from the following:—Messrs. S. Pearson and Son, Ltd., the Sudan Plantations Syndicate, Ltd., the Nile Congo Divide Syndicate, Ltd., Messrs. James Laing, Son and Co., Ltd., Messrs. Ransomes and Rapier, Ltd., Messrs. THE SENNAR DAM.

A Great Engineering Achievement.

To many people at home the brief message that reached this country from the Sudan last week announcing that the dam that is being constructed on the Blue Nile at Sennar has been raised to a safe height in time for the July floods will cause no greater emotion than the report that the monsoon has broken, for which all India waits with an annually recurring anxiety. Actually it records an outstanding triumph for British engineering, for it has been a question for the past six months of a

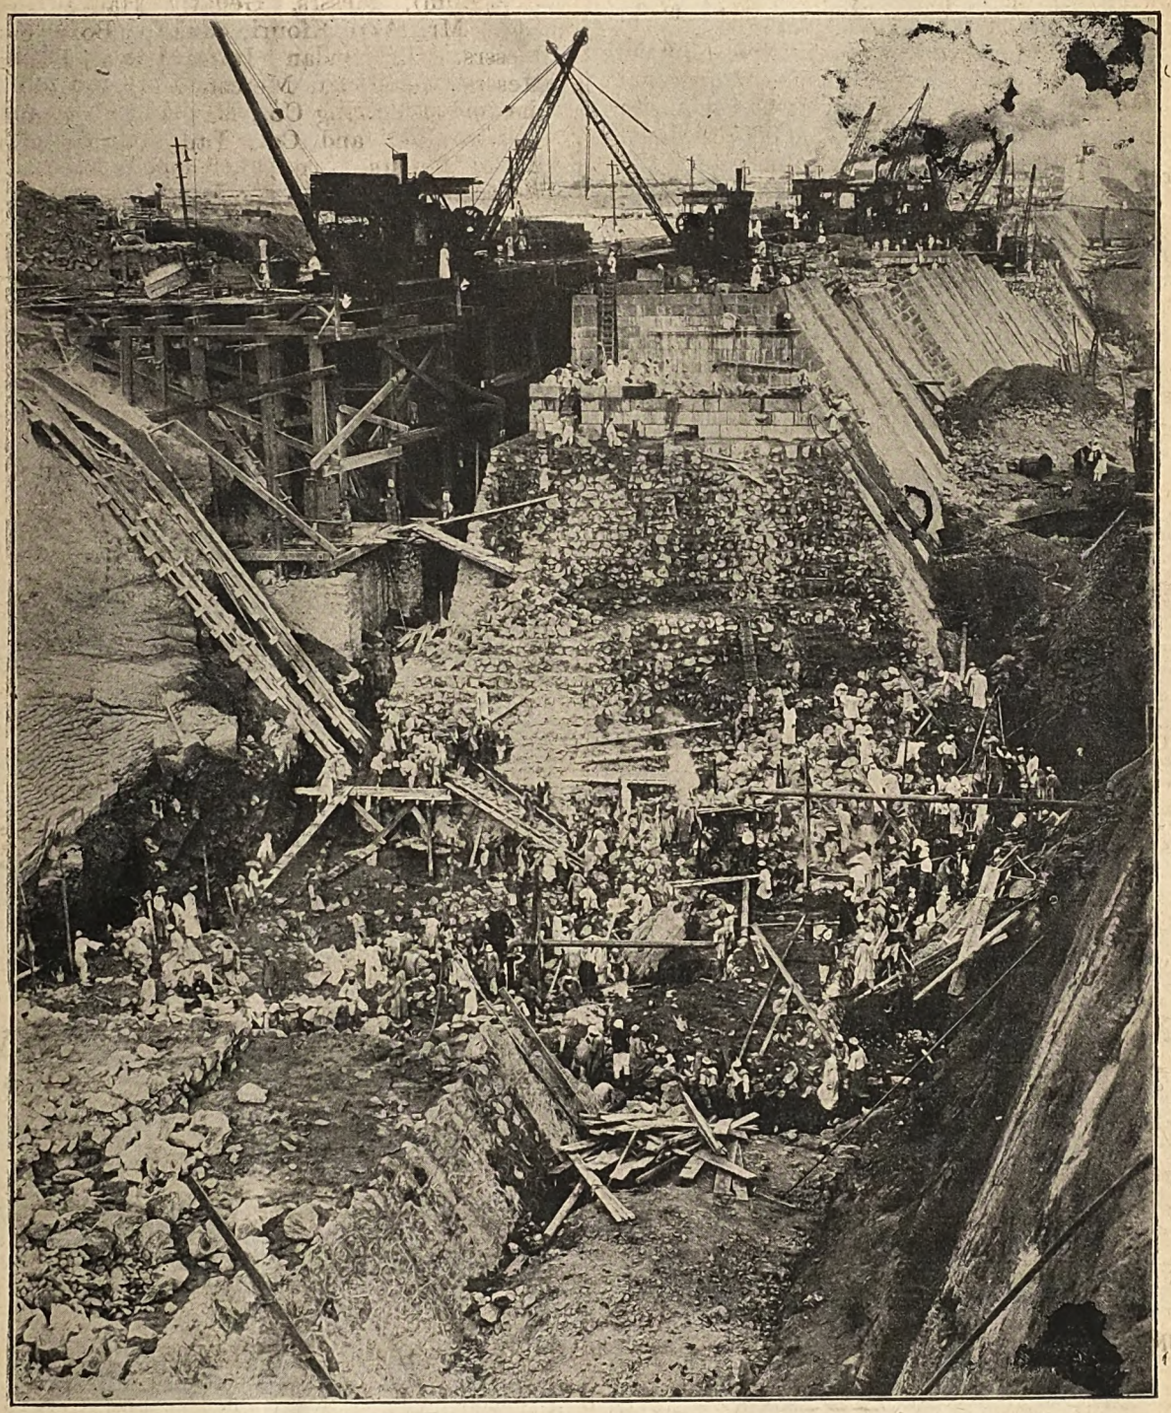
fight against time, in which there has been no possibility of a respite even of a couple of weeks or so. Failure would have been fraught with serious consequences, for it would have meant delay in the carrying out of a scheme which will transform the face of the region which the dam will enable to be irrigated, will appreciably increase the world's cotton production, and will add enormously to the wealth of the Sudan.

and one-third to green crops, the remaining third being allowed to lie fallow. Considerable progress has already been made with cotton growing in this area, about 20,000 acres (one acre is rather less than a feddan) having been put under this crop, the water being supplied from the Nile by pumps. The dam will also serve for the storage of water during the period of the spring when the natural flow of the river is not available for the Sudan.



THE CONSTRUCTION OF THE GREAT DAM ACROSS THE BLUE NILE AT MAKWAR.

Messrs. S. Pearson and Son, Ltd., the present firm of contractors, took over the construction of the Sennar Dam in December, 1922; it is due to be finished in July of next year. The main object of the dam is to raise the level of the river to a point which will enable the water to flow into a main canal, and thence into branch canals, so as to permit of the irrigation of 300,000 feddans in the Gezireh. The intention is to devote one-third of this area annually to cotton cultivation,

The construction of the dam is a vast enterprise, and the undertaking will certainly rank with the chief works of this kind that have marked the civilising influence of Great Britain, and very possibly indeed may be considered as the most remarkable of them. Some civilisations have left as their memorial and as a hostage to immortality strange edifices like the hill fortresses in India and the Pyramids in Egypt; outside Italy the Romans left more useful

Digitized by Google

evidence in the shape of wonderful roads, which they constructed for military purposes; we shall be remembered by monuments of a more altruistic nature designed primarily to benefit the regions which give them place. A few figures will serve to emphasise the nature of the present undertaking. The dam will be 3,300 yards in length, and will result in the formation of a reservoir about 50 miles long, the capacity of which will be 140,000 million gallons. The dam will stand 26 metres above the bed of the river, and its height from its lowest foundations will be 36 metres. It will contain 550,000 cubic yards of masonry, and its total weight will be nearly 1,000,000 tons. There will be eighty sluices in the principal structure and fourteen for the main canal regulator, seven of which will provide the requisite water for the irrigation of the 300,000 feddans. The top of the dam is to serve as a bridge for the railway that will link up Gedaref with El Obeid. The canalisation scheme will comprise about 1,000 miles of canals and 10,000 miles of field channels.

These are briefly the main details of the enterprise, but no mere narration of facts can bring out the enormous importance of the undertaking, the prodigious difficulties under which it is being carried out, and, it may be added, the romance of one of the most vivid chapters in connection with the development of the Empire's resources. The completion of the dam will literally open a new phase in the history of the Sudan. It will mean that a tract of territory about 60 miles in length, or rather farther than from London to Cambridge, of great potentialities, will be made available to the cultivator, and that in a short space of time the comparatively limited cotton production of the country will be greatly increased. The task of developing the 300,000 feddans is naturally no light undertaking. The area is being divided into twenty stations of about 15,000 feddans each, these stations being self-contained, and in the coming October ploughing is to be started on an area for which a water supply will be available from the dam in the first year.

The difficulties that have had to be overcome in constructing the dam have been of a most serious character. In the first place, there has been the question of transporting the necessary machinery and tools to the spot, no light task in itself. Then the granite used in the dam has had to be transported from a hill some 35 miles away. The labour question has also been a problem. It has not only been a matter of recruiting the necessary staff, but of housing them, and, in fact, of providing all the necessary facilities of life in a region where they were lacking, for Makwar, where the dam is, was only a tiny village. This hamlet, if so it can be called, not long ago entirely obscure, has now had fame thrust upon it, and from insignificant proportions has developed almost in a flash into a small town of several thousand inhabitants—a town of attractive little houses with pleasant gardens. Actually some 19,000 men are engaged on the dam, half of whom are Sudanese and half Saidis. The organisation rendered necessary in connection with the work, difficult as it has been, has been light compared with the problems encountered in the actual work of construction. It has been throughout a race with inexorable time. As already mentioned, the work began in December, 1922. In the river at the site of the dam there is a small island, and this facilitated the work in so far as it enabled the engineers to lay the foundations in two sections. The west channel was first dealt with, and the foundations there were completed and part of the sluices constructed before the advent of last year's floods. This season's work has been devoted to laying the foundations in the other section, and to bringing the dam to a height which would enable it to withstand the July floods. It often happens in engineering work of this nature that the nature of the terrain presents serious difficulties, and in this case one small section of the river bed has occasioned no little trouble. When it is a question of a fight with time, as it has been for the past six months, delay of any kind is serious. Happily, the difficulty was overcome, the dam has reached its scheduled height, and the next season will be devoted to its completion, which it is certain will now take place within the period allotted to the work. This season's achievement is one on which Messrs. S. Pearson and Son, Ltd., and their director, Mr. F. T. Hopkinson, who is in charge of the work, are entitled to the heartiest congratulations.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Sudan at Wembley.

Elsewhere in this issue will be found a description of the exhibits of the Sudan at the Exhibition. It will, I think, be admitted by all who have seen it that for distinctiveness the Sudan Court will bear comparison with any other part of the Exhibition. It is certainly most picturesque with the charming little scenes illustrative of various aspects of the life of the country, and, what is more important, gives a wonderfully comprehensive glimpse of the Sudan as it is to-day and of its possibilities. The exhibits should, and undoubtedly will, serve the invaluable purpose of helping to concentrate public opinion at home on one of the most important regions in the Empire.

The Sudan's Products.

It has always been a weakness of people at home that they have failed to understand the need for works of development abroad, and this has been an admitted hindrance to progress in the past. It is essential that it should be adequately realised here exactly what the Sudan means to this country, and what, if present indications are anything to go by and the economic advance continues unchecked, it will come to mean in the future. At the present time the Sudan is practically dependent on a few commodities for its export trade—gum, cotton, and dura—and of them it need scarcely be said that it is to cotton that the country must look for the great development of its prosperity. The rapid development of cotton growing in the Sudan is of practically equal importance to that country and to Great Britain. For the Sudan it means a great accession of wealth in the future; for Great Britain (or rather for Lancashire) it means a prospect of relative freedom from the anxiety caused by dependence on the American cotton crop.

Empire Cotton Growing.

As has often been emphasised in these columns, this crop has been decreasing for a number of years, while at the same time internal consumption has been increasing, with the result that the margin available for export has tended constantly to decrease. Thus a situation has arisen which, if world consumption were normal, would make it very difficult for Lancashire to obtain the necessary supplies of the raw material. It is only so because there was no consistent effort in the years before the war to develop the cotton-growing possibilities of the Empire. If there had been, the present position could be faced with equanimity. Of course, for the reason stated—the restricted world consumption—there is no immediate prospect that Lancashire will have to go short of the raw material, and the great efforts that have been made in recent years in the Sudan and elsewhere (principally, of course, in the Sudan) to develop cotton growing—efforts which are now beginning to bear fruit—have to some extent relieved the situation, which will be still easier in a few years when the new areas in the Sudan are fully developed. But it must be emphasised that what is being done is not sufficient, and that there must be no halting until we are as near independence as regard supplies of cotton as it is possible for us to be, and for that reason it is essential that the public should be well educated with regard to the importance of the cotton-growing regions of the Empire.

Roumanian Mining.

The Roumanian Mining Law Bill, concerning which there has been a good deal of discussion, has now been passed, after undergoing amendments, and as it now stands it is impossible to take exception to it as likely to hamper the work of the oil companies. "Acquired rights" are guaranteed under the new law, which means that the companies will be able to carry on the work of development on their existing lands as before. It is only in the case of new concessions that the new régime applies, and in this case there is no barrier to the introduction of foreign capital. The law has for its object the safeguarding of Roumanian rights, and it is well that it has been so modified that it is unlikely to have the effect of imposing a handicap on foreign enterprise, for Roumania is not in a position to utilise her vast oil resources herself, and if she is to obtain the fullest advantage from them she must have external assistance.

Bank of British West Africa.

The report of the Bank of British West Africa for the year ended March 31 shows a further slight reduction in earnings, the net profits being £95,990, as compared with £100,574 for 1922-23, and £105,936 for 1921-22; £34,690 was brought forward, making the disposable balance £130,680, as against £134,690. A dividend of 5 per cent. is proposed, the same as before, absorbing £60,000; £25,000 is to be placed to the contingency fund, and £10,000 to premises, etc., leaving £35,680 to be carried forward.

COMMERCE AND INDUSTRY.

YUGOSLAVIA.

Liubliana, June 18.

The Economic Position.

The Minister of Finance, M. Stojadinovitch, recently made an important statement to the editor of the *Politika* with regard to Yugoslavia's economic position. The main points of the statement were as follows :—

The great inundations from which the country suffered during the past winter and spring did immense damage, but this has, however, been almost entirely remedied, thanks to the timely precautions of the authorities. To give but one instance, one hundred truck-loads of maize and eighty-two truck-loads of wheat were distributed in the Banat (the grain-growing district between the Danube and the Tisza and part of the so-called Vojvodina) in order to replace the seedling crops that had been washed away.

The harvest itself bids fair to be excellent. The heavy rains were very beneficial in the hilly and mountainous regions. It must, above all, be remembered that the area under cultivation is considerably greater this year than last, which is mainly due to the fact that the early, unfortunate results of the Agrarian Reform in the Vojvodina have now been overcome. The newly settled smallholders have learnt to farm their land to better purpose, and this year the best wheat is to be seen in the fields of the ex-volunteers who were given land in that region.

Special success is this year attending the effort to encourage the cultivation of the sugar-beet. So far Yugoslavia has had to import from abroad one-half of the sugar she requires. But this year the sugar-beet harvest promises to be so rich that the sugar factories will scarcely be able to deal with all the beet, and something like one thousand truck-loads of sugar are likely to be available for export.

The tobacco crop promises equally well. The peasants go in more and more for the cultivation of tobacco, and, whereas after the harvest of 1922 only 500,000 kg. of tobacco were available for export, that figure is likely to be increased tenfold this year. This means, of course, a corresponding increase in the revenue of the State, which has the monopoly of the tobacco trade.

Nothing reflects more clearly the growth abroad of confidence in Yugoslavia than the British loan of £300,000 which has just been concluded between the Monopolies Administration and a group of British firms.

Yugoslavia's export trade will continue to meet with encouragement. To this end the export duties will again be appreciably lowered, and the country, as regards its commercial policy, will approach nearer to free trade.

There is no valid reason at all for the present fluctuations of the dinar. The number of bank-notes in circulation has been reduced by half a milliard during the course of this year, viz., from 6,000,000,000 dinars (rather less than twenty million pounds) to 5,500,000,000 dinars. Exports have gone up considerably. During the first three months of 1923 they amounted to 753,000 tons of a total value of 2,000,000,000 dinars, whereas during the corresponding three months of 1924 they had risen to 976,000 tons of a total value of 2,786,000,000 dinars. The State revenue shows a similar increase. In January, 1923, it amounted to 583,000,000 dinars, and in January, 1924, to 783,000,000, an increase of 200,000,000 dinars. In conclusion, exports are increasing, the State Budget has been balanced, and the amount of paper money is being reduced. These are three incontrovertible proofs of the value of the dinar.

Company Meetings.

GREAT INDIAN PENINSULA RAILWAY.

Growth of Traffic.

The one hundred and forty-ninth half-yearly general meeting of the Great Indian Peninsula Railway Company was held on June 27 at the company's offices. 48, Copthall Avenue, E.C. Sir Charles H. Armstrong (chairman of the company) presided.

The Secretary (Mr. R. H. Walpole) having read the notice convening the meeting,

The Chairman, in the course of his speech, in moving the adoption of the report and accounts, said:—You will have seen from the report that the position of the railway has improved very materially, and that surplus profits have been earned. Gross earnings, it is true, were 20½ lakhs, or 1.36 per cent., less than in 1922-23, but, on the other hand, expenditure declined by 132 lakhs, or 11.73 per cent., and this has resulted in net earnings of about 490 lakhs, as against 378 lakhs a year ago, an improvement of 11¾ lakhs, or 29.54 per cent. Gross earnings a year ago of just over 15 crores were a record, and, although we have not earned quite as much during the past year, we are over a crore ahead of 1921-22 and 6½ crores better than ten years ago The steady growth of traffic during the past decade is very encouraging, and although increased receipts of the past two years are due in some measure to higher rates and fares, there can be little doubt that traffic is steadily increasing, and, if trade conditions are favourable, it will continue to increase.

After taking into account the interest charges on debentures and advances and loans from the Secretary of State, which amount altogether to 364 lakhs, there is a profit of a little over 89 lakhs, of which the company's share for distribution is one-twentieth The amount due to us has been remitted at 1s. 4 29-32d. exchange, realising £26,722 7s. 5d., and out of this we propose to pay a dividend of one-half per cent. in addition to the 1½ per cent. guaranteed for the six months, which makes a total dividend for the year of 3½ per cent. You will have noticed from the report that out of surplus profits we are carrying forward a balance of over £10,000, as our contract with the Secretary of State ends a year hence, and certain expenses and adjustments may have to be provided for in our final account.

The total number of passengers carried during the year was 39½ millions, against nearly 41,000,000 in the previous year, and our total receipts from coaching traffic were less by 11½ lakhs. I may observe, however, that the falling off in passenger traffic occurred almost entirely in the first six months of the year, the figures for the last six months showing only a trifling decline. The improvement has continued since the year ended, and, if there is again a good monsoon, I look for a steady increase in numbers as the year progresses. I may say that by the mail before last the agent advised us that we had carried during that week over 1,000,000 passengers, which, I believe, is a record for this railway. By the last mail the figure was 978,000—in both cases about 225,000 ahead of the previous week in the corresponding period of last year. You will see, therefore, that our traffic is making good progress.

As regards the current year, all I can say at present is that for the first 2½ months we are ahead of last year's traffics by 26 lakhs of rupees, and we have therefore made a good start. The future depends to a very great extent on the monsoon, which set in quietly in Western India about ten days ago. If good harvests are again reaped, trade ought to improve, and, if so, traffics may continue to expand. An increased export trade is, however, largely dependent on more settled conditions in Europe and improved exchanges, which do not seem very likely at present. The import trade of India may also improve, but prices of many things are still a good deal higher than they should be, and so long as this is the case India, in all probability, will continue to buy from hand to mouth, as has been the case for some time. Stocks of imported articles are running down, however, and as supplies must be kept up a steady trade in most things is likely if the monsoon gives good rain all over the country. The import trade of the country must, however, to some extent be affected by the high Customs tariff which now prevails. India, although a rich country collectively, is relatively poor individually, and if the cost of necessary articles is unduly enhanced, and the cost of living thereby increased, the general trade of the country, both import and export, must suffer.

In some directions, I regret to see, India is now drifting into extreme protection, and the Tariff Bill lately passed, giving excessive protection to the steel industry, is bound to have an injurious effect on the general development of the country. It will also increase the cost of living, and this in its turn will affect many other things. The railway cannot expect to benefit from changes of this character, which will affect the cost of construction and repairs, besides limiting, in all probability, the volume of the traffic that it will have to carry.

The report was unanimously adopted.

EGYPTIAN HOTELS.

A Successful Year.

The twenty-seventh annual general meeting of the Egyptian Hotels, Ltd., was held on June 30 at the registered offices of the company, 11, Ironmonger Lane, E.C. The Right Hon. Lord Claud Hamilton, P.C. (chairman of the company), presided.

The Chairman said: I presume you will, as usual, take the directors' report and accounts as read. We have the satisfaction of knowing that

INDO-EUROPEAN TELEGRAPH COMPANY
(LIMITED)
Through Communication Restored
QUICKEST ROUTE TO
S. RUSSIA, TURKEY, IRAQ, PERSIA, INDIA AND FAR EAST

Digitized by Google

the company has enjoyed a very successful year. Shepheard's Hotel has earned a profit of over £58,000, equalling the results of the year ended April 30, 1920, which was then a record year. The Semiramis Hotel has also had a very good year, and we are able to bring into our profit and loss account the sum of £10,256, which has been received in reduction of advances to the Semiramis Hotel written off in previous years. As you are aware, in past years considerable sums have been provided to write down the book value of our investments in and advances to the Semiramis Hotel. In view of the improved circumstances, the directors feel justified in bringing into our profits the amount repaid by the Semiramis Hotel during the year. This makes a total profit on the hotels for the year, after providing for taxation and bad debts, of £68,023, and after taking into account interest and dividends received, administration and office expenses in London and Cairo, there remains a net profit for the year of £70,000 6s. 4d., the highest profits recorded in the history of the company.

Turning to the balance-sheet, it will be seen that the book value of our freehold and leasehold land and buildings remains unaltered. Plant, fixtures, and furniture has been reduced by the sum of £5,000, which has been written off as depreciation. Our interest in the Société Suisse Egyptienne des Hôtels stands at a lower figure this year by some £4,400. This is due to a reduction in the current indebtedness between Semiramis Hotel and Egyptian Hotels, Ltd., apart from the repayment of £10,256 on advances.

The company's investments, which stand at cost, show very little changes compared with last year, the only difference being a slight decrease in our holding of first debentures in the Société Suisse Egyptienne des Hôtels owing to the redemption of a portion of our holding in these debentures. The market value of our holding in Egyptian Government securities, which stand in the balance-sheet at £39,101, was at the date of the balance-sheet £45,037, showing an appreciation of £5,936. Cash at bank and in hand amounts to £121,082, as against £82,630 last year. It will therefore be seen that, including our holding in Egyptian Government securities at their market value, we have cash and readily realisable securities of a total value of £166,119, so that our financial position is sound. Our liabilities are small. We owe only £5,200, which includes provision for taxation. Our special reserve account stands at £35,000, and it is proposed to increase this to £50,000 by the appropriation of £15,000 out of this year's profits. The balance on profit and loss account is £73,083, making with the special reserve account a total of undistributed profits exceeding £108,000.

Last year I dealt with proposals to which reference had been made in the directors' report for the amalgamation of the company's undertaking with that of the Société des Grands Hôtels d'Egypte, and dealt at some length with the terms which were then proposed. Discussions are proceeding, but no definite agreement has yet been entered into, and the directors are not therefore in a position to take steps to summon meetings of the shareholders for the purpose of considering the proposed amalgamation I now move that the directors' report and accounts for the year to April 30, 1924, be received and adopted.

Mr. Charles Baehler seconded the motion, which was carried unanimously.

INDIA'S TRADE IN 1923-24.

(*Concluded from page* 670.)

The total imports of motor-cycles (including scooters) rose from 866 to 1,182, and the values from 8½ to 9¼ lakhs. The United Kingdom fully maintained its predominant position in this trade, and supplied 831 units, valued at 6 lakhs. The imports from the United States of America fell from 261 to 228, but the value rose from 2.5 to 2.68 lakhs.

There has been a slight reduction in rubber tyres for motor vehicles from 106 to 100 lakhs, although the number of tyres imported rose from 157,807 to 174,770. British makers improved their position and supplied 60,000 tyres, valued at 35 lakhs, France supplied 54,589 tyres, valued at 31 lakhs, while the United States of America shipped 25,798 tyres, valued at 13½ lakhs. There has been an increase in the shipments from Germany from 9,139 tyres, valued at 6½ lakhs in 1922-23, to 16,713 tyres, valued at 11 lakhs, in the year under review.

Paper and Pasteboard.

The total trade in packing paper fell from 26½ lakhs to 21 lakhs. The leading supplier is Germany, the imports whence rose slightly to 6¾ lakhs. Imports from the United Kingdom fell from 8½ to 4½ lakhs, those from Sweden rose slightly from 3¾ to 4 lakhs, while shipments from Norway were reduced from 2¾ to 1½ lakhs. As regards printing paper there was a slight diminution in the total trade from 96 to 86 lakhs. The British share fell from 35 to 28 lakhs, that of Norway from 30 to 20 lakhs, whereas Germany more than doubled her shipments from 10 to 22 lakhs. The imports from other countries are of small account. The total trade in writing paper and envelopes fell from 62 to 56 lakhs. The British share receded from 43 to 35 lakhs, but German shipments rose from 5 to 8 lakhs, and those from other countries from 6 to 7 lakhs. It will be observed that the Germans are gradually regaining their pre-war share of the trade in all types of paper.

Provisions and Liquors.

The total imports of provisions have remained fairly stationary, the variation being from 277 to 281 lakhs. The share of the United Kingdom fell slightly from 134 to 130 lakhs. The trade of the Straits Settlements (mostly native produce and goods in transit from Australia) remained stationary at 41 lakhs. Dutch shipments advanced from 16 to 27 lakhs, but those from the United States of America fell from 28 to 24 lakhs, and direct supplies from Australia and New Zealand shrank from 18 to 14 lakhs.

There has been a slight decrease in the total trade in ale, beer, and porter from 83 to 78 lakhs. British shipments fell from 57 to 51 lakhs, but those from Germany advanced from 20 to 22½ lakhs. It is noteworthy that German light beers are regaining their position in the Indian market. The total imports of spirit fell from 225 lakhs to 206 lakhs. The British share diminished from 157 to 136 lakhs, whereas that of France increased

from 37 to 39 lakhs. Imports from Germany, America, and other countries remained stationary.

Dyestuffs Obtained from Coal Tar.

The total trade advanced slightly from 247 to 251 lakhs, which was accounted for by increased imports of alizarines. Germany has almost regained her pre-war predominance in this trade, but imports from that country fell slightly from 184 to 181 lakhs. British supplies advanced from 20 to 27 lakhs, and those from Holland (probably transit trade from Germany) rose from 14 to 18 lakhs. American shipments remained fairly stationary at 11 lakhs.

Coal.

There has been a considerable reduction in the imports of coal from 882,000 tons to 592,000 tons. This reduction is almost entirely in British coal, the shipments from the United Kingdom having been reduced from 496,000 tons to 79,000 tons. The Union of South Africa, however, increased its share from 254,000 tons to 274,000 tons, Portuguese East Africa advanced from 34,000 to 169,000 tons, and Australia advanced from 24,000 to 61,000 tons. A determined effort is now being made—so far without much success—by the Bengal Collieries to regain their position in the Bombay market, but in view of the high transit rates, both by rail and sea, and also in view of the fact that the calorific value of Bengal coal is far below that of Cardiff or African coal, it is doubtful whether they will have much success in markets such as Bombay, Karachi, or even Colombo.

COTTON AND COTTON GOODS

THE EGYPTIAN MARKET.

Futures Quiet But Steady.

The Alexandria Commercial Company in their report for the week ended June 19 state :—

During the past week the market has been quiet but steady. The net changes since last Thursday are :—Sakellarides 0.10 dollar down for July, 0.03 dollar up for November, 0.10 dollar down for January. Ashmouni 0.10 dollar down for June, 0.35 dollar down for August, 0.48 dollar down for October, 0.48 dollar down for December. There have been no large fluctuations. Old crops are steadily losing interest, and the open July position probably does not exceed 25,000 kantars. New crops have not attracted much attention during the past week, and the volume of business has been small; November has again been the better market of the new crop options. The trade demand has been poor, and the amount of business actually put through has been small. The bulk of the inquiry continues to run on Fully Good Fair and above. The week's receipts amount to 2,378 krs., against exports 76,974 krs.; the stock stands at 699,976 krs. Spot : Total sales this week amount to about 4,100 bales, of which we estimate 3,100 bales Sakel and 1,000 bales Uppers.

Sakellaridis.—The demand, as during the past few weeks, continues to be concentrated on Fully Good Fair and Fully Good Fair to Good. In the latter part of the week rather more interest was shown in Fully Fair to Good Fair and Good Fair, and consequently the price of spot as compared with contracts has somewhat stiffened for these grades. Other grades remain about unchanged.

Uppers.—Business has been done in all grades from Fully Fair to Good. For cotton below Fully Good Fair prices, as compared with contracts, are somewhat dearer.

Crop 1924.—The crop continues to make good progress. Temperature has been somewhat higher than normal, but water supply has, in general, been ample. The discharge from the Assouan reservoir shows a slight increase.

LIVERPOOL COTTON REPORT.

Demand Only Moderate.

Messrs. Reynolds and Gibson report as follows for the week ended June 25 :—

Egyptian Spot.—Although the spot sales show a substantial increase over last week, the demand cannot be classified as very satisfactory. In the first place, quite a slice of the business transacted has been for export, Russian buyers taking a good line of Uppers, 500 bales at 22.00d., in addition to quite good purchases of Sudan and Tokar Sakel. Local spinners continue to be seriously handicapped by the large difference in old and new crop values, and find their operations in yarns much hampered thereby; they will only pay the old crop basis when forced into the market, and a hand-to-mouth policy will probably be strictly enforced for the next few weeks. The bulk of the business transacted, with the exception of the Uppers mentioned previously, has been in Sakel cotton grading F.G.F. to Good, all other growths and grades finding little interest. Holders of the lower qualities show increasing keenness to let their cotton go, but price restrictions so far have failed to achieve the desired result. The spot quotation of Fair in the different growths still appear on the high side, although they have been cheapened with the other grades during the week. More interest has been shown in Sudan and Tokar Sakel, and the basis of these qualities shows material reductions. White Sudans have been neglected. Estimated sales of Egyptian 2,400 bales. Sudans 1,150 bales.

IONIAN BANK, Ltd.

LONDON, GREECE, EGYPT.

The only British Bank or Financial House in Greece originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia, and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has agencies throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

In Turkey the Bank has a branch at Constantinople.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment, of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALI-IMLI PURE WOOL

Makers of the famous Lali-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Great-coat Cloths. All requirements in Wool at lowest prices consistent with quality.

Cawnpore Woollen Mills Co., CAWNPORE.

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.

The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

Cawnpore Cotton Mills Co., CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO., CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mills Co., DHARIWAL.

BUSINESS DIRECTORY.

NOTES OF THE WEEK.

Bulgarian Reparations.

Elsewhere in this issue a correspondent calls attention to a difficulty in connection with the payment of Bulgarian reparations. The country is able to provide the fifteen hundred million leva which are the equivalent of the sum in gold required for this year's instalment, but cannot convert this amount into gold without seriously affecting the rate of Bulgarian exchange. The problem is on all fours with that presented by German reparations, for the payment of which a special commission of experts has had to devise ways and means. It is evident that Bulgaria must receive similar consideration, but whether the suggestion put forward by our correspondent offers the most practical solution of the difficulty is a question for experts to decide. The dilemma emphasises the necessity for keeping the Inter-Allied Reparations Commission on a footing that will enable it to give practical advice and assistance to Bulgaria in all financial matters. In our issue last week reference was made to the difference of opinion that had arisen between the British delegate and his French and Italian colleagues on the Commission. The British delegate wished to reduce the charge to the Bulgarian Government to a considerable extent, while leaving the Commission sufficiently strong to carry weight in Bulgaria. The French and Italian delegates, however, favoured merely a skeleton Commission, which would be in a position to do little more than to register acceptance of moneys received, and would be quite unable to carry on the good work hitherto done by the Reparations Commission. The question, it is understood, is still under discussion.

Egypt and the Negotiations.

Unless some untoward event occurs in the near future, there is now reason to suppose that the negotiations between Zaghloul Pasha and the British Government will ultimately take place. Mr. Ramsay MacDonald's invitation conjured up all manner of misgivings in Zaghloul Pasha's mind, and it has proved a laborious task and one requiring much patience to remove all these. The Egyptian Prime Minister was afraid that he might find himself committed to a rigid agenda, which would not allow him to discuss matters of special interest to Egypt. He saw in the representation of the Sudan in the British Empire Exhibition a subtle attempt to prejudice Egypt's case; he imagined that the acceptance of the invitation might be taken to imply acquiescence in the legitimacy of the 1922 Declaration. One by one all these qualms have been met straightforwardly by the British Government, and, as Zaghloul Pasha has not raised any further obstacle, it is hoped that eventually he will state that he accepts the invitation to come to London. In the meantime the date originally contemplated by the British Government for the conference has passed. Zaghloul Pasha is understood to be anxious to spend some time at a Continental watering-place, and if he does not find it convenient to be in England before the end of this month he will not expect the negotiations to take place until September, after the holidays.

The Little Entente.

The Foreign Ministers of the Little Entente meet this week in conference at Prague, and will pass in review most subjects of common interest to the three States. According to the published programme, the agenda comprises five items:—Current international questions; the relations of the three States with their neighbours; financial reform in Austria and Hungary; the next agenda of the League of Nations' Council, including military control in ex-enemy countries, disarmament, and treaties of mutual assistance; pending Inter-Allied negotiations on the subject of Reparations. It will be too soon to discover whether the change of Government in France will have any repercussion on the Little Entente. So long as it remains identified with its original basis, it is essentially a warlike agency for peace; it looks to maintaining peace in Central and South-Eastern Europe by threatening war. This is the Poincaré policy, to which Czecho-Slovakia has been won over and which M. Pashitch has always preached. It serves its purpose, but it prevents the Little Entente from playing the far more useful rôle of a constructive peacemaker. What is wanted in Europe to-day is the

Digitized by Google

grasp of the hand of fellowship, not a row of bayonets from which are suspended placards of the *Es ist verboten* type. If M. Herriot can introduce a fresh orientation into France's foreign policy, it will probably be found that there is a strong body of opinion in all the countries of the Little Entente anxious to seize the first opportunity of making common cause with their neighbours in a general scheme of reconstruction based on active co-operation, instead of wasting time and money in duplicating Europe's police with a special force of their own.

Roumania and Bessarabia.

If the *Adcverul* of Bucharest is to be believed, the Roumanian Government is about to undertake a thorough-going reform of the Bessarabian administration. According to this organ M. Bratianu has realised that the present régime has alienated the Roumanian population of the province, and he hopes to regain the sympathies of the people by means of reforms and concessions. Unless this is merely an announcement of a "tendencious" character—a method of carrying on the political struggle not unknown to the Balkans—it may not be without its bearing on the conference of the Little Entente. Roumania is understood to have been disappointed in her hopes of support from Czecho-Slovakia and Yugoslavia in the event of finding herself embroiled with Russia over Bessarabia, and she can hardly wish to have her isolation in regard to this question emphasised at the coming meeting. The introduction of reforms in Bessarabia would probably remove all danger of the province's becoming a *casus belli*. Soviet Russia has offered to respect the verdict of an impartial plebiscite in Bessarabia, but the Roumanian Government refused to submit the fate of the province to this test. The promised reforms—in the event of the statement in the *Adeverul* being authentic—may rob a plebiscite of some of the disadvantages that it previously had in Roumanian eyes, although there was a genuine belief in Roumania that the Russian suggestion was merely a device for perpetuating unrest.

Air Operations in Iraq.

Some time has passed since the subject of air operations in Iraq was raised in the House of Commons, and a new Government is in power. Mr. Lansbury hoped, no doubt, to drive a nail or two into the coffin of the Royal Air Force, as far as their activities in Iraq are concerned, by taking up the question afresh with a Labour Ministry. He was anxious to know the number of casualties suffered by the bombers and the bombed during the last five months, and whether notice was being duly served on the civilian population before bombing operations took place. The answer was clearly not to his liking. Mr. Leach, Under-Secretary for Air, stated that there had been five bombing operations in the period referred to, and in each case, with one exception, two days' warning had been given to enable the inhabitants to withdraw from the encampments and grazing grounds that were to be attacked. The case where no warning was given was one of an attack by tribes on native police, in which one police officer and three police were killed. There had been no casualties among the Air Force and none among the natives had been reported. Mr. Leach reminded Mr. Lansbury that in areas where violence is habitual, air action, however regrettable the necessity for it, in many cases checks at an early stage disturbances which would otherwise cause great loss of life. In this connection he mentioned that a frontier tribe of the same type as those which Mr. Lansbury had apparently in mind recently killed 146 men and 127 women and children during a single raid, in the course of which all male prisoners and wounded, both men and boys, were put to death. Mr. Lansbury sought to make a point of the fact that the raid referred to did not take place anywhere near the villages that had been bombed; but the incident was cited merely to draw attention to the contrast between Mr. Lansbury's solicitude over bombing operations and what might be of frequent occurrence in Iraq if the Air Force had not proved such a powerful deterrent.

A Loan for Palestine.

An inquiry by Lord Raglan in the House of Lords last week elicited an interesting statement from Lord Arnold, Under-Secretary for the Colonies, on the subject of Palestine's indebtedness. As is known, the question of a loan for Palestine has long been under discussion, but hitherto the time has not been considered opportune for raising one. The British Government has agreed in principle to guarantee the loan. To meet the situation recourse has been had to advances from the Crown Agents, and these at present amount to £1,583,000. Up to December 31, 1923, the Palestine Government had incurred expenditure amounting to £1,861,000 upon services which it is proposed should ultimately be made chargeable to loan funds, the largest items being £1,178,000 for railway capital improvements, £299,000 for purchase of the Jaffa-Jerusalem Railway, £123,000 for telegraphs and telephones, and £104,000 for roads and bridges. Lord Arnold pointed out that certain Imperial assets had been handed over to the Palestine Government of a value provisionally fixed at £2,190,000, but for which the Palestine Government wishes to pay a considerably lower sum. In any case, payments for interest and sinking fund for whatever amount may ultimately be agreed upon will not become due until the finances of Palestine are in a condition to meet the charge. Lord Arnold concluded by pointing out that Palestine's indebtedness has been incurred almost entirely for extraordinary or capital expenditure, the normal Budget having been balanced each year since the Mandate came into operation.

The Indian Extremists' Position.

The outcome of the Extremist caucus which closed in India last week is apparently a famous victory for most, if not all, of the contending sections, and, without fuller reports of the proceedings than the cable has brought, we should not like to commit ourselves to a definite opinion on points of detail, but the general position is perhaps fairly represented by a remark we heard the other day to the effect that Mr. Gandhi has turned his platform into an umbrella. No one need now take his stand on the Mahatma's elaborate resolutions, or qualify for political leadership by making up his daily tale of homespun yarn, but it is still open to anyone to

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 52 of this issue.

Digitized by Google

take shelter under them until the storm of criticism shall blow over. That means that the original ideals have definitely lost ground among the more prominent politicians, but the next meeting of the full Congress must be awaited in order to know how far the change has penetrated downwards through the rank and file, who may conceivably assert a claim to influence the movement they finance. From one point of view we should like to see them do so, but there is so much important work waiting to be done in India that the elimination of the impracticalities of the last few years is getting rather urgent.

Legislatures and the Law.

The most piquant item of the recent news from India is that the Calcutta High Court has been moved for an injunction to prohibit the local legislature from considering a motion which the Government proposes to introduce. We have no intention of entering into the legal questions thus raised, but this form of procedure is so congenial to Indian mentality that, if the High Court finds it has jurisdiction—and it has never shirked responsibility—the position will become almost impossible, for business may at any time be held up until judges in India have reached a decision, and the Privy Council has decided whether their decision is correct. Subordinate legislatures have, of course, to expect, as the Dominions know so well, that a proportion of their work will in due course be declared unconstitutional, but judicial interference with pending business is a different matter, and, if the practice becomes established, the choice will apparently lie between amending the Constitution so as to stop it, and locating a bench of the Privy Council in Delhi, a course for which there is much to be said on other grounds.

Protection and Lobbying.

Among the details brought by the mail regarding the Protection debates in Simla, perhaps the most striking is the reaction of legislators to the pressure brought to bear on them by the industries concerned. Everybody knows that Protection means lobbying, and most of us have anticipated that, once started, lobbying would flourish in India, because it is essentially the procedure which prevailed throughout the centuries of Indian autocracy. What was not anticipated was that legislators would be quick to resent the procedure, and would be led to look critically into a measure they were at first prepared to accept without comment. It would be premature to build too much on this development, for, compared with most parts of India, Bombay is notoriously deficient in tact, and it is quite possible that the lobbying was too energetic for the taste of the more sedate North, but nevertheless the reaction strikes us as a distinctly hopeful sign. Legislators are everywhere subject to the pestering attentions of touts of every description, and even in politically advanced countries they show a curious reluctance to protect themselves against the nuisance, yet the remedy is in their own hands, and we should like to believe that the fact is already becoming realised in Simla.

THE WEEK AT HOME.

London, Tuesday Morning.

The Political Interregnum.

These are dull and apparently idle days. After much tuning up of the Press and a flourish of trumpets generally, one expected the international symphony of the Herriot-MacDonald and Soviet-Whitehall orchestras to begin, but still we hear nothing but the blaring discords of instruments rather in rivalry than in harmony. This, of course, is the pessimistic view: the optimist will assuredly talk of the big things that may—or may not—be going on under the surface.

It certainly looks, however, as if the present régime were but an interregnum between a sleep and a sleep. But then, these Russians and French are such difficult people. . . .

Freezing Our Blood.

In the House of Lords a day or two ago Lord Danesfort endeavoured to freeze our blood with the horrid story of Communist teaching in our Sunday schools. He produced some most terrifying specimens of Communist precepts that he alleged are being inculcated into the minds of the young, and asked for special legislation to deal with these iniquitous practices. He wishes, in fact, that summary jurisdiction be granted to nip in the bud these monstrous habits of the proletariat. This is the real Toryism, strong and very hearty.

But it is difficult to take it all very seriously. The introducer of these proposals was able to show no evidence upon the extent to which these nefarious doctrines are spreading over the fair land, nor was he or any of his supporters able to adduce any reasonable answer to Lord Haldane's comment that the ordinary laws of the land were sufficient to deal with seditious teachings. However, a certain type of mind will, one supposes, always believe in the existence of these bogeys; and, unheedful of our Lords Danesforts and the object of their whims, the world rolls on.

Peerages to Sell.

"If I had peerages to sell, and everybody paid his quota," as, in those beautiful days before the War, the delightful *Eyewitness* used to sing! We have been reminded recently that the good old game has been going on apace since the decease of the *Eyewitness;* nothing, in fact, seems to be able to stop it. The other day we read of a certain man who actually recovered £3,000 that he had given to some institution in the expectation that he would receive a knighthood. And of another man who, owing to unexpected financial stringency, asked for the return—and obtained it—of a large sum of money that he had paid in to the party funds. Which funds these were is being kept very quiet. But, of course, everyone knows.

The Builders' Strike.

While politicians prate of houses, the possibility and the necessity for more houses, the people who build them quietly go out on strike. At least, I think it is a strike, for one's head has become so confused recently with the quarrel between master builders and men and their eternal talk of lock-outs and strikes that one cannot be quite clear who is actually the more to blame.

In the public estimation neither side is receiving much sympathy, for the ordinary man recognises only too well that he is being made the milch cow by the builders. The difficulty appears to be that neither on the masters' side nor on the men's can a body of men be found to act as plenipotentiaries.

Digitized by Google

Wimbledon.

Wimbledon did not turn out to be such an American affair after all. One of the championships, the Ladies' Singles, remained actually with us, although it is at least doubtful, and therefore not so complimentary to the winner, Miss McKane, whether either of the two finalists would have beaten Miss Ryan, let alone her conqueror, Mlle. Lenglen. The Ladies' Doubles went deservedly to America, just as the Singles went to France. America, however, were not unlucky to get the Men's Doubles, for our pair, the holders, were very close to them when they were forced to retire.

Apart from the appearance of Norman Brookes, nothing more startling was seen at Wimbledon than the brilliance of the two French finalists, MM. Lacoste and Borotra. They, together with the unfortunate Mlle. Lenglen, enhanced their reputations as much as anybody. Otherwise the year will be remembered chiefly for its bad umpiring and for the illusions of the linesmen.

Henley.

It was a good Henley this year, despite the high, blustering weather. The racing was as excellent as the rowing conditions were bad, and the final day—Saturday—was brilliant. It was extremely pleasant to see Leander coming into its own once more—nothing in post-War sport had been more missed than the temporary eclipse of this famous crew. But they had to go all out to beat Jesus, head of the river at Cambridge, in the Grand. Times were slow, but that was due to the strength of the wind. They have made a new course at Henley (one mile 550 yards), and although everybody seemed to think it a great improvement, the fact that it is in a straight line from start to finish has its drawbacks.

Miraculous Cures.

This is an age of little faith, or, perhaps it is more accurate to say, an age in which the former blind belief in Religion has been transferred to Science. In any case, the doctor nowadays more often has the final word than the priest.

It was scarcely a surprise, therefore, to find that a majority of the fifty-four British medical men who met on Sunday to investigate an alleged miraculous cure to a girl at Lourdes should have given as a verdict "Not Proven."

But other cases of cure at Lourdes are to be submitted to medical opinion, and the result should be interesting.

Missing Trains.

The missing of trains is probably a psychological phenomenon not confined to office staffs and holiday seekers in this country. But the railway companies, the most passionate lovers that we now have in psychological and artistic research, are seeking to force the disappearance of this phenomenon upon Great Britain. The Great Western are altering their time tables in the hope of making the missing of a train an impossibility. They are standardising their trains, so that the times of departure will be definite, and therefore, they say, easy to remember. For the North, ten minutes past the hour; for Bristol, fifteen minutes past the hour, and so on.

This is all very worthy, but is it not a little too patronising and American? Do we really miss trains because we cannot remember the times of their departure? Is not the reason for catching the 10.13 instead of the 10.0 an altogether different one? If the Great Western could tell us every morning where we have left our tobacco pouch and our season ticket, and where (oh where) our studs have slipped to, the virtue of their scheme would be quite unassailable.

The Learning of English

It is a curious fact that many of our best writers, such as Mr. Wells, Mr. Shaw, and Mr. Churchill—all, of course, very different, and only mentioned together for convenience—bestir themselves from time to time to attack the teaching of English on a classical basis. The two novelists (one of them early became a playwright) have now nothing new to say, so that their words are no longer regarded in this matter; but the other day Mr. Churchill very nearly demolished the "Classics" case when he pointed out the modern absurdity of pronouncing, with the avowed object of making people speak better English, the verb *audire* as "Owdearie." That, indeed, was a nail on the head, but it may be that this "modern" pronunciation of Latin is a passing phase; and, in any case, nothing can destroy the fact that you cannot, as Mr. Churchill suggests we should, make English a basic study in our public schools, because it is not a basic language. ALTER EGO.

THE BRITISH-INDIAN UNION.

Luncheon to Lord and Lady Willingdon.

A large gathering assembled at a luncheon given in the Hotel Cecil on July 2 by the British-Indian Union in honour of Lord and Lady Willingdon. The Duke of Connaught presided, and paid a tribute to Lord Willingdon's service in India, first as Governor of Bombay and afterwards as Governor of Madras. He and Lady Willingdon had won golden opinions for their kindness and consideration to all classes, and the secret of their success had been the human touch which they had introduced in all their relations with the people of India.

Lord Willingdon, in replying to the toast of his health, testified to the courtesy and consideration that he had met with in India. He held the view that it was character and not colour that really mattered. The social relations between Indians and British in India were the basis of our troubles in that country. A difficulty in the way of mutual understanding was to be found in that reserve and self-consciousness which are associated with the British character, but Lord Willingdon pointed out that the Indian was also an extraordinarily reserved person, who found it equally difficult to make friends with the Briton. Thus it was always quite easy to meet Indians on official occasions from a business and professional point of view, but it was extraordinarily difficult to meet them on purely social lines. With the recognition of equality of opportunity of citizenship, and with an increase of opportunities of meeting together, Lord Willingdon believed that they would create a mutual tolerance, a mutual goodwill, and a mutual friendship which would be of inestimable value to India.

Lord Olivier, Secretary of State for India, proposed the health of the Duke of Connaught.

Among others present were:—

The Maharaja Jam Sahib of Nawanagar, the Maharaja of Rajpipla, the Earl of Midleton, Viscount and Viscountess Erleigh, Countess De La Warr, Sir D. M. and Lady Dalal, Sir Alfred and Lady Mond, Sir P. and Lady Rajagopala Chariar, Dr. Annie Besant, Lieut.-Colonel Sir M. Murray, the Right Hon. E. S. Montagu, Lady Emily Lutyens, Sir M. Bhownagree, the Right Hon. V. S. Sastri, the Hon. I. Freeman Thomas, Miss Forbes Robertson, Katherine Countess of Cromer, the Countess of Wemyss, Mr. and Mrs. Godfrey Isaacs, the Countess Roberts, Colonel the Hon. A. G. A. Hore-Ruthven, V.C., and Mrs. Hore-Ruthven, Mrs. Philip Snowden, Sir Thomas and Lady Bennett, and Sir Edward and Lady Boyle, Sir Ali and Lady Imam, Sir Grimwood and Lady Mears, Lady Cynthia Mosley, Sir Dinshaw and Lady Petit, Sir Stanley and Lady Reed, Sir Dorab and Lady Tata, and the Rev. and Mrs. R. M. Gray.

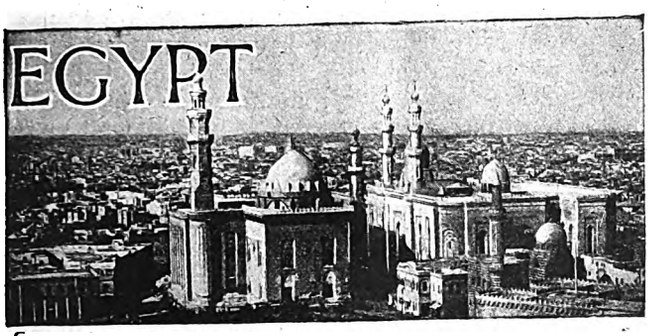
The Near and Middle East.*

From Our Own Correspondents.



Cairo, June 21.

The Residency.

The Residency transferred for the summer to Ramleh on Monday last, and the day after to-morrow the King and his household will follow suit. Although the Government announced earlier that, with the object of economising, it was not its intention to spend the summer in Alexandria, as had been the custom for the past twenty-five years, there is every reason to believe that as soon as Parliament rises for the summer vacation the Ministers and their staffs will move down to Bulkeley.

The Manchester Speeches.

The speeches made by Izzet Pasha at Manchester are still a great topic of conversation, and continue to arouse much favourable comment in Egyptian circles. In European circles, while his eloquence and courage are admired, it is pointed out that he appears to have made one great omission, viz., when criticisms of the Egyptian cotton crop were voiced by his hosts and fears as to the future were expressed, he made no reference whatever to this matter in his later speech. He would have scored a strong point if, as he could easily have done, he had taken upon himself to give some reassurance with regard to the cotton crop, and undertaken to emphasise to his Government the feelings of the spinners in this connection.

[As reported in THE NEAR EAST at the time, the necessary assurances on these points were given by Aziz Izzet Pasha immediately after the luncheon speeches.—ED.]

The Mahmal.

The dispute that arose last year between the Egyptian Government and King Hussein in connection with the medical mission that the former sent with the Holy Carpet, as a result of which the "Mahmal," together with the Egyptian contribution of grain and money was withdrawn, has now been settled, and the Egyptian caravan will leave this year as usual. It has been agreed that Egyptian doctors shall accompany the escort not as a special mission, but as medical attendants on the Egyptian pilgrims, and that special wards shall be reserved for the latter in the Hejaz hospitals.

The Heliopolis Murder.

The Court of Assize was occupied this week with the trial of the two students—one of whom had confessed—accused of murdering the airman Ryan at Heliopolis two months ago, and with the case against *Al Siassa*, the organ of the Liberal Constitutional Party. The Court acquitted the second student, who had pleaded not guilty, and sentenced his companion to fifteen years' penal servitude, the maximum penalty under the Penal Code, as he is under sixteen years of age.

The "Al Siassa" Case.

The *Al Siassa* case had to be suspended after three days' hearing owing to the difficulty which the presiding judge had in keeping order in court. From the very start feeling ran very high, and it must be admitted that neither the Parquet representative nor the counsel who intervened on behalf of Parliament, which, it is alleged, had been calumniated by *Al Siassa* articles, assisted to allay the excitement. The Parquet agent started off by insulting the counsel who were defending *Al Siassa;* next he went on to refer to "the English, our terrible oppressors"—this, with an English judge on the bench, may have been a subtle compliment to British judicial impartiality, but it was scarcely tactful—and finally he made what was really a political speech. Throughout defending counsel's speech, which the audience freely interrupted with loud contradictions, Parliament's counsel repeatedly evoked loud applause by intervening every time Zaghloul Pasha's name was pronounced, and protesting at the "sacrilege" in dragging "this martyr's name" into the case! So excited did the audience become, and to such an extent did they interfere with the hearing, that the President had at last to suspend the hearing until, as he said, "the police can take measures adequately to maintain order in court."

Industrial Troubles in Cairo.

Industrial trouble of the nature that so disturbed Alexandria a year ago has now made its appearance in Cairo. The men employed at the Belgian cement factory at Maasara, close to Helouan, struck and took possession of the works, from which for a long time it was impossible to dislodge them. Their complaint was, first, that the management dismissed seven of their number, and, secondly, that they wanted better hours and pay. They have now resumed work on the promise that the dismissed men will be reinstated and their grievances investigated by the authorities.

The aspect which the labour question is assuming in Egypt is a very serious feature in the present situation, and the assumption by Abdel Rahman Bey Fahmy, of Vengeance Society notoriety, of the chairmanship of the Egyptian Labour Syndicate, is regarded with much apprehension in responsible industrial circles. The trouble is that

there is no legislation dealing with the subject. A Conciliation Committee was set up some considerable time ago to deal with disputes, but the net result of its activities seems to have been that the men have gained the day all along the line, without, however, anything being done to regulate the future.

Until Government introduces legislation and adopts a fair attitude towards the employers it is to be feared that not only will the present unsatisfactory state of affairs continue, but there will be a danger of a serious aggravation of relations between Capital and Labour, and a set-back to industrial development. Many foreign enterprises are indeed finding it extremely difficult to carry on under the conditions which they have been compelled to grant to their men. Already the firm of Bos has had to close its works at Ismailia, thus throwing out of work over 500 persons, owing to its being impossible to carry on in the face of the demands of labour, and it is highly probable, unless the Government takes some action to regulate the question on proper lines, that foreign enterprises will have to shut down for a time.

Cairo, June 28.

The Sudan Declaration of Policy.

To say that the debate on the Sudan in the House of Lords and Lord Parmoor's declaration of the Government's policy came as a terrible shock to the Egyptians is to put but mildly the effect which they have had on them. That a Government belonging to the party which had always sympathised so keenly with them in their national struggle, and from whom they had always been led to expect so much, should adopt such an attitude had never entered for one moment into the calculations of the majority of Egyptians, and the consequent effect on them has been all the more overwhelming. In proportion as they have so far expected great results from the forthcoming negotiations, so now they view the outcome of the meeting between Zaghloul Pasha and Mr. MacDonald with pessimistic eyes; and, although the more irresponsible element feigns to be more uncompromising, more defiant, than ever, one can detect even among its members a distinct note of depression. In many circles it is considered that the question of negotiation had better be allowed to drop for the present, but, so far, there has been no indication that Zaghloul Pasha has abandoned the idea.

While the British Government's declaration of policy came like a bolt from the blue, it has for some little time been evident that some firm action was becoming necessary. The intervention of the home authorities has, indeed, been fully justified by the attitude adopted of late by the Chamber of Deputies towards this question. A large portion of practically every sitting during the past fortnight has been taken up with discussions on the subject of the Sudan, which have been based almost entirely, in the first place on telegrams addressed to the Chamber by a certain notorious agitator in Khartoum, Abdel Latif, announcing that a delegation from the Sudanese bringing documents testifying to the loyalty of the people towards Egypt and King Fuad, had been stopped at Wadi Halfa on its way to Cairo and turned back, that a demonstration to protest had been dispersed with bloodshed by the authorities, and that a member of the "delegation" had been arrested; and, secondly, on news of the holding of a meeting at Omdurman at which well-known sympathisers with the present régime passed resolutions of loyalty to the Sudan Government.

The reading of these telegrams in the Chamber excited the members almost to frenzy. Not for one moment was any doubt thrown on the veracity of the information contained in them; nor was any effort made to get the news they conveyed confirmed or to ascertain what the true facts of the case were. They affirmed the loyalty of the Sudanese towards Egypt, they once again showed the British authorities in the light of crushers of a national movement. That was sufficient for the Deputies, and they proceeded to outvie one another in the vehemence of their protests. The anti-British sentiments which they expressed could cause no surprise to anyone who has been a regular attendant at their meetings, which have latterly evinced such a growing Anglophobe, almost xenophobe, tendency, that one has ofttimes wondered whether the Chamber really wanted a friendly settlement with Great Britain.

Zaghloul Pasha, each day the question was raised, managed to get the Deputies under control, but only after, on the last occasion, practically endorsing their views as to the attitude of the Sudan authorities towards this "loyalty" movement. He declared that they could rely on his insisting on their rights in the Sudan in the course of the negotiations, which would, however, only take place if he received the assurance which he still awaited from the British Government that by agreeing to negotiate Egypt would lose none of her rights.

The aged Premier carried the day and obtained a unanimous vote of confidence, which was repeated when, after a heated debate, the credit for the compensation of foreign officials was agreed to by 116 votes to 10 (with 5 abstainers).

The Case of "Al Siassa."

The decision of the Assize Court in the case of *Al Siassa*, where the proprietor and one of the writers have been acquitted, and the editor was found guilty of libelling the Parliament and fined £E30, with P.T.1 damage to the latter—is regarded as a fair one. It is, however, not what the Zaghloulists wanted—a sentence that would completely squash opposition criticism—for it practically says that Parliament and Government may be criticised, but that in this instance, perhaps, the words used exceeded somewhat the limits of reasonable criticism. At the same time there is no doubt but that it establishes an important precedent, and will have its effect on the tone of the Press in the future.

Judge Pierre Crabites, the American member of the Mixed Court of First Instance in Cairo. He was boarding a tram to return to his home at lunch-time when he slipped, and the wheels went over his right leg, almost completely crushing the lower part. The Judge never lost consciousness, and, after a temporary dressing at the Continental, was conveyed to the Deaconess's Hospital, where late in the evening his leg was amputated half way up the shin. He is doing now remarkably well, and the sympathy which has been extended on all sides to his wife and himself in this painful experience, has been mingled with the warmest admiration for the cheerful—almost stoical—bravery with which he has borne his sufferings from the very moment the accident occurred to him.

BULGARIA.

Sofia, July 1.

M. Petkoff's Murder.

The assassination of M. Petko Petkoff, formerly Secretary General of the Foreign Ministry and a prominent Agrarian, has caused wide regret throughout Bulgaria. Petkoff was a bitter opponent of the Tsankoff Government, and it is to be feared that he was a prime mover in the Agrarian-Communist *rapprochement*. But the country has seen too many political murders since the War, and Petkoff's death has done no one any good. Upon the day following on the murder a young Macedonian named Karkalasheff, who had been employed as a police agent, was arrested and accused of the crime. It is stated that he confessed but afterwards retracted his confession. The Communist and Agrarian parties used the murder as an occasion for violently attacking the Government, and even went as far as accusing the latter of being the perpetrators. In general, the whole affair has made a most disagreeable impression, and it is to be hoped that there will be no more of its kind. The only cheerful point about the matter is the arrest of the supposed assassin, an event almost unique in post-War Bulgarian history.

The Macedonians.

More details are now coming to light concerning the recent voyage of Todor Alexandroff to England, France, and Switzerland. It appears that the Macedonian Revolutionary leader, although not discouraged by the reception he was accorded, has at least realised that there exists little sympathy in Western Europe for warlike movements.

He would thus seem to have come to the crossing of the ways. Either he must renounce revolutionary action and place his trust in the good will of the Great Powers and the League of Nations, or he must strike a blow, assisted, perhaps, by the Bolshevists. The latter contingency seems the most probable, and the fact that Stephan Raditch, the Croat peasant leader, has been at Moscow may prove to be an incentive to Alexandroff to consider co-operation with the Soviet.

The latter are only too willing to work with the Macedonians, as they would do anything to embarrass the Tsankoff Government, who have so far proved a nasty stumbling-block to Bolshevist intrigue in the Balkans. Despite the huge sums which Bolshevist agents continue to distribute, no tangible results have yet been achieved, and Macedonian collaboration would thus be doubly welcome. But as far as can be seen, the bulk of the Macedonians do not desire to have anything to do with the Bolshevists, as they realise that nothing good can come out of such a friendship. What is to be feared is that some of the extremer elements amongst the revolutionaries—men who have everything to gain and nothing to lose by the continuance of trouble—may become the tools of the Bolshevists.

Radoslavoff's Liberal Cabinet.

Last week the Cabinet approved of a Bill which will have the effect of pardoning the members of the Liberal Government who were in power when the world War began. This Bill will probably be brought before the Sobranye in two or three days, but it is necessary to note that neither Radoslavoff himself, nor General Boyadjieff, both of whom refused to return to Bulgaria to face their trials, will be pardoned. MM. Tontcheff and Dintcheff, two other Ministers who are considered guilty of corruption, are also excepted. As the other Ministers have been in prison for about four years, and as they mostly held minor positions, it is considered that they deserve to be pardoned. Incidentally, if the amnesty is approved, the Liberal Party is likely to support the Government more than hitherto.

GREECE.

Athens, June 27.

Greece and Bulgaria.

If Bulgaria is sincerely trying to make friends with Greece someone might point out to her that she is going the wrong way about it. After the Bourgas incident, when the two brothers Benzis, both well-known business men in that town, were ordered to leave Bulgaria simply because their presence there was resented by certain "Macedonian circles," there comes another incident of a decidedly more serious character. The persecution by the Bulgarian autonomists—a new name for *komitaji*—of the Greek population of the village of Vodena, in the Stenimaque region, has caused the Hellenic Government to lodge an energetic protest with King Boris's Government. The latter's reply, received two days ago, assures the Greek Foreign Office that every endeavour will be made to prevent a recurrence of the persecutions. From a diplomatic point of view Bulgaria's reply is, of course, entirely satisfactory, and although Greece does not for a moment doubt the good intentions of official Bulgaria, the recent activities of the "autonomists" make her treat these assurances with much scepticism.

A Navy Without Officers.

At the time of writing, one hundred and thirteen out of the 170 combatant officers of the Hellenic Navy are under resignation, and unless the dispute which has arisen between the Minister of Marine and the naval officers is settled within the next few hours, the cruiser Averoff and the other Greek warships told off to meet the British Fleet expected at Phaleron Bay to-day, will have to do so with practically no officers aboard!

The real cause of the trouble is the policy of favouritism alleged to have been adopted by the Minister of Marine, Captain Hajikyriakos, who, after distributing the best and "cushiest" naval

posts to his relatives and friends, is said to have promoted them to higher ranks, while officers who were entitled to promotion were left on the shelf merely because their views and ideas did not coincide with those of Captain Hajikyriakos. The naval officers' demands embodied in a protocol which the newspapers were not permitted to publish, are as follows:—

(1) Immediate resignation of Captain Hajikyriakos, the Minister of Marine.

(2) A civilian to be appointed Minister of Marine.

(3) That the Minister of Marine's private office be entirely abolished.

(4) That the Council of Admirals, which was done away with during the revolutionary régime, be re-established.

(5) The recent naval promotions to be cancelled.

As was only to be expected, these demands were rejected by the Government, and the Prime Minister, M. Papanastasiou, refused to receive a delegation of naval officers who called on him to expose their views. Among the leaders of the movement whose arrest has been ordered is Lieutenant Kountouriotis, son of the temporary President, Admiral Kountouriotis.

The Government and the Movement.

For the third time within three weeks M. Papanastasiou's Government obtained the confidence of the National Assembly, 158 voting for and 123 against. Before the vote was taken the Premier asked the Assembly for a *carte blanche* to deal with the naval officers' movement. Several Deputies, including many of M. Papanastasiou's followers, objected to the question being brought before the National Assembly on the ground that the movement being of a purely disciplinary nature, the only competent authority to deal with it was the Ministry of Marine.

It now remains to be seen how the Government will handle the situation. If, as it is generally believed, the naval officers stick out to the end and refuse to withdraw their resignations, the Minister of Marine will find himself in an extremely awkward position and may eventually have to resign.

CYPRUS.

Nicosia, undated.

The High Commissioner.

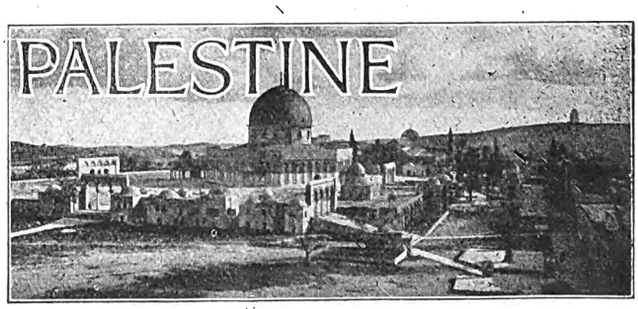
Sir Malcolm Stevenson is proceeding to England on leave. The papers express their hopes that he will explain to the Colonial Office the real needs of the island. Leaving aside the "unalterable desire" for union with Greece, they dwell principally on the general hope that tithes may be abolished. So much has been said on the subject lately that the taking of tithes is now regarded as a grievance. As regards alternative taxes, little is said; but it is represented that an income-tax would be quite inapplicable to Cyprus, as the number of persons, even in the towns, who keep accurate accounts of their income and expenditure "can be counted on the fingers of one hand." It is urged that any new taxes should fall with absolute impartiality on all classes of the people. An increase of import duty on all articles of luxury is of first importance.

The Exhibition and Cyprus.

There is no doubt that the British Exhibition should lead to a fresh start in Cyprus industries. It is felt that a better knowledge of each other between Britain and Cyprus is being brought about, and one paper goes so far as to say that Wembley will do more for Cyprus than the Government has done in half a century. Some lessons are certainly being learned by Cypriots. Information has been received from London that a great many articles could have been sold in the Cyprus pavilion had they been obtainable, especially, perhaps, silk work. There may be yet time to send more of this. The only industry which is fairly well represented, and of which a considerable quantity is being sold, is the lace called "Lefkara work," from the village where it has been principally made, which is always much admired. Many other articles would find a ready sale, and among them may be mentioned the excellent *Rahat-lokoum* ("Turkish delight"), which is remarkably well made in Cyprus. Wines cannot be sampled in the pavilion (as they could be in the Indian and Colonial Exhibition of 1886), but can be obtained in the restaurants. While these are hardly likely to find a profitable market in England in present circumstances, it may safely be said that raisins, if prepared by better methods, which would be easy, would be largely bought in London. Failure to give practical attention to this opening would be to neglect what would be of immense value to the large vine districts of the island.

The Tithe Grain.

With regard to the shortage in the cereal harvest, which it is calculated is over 20 per cent. less than that of an average year, a fresh proposal is being made as to disposal of the Government tithe. According to the present system, the tithe grain is sold to the highest bidders, generally town merchants, in large quantities. The greater part is generally exported, much, perhaps, being required for island needs, especially in a bad year. Then, later, higher prices have to be paid for imported flour. This is one of the causes of the indebtedness of her peasants. Some, again, is stored and sold at profitable prices by the merchants in the island. The *Phoni* advocates sales by the Government of small quantities, say, 5 to 10 bushels, to agriculturists and others. This would relieve the situation. If Government would agree to this, it would enable the poorer classes in towns and villages to buy on easier terms, and lessen the demand for foreign flour. The Government would not incur extra expense, as the storekeepers and employees have to be paid from harvest time till December or January, if not later.



Jerusalem, June 21.

Zionist Immigrants.

Some two months ago reference was made in these columns to the hope aroused in official Zionist circles that, as a result of the large influx during Passover of Jewish tourists of the petty commercial class, Jewish immigration into Palestine might soon be expected to include a greater proportion of this class, and that instead of, as hitherto, a predominance of the purely idealist,

but penniless and unskilled immigrant, Palestine would attract the self-supporting craftsman and tradesman. We now learn that this expectation has been realised. "The remarkable change," announces the local Zionist Executive, "in the psychological make-up and material equipment of the type of the Jewish immigrants coming to Palestine from Poland has been a subject of comment among immigration officials who have come in contact with them. In contrast with, and in addition to, the former class of immigrants, who were mostly young and penniless Chaluzim, every boat coming to Palestine at present brings its quota of persons of means, who are leaving behind them businesses of no mean standing. The Jewish merchant in Poland is prepared to leave the country with the first opportunity which presents itself, disregarding stern economic considerations. He believes in, and is prepared to trust himself to, his powers and his talents to adjust himself in a new environment with what money he is able to take away with him. The financial and commercial pressure which is brought to bear upon the Jewish merchants by the Polish authorities is one of the causes. Merchants, small tradesmen, masters of crafts that are thought to be useful in Palestine, constitute the largest class of would-be immigrants from Poland, while Chaluzim continue to come as before, but in somewhat smaller numbers. It is interesting to note that with each boat carrying passengers from Poland to Palestine, the Polish Government has made it a practice to send an inspector detailed by this Governntent's Department of Immigration."

It is, of course, just this class which formed the bulk of Jewish immigrants into America. With the closing of the doors into the United States this class can certainly be expected to turn its attention to Palestine. The possession of £500 gives you absolute right of entrance into Palestine as a man of independent means.

The Reign of Quiet.

The present reign of absolute peace in Palestine is becoming a matter for increasing wonder. It is ceasing to be something merely negative, the mere absence of political dissatisfaction; it is becoming something positive and almost tangible. Many of those who, during the past three years, vilified the Administration for its weakness, its flabbiness, or its alleged pro or anti tendencies, are beginning to confess that, after all, the Government has been right in its "feather-pillow" treatment of all parties, in its rejection of anything approaching a cast-iron policy, and, in fact, in its having no policy at all save only that it gropes after one "if haply it might feel after a working policy and find it." Results certainly seem to be justifying this procedure, however heretical it may have appeared to the minds of the more ardent spirits in Palestine (and out of it) seeking to propagate their own variety of revealed truth, be it maximum Balfour-Declarationism or Pan-Arab Nationalism. The new Hebron Peasant Party is a striking proof of all this. It is not a Zionist puppet by any means, even though the other Arab political parties say it is; it is just a symptom of the return of the Palestinian to the normal, to the "policy" which he has cultivated during the past two and perhaps three thousand years—the policy of making the best of things as they are.

Several cases of plague are reported from Patras, Greece, and there have been two deaths.

The Central Relief Committee for Ukrainian Refugees in Roumania has liquidated its work on account of lack of funds.

SIR HERBERT SAMUEL.

Sir Herbert Samuel (High Commissioner for Palestine) and Lady Samuel arrived at Victoria on July 2 on leave, and will stay in London for a month. They were met at the station by Messrs. Philip and G. H. Samuel (sons), Dame Louise Samuel, Sir Ronald and Lady Storrs, Major Hubert Young (representing the Colonial Office), Mr. and Mrs. A. E. Franklin, Mrs. Frederic Franklin, Mrs. M. Gaster, Mrs. Friedlander, and other relatives and friends. Sir Herbert and Lady Samuel visited the Palestine Pavilion at the British Empire Exhibition last Thursday morning.

PALESTINE BOY SCOUTS.

For the first time in the history of the Holy Land a small party of Palestine Boy Scouts, consisting of five members, under the leadership of Scoutmaster J. Gordon Boutagy, are visiting England.

For several years past members of the 1st Haifa St. Luke's Troop of Boy Scouts have evinced a very keen desire of taking part in the Boy Scouts Jamboree, which is held in England. This party, travelling on the s.s. "Cordilliere," of the Messagerie Maritime, via Marseilles, were due in London yesterday.

SYRIAN FREEDOM.

Dr. Shahbender, the Syrian Nationalist, was the guest of the Near and Middle East Association at the meeting which was held, by the kindness of Sir Robert Hadfield, on July 1 at 22, Carlton House Terrace. Dr. Shahbender, who was introduced by Mrs. Arthur McGrath (who emphasised the point that Arab nationalism was not now religious but racial), explained that the Syrians were still pining for freedom and independence, and pleaded for the application of a universal justice. He was seconded by Dr. D. G. Hogarth, who testified to the services that Dr. Shahbender had rendered to the Allied cause in the War, and to the general merits of the Arabs. He noted, and lauded, Dr. Shahbender's avoidance of the subject of the form of the projected Arab confederation, and doubted whether he personally would live to see it. But he was certain that in the hands of men like the Association's guest the Arab cause was safe and would persist. Britain's concern in the matter of an Arab confederation was at once interested and disinterested, and this country had already done much in the fulfilment of its promises.

The following were among those present:—Lord Burnham, Mr. and Mrs. Ameer Ali, Lady Polson, Sir Aurel Stein, Sir Thomas Mackenzie, Colonel Sir Charles Yate, M.P., Mrs. L. Cobham, Miss Edith Durham, Rev. Dr. Robert Frew, Sir Henry and Lady Burt, Lady Blois, Hon. Mrs. Eric Rollo, Mr. and Mrs. John Nicholson, Miss Vaughan Morgan, Viscountess Gort, Sir Ali and Lady Imam, Sir Thomas Arnold, Sir Krishna Gupta, Sir John Foster Fraser, Lady Seton-Karr, Mrs. Emile Mond, Mrs. Margaret Hasluck, Brig.-Gen. E. A. Plunkett, Mr. Ernest Richmond, Mr. Campbell Ogilvie, Captain R. A. Eden, M.P., Mme. Sabit Bey.

NEAR AND MIDDLE EAST ASSOCIATION.

President:
MAJ.-GEN. LORD EDWARD GLEICHEN, K.C.V.O., C.B., C.M.G., D.S.O.
Vice-Presidents:
THE LORD LAMINGTON, G.C.M.G., G.C.I.E.;
LT.-COL. LORD HENRY CAVENDISH-BENTINCK, M.P.
GEN. SIR CHARLES HARRINGTON, K.C.B., G.B.E., D.S.O.
OBJECT: To establish friendly relations with Turkey and with the other peoples of the Near and Middle East.

CORRESPONDENCE.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

THE CENTRAL ASIAN SOCIETY.

To the Editor of The Near East.

Sir,—When the Press is invited by a society to attend its annual dinner or other important function, is it to the society that the Press owes a duty or merely to the one or two individuals who are selected to speak on the occasion? I am prompted to put this question to you by the reports in *The Times*, the *Daily Telegraph*, and the *Morning Post* of the annual dinner of the Central Asian Society, which was held on July 3 in the Hotel Victoria, reports which confined themselves almost entirely to the opinions expressed by the speakers on political affairs, and repeated not a word of the very appreciative remarks which the president of the society, the Marquis Curzon of Kedleston, made on the work and publications of the society itself. Since 1914 Lord Curzon has taken the chair twice only at the annual dinners of the C.A.S., viz., in October, 1920, and July 3, 1924, and on both occasions he passed encomia, and well-deserved encomia, first on the very important work which the society was doing in educating public opinion and forming a school of statesmen and administrators for British Dominions and mandated territories in Asia and—allow me to add, *pace* Lord Curzon—in Africa, and, secondly, on the quarterly journal which the society edits and publishes. The remarks thus made by Lord Curzon have been and are, I may remark, a clear incentive to the society to pursue the good work that it has been doing, and when the Press fails to report those remarks it blunders. It is, in my opinion, more important to the British nation and Empire to be made acquainted with the instruments which are at its command for the furtherance of its Imperial interests than to have its sphere of thought entirely confined to individual ideas on political topics. Individuals pass, but societies continue.

The gentle badinage which passed in the after-dinner speeches on the occasion to which I refer with regard to Africa between Lord Curzon and Lord Winterton eminently entertained the assembled audience; but, as a matter of fact, the Central Asian Society, the width of whose scope was so eloquently outlined by Lord Curzon, has embraced a section of Africa. How else would the society have as members Sir Reginald Wingate, Lord Allenby, Sir Lee Stack, Sir Robert Coryndon, Sir Edgar Bonham-Carter, Sir Gilbert Clayton, and many others whose services connect them with the African side of the Suez Canal? North-East Africa cannot help associating itself with Levantine and Arabian Asia, and when Mr. Robert Williams addressed the C.A.S. on the Cape to Cairo Railway and the lands and peoples through which that railway was to pass, the society was made to feel the strong link that held Africa to Asia not only by the lecturer, but by such authorities as Sir Reginald Wingate, Sir Frederick Lugard, Sir Lee Stack, and Sir Edgar Bonham-Carter.

I will say no more for the moment. I think it most desirable in the interests of the Central Asian Society that the British nation and Empire should know that that society is thoroughly alive to the importance of the task which it has undertaken. It was with very great pleasure that we, the members of the society, heard the tribute which was paid by Lord Curzon, in his after-dinner speech on July 3, to The Near East as the organ of the Press which had proved itself to be a valued and valuable ally of the society of which he is president.—I am, etc.,

A. C. Yates, Lt.-Col.,
Hon. Sec. C.A.S., 1918-1923.

BULGARIAN REPARATIONS.

To the Editor of The Near East.

Sir,—However injudicious a plea on behalf of Bulgaria may seem at a time when people are drawing a parallel between the murder of Matteotti and that of the Agrarian Petkoff, and are expressing their just indignation against Governments which countenance the committal of such brutal acts, it is nevertheless imperative to draw the attention of responsible quarters to the probable consequences of the Reparation programme imposed on Bulgaria if an economic crisis, which will increase the already perturbed state of the Near East, is to be timely averted.

The Bulgarian Government, in its desire to show itself as subservient to the Allies as the late dictator Stamboliski, whose policy was to placate foreign interests at all costs, in order to secure a free hand at home, has assumed obligations which it will be impossible for it to discharge without bringing disaster to the country.

In this year's Budget a sum of 1,500,000,000 leva has been earmarked for remittances abroad on account of various Reparation claims and loans—this being the first of a series of annual instalments—and persons conversant with the state of affairs in Bulgaria are at a loss to understand how this feat of converting annually such a huge sum of leva (over a third of the fiduciary circulation) into gold is to be achieved without causing a serious drop in the local exchange, paralysing the economic life of the country, and thereby rendering the payment of Reparations illusory.

Bulgaria has an adverse commercial balance; her exports last year were less than her imports, and so far this year the deficit has shown a tendency to increase. She has no foreign investments on which to draw. She can obtain the necessary funds for payments abroad only by exporting her produce, the available quantity of which barely suffices to pay for what she imports, or, by utilising part of the State Bank's gold reserve for the purpose. But as this reserve constitutes the sole cover for the fiduciary circulation, and does not even attain one per cent. of the latter, it will be admitted that this expedient cannot be resorted to without influencing adversely the exchange.

If the Allied Governments are sincerely desirous of avoiding the economic ruin of Bulgaria, and of averting the burden they will subsequently have to shoulder in order to place her once more on her feet, they should put a stop to this process of bleeding her white. They would demur to the suggestion of cancelling Bulgaria's obligations, but such a solution there is yet time to avoid. All that is apparently needed for the present is that the money raised for the express purpose of paying Reparations be, at least for some years to come, allowed to remain in the country, and utilised, under Allied control, in works of public utility, which would increase the productive capacity of Bulgaria and enable her to increase her exports, thus affording her the means with which to pay an ever-increasing annual quota on account of the obligations that have been imposed on her.—I am, etc.,

G. Clenton Logio.

PERSONAL AND GENERAL.

TO-DAY.

July 10, 1924 (New Style).
June 27, 1924, (Old Style).
Julheggia 7, 1342, A.H., of the Moslem Calendar.
Tamuz 8, 5684, of the Jewish Calendar.

Sir Kay and Lady Muir have arrived in London from Scotland.

Sir Horace Rumbold has arrived at 3, Grafton Street, W., from the British Embassy, Madrid.

M. Subotitch, specially attached to the Yugoslav Legation, has left London for Belgrade on leave.

The Gaekwar of Baroda arrived last week in London for a few days, staying at Claridge's Hotel.

Sir Leslie and Lady Miller left London on July 5 for Madras by the British India Company's s.s. Matiana.

The Bulgarian Minister, who is a member of the International Olympic Committee, left London on July 4 for Paris.

Prince and Princess Omar Halim and Prince Osman Fouad have arrived in London from Paris. They are staying at Claridge's Hotel.

The Roumanian Minister, who is now in Switzerland, has arranged to return to London on Monday next for the Inter-Allied Conference.

Mr. Norman Nairn, of the Nairn Transport Company, who recently arrived in London from Beyrout, will leave for New York on Saturday.

Sir Ali and Lady Imam will be "at home" to meet the delegates of the National Convention of India at the Hotel Cecil on Friday, July 18.

Sir Elliot Colvin, head of the British Delegation of the Bulgarian Reparations Commission, has returned to London. A meeting of the Commission was recently held in Paris.

The Crown Princess of Roumania will arrive in London from Paris with her sister, Princess Irène of Greece, in the middle of next week. The Crown Prince will arrive a few days later.

The representatives of India at the September session of the Assembly of the League of Nations will be Lord Hardinge of Penshurst, Major-General His Highness the Maharaja of Bikaner, and Sir Muhammad Rafique.

The Marquess and Marchioness Curzon left London last Friday for Paris, where the Marquess will undergo medical treatment for a recurrence of the illness from which he suffered two years ago. Lord Curzon expects to be away for two weeks.

Under the auspices of the East India Association, a paper will be read on July 14, at 3.30 p.m., at the Caxton Hall, Westminster, by Pandit Shyam Shankar, on "The Mystery of Stereotyped Customs of India." The Right Hon. the Earl of Ronaldshay will preside.

Lieut.-Colonel Francis Humphrys (His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Kabul) was received in audience by the King at Buckingham Palace on July 5, when His Majesty conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight-Commander of the Most Excellent Order of the British Empire (Civil Division).

APPOINTMENTS, PROMOTIONS, ETC.

Mr. William Alison Russell, K.C. (King's Advocate, Cyprus), has been appointed Chief Justice of His Majesty's High Court of Tanganyika.

Mr. Jacques Jonathan has been appointed Brazilian Consul in Belgrade.

Lord Chalmers, who has recently been elected Master of Peterhouse, Cambridge, is President of the Royal Asiatic Society.

The Maharaja of Kapurthala has been created a Grand Officer of the Legion of Honour by the French Government.

OBITUARY.

Dr. Jacob Israel de Haan, Jerusalem correspondent of the *Daily Express*, was shot on June 30 in the courtyard of the hospital in the Jaffa Road, Jerusalem. Three shots were fired, and death was almost instantaneous. Dr. de Haan was formerly a lecturer at the Government Law School in Jerusalem.

Major-General John Upperton, C.B., who died on July 2 in his 89th year, joined the Bengal Army as a cornet in 1854. During the Indian Mutiny he commanded a body of irregular cavalry, being present at the siege of Delhi and serving through the campaign in Oude, including the capture of Amethee and Shunkergahr and the action of Dundeakeira. In 1869 General Upperton accompanied Sher Ali, the Ameer of Afghanistan, on his visit to the Viceroy at Umballa. He was sent on special service to Baluchistan in 1876, and in 1882 took part in the Egyptian War, being mentioned in despatches and awarded the C.B.

An Athens telegram announces the death of Mgr. Castell, Grand Rabbi of Greece.

The Times Simla Correspondent understands that the Constitutional Inquiry Committee, under the presidency of Sir A. P. Muddiman, re-assemble in the first week of August, and will continue their sittings throughout the month.

RAS TAFARI OF ABYSSINIA.

The visit of the Prince Regent of Abyssinia to England is a picturesque episode in a notable year. Ras Tafari has been welcomed in London both for his own personality and as an outstanding figure in his generation. Appointed Regent of Abyssinia in 1916 at the age of twenty-five, he has been confronted for the last eight years with a task as difficult as any that has beset a ruler of the present day. The control that he has exercised has been nominally shared with the Empress, and he has had to consolidate his position in the face of jealousy, intrigue, and faction. Whatever may be thought of the admission of Abyssinia to the League of Nations, the fact remains that it is due to the initiative and statesmanship of the Prince Regent that his country's claim received favourable consideration. In the few years of his rule he has contrived to impress some of his own energy and ambition on a backward State, so that, even if he seemed ahead of his people in his request for Abyssinia's admission to the League, the latter's wise decision has done much to rally the nation to the support of its ruler in his effort to justify Abyssinia's membership. Nothing, perhaps, is more typical of the new spirit now animating the country than that not only should the Prince Regent break with tradition by being the first Abyssinian monarch to undertake a tour in Europe, but also that he should be accompanied by a substantial following from among the princes of the land. From this circumstance the mission acquires more importance than it would have had if the Prince Regent had been travelling without members of his Government, princely Governors of provinces and representatives of the feudal aristocracy. These will all return to Abyssinia, it is to be hoped, to become so many separate centres of civilising influence, in order that the good work inaugurated by Ras Tafari may proceed apace. To this end it is well that the brief official visit this week should be followed by an unofficial stay, which will enable the members of the Mission to see more of England and to gain a closer insight into the factors that underlie Great Britain's position in the world.

The regency of Abyssinia is no sinecure. Ras Tafari comes to this country with the reputation of an abnormal capacity for work and with the record of an excessive indulgence in it. It is well for a country to have driving force behind it, but it is better that it should not have to rely upon one man alone for that force. While, therefore, the Prince Regent is away, others will have a greater share of responsibility, and opportunity will be given of gauging the extent to which the exceptional talents of Ras Tafari have succeeded in raising the administrative standards of the country. One of the first things, it may be, that will impress him in his European tour will be that those who direct the affairs of far greater States than Abyssinia find more time for relaxation than he does. If he cares to probe the cause, he will discover it in the existence of a higher standard of intelligence more widely distributed among the people as a whole than is the case in Abyssinia. Administrative responsibility can thus be shared by a greater number, and it is no longer necessary to concentrate the whole burden of government on one pair of shoulders. The degree of knowledge and intelligence in a people depends on the standard of education, and it is in this direction that special efforts must be made if Abyssinia is to take in the family of nations the place to which she aspires. The adequate spread of education among a people is incompatible with the existence of slavery, and thus Abyssinia will be spurred to remove from her borders a system that has long since been condemned by the civilised world. Slavery with her may be robbed of some of its old horrors; but it gives rise to slave-trading, for which no justification nor excuse can be urged. In Abyssinia's case it is this slave trade that endangers her good relations with the European countries whose African possessions march with her territory, and the complete elimination of the traffic which would follow the abolition of slavery could not fail to increase the prestige of the country and its progressive ruler.

Not the least striking characteristic of the Prince Regent is his genius for hastening slowly. He has been content to consolidate his position gradually, refraining from the more spectacular methods, which make attractive reading, but inevitably play into the hands of opponents. This characteristic, we may hope, will stand him in good stead in the task of carrying the development of his country to a higher stage. Desire and attainment more often than not are separated by a wide gulf. Abyssinia will reach the goal she has in view more surely and more rapidly if she is content to tread the path of self-discipline and tuition. The quickest way to raise the administrative capacity of the nation to the standard required is to employ foreign advisers to assist not only in departments of State, but also in other posts of responsibility. The Abyssinians, who have only recently had brought home to them the necessity of modern ideas and modern methods for the satisfactory transaction of public affairs, will learn more easily by precept and example than if they are left to themselves to evolve a new order. Recent experience has shown that with the best will in the world trade cannot emancipate itself immediately from the shackles of bad communications, an inadequate currency system, and primitive methods. Western experience is needed to cope with all these drawbacks. For the construction of an imposing edifice the foundations must be dug deep. The Prince Regent, it will be imagined, will have a better chance of securing a port for Abyssinia on the Gulf of Aden if he can show that the trade of the country, released from the fetters that have hitherto handicapped it, will justify the request by offering in its increased volume adequate compensation for any privileges that may have to be abandoned. The time that the Mission is absent from its own country will be none too long to enable it to learn all that the countries of Europe will be able to teach it, to the lasting advantage of Abyssinia.

CENTRAL ASIA—YESTERDAY AND TO-DAY.

Lord Curzon's Review.

For the third time in the history of the Central Asian Society the Marquess Curzon of Kedleston made an important speech at the annual dinner, which was held at the Hotel Victoria on July 3, under his chairmanship. With striking eloquence and power, he drew a contrast between the condition of Turkey, Russia, Persia, China, and other Asiatic Powers at the beginning of the century and the weakness and confusion by which they are afflicted to-day.

Lord Curzon was provided with a good starting-point by some observations of Earl Winterton, M.P., in proposing the toast of the Society. He expressed regret that the number of people interested in overseas problems was so small, and said that the longer he was in politics the more appalled he was at the tremendous ignorance of the country in the problems on which it had a deciding voice. On this part of his speech there was no challenge, but what Lord Curzon called in question was Lord Winterton's admission that he found Africa a far more interesting continent than Asia. He said he had some interest in Africa, and was one of those undesirable individuals who owned a large area of land there with the intention of exploiting it and getting what he could out of it and its wretched inhabitants. He felt it would be increasingly the case that the interests of Africa and Asia would conflict, and he thought the people of this country would be turning more toward Africa than toward Asia.

The Marquess Curzon, who was received with enthusiasm, while thanking Lord Winterton for his personal references, said he must enter an immediate and emphatic *caveat* on his declaration that Africa was not only of equal but of superior interest to Asia. That such a heresy should be preached by a sensible and competent man was to him incredible. (Laughter.) What was Africa? A country of sands and deserts—(laughter)—plentifully peopled with black men; an arena no doubt of great historical antiquity in the north and splendid British endeavour in the south and round the circumference. But it could not be compared with Asia—the great continent from which all religions, all ideas, all great achievements had sprung; the fountain-head of everything great that had come into the world from immemorial times; the birthplace of the most striking vicissitudes which had ever been witnessed by man; the scene of the greatest events in history; still the fertile source of inspiration and ideas. That a guest of the Central Asian Society should get up there to propose the toast of the Society and express an unqualified preference for Africa was an unbelievable atrocity. (Laughter.) The explanation made it no better, for from it they learned that it was based on sordid material interests. Asia had never brought the noble lord a rupee, and therefore he wiped out Asia, and explained to them his attachment to the miserable continent of which he truly said the inhabitants were wretched. (Loud laughter.)

I, at any rate, continued Lord Curzon, will not be a party to such heresy. I am here to speak of Central Asia, which is to me and many of those in this room the scene of recollections that charm almost more than anything else in the world. What is Central Asia? It is a country which for hundreds of years has appealed to the traveller, to the archæologist, to the man of affairs, to the writer, to anybody with an idea above the commonplace. Central Asia holds us by the magnificence of its surroundings and by the splendour of its surface. What is the appeal which Asia makes? It appeals, in the first place, to the spirit of enterprise and adventure. For hundreds of years the ablest pioneers in the world have selected Central Asia as the field of their exploration, or where they went for trade. It also had a marked appeal for the purposes of religion, and called forth the devotion of the friars of the Middle Ages. The call was also heard for purposes of trade by our own pioneers, and at a later date by those in the service of Government. The adventure and enterprise of which Central Asia is the scene has been one of the moving agencies in the history of the world.

Look at the long struggle for more than a century to unveil the mysterious land of Tibet, a work at last accomplished by Sir Francis Younghusband (cheers)—whom I am glad to see before me—in a mission under my auspices. Then again, look at the appeal that Central Asia has always made to the sense of beauty that exists in all of us. There is the communion with Nature that we achieve when we wander over those distant lands and view the great spaces, the mighty peaks, the solid glaciers, the rushing rivers, and all the other splendours of Nature in its manifold forms. Nobody has realised that to the same extent or expressed it so vividly as Sir Francis Younghusband in at least two of his books, one on the Himalayas recently published, and the other entitled "The Heart of a Continent." You will find in these books the communion with Nature which travel in Central Asia has enabled him to establish, getting to the core and centre of his being.

Then there is the appeal that Central Asia has always made and continues to make to the scientist, the naturalist, the ethnologist, and the antiquarian. I see before me Sir Aurel Stein. (Cheers.) Central Asia has made him deservedly famous in the history of travel and science. I am proud to have been the means of sending him out on the first of the great missions in which he has rendered so much service to Central Asia, and in which he has unfolded so many of its mysteries. Central Asia makes a further appeal which will strike home to many of us even more closely—the appeal of the sense of service and of duty. I am proud as an Englishman when I think of the services which have been rendered by our countrymen in these remote parts of the world, not only our officers serving on the frontier of India, introducing peace and keeping order among the tribes, but also by those sustaining the great name of England very often in circumstances of isolation and remoteness, and making the name of England respected among the people of those lands. For instance, Sir Charles Bell, spending some time at Lhasa, achieved successes which would have been incredible a few years ago, while similarly remarkable work spread over many years was done by Sir George Macartney at Kashgar. Such men, often having occasion to doubt whether they were upheld by the Government at home, have kept steadily on doing their work and sustaining the honour and glory of our Empire. (Cheers.)

The fact is that Central Asia appeals to the sense of service and of duty more than any corresponding area on the globe. When I talk of Central Asia I am not confining myself to the strict geographical limits of that term. If you look at the map you will see that geographically, Central Asia comprises Russian Turkestan, Chinese Turkestan, the Pamirs, Tibet, and Mongolia; but when we talk of Central Asia I think we mean something of very much wider application than that. For instance, we might argue that Turkey and the Turkish dominions are in a sense a European and Western problem. Constantinople has long been a great question of the Near East; but as you go eastwards you find that the Turkish question is an Asian question which overspreads the whole of Asia.

Digitized by Google

Minor and flows to Persia and Afghanistan, and has exercised a vital influence during the last ten or twenty years in India. Therefore you find that Turkey, although in the region of its former capital a European Power, has been a great Central Asian Power and force.

So, also, China, associated in the popular conception with Japan as forming the Far East, is a great Central Asian Power and force. When you go into Central Asia you find in vast stretches Chinese rule and Chinese subjects. Just as on the one side you find Turkey, so on the other you find China, somehow or other forcing themselves into Central Asia and becoming part of the Central Asian problem. So to-night I am not talking of a relatively narrow geographical area, but I am talking about that real centre of the Asian Continent embracing at least half the peoples which inhabit the Continent. I was looking to-day at the last issue of your excellent *Journal*, and I find that you emphatically recognise the wide implications of the term "Asia." You have articles in this issue about Tibet, Persia, the downfall of the Khilafat, and the Indian Frontier. You will make a very great mistake if in the *Journal* you confined yourselves to the geographical Central Asia, for your purpose is to deal with the political Central Asia, and I hope that the editor of the *Journal* will always bear that cardinal point in mind, and will not restrict the wide area over which your activities have hitherto been spread. I think, if I may say so in passing, your *Journal* is a splendid production. I never take up a number and read its papers without recognising that they are written by experts, and that they contain information which could not be found anywhere else in the world. There is an atmosphere of seriousness about them which renders them invaluable contributions to human knowledge; and if this Society existed only for its *Journal*, if it never gave a dinner, it seems to me that its existence would be justified by this publication.

Here let me say a word about another journal which I wish to commend. It is the paper called THE NEAR EAST. Just as I said it is difficult to define Central Asia, so is it difficult to define the Near East, and I am glad to find in the weekly journal which bears that name articles about all parts of the Asiatic problem, which are to my mind of the greatest value, and I hope that the editor and proprietors will long continue to give them to the world. (Cheers.)

In dealing with the Central Asian problem the first thought that occurs to me is that of the astounding changes that have come over Central Asia during the last quarter of a century. I take the changes of that time because it is convenient to begin with the dawn of the century, and because my own experience of responsibility in dealing with any of these problems synchronises with the close of the nineteenth century. Just imagine the difference in the situation about the year 1900 and the present time. Turkey then had a Sovereign who was both Sultan and Khalif, who combined spiritual and temporal power which had been hereditary from almost immemorial times in the possession of one branch or another of the Turkish family. Turkey, no doubt, was not a great Power, though she thought herself so, but her possession of Constantinople and her great influence in Europe also enabled her to exercise a most potent influence throughout the whole of the Eastern world.

At that time Russia had a Tsar and an Imperial system believed to be deeply rooted in the affections of the Russian people. She spread abroad an influence and a power largely based upon military force, which was certainly, from the material point of view, one of the most tremendous agencies which ever existed in the world, and was a source of immense anxiety to ourselves. You had then as the perimeter of the Russian Empire large States in the Caucasus absorbed in her system and still retaining some measure of individual life. You had small monarchies filled by princes at Khiva and Bokhara, under Russian influence, still retaining some traces of their old resplendence and glory. Persia was held up between the rival arms of Russia and Great Britain, while Afghanistan at that time was ruled by a singularly powerful and capable Sovereign.

Further East we had the Empire of China with an Emperor at Peking, still shrouded in the mystery of the Forbidden City and surrounded by the almost unbelievable conservatism of its people. At one moment you were shocked by the weakness of China and at another moment appalled by its strength and its tremendousness because of the vast population under the rule of the Emperor. China at that time was so powerful that even in her feebleness you had men of imagination who thought and spoke of the Yellow Peril as calculated to confront and overwhelm the Western world.

That was the situation twenty-five years ago. What is the situation now? There has never been twenty-five years in the history of the world in which such tremendous change has been produced in the state of affairs of the great continent. Take Turkey: The Sultan gone, the Khalif gone, a sort of sham Republic set up which is merely a disguise for military despotism. Under this system she is making experiments of independence and hostility to the outside world, by which she and she alone will be the sufferer. The old Turkey has gone—irremediably gone—and whereas twenty-five years ago anybody who touched the Khalif or the spiritual and temporal power of the Sultan would have been almost immediately swept out of existence, that change has been effected with scarcely a murmur in the Mohammedan world. Look at Russia: The Tsar, the Imperial family, and the whole system of Imperialism have gone, with all its vast state and with its huge military force. It has crumbled away to a multiple collection of furtive Republics more or less bound together under the ægis of the Soviet Government at Moscow. That is not only an immense change, but a deplorable disaster, because whether we approved of the Russian Empire or not, at any rate there was stability, cohesion, and strength, whereas now there are a number of jarring atoms called democracies, crushed under the heel of a relentless despotism, masquerading in the disguise of a Republic.

Then take Persia, which exists for the moment held together by the arm of a rather strong man, but with an absentee Sovereign whom she does not seem particularly desirous to welcome back to the country, sinking deeper and deeper into the bonds of destitution and feebleness. Khiva has gone, Bokhara has gone; Afghanistan, it is true, still exists as a kingdom, but with a dynasty liable, as you all know, to great personal vicissitudes. And what is now the former great Empire of China? It is neither an Empire nor a Republic; it is nothing more than a great splash on the map—an amorphous collection of human beings without government, without cohesion, without solidity, and with nothing except their vast numbers. China is split up into a series of small, independent governorships under military dictators, who collect the taxes, amuse themselves, despise

Digitized by Google

the Central Government, and do exactly what they will.

That is the condition to which Asia has been reduced in the last twenty-five years, and whereas a quarter of a century ago you would have said that that continent was the quarter of the globe where the most deeply embedded conservatism prevailed, where ancient monarchies were more firmly established than elsewhere, you will find to-day in the whole of the East only three kings—the Shah of Persia, the Ameer of Afghanistan, and the King of Siam. There are, it is true, other Kings dotted about here and there, but they are merely linnets singing in gilded cages. (Laughter and cheers.) The whole of that vast organisation which seemed to be so firmly founded has been swept into space.

What is all this due to? I think it has been due in the main to two causes. In the first place, it is due to the existence of the grotesque illusion that Parliamentary institutions which are essentially the outcome of Western thought and ideas are suitable to Eastern peoples. (Cheers.) The decay of Asia began on the very day which saw the introduction of Parliamentary institutions. It is not an exaggeration, it is a profound truth I speak. Take the National Assembly at Angora—a body which affects to be not only a legislative assembly, but also to have executive powers, but which is being very properly put in its place by Kemal Pasha. The Persian Mejliss has had a deplorable history of vicissitude. The Parliament of China only exists because it never meets—(laughter)—although you will see it gravely referred to in any work of reference as a part of the Constitution of the country. These Eastern nations have adopted experiments of Western origin, based on Western experience, and they have been, and will be, deplorable failures.

In the second place, the decay of Asia is due to an aggressive spirit of nationalism, which has received great impetus from the War, partly racial, partly religious, and partly political, which has led these people to believe that they are not only as good as we are, but are better. They have seen in their contact with Western civilisation its weaknesses, its foibles, its troubles, its disasters, and there has arisen in them the idea, partly based on a mistaken reading of their own history and partly on ignorance of world conditions, that they are capable of resuming the position they held in antiquity and of recovering for themselves the supremacy which they once enjoyed.

These are, I believe, the two explanations of the terrible, lamentable, collapse of Central Asia in the last quarter of a century. Here I come to the application of my reflections. Is there any hope for the future of Central Asia? I cannot make a confident prediction any more than anyone else at this table. Prophesying in Asia has always been a dangerous thing. (Laughter.) Accordingly as the prophets existed on a large or smaller scale, so they were known as major or minor prophets. Both made mistakes, and to-night I am not going to array myself in the robe of either a major or a minor prophet. I cannot say how things are going to work out in the future, except that I think that for the time being, at any rate, the process will be downwards, not upwards. But in this area of chaos and dissolution there is yet one great dominion still intact with its frontiers still untouched—one great Empire still, I believe, capable of exhibiting those virtues and setting that example which may help, at any rate, to arrest, if not stay, the decline of Central Asia. I allude to the Indian Empire of Great Britain. (Cheers.) Here you still have British rule, although shaken, supreme; still you have the frontiers of India untouched by external invasion; still you have Englishmen devoting to their great work in the East, the strength and substance of their lives. The duty imposed on us from on high still lies on the British race. Let us not take our hands from the plough.

Lord Winterton spoke despondently about the work of England abroad, and about the ignorance of these matters at home. There may have been some truth in his remarks. At the same time, I should be reluctant to proclaim myself a pessimist in these matters. I see that things in India are not what they were. I see feelings, ambitions, and aspirations rising amongst the people that it will be difficult to satisfy without some sacrifice of our position and our greatness. I see the services which have brought about such astounding progress in India to some extent disheartened and discouraged. But now, ladies and gentlemen, is the time to brace ourselves together before it is too late. Believe me, no Englishman can perform a greater service now to his country than to devote himself to the re-establishment in Asia of that influence which has built up our strength and our reputation in the world. Let there be no dealing with unclean things in our work in that Continent. Let us preserve our frontiers, keep our armies sufficiently strong to maintain the peace; let us support our services; let us teach our people that it is still worth while to go out there to labour, to struggle, to fight, to maintain the high traditions of the British services in those parts of the world. In doing so you are not merely keeping the flag flying and sustaining the honour and glory of England, but you are making a contribution to the stability of Asia and to the restitution of a state of strength which seems almost for the time being to have disappeared.

I suppose I have not been making exactly an after-dinner speech except for the few remarks with which I began. But you must pardon me, because to me Central Asia and Asia generally mean much more than anything else in the world. I have devoted the greater part of my life to Asia, and it is a field ever in my thoughts. I have written about little else than Asia, and you must forgive me if, even on a festive occasion, I have tried to convey to you the thoughts which are moving in my mind, and to get you to understand that Asia is not merely a continent where strong men make hazardous journeys under difficult conditions, but a focus of moral duty and responsibility. The work of the recovery of Asia rests upon us and upon our people, and we must attack it so that the blame for any failure may not be in us. It has given me the greater pleasure to have said so much about India as the pivot from which recovery can be exercised because of the presence of Sir George Lloyd—(loud cheers)—just back from Bombay. He is one of those young Englishmen who, at every phase of public life, show a keen interest in the external responsibilities of Great Britain for which I have been pleading to-night. He is an intrepid traveller, a great authority on the East, and his heart is full of the ideas which I have been presenting. There came to him while still young the great opportunity to go out to Bombay, where, with the assistance, if I may say so, of his charming wife, Lady Lloyd—(cheers)—he enjoyed a popularity which has not been exceeded by any of his predecessors. In the sphere of administration he showed not only imagination, but courage—and it is a great thing in the Government of India for the English administrator to have courage. He always stood for high ideals, and was prepared to sacrifice much for them. (Cheers.)

Sir George Lloyd's Speech.

Sir George Lloyd, who was enthusiastically received, took up the parable where Lord Curzon left it by remarking that the tranquillity of the countries which flanked India on its north and north-western approaches, and the relations between them and ourselves to-day, was the most important question confronting our Indian policy. In view of the changes taking place in India itself, it was of prime importance to us that India should not be an island in a sea of disturbed States round her, and it fell to our lot now, as before, to be the main factor in the pacification and resettlement of those adjacent territories. Respecting the Turkish situation, he remarked that while her public debt remained repudiated, and while British traders were harassed in their most ordinary commercial dealings in Turkish territory, there was perhaps little to be done in that country. But, with a long and happy remembrance of the qualities of the Turkish people, he did not believe that their exaggerated secularism or their ostracising nationalism was more than a passing phase, and he trusted that when prudence and moderation returned England would be the first to assist Turkey in the formation of her new future.

Sir George Lloyd confessed to having returned from India a good deal exercised, not so much in regard to the particular structure of this policy or that (for where there was good will and accord in a mutual purpose almost any structure would serve), but more in regard to the uncertain touch with which we seemed often to be handling the delicate position in India to-day. He believed that the reforms, alien as ideas of democracy undoubtedly were to the people, and based no doubt on a fallacious idea of the existence of a national united Indian feeling not yet materialised, could still be made workable and in a sense successful, given three things. The first was that the authority and power of the Central Government was not allowed to be impaired; the second that the maximum rate of progress in constitutional development must be laid down rigidly, adhered to, and not made subject to sporadic and intermediate revisions; and, thirdly, that the Indianisation of the administrative services should be made more slowly than, and always subsequent in each stage to, any added transfer of political power. His anxiety to-day was lest the reforms should risk a breakdown for lack of the observance of these essential conditions. He believed that most of the surface unrest in India was due to a belief in India that we did not know our own mind, and that our policy could be made alterable according as the gusts of newspaper or partisan demands indicated. Much of the distrust with which the politician of extreme views regarded us in India to-day was due to a lack of candour on our part toward their aspirations. He believed that this distrust could be dissipated if we had the courage to speak more frankly on what did and did not conflict with British interests in India. Five years in India had convinced him so fully of the wealth of real loyalty and warm feeling that permeated the vast mass of the peoples of India that he believed that it was the uncertainty of our policy that led more than anything to the doubt and distrust of our intentions toward India's future. (Cheers.)

The company included Lady Lloyd, Field-Marshal Sir Arthur Barrett, Sir Francis Younghusband, Lord Lamington, General Sir Edmund Barrow and Lady Barrow, Lieut.-General Sir Raleigh Egerton and Lady Egerton, Sir Hugh Barnes and Lady Barnes, Lieut.-General Sir Aylmer Hunter-Weston and Lady Hunter-Weston, Sir Michael O'Dwyer, Colonel Sir Charles Yate, Sir Henry Bax-Ironside and Lady Bax-Ironside, Sir William Willcox, Sir William Geary, Vice-Admiral Sir Hugh Tothill, Captain Staveley, Major-General H. C. Sutton, Sir Thomas and Lady Bennett, Sir Edgar Bonham-Carter, Major-General Sir Claude Bray, Sir George Buchanan, Sir Armine Dew, Sir Henry Gibson, Sir Arbuthnot Lane and Lady Lane, Khan Bahadur Mirza Muhammed, Sir E. Penton and Lady Penton, Brig.-General R. Pigot and Mrs. Pigot, Sir Malcolm Robertson, Sir Aurel Stein, General Sir William Thomson, Sir Arnold Wilson, and Brig.-General M. E. Willoughby.

TURKISH REPARATIONS.

The Commission established under the Convention of November 23, 1923, for the assessment and reparation of damage suffered in Turkey by the nationals of the Contracting Powers is about to hold preliminary meetings in Paris. The Joint Fund to be used by this Commission for the reparation of the damage (as defined in the Convention) amounts to nearly six million pounds. The British delegate is Mr. H. E. Garle, who left this week for Paris, accompanied by Mr. Cyril M. Bell, who is acting as secretary to the Delegation.

Owing to the recent frontier incidents the Italian and Yugoslav Governments have appointed a Joint Commission to make a full inquiry.

The *Pioneer* (Allahabad) learns from Teheran that the editor of the *Twentieth Century*, a strong anti-Republican, has been shot dead in the street. Political significance is attached to the crime.

According to news from Meshed (Persia), Salar Amjad, who had recently been relieved of his command of a brigade of the Persian Army, has been arrested on suspicion of his complicity in incidents involving the death of a staff officer.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday, Morning.

Sudan Plantations Syndicate.

The interim dividend of 10 per cent. which has been declared by the Sudan Plantations Syndicate is 2½ per cent. higher than the distribution at the same time a year ago. Shareholders in this enterprise may regard themselves as very fortunate, seeing that, provided there are no unforeseen developments, the time will obviously not be far distant when they will be receiving a really substantial return.

Another Year?

While a definite decision has not been taken yet, it seems highly probable that the Wembley Exhibition will be continued for another year. Among the exhibitors opinion appears to be generally in favour of that course. At the commencement it was somewhat open to doubt as to whether the great expenditure entailed in the Exhibition would be justified, but no one would question it now. Throughout the attendances have gradually tended to increase, and, what is equally important, so has the business, which has so far exceeded anticipations. As a medium for promoting inter-Imperial trade and for furthering the development of British industry, Wembley, in short, has been a unique success, and next year there is no reason to think that it will not have equally happy results, for there will be far more visitors from abroad when they have heard all about the wonders of the Exhibition from those who have seen it.

P. and O. Banking Corporation.

The adverse conditions that prevailed in the past year are reflected by a slight decline in the net profits of the P. and O. Banking Corporation for the twelve months ended March 31 last, the figures being £136,400, which with the amount brought forward gives a disposable balance of £152,000. It is proposed to maintain the dividend at 5½ per cent., and to place £20,000 to the reserve, as against £25,000, bringing it to £135,000, carrying forward £17,567. It was emphasised by Lord Inchcape at the last general meeting that the policy of the board was one of prudence, and that they aimed at gradually working up a sound and lucrative business and building up reserves. The present report is eminently satisfactory, and considering the short time in which the bank has been in existence the figures of the balance-sheet provide eloquent testimony to its development and the strength of its position.

Bengal-Nagpur Railway.

The surplus profits of the Bengal Nagpur Railway for the year ended March 31 last have been affected by the disastrous cyclone of November, and at Rs. 4,04,000, representing £28,500, compare with Rs. 5,71,700, or £32,100, for the previous period. For the two previous years the shareholders received 6 per cent., including guaranteed interest. They now receive in addition to the guaranteed interest of £1 15s. an interim distribution of 15s., making £2 10s. for the half-year, as compared with £3 for the corresponding period last year.

Oriental Telephone and Electric.

At the general meeting of the Oriental Telephone and Electric Company Sir George Gibb, the chairman, was able to give a most encouraging review of the situation of the company. "I can congratulate the proprietors," he said, "on the sound financial position of their undertaking, and on the favourable prospects to which we can look forward after the works of new construction have been completed and the charges for telephone services have been placed, as they soon will be, on a satisfactory footing." The company's history has been one of steady growth. In this connection Sir George cited the progressive increase of gross revenue. Starting from 1900, and excluding the figures of the Egyptian undertaking, the gross revenue had doubled in eight years. The new figure was doubled again in the next six years, and again in the succeeding six years, and in twenty-three years the gross revenues have multiplied thirteen and a half times. These figures speak for themselves.

Roumania as a Market.

Elsewhere will be found extensive extracts from the report of Mr. Adams on conditions in Roumania in 1923 dealing with the import trade of that country. Those who are familiar with the Near East markets realise to the full that, speaking generally, British traders are not taking anything like adequate advantage of the openings for enterprise that present themselves there. Unfortunately it is difficult to persuade our business men that these openings exist, and that if they do it is possible to make use of them, and I can only hope that they will carefully read what Mr. Adams has to say with regard to Roumania as a market. He emphasises the point that there are openings, and that trade can be obtained in such lines as machinery, etc. It is the business of our traders to utilise these opportunities.

British Consular Reports.

III.—ROUMANIA.

The Market Position.

The following extracts are taken from the report on the financial, commercial, and economic conditions in Roumania in 1923 of the Commercial Secretary to the British Legation at Bucharest, Mr. Alexander Adams :—

The vitality and continuity of British trade with Roumania in the staple articles of export is its most striking feature. Cotton manufactures and yarns, shirtings, calicoes, iron bars, sheet iron, agricultural machinery, and coal have formed the backbone of British-Roumanian trade for over fifty years. The reputation of British goods in these branches has in no way diminished. The persistence of British trade in the above articles has since been added to by the woollen trade and in the iron and steel trade by wire ropes, tin and terne plates, etc. A parallel could be drawn between British trade in 1872 and the present time. Broadly speaking, the same articles form the bulk of British imports into Roumania (with the exception of earthenware), and the same articles that in 1872 were apparently unable to enter this market in competition with those of foreign manufacturers seem still unable to do so. It will be seen, however, that there did exist a limited market for certain types of goods of the very best quality of British manufacture. Such a market will always exist in the larger towns where there is any focus of wealthier people, and this broad distinction between the ordinary article of commerce and that which constitutes the so-called "luxury trade" should be borne in mind by the British exporter. There is always a certain limited sale for luxury goods of the best quality in Bucharest and one or two other towns in Roumania, and, although the difficulties contingent upon breaking into this trade at the moment are more than usually great, yet, judging from previous experience, the results are likely to be appreciable.

Adverse Conditions.

The general conditions in the import trade during 1923 have been such as to discourage new departures or big orders on the part of importers. As a rule the importer has followed the line of least resistance and, when confronted with offers from various exporters in foreign countries, has usually chosen to adopt the course which would involve him in the least risk. This means that when offered goods from one or two sources he has chosen those coming from manufacturers or exporters who were willing to put goods down on consignment terms, or offer him terms of payment as and when the goods were disposed of. So far British exporters have not entered into competition to any extent along these lines, and it is true that business under such conditions always offers a certain amount of risk, especially with a currency not yet stabilised. In the face of such competition it must have been difficult for British exports to hold their own in 1923, and the achieved results were distinctly encouraging, showing as they do some slight increase over 1922. With the shortage of money and high interest rates it is difficult for importers to purchase goods the turnover of which will take some time. With a return to more normal markets, however, it seems probable that the demand for British goods of all kinds will increase. A population engaged in agricultural pursuits can most conveniently pay its bills about harvest time when crops are marketed. Roumania being primarily an agricultural country, and the eventual consumers consisting as they do of about 85 per cent. of rural population, terms of credit have always been slightly longer than those customary in more highly industrialised countries. This should be borne in mind by British exporters.

Trade Openings.

In nearly every branch of trade there are opportunities for placing British goods in this market. The principal condition for successful marketing is that the British exporter or manufacturer should be in as close touch as possible with his customer, for instance, in the motor-car trade no determined attempt has yet been made by British makers to compete. Italian and Austrian makers send fairly large shipments of cars to this market on consignment terms to agents. The British maker has not so far done this, and, indeed, there are other methods of entering the market. Such is the reputation of British cars that it would seem possible for them to command slightly higher prices than foreign made cars of similar type. If a large maker, or possibly two or three makers in conjunction could set up their own representative in Roumania under such terms as would allow the latter to open a large repair shop, and, above all, if he were possessed of sufficient capital to enable him to employ two or three reliable mechanics well acquainted with the makes handled by their employer, there is every reason to expect that cars could be sold.

There are one or two elementary conditions which they would have to fulfil. A good clearance is advisable because of the bad roads in the country, and for the same reason the springing should be specially good, and some type of shock absorber should be handled by the representative along with the cars. Fairly foolproof lighting and starting systems are a necessity, and such things as all weather tops, back seat screens, and four-wheel brakes would add to the attractiveness of any car. A strongly built British-made car would probably sell even in competition with larger power cars from Italy and Austria.

Similar general conditions as regards methods of marketing apply to the sale of rubber tyres for motor-cars. A large stock of the necessary sizes should be held in the country, and dealers supplied therefrom immediately upon request. So far practically no British-made tyres have been sold in Roumania since the Armistice, and there seems no reason why this should be so, although just at the present time the French manufacturer would seem to be favoured to some extent by the recent fall in the value of the French franc. This point may have helped the French maker, but the same argument can hardly apply to the American tyres found here and sold by several of the principal dealers. It would seem that the extra freight from the United States across the Atlantic has not constituted an effective barrier to the competition of the American-made tyres against French tyres

in Roumania. This may have something to do with the quality of American tyres and their durability in a country with poor roads. At the same time the British maker should be able to compete.

In connection with the motor-car trade there would also seem to be a certain market for the sale of accessories such as back-seat screens, lighting and starting installations, and pumps, in addition to tyres. These things would need advertising, and stocks would have to be kept in Bucharest, whilst in most cases it would be advisable that the accessory should be handled and mounted by a mechanic or workman familiar with it.

Other examples of British manufactured articles which could be sold here are jams and preserves, tinned foods, tinned molasses and food specialities such as sauces and biscuits, etc. These articles come under the general heading of the luxury trade, and always command a ready sale in limited quantities. This means that the exporter must, if necessary, be prepared to make up mixed cases of various kinds of goods to suit smallish orders, do a certain amount of advertising, have a good agent, hold stocks in the country, and push sales.

Market for Tea and Coffee.

In tea and coffee and colonial goods generally there is a trade to be opened out Not only tea in bulk, but also tea in packages and tins can be sold in Roumania, and the quality of English packed tea seems to be understood. There is, of course, severe competition as regards package tea to be met with from Hamburg, but the better facilities for shipment from Great Britain would redound in favour of the British exporter if he could be induced to consider the question of advertising, and to send out a capable representative. Coffee in Roumania appears to come principally from Continental sources of supply, but here again, with the better facilities for shipment now existing from Great Britain, there seems no reason why this should be so. Indeed, some purchases have already been made in 1923.

So far as can be ascertained, the import of British extra hard yarns fell short of normal during 1923, but this seems due to the lessening in the flow of imports as a whole rather than to any special factor. The sale of British cottons to Transylvanian houses was hampered by transport delays from the ports, and, in consequence many of the Transylvanian merchants obtained their supplies from Italy by rail over Trieste. This route is apparently quicker than importing by sea to Galatz or Constantza, and thence by rail to Transylvania. The same fact favours imports of cotton goods from Czecho-Slovakia, where the goods come direct from the factory in that country to the merchant's warehouse in Roumania. In addition, Czecho-Slovakia exporters are aided by their long experience in catering for the needs of Transylvanian merchants. It must be remembered that until the war both Czecho-Slovakia and Transylvania formed part of the Austro-Hungarian Zollverein.

During the first half of the year severe competition was met with from Polish textiles. This was something new in the history of British trade with Roumania. Polish competition was a direct consequence of the last war. With the secession of Polish territory from Russia the big factories of Lodz found themselves deprived of their pre-war markets, and naturally turned to Bessarabia, which had now become part of Roumania, and to Roumania itself to supply their lack. The goods manufactured, although of low quality as compared with British goods, are sold at prices commensurate with their quality, and it may, therefore, be expected that the market in Roumania for low-grade cotton goods will temporarily be subject to competition from Polish exporters. Both the Czecho-Slovak and the Polish manufacturer have direct rail communication with their customer in Roumania, and have only one customs barrier to pass.

In the cotton trade the model type of organisation for sales in Roumania seems to be either that of a home buying firm with a branch to Roumania, or a Roumanian selling firm with a buying branch abroad. Both these types of organisation seem to work well, and the stress is laid upon one or the other side in accordance with the nationality or the interests of the partners in the firm. In both cases large stocks of goods are held in Roumania, and very close touch is kept with customers, whilst buying orders are gauged carefully both as to quantity and styles.

To sum up, the British exporter has to expect competition in low-grade goods from Poland and Czecho-Slovakia, in addition to the long-standing competition in slightly better-class goods from Italy. On the other hand, in staple articles such as greys, whites, prints, and dyed goods, British trade seems able to hold its own.

Chemicals, etc.

In view of the difficulties of securing goods from Germany, there seems a further opening for British manufacturers to supply chemicals to this market. Something could also be done in patent medicines, drugs, and pharmaceutical preparations. Advertising would be essential, as there is strong competition from imported and locally manufactured goods of this type.

The trade in higher grade woollens is predominantly British in character, whilst a good trade is done in goods of lower quality. In this trade there are two methods of transacting business which seem to meet with success. One is the old system under which the large exporting merchant of London or the North sells in fairly small shipments to importers on this side. There are exporting merchants in England who do a very large business in this manner. These people do not manufacture the goods which they sell, but purchase from the Yorkshire mills those qualities and styles which appeal to the Roumanian market. Other exporting merchants have solved the problem of sales in Roumania by sending out their own representative, who handles large stocks of goods and remits payments home. For the adoption of this method it is, of course, necessary

to have an honest and experienced representative available. Perhaps during the last two years, with the fluctuating exchange and the necessity for keeping a close watch upon prices, as well as taking favourable opportunities for the purchase of exchange and the remission of funds, this method of working has given better results than the former, where goods are sold outright to the local importer.

So far back as the seventies British agricultural machinery was a considerable item in Roumanian imports, and right up to just before the War a considerable trade was done. Part of this trade was transferred to Austria-Hungary and Germany by the British firms interested opening factories in those countries from which it was easier to supply the Roumanian market than direct from Great Britain. Thus it was that the greater part of the agricultural machinery came from these countries before the War, although in its origin a good deal of it was British, and British capital was interested in the works supplying it. The situation of these firms was very much disturbed by the War, whilst post-War financial and agricultural conditions in Roumania have been such that no extensive sales policy has been undertaken by them. The breaking-up of the large estates into peasant holdings has lessened the market for big machinery until some form of effective co-operation between the peasants can be instituted under which they will be enabled to use the larger machines in common. In the majority of cases the old landowner was left with more machinery than was necessary for the cultivation of the lands remaining to him, whilst the new peasant proprietor had no machinery.

Machinery and Agricultural Implements.

For smaller machinery and agricultural implements there exists a potentially larger market than before the war, because each peasant makes an attempt to own all the tools and implements necessary for the cultivation of his little holding. In this branch, competition is severe from machinery and implement makers established in Transylvania, as well as from Austria, Czecho-Slovakia, and Germany.

Several English houses did a considerable trade in such articles before the War, and it seems likely that, with the gradual completion of the rural land reforms and the settlement of the peasant on his holding, trade could be developed to a much greater extent by British manufacturers, aided as they undoubtedly are at the moment by the economic disorganisation of Germany.

In this trade it would perhaps pay British makers to instal a branch establishment in Roumania and ship tools, implements, and small machinery direct from Great Britain to this country instead of working Roumania from Austria or Germany. A possible alternative would be the establishment of finishing or fitting works in Roumania itself, although in this case it would be advisable to interest Roumanian firms in the venture. More especially in this regard there is one point which should be borne in mind, and that is the increased purchasing power of the peasant following on the rural land reforms. This increased purchasing power will undoubtedly, in the first instance, affect the demand for tools and machinery necessary for the cultivation of the land, whilst in a secondary degree it will be reflected in the whole of the market for imported manufactured goods owing to the adoption of a higher standard of living by these new landowners.

The machinery for nearly all the factories, saw-mills, flour mills, printing establishments and distilleries in Roumania has hitherto been supplied from Austria and Germany. This renders any efforts to enter this market rather difficult, the more so as many of the mechanics and engineers running these enterprises have received their technical education in Germany, and are more familiar with German installations. In the past French firms have been able to secure orders for printing machinery, but a few years before the War this trade fell into the hands of Germany.

HAMILTON'S OIL CONCESSIONS.

Following a visit to the properties of Hamilton's Oil Concessions (Roumania) of the chairman, managing director, and consulting engineer of the company, a circular has been issued to the shareholders which states:—The Gura Ocnitei oilfield, on which the company is drilling, is authoritatively accepted as one of the richest in the country, and the Hamilton Company is fortunate in having 64 acres in the centre of that field. This area is surrounded by a number of wells from which a large production is being obtained, and recently the Phœnix No. 4, within 100 ft. of the Hamilton Company's boundary, came in with a large flow. The Hamilton Company's area at Gura Ocnitei is now acknowledged as proved. The company's well, which is being drilled by the rotary system, has reached a depth of 842 metres, and as the oil horizon should be entered at about 900 metres, production from this well may be looked for at an early date. The two wells, which are being drilled by the less rapid percussion system, are being strenuously pushed on and should intersect the oil sands shortly, the greatest depth reached being 698 metres. Work on the first new well comprised in the board's further drilling programme is progressing satisfactorily, and is being pressed on with the utmost dispatch. The directors are taking into their close consideration a more extended and intensive drilling programme.

Shipping Intelligence.

CONDITIONS AT GALATZ IN 1923.

Communications by land, both rail and road, are still unsatisfactory and liable to be interrupted altogether in the winter when the frost is severe or the snow is deep (says Mr. L. M. Robinson, H.M. Consul-General, Galatz, in a report on conditions in 1923). As the river is usually closed by ice at the same time, the disadvantage is not felt as much as it would otherwise be, but it occasions difficulty and delay in distributing imports and collecting exports. River communications have improved. The normal depth over the bar at Sulina is now 22 ft., and, in the summer and autumn, as much as 23 and 24 ft. were reported. The new dredgers of the European Commission have done good service in maintaining the depth. The river remained open up to the end of the year, and loading and discharging continued till then, though few vessels ran the risk entailed, and one steamer was eventually caught.

The port facilities have been greatly improved by the two galvanised iron warehouses, each with a capacity of 2,500 tons, and the electric cranes (four with a lifting capacity of 2½ tons and one of 40 tons) recently erected. All cargo can now be put under cover; hitherto part of the general cargo landed has been discharged on to the quay, where it was liable to rapid deterioration.

Official statistics of exports and imports are not yet available. The harvest was later than usual. Considerable quantities of grain came down the rivers in lighters for shipment from November onwards, but only a part could be shipped before the ice came. . . . The recent removal of the export restrictions on wheat and rye will stimulate export and considerable quantities of grain were expected to go out in the early part of 1924. The principal articles exported were maize, barley, oats, beans, and timber, and, to a lesser degree, dried fruits and walnuts. About 500,000 tons of grain were shipped from the Danube during the first five months, and some 600,000 tons during the last three and a half months of the year. These two periods cover the principal export seasons, so that the total exports of grain from the Danube during 1923 may be put in the neighbourhood of 1.2 million tons. During the same two periods, exports of timber amounted to some 580,000 cubic metres, but considerable quantities were also shipped from the middle of June to the middle of September, for which no figures are at present obtainable.

The United Kingdom took a relatively small proportion of the exports, which went mainly to Antwerp and Rotterdam, but the export of timber to the United Kingdom showed a fair increase over previous years. Imports from the United Kingdom through Galatz consisted mainly of coal, tin plates, black plates, bar iron, chemicals, oils, cotton piece goods, and yarns. Quantities were smaller than in 1922, particularly in cotton piece goods and yarn, in which competition from Poland and Italy made itself felt.

Messrs. Francis Wells and Co., Ltd., are now working a new regular fast service between London and the Near East. There are two departures weekly, and the approximate times of transit from London are as follows:—Bratislava 20 days, Belgrade 24 days, Orsova 28 days, Turnu Severin 28 days, Giurgiu 28 days, Rustchuk 26 days, and Lom Palanka 26 days. The service to Vienna takes 18 days and to Budapest 21 days.

SHIPPING AND TRADE AT BRAILA IN 1923.

A shortage of most kinds of foreign manufactured goods, especially those of good quality, was felt during 1923 (says Mr. C. H. A. Marriott, British Vice-Consul, Braila, in his report for 1923) Braila is not of importance as an importing centre, but in this year imports of general merchandise dwindled to insignificant proportions. The import of coal increased.

The balance of last year's (1922) grain crop was exported during the beginning of the year, and some local exporters lost heavily on consignments of bad maize. The river was not closed during the winter 1922-1923, but few shipowners took the risk of sending their ships up the Danube before March.

The 1923 crop was about a month late in reaching the ports and charterers who had hoped for good business during August and September found themselves with several steamers on their hands and without any cargo for them. The export season did not begin until the end of September, and from then until the end of the year grain was exported in quantities. Exporters still had cause to complain of the lack of organisation in the railway system, and whereas before the War from 500 to 900 trucks of grain would arrive daily, it was an event for a single train to arrive during 1923. During September and October the river was exceptionally low, and delays in bringing lighters from up-stream to the seaports were experienced. The improvement in the value of the leu during October, and lasting until the close of the year, also upset the market. The exports of grain were about equal to those of 1922, and the quantity of timber again showed an increase.

The chief exports in British ships were maize (120,000 tons against 55,000 tons in 1922); barley (101,000 tons against 110,000 tons in 1922); beans (17,000 tons against 16,000 tons in 1922); timber (19,000 tons against 15,000 tons in 1922).

There was an increase of some 4 per cent. or 5 per cent. in the total shipping resorting to the port, whilst British shipping lost its place at the

head of shipowning countries to the Italians, the number of whose ships visiting Braila was almost doubled in 1923 in comparison with former years. It is known that the Black Sea ports afforded more favourable conditions than Danube ports, and this may be a reason for the decline in British shipping. Many British owners fixed their steamers to load at Russian Black Sea ports, where the British flag has predominated in recent months.

The decline in Greek tonnage is attributed to the disturbed conditions in the Levant. Of the 49 Greek ships which arrived in 1923, 37 entered during the last three months of the year. Dutch and German ships continued to increase in number. America has dropped out of the Danube trade, while Hungarian and Yugoslav vessels show increases in number. Figures relating to tonnage are not procurable. According to the figures of the Captain of the Port, 40,134,359 metric tons of general merchandise were brought in 1923 in sea-going ships, against 45,327,098 metric tons in 1922. 895,326,934 metric tons (against 640,213,687 metric tons in 1922) and 87,153,822 metric tons (against 61,105,462 metric tons in 1922) of other merchandise, giving a total of 982,480,756 metric tons (against 701,319,149 metric tons in 1922), were exported in sea-going ships.

British ships carried 49.45 per cent. (against 41.6 per cent. in 1922) of the imports and 27.52 per cent. (against 38.1 per cent. in 1922) of the exports.

The Turkish Government has decided to institute a monopoly of the manufacture, importation, and sale of matches as from September 27 next. As from that date matches will be imported and sold exclusively on behalf of the Government.

THE LATE SIR WILLIAM COOPER.

We regret to announce the death of Sir William Earnshaw Cooper, C.I.E., which occurred on July 2 at Castle Carey, Guernsey, at the age of 81. He proceeded to India as an indigo planter, and subsequently founded, with Sir George Allen, the famous firm of Cooper, Allen, and Co., of Cawnpore, of which he was chairman for many years. He was elected president of the Upper India Chamber of Commerce on the establishment of that body, and represented it for a number of years in the United Provinces Legislature. He took a keen interest in the Volunteer movement in India. He was the author of a number of books on political and social questions. He received the C.I.E. in 1897 and was knighted in 1903.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, July 22).

Ellerman "City" Line.—S.s. City of Salisbury for Calcutta (Birkenhead, July 14).

Johnston Line.—M.v. Sycamore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 12); s.s. Incemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 9).

P. and O. Line.—S.s. Narkunda for Bombay (London, July 11); s.s. Nore for Colombo, Madras, and Calcutta (London, July 12).

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Dull.

The Alexandria Commercial Company, in their report for the week ended June 26, state :—

The market during the past week has been very irregular; the net changes on the week are :—Sakellarides : $1.00 down for July, $0.78 down for November, $0.60 down for January. Ashmouni : $2.70 down for August, $1.50 down for October, $1.30 down for December.

From the commencement of the week the market began to show signs of nervousness. Trade conditions did not show any signs of improvement, and this induced liquidation by holders of old crops, whilst the good progress made by the new crop, and the fact that American crop news was also much more satisfactory brought speculators into the market selling the distant positions. The Sakel contract has been decidedly more steady than Ashmouni; on the week, July shows a loss of $1.00 against $2.70 by August and November—a loss of 0.78 points against $1.50 by October. There has been a good deal of straddle selling of October against purchases of November, and the difference between these two positions is now $7.08. Although old crops are rapidly losing interest, the following figures will not be uninteresting :—Stock at this date in Alexandria, 634,000 krs.; probable arrivals to August 31 (including new cotton), 100,000 krs.; total, 734,000 krs. Exports have recently been averaging about 80,000 kantars a week. Last year from this date to August 31 they averaged about 60,000 kantars a week, and to assume that the exports this year will be on the same basis will be to reduce the stock dangerously low, for a considerable part of the stock consists of low grade cotton, unsuitable for spinning. Prices at this time last year were in the neighbourhood of $30 for fully good fair Sakel, whilst fully good fair Sakel is to-day worth $45. Sakel new crops at this date last year stood at a premium, whilst even for Uppers the discount for the new crop was very small; this year the reverse is the case, and with present prices and the existing big new crop discounts, exports from now on will, we think, be so reduced as to leave the carry-over at a figure, which, although small, will be rather more than generally anticipated. Trade is not good, and takings can, we think, be cut down without any great effort. We anticipate that old crop prices will gradually decline as the season draws to a close, although certain grades, of which there is hardly any supply, may command fancy prices. The week's receipts amount to 112 krs., against exports 65,876 krs.; the stock stands at 634,212 krs.

Spot.—Sales this week amount to about 4,100 B/s, of which we estimate 3,500 B/s Sakellarides and 600 B/s Uppers.

Sakellaridis.—All grades have been dealt in with the exception of cotton below fully fair, which has been entirely neglected. Premiums demanded for fully good fair and above are getting daily stiffer, as the constant demand for this cotton, especially fully good fair and fully good fair to good, has considerably reduced the stocks, and good style cotton in these grades is now very difficult to find. A good business has been done in fully fair to good fair, and the price of spot, as compared with contracts, is consequently somewhat dearer.

Uppers.—The demand has been small for this variety and confined almost exclusively to cotton above F.G.F., of which very little remains for sale. The price of spot as compared with contracts remains about unchanged.

Crop 1924.—The crop news continues to be very good; flowering and bolling are general in the Southern and South Central districts. There is no feature calling for special comment.

LIVERPOOL COTTON REPORT.

A Very Quiet Week.

Messrs. Reynolds and Gibson report as follows for the week ended July 2 :—

Egyptian Spot.—The past week has been one of the quietest experienced for some months, the official report describing the demand as "quiet," "in limited request," and "neglected" alternately. Naturally, with Bolton closed, a considerable curtailment in the off-take was only to be expected, but the other centres might also have been shut down, judging from the very limited amount of business sent through. The inquiry has been featureless, and calls for little comment; the small business transacted has been in the current qualities St. Good Fair to Fully Good Fair Sakel; a few bales of Upper have changed hands, but spinners show a disposition to cut this quality out as much as possible, and although stocks of same are light, very probably a considerable easing in basis will be witnessed during the next few weeks. During to-day's session the inquiry has shown signs of broadening, and there seems little doubt that many concerns have let their supplies run down. With stocks of desirable cotton, both here and in Alexandria, at a very low ebb, spinners appear to be faced with a difficult proposition between now and the new crop movement, and probably many will be forced, much against their inclinations, to use the qualities grading below G.F., which exist at this side and in Alexandria in fair quantities. The above, of course, refers solely to Sakel, Uppers are on quite a different basis, as mentioned previously. Sudan Sakel, Tokar Sakel, and White Sudans, in spite of being offered at what appear reasonable prices, have been comparatively neglected. Estimated sales of Egyptian total 1,100 bales, and those of Sudans 250 bales. Quotations for all grades and growths are reduced 25 points. Fair in the different growths exceptionally being reduced 55 points. F.G.F. Sakel 23.35d.

DRIED FRUIT REPORT.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the month ended July 1 :—

Currants.—The month just concluded witnessed no development of note, the fact that it included the Whit holiday being an adverse factor, for it is a period when many take the opportunity to enjoy a certain respite from business, especially in Lancashire. The demand throughout was restricted and confined within a narrow compass, but it is at least satisfactory to note that it has shown more signs of activity of late, and there is a generally hopeful feeling that this tendency will become more marked in the near future. Certainly the last few months have been characterised by such extreme quietude that a better state of affairs is decidedly overdue.

More liberal supplies, chiefly of the lower grades Pyrgos and Amalias, came to hand per Gerano and Veratyr, and were disposed of at some slight reduction in values from rates ruling last month—i.e., 43s. to 45s., and Smalls 46s. to 47s., otherwise quotations show little variation, the commoner grades of Vostizza alone excepted. Sales were :— Pyrgos, 42s. to 43s., cleaned, 43s. 6d.; Amalias, cleaned, 45s.; Patras, cleaned, 47s. to 50s.; Zante, 47s. to 49s.; Gulf and Panariti, 50s. to 55s.; Vostizza, 52s. to 58s., Fine up to 70s. Quotations : — Pyrgos, 42s.; Pyrgos, cleaned, 43s. 6d.; Amalias, 44s. to 45s.; Amalias, cleaned, 45s. to 47s.; Zante, 47s. to 49s.; Gulf and Panariti, 50s. to 54s.; Vostizza, 52s. to 70s.

Australian Currants.—There were further arrivals per Ceramic and Argyllshire, but unfortunately no improvement in the quality was noticeable, and the response from the trade has been most disappointing. Sales were made at 57s. to 60s. for the better grade, the lower qualities neglected.

Raisins.—Valencia : Some business for export and distilling was concluded at 34s. Cape : Reduced prices had to be accepted to make progress, and the little business possible was at 40s. for f.a.q., 52s. for g.a.q., and for a.q. in pockets 35s.

Sultanas.—This article has been persistently pushed for sale, importers showing anxiety to clear their holdings in preparation for the new season. Prices on the whole show very little alteration. The business has principally centred round the cleaned varieties at 50s. to 53s. Other sales : Ordinary 49s. to 51s., good quality 53s. to 64s., and fine 70s. Greeks : Difficult of sale, 48s. to 56s. Australian : Fresh consignments fail to attract buyers, and business is most difficult to negotiate, quality being very mixed as to size and colour, comparing very unfavourably with last year's crop. Business transpired at 52s. to 60s. Cape : Slow of sale. Sundried, 46s.; Sulphured, 55s. to 60s. Afghans : Offer no attraction to buyers and are neglected. Quotations : Reds, 32s. to 35s.; Yellows, 40s. to 45s.

Figs.—Stocks cleared.

There is a growing demand for tanning machinery in Greece as a result of the development of the tanning industry in that country.

Dacia Romano Petroleum.—Production for May amounted to 290 tons. Cable received : Moreni well No. 1 restarted flowing June 2.

Indo-Burma.—Production for April was 4,361 barrels. being 2,563.4 barrels from the Yenanma field and 1,797.6 barrels from the Padaukpin field.

NEAR EAST MARKET REPORTS.

The following extracts are taken from the current issue of the monthly circular of the Imperial Ottoman Bank :—

Constantinople.

The economic uneasiness previously mentioned increased during May, and the commercial crisis is all the graver in the absence of any immediate remedy. Although rumours have been circulated with regard to the eventual withdrawal of town-dues on commodities of first necessity, it does not seem likely that a reduction in fiscal charges is possible.

Deficient showings and poor agricultural results, due both to the reduction in the populations and to the methods of cultivation employed, the reduced purchasing power of the urban and rural population, the reserve shown by foreign companies and by local capitalists and traders, exclude any hope of an early improvement in the situation. Under these conditions transactions are very much reduced. Goods are left lying in Customs and are only withdrawn gradually and with great difficulty.

The import trade is weak; business in piece goods slowed down considerably after the Ramadan Festival, and the colonial produce trade is affected by the fall in the prices of sugar. Deals in carpets contributed the only animation in the export trade. The first consignments of mohairs have arrived from Anatolia, and stocks of the new campaign are being constituted.

The transit trade has declined further. The ports of Salonika and Piraeus have succeeded in attracting a great part of the transit trade formerly centralised in Constantinople, especially in the case of Persian carpets, British and Heraclée coals.

Mosul.

Locusts and grasshoppers caused fairly extensive damage to cereals. Lack of rain further increased apprehension with regard to next crops. Prices of cereals have risen 100 per cent. in consequence.

Jerusalem.

Over 4,500 tourists and a large influx of pilgrims visited Jerusalem during April, spending from two to three days in the city and visiting Bethlehem and Jericho. This has reflected on the local market, causing appreciable activity in the retail trade. Hotels and motor-car owners realised big profits.

The imports into Jerusalem, as recorded by the local Customs station, were less than during the corresponding month of last year. For the first three months of the year goods to the value of £E82,000 were imported, whilst the exports amounted to £E16,000. The chief imports were : Sugar, £E14,000; flour, £E13,000; rice, £E11,000, and petroleum, £E10,000. Prices of imported commodities were firm with the exception of fuel, foodstuffs, and cereals, which advanced considerably.

The "Carmel Oriental" have been granted permission by the Czecho-Slovak Government for the export of Palestine wine to Czecho-Slovakia on 50 per cent. ad valorem Customs duty, as is the case with the French and Italian wines, instead of the 100 per cent. ad valorem duty levied previously on the Palestinian wine. The society is negotiating with the Polish Government with a view to obtaining a similar privilege in Poland.

Company Meeting.

ORIENTAL TELEPHONE AND ELECTRIC.

The thirtieth ordinary general meeting of the Oriental Telephone and Electric Company, Limited, was held on July 1, at the Abercorn Rooms, Great Eastern Hotel, Bishopsgate, E.C. Sir George S. Gibb (chairman of the company presided.

The Secretary (Mr. J. Macleod) read the notice convening the meeting and the auditor's report.

The Chairman, in moving the adoption of the report and accounts, said:—The death of your late distinguished chairman, Sir Henry Babington Smith, was a severe loss to the company. During his seven years' tenure of the chairmanship he gave most devoted attention to all the affairs and interests of the comany at all times even in the midst of his numerous and arduous public duties in connection with the war. I feel sure that you will unanimously join the directors in the deep regret which they express in the report now before you. In November last your directors honoured me by an invitation to undertake the chairmanship. Since my election I have been able to make a fairly comprehensive study of the position and prospects of your company. I have made myself acquainted, by a personal visit to India, with the undertakings at Bombay, Calcutta and Madras, and with the directors and chief officers of the local companies affiliated to the Oriental.

I may say at the outset that as the result of my studies I can congratulate the proprietors on the sound financial position of their undertaking and on the favourable prospects to which we can look forward after the works of new construction have been completed, and the charges for telephone services have been placed, as they soon will be, on a satisfactory footing.

A few years ago the situation of your company contained some elements of uncertainty. The most important of the problems which confronted the company were, first, uncertainty of licence tenure; secondly, the need for raising large sums for extension of buildings and plant; and, thirdly, the necessity to revise charges in view of the general rise in wages and materials.

As regards the licences, it seemed likely that the Government would exercise their right of terminating your Indian licences in 1923, and matters went so far in that direction that when Mr. Parker Ness made his first visit to India in December, 1919, an arrangement was discussed and was thought to have been settled for regulating the conduct of the business at Bombay and Calcutta up to the date of assumed termination. Before that arrangement was finally settled, however, the whole question was referred to London, and fortunately, as I think it was, both for the companies and for the public, the India Office adopted a better policy. They got into communication with your late chairman and offered that in return for guarantees that the systems would be modernised they would agree not to terminate the Bombay licence before the year 1943. This became the basis of settlement ultimately applied to Bombay, Calcutta, Madras, and Rangoon.

As regards Singapore, a new agreement has now been signed under which the Government surrender their right to terminate the licence before, in this case, the year 1944. In India, Rangoon, and Singapore, therefore, the company are now secure in their licence rights up to 1943 and 1944, and the chief peril to which the company was exposed a few years ago has been entirely removed.

Now take the question of capital expenditure. At the beginning of the period under review there was urgent need for new exchange buildings, new and improved equipment, and considerable works of reconstruction. The business had outgrown the accommodation. How large and rapid that growth had been is well shown by the progressive increase of gross revenue. Starting from the year 1900 and combining the revenues of the Oriental and the subsidiary companies, but excluding the figures of the Egyptian undertaking, which, as you know, was sold to the Egyptian Government on very favourable terms in 1917, the gross revenue doubled in eight years. The new figure was doubled again in the next six years, and again it doubled itself in the succeeding six years at an average rate of about £26.000 per annum. In the remaining three years of the period up to 1923 there was a further increase of 50 per cent., due partly, in the last two years, to increased rates of charge. In other words, the gross revenues have multiplied 13½ times in 23 years.

The cost of the necessary improvements and extensions has been large. During the six years up to 1923 the capital expenditure was in Bombay £571,152, in Calcutta £433,437, and in Singapore £112,000. We have still to deal with Madras and Rangoon, where the estimated expenditure is about £150,000.

I think that is all I need say on the subject of the capital expenditure. You will realise that expenditure on extensions cannot be expected to yield an immediate return. It needs time to fructify. It is provision for future growth.

The report was unanimously adopted.

COMPANY NOTES AND REPORTS.

P. and O. Banking Corporation.

The report of the P. and O. Banking Corporation, Ltd., for the year ended March 31 last states that the net profits for the year, after providing for taxation, bad and doubtful debts, and valuing investments at or below market rates, amount to £136,382 6s. 5d., which, with £15,179 11s. 10d. brought forward from last year, gives an available balance for disposal of £151,561 18s. 3d. The directors have placed to reserve the sum of £20,000, thus bringing the reserve up to £135,000. Out of the balance of £131,561 18s. 3d. they propose to pay a dividend of 5½ per cent., less income-tax at 4s. 0½d., absorbing £113,994 8s. 4d.

Imperial Bank of Persia.

The report for the half-year ended March 20 last states that the profits for the period mentioned, after making provision for expenses of management and general charges in London, and at chief office and branches, income-tax, corporation tax, and bad and doubtful debts, amount to £53,093 17s. 5d., to which has to be added £34,644 3s. 7d. brought forward from last account, making a total of £87,738 1s. 0d. From this sum, £3,185 12s. 8d., the amount due to the Persian Government in terms of the concession, has to be deducted, leaving £84,552 8s. 4d., which the directors have dealt with in the following manner: Transfer to reserve account, £20,000; transfer to bank premises account, £5,000; dividend, at the rate of 5s. per share, payable on July 17 (free of income-tax), £25,000; carry forward to new account, £34,552 8s. 4d.

NOTES OF THE WEEK.

Britain and Egypt.

Public opinion in Great Britain (it would be idle to attempt to disguise the fact) has been thoroughly aroused by the insistence upon Egypt's right to the sole possession of the Sudan, with the result that Anglo-Egyptian relations, which ought to be without the suspicion of a cloud, are in danger of becoming strained. Only complete understanding between the two countries can restore the necessary cordiality, and in the circumstances candour was called for on both sides. The debate in the House of Commons last Thursday was the outcome of the anxiety on the subject felt by the country as a whole, and Mr. Ramsay MacDonald took the opportunity of making a clear and straightforward statement. He deprecated the suggestion that differences of opinion between Egypt and Great Britain should at this stage be referred to the League of Nations. "It is much more in the nature of a domestic problem," he said. "We have been in partnership up to now." In regard to Egypt's water supply he gave a guarantee that the British Government was prepared to come to an agreement with Egypt which Egypt itself will accept as satisfactory, and that under that agreement all the needs of Egypt will be adequately satisfied. Mr. MacDonald referred to his anxiety to have the negotiations as quickly as possible. The problem could not be allowed to drift. There must be plenty of time, but not too much of it. While the negotiations are pending, neither Egypt nor Great Britain ought to destroy the *status quo* in the Sudan, and he added: "That must be honourably understood. No one responsible for the British Government could possibly allow, say, Egypt to hang on the negotiations for twelve months or two years, and, whilst the negotiations were being postponed, acting inside the Sudan, disturbing our administration, and upsetting civil order and the peace of the country."

The Pledge to the Sudan.

Turning to the lines of the proposed settlement, Mr. Ramsay MacDonald said very deliberately: "It must be clearly understood that Great Britain cannot throw off its responsibilities, contracted to the Sudan and the Sudanese, by withdrawing and handing the government of that country over to any other Government. I say that in no aggressive spirit at all, and I say it in no spirit of acquisition. . . . I say what I have said because we must stand by the people of the Sudan." He concluded by expressing the hope that Zaghloul Pasha will come to London "determined to settle—reasonable, objectively minded. In that event—the things that used to be said immediately after Egypt became independent will be fulfilled, and Egypt and ourselves will remain friends for each other's good and for the good of all the peoples in the countries round about." At the time when these words were spoken it was difficult to believe that they would not make a strong appeal to Zaghloul Pasha. Now after the outrage of which he has been the victim it remains to be seen whether his health will permit him to undertake the strain of negotiation.

The Attempt on Zaghloul Pasha.

Nowhere will more genuine satisfaction over the fortunate escape of Zaghloul Pasha from a dastardly attempt on his life be felt than in Great Britain. Considerable disappointment may have been experienced in this country by reason of the Egyptian Prime Minister's attitude towards the pending negotiations with the British Government—an attitude which apparently has not sufficiently differentiated him from the more irresponsible of his followers—but it is recognised that Zaghloul Pasha is for the time being the one obvious leader of the Egyptians, and the natural desire for Egypt's welfare suggests that the land is more likely to benefit from his retention of office than if Egypt becomes the prey of political rivalries among a number of minor leaders. Public opinion in Britain would far rather have to deal with an Egyptian Prime Minister, however intransigent, who can maintain some measure of unity and ordered government in Egypt than with a more amenable Prime Minister who had little prospect of carrying his country with him. There is always room for the hope that Zaghloul Pasha will one day begin to set less store on shouted applause, and will realise that the duty of a leader is to lead, even along an unpopular path, if it can be shown to be the only one compatible with the interests and dignity of the State.

Digitized by Google

Assassination as a Policy.

Egypt is in danger of acquiring an ugly record for a tendency to adopt assassination as a political policy. Now that the most popular man in the country has nearly fallen a victim, it is to be hoped that steps will be taken to deal with the evil at its source. Assassination argues political immaturity, and is likely to be indulged in in a country where policies may be influenced, if not actually determined, by student demonstrations. When the whole future of a country seems to hang on the degree of national unity displayed, there must always be the temptation to welcome any form of endorsement of a public policy; hence the encouragement given in the past to mob politics in Egypt. With the grant of independence, the necessity passes for these demonstrations, which at best fail entirely to impress people of greater political experience. It remains, therefore, for the sober body of public opinion in Egypt to devise some means of discouraging the tendency to subordinate the Legislature to the universities and schools. Advisedly the wisdom of all the nations has decided to withhold political rights from minors; but it would be safer to give votes to children than to allow them to dictate by public meeting what is or is not to be the Government's policy.

Austria and Undesirables.

It is announced from Vienna that the Austrian Government has informed M. Raditch, the Croatian leader, that his return to Austria is not desirable, and will not be sanctioned. M. Raditch recently went to Moscow to study Soviet matters and methods, and has since been credited with the intention of organising with Soviet assistance a movement for the establishment of peasant republics in the Balkans, and of starting a propaganda paper in Vienna to further their cause. The action of the Austrian Government in warning off the leader of the Croat Peasant Party throws into strong relief their tolerance of the presence in Austria of a number of disgruntled Egyptians, who not only carry out a violently anti-British propaganda, including the publication in German of a paper called *Die Aegyptische Fahne* ("The Egyptian Flag"), but are also inveighing against Zaghloul Pasha in language that shows a striking similarity to that attributed to the medical student who has tried to assassinate the Egyptian Prime Minister.

The Little Entente.

The Conference of the Little Entente in Prague has come and gone, and once more the representatives of the three countries are able to report the complete harmony which characterised the deliberations. No official statement gives any indication of the ground actually covered, and in view of the thoroughness with which the question of Bessarabia had previously been threshed out in the Press of the countries concerned, there is no reason to suppose that the Conference risked its harmony by attempting any stereotyped expression of the attitude that Czecho-Slovakia and Yugoslavia might feel obliged to adopt in the event of hostilities between Roumania and Russia. One noticeable point is that the Little Entente has found itself obliged to adopt a less unforgiving demeanour towards Hungary. In spite of the fact that the three States would be the first to suffer from any attempt on Hungary's part to kick over the traces, the wisdom of the Great Entente in recognising that Hungary's capacity for ill is much circumscribed, and that it is worth while helping her to carry out any good intentions that she may have has prevailed, and is being tentatively accepted by the Little Entente.

The Religious Riots in Delhi.

The news of a serious outbreak of disorder in the heart of the capital of India is deplorable, but, unfortunately, not surprising; indeed, the increasing tension between Hindus and Moslems, not only in Delhi, but throughout the great cities of the North, has for some time been a commonplace of the local Press. The immediate occasion of the disorder seems, as usual, to have been a trivial quarrel between individuals, but its precise nature is unimportant, for the thing that matters is the eagerness of the men of either community to believe the worst of the other, and to bring sticks or knives into play on the flimsiest excuse. If there were to be riots at all, one could wish that they had synchronised with a session of the Legislature, so that the eager politicians of the South might have seen with their own eyes one of the ugly sides of the country they aspire to rule. As things stand, the lesson will probably be wasted, and eloquent lawyers from a distance will continue to throw lighted matches into the straw, leaving it to others to put out the fire. Will they never learn that appeasement is an essential preliminary to any real constitutional progress?

Indian States and the Government.

Rather a striking sign of the changing times in India is the vigour with which some of the States are now reviving old claims, and pressing new ones, against the central Government, partly, at least, because they hope for greater consideration from British administrators than from the Indian politicians who may by and by succeed them. Critics in India have attributed to this motive the sudden assertion of the Nizam's claim to Berar, a claim, by the way, which does not seem to have enlisted enthusiasitic local support, and we see that Mr. Banerji, the distinguished Dewan of Mysore, has openly relied on the same consideration in claiming to share in the new protective duties. Whatever the treaties may say, there is something to be said in equity for this particular claim. In the old days of a low revenue tariff, subjects of the States did not suffer in practice from the fact that imported goods had been taxed for the benefit of British India, but now that prices to consumers are being deliberately raised, the States can fairly ask for a share in the proceeds. Unfortunately, the central Government is not in a position to be generous, and no immediate settlement of the question can be expected.

Sir Gilbert Walker.

An important chapter in the application of science to human needs was closed last month when Sir Gilbert Walker vacated the post of Director-General of Observatories in India. For more than twenty years he has been eagerly chasing the monsoon, and if he has not actually located its origin he has added immensely to the stock of knowledge on the basis of which its vagaries can

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 78 of this issue.

Digitized by Google

be forecast. We remember elderly people sneering when Sir Gilbert began to seek information from the West Coast of America, a region which at first sight has no possible connection with Indian rainfall, but to-day the value of the American observations is universally recognised, and the same is true regarding the mass of other data which he has collected and, what is equally important, interpreted. There are gaps in the record still, and we suspect that forecasts will continue imperfect until regular data are obtained from the Antarctic regions, but an observatory in those parts is perhaps not a practical proposition, and, if one were established, somebody would probably wreck it with an axe in the next fit of economy. What Sir Gilbert has done has been to utilise such observations as exist, and to supplement them at an expense which is ridiculously small in view of the importance of the work.

THE WEEK AT HOME.

London, Tuesday Morning.

The Government Stock.

However the Government's domestic proposals may get torn in Parliament, something always seems to occur abroad which puts matters right for the Labour Party again. Very soon after the Premier had a very nasty attack from both flanks over his relations with the French Premier, and the Chancellor had been heartily attacked over the pensions of widows of Service men, Mr. MacDonald was able to send Government stock bounding up again with the extremely welcome remarks upon the future of the Sudan. This attitude of the Labour Government towards the Sudan has, one might say, done them as much good as anything since they assumed office.

Some observers, including many eminent Conservatives, are inclined to think that the Labour Government is incorrigibly lucky; but one is now forced to assume, from the frequency with which salvation has been secured, that the Premier has his ear more closely to the ground than his opponents thought was possible for one whose head was reputed to be so much in the clouds.

Coal and Liberalism.

Pity the poor Liberals! It is almost melancholy to see the eager, perhaps despairing zest with which they turn from one subject to another, thinking therein to find their own salvation. The land, electoral reform, and now coal have been the objects of their frantic researches. Yet, while they thus seek feverishly for a panacea, the country steadily and unmistakably is voting against them.

They have, over the problem of this country's coal supplies, drawn up what they call a great national programme, but it is hard to perceive that it does more than recommend in the good old way that justice should be done to everybody. It is true that the Liberals fully understand that our mines are often not run on the most economical lines, and that, between the demands of the masters and of the men, the public stands always to lose, but one feels that all this might so easily and more creditably have been recognised when the Liberals were in power, or and especially when there was in supreme command Mr. Lloyd George, under whose presidency this "programme" on coal and power has been formulated.

But it would seem, whatever the Liberals do, the people of Britain will not approve. At the Lewes by-election the other day the same unlearnable lesson was taught to the Liberals. The Conservative easily got in, with the Labour man not very far behind, and the Liberal nowhere. And this was after a stupendous effort had been made in Liberal quarters, and after their Press had daily announced the sure tendency of the country towards a sane Liberalism. For many years more it looks as though the Liberals will have to live under a cloud with an increasingly leadening lining.

Parliament and the Weather.

Governments some æons ago gave up the attempt to control the weather, and Parliament has now proposed to move to the mountain. It set up some months back a Joint Committee to see whether Parliamentary sessions could not be arranged so as to curtail the interference of the hot weather in the national business. This Committee is of opinion that Parliament should sit until the end of July and adjourn until October or November.

The need for some such rearrangement is increasingly apparent as the weather becomes hotter and tempers become frailer. The Clydeside people, in particular, will, if these proposals are enforced, undoubtedly spare us some of their August and September ebullitions.

The Monstrosity of Advertising.

There are at present gathered together in London various "advertising experts"—that is, people who tell you more loudly and more persistently than anyone else that there is truth in what they say. They indulge in what they call "slogans." (Example, by E. V. K.: "Digest well, and you won't die jest yet.") The more stentorian and palpable of them come from America, and are now running the British Empire Exhibition off its legs. They do not recommend to us very ordinary folk that we should buy the articles that they advertise: they enjoin (not, as in Latin, followed by the conditional, but by the present indicative) us to buy the wretched things.

More than this. They claim that the whole world of beauty is theirs. They are proudly exhibiting the posters that they have paid artists for to prove to us how beauty and truth are instinct in their work. "There is truth in advertising," says our own incomparable Sir Charles Higham, and for the weak moment many are inclined to believe him. The dogmatism of these men is really delightful. Possibly it has a philosophical or psychological basis; it may be the modern form of Positivism.

Certainly there is nothing to which this use of advertisement may not, in the eyes of its devotees,

be applied. It is, in the opinion of our Sir Charles Highams, the method of the future for the propagation of ideas; it is the only way in which States will be able to justify their existence. Not only for mundane purposes will this great instrument of instructing the public be used; and there are those already in Great Britain who advocate its employment for religious purposes. If, they argue (although not quite in these words), you can get people to drink what is called whisky and to eat what is called marmalade, how much more easily will they be persuaded to swallow So-and-so's sermons!

I once heard Mr. Edgar Jepson tell Sir Charles Higham to his face that these advertising "stunts" and "slogans" are nothing but "toddy for imbeciles"; and it is impossible to improve upon that.

The Week at Lord's.

Previous report was even more unreliable than usual over the match between Oxford and Cambridge at Lord's last week, for there was at no time more than one team in it. As far as I could see, there was not a single department in which Cambridge were not infinitely superior. But, on the whole, the teams were far below the average, particularly in fielding. Some of the on side play was excellent, but one missed the off-side grace which is commonly so distinctive a feature of University play.

Harrow this year were not beaten by Eton, and that fact alone seems to deserve record. What is more, they had a quite good share of the honours. What is perhaps even more still, the two days were the completest social triumph.

English Oilfields.

It is disappointing to read that the directors of the English Oilfields, Ltd., have come to the conclusion that from their large oil shale lands in Norfolk there is no reasonable prospect of commercial success. Everyone will remember how, about four years ago, the country was set agog with the suggestion that it possessed oil in workable quantities. And now comes disillusion.

Yet there is much to be said for the absence of oil in a country. At any rate, our politics do not, as in some countries they do, reek of it.

The Health of London.

No idea is more firmly imbedded than that the wear and tear of modern life cause people to die earlier than they used. But it is, as the latest report of the Medical Officer of Health for London shows, a mistaken belief, for it is therein demonstrated that in the course of eighty years the Londoner's life has been extended by more than twenty years. Moreover, in 1923 the death-rate was the lowest ever recorded in London. And this was a remarkable year in other ways. For the birth-rate was lower than in 1922 (although that has been on the down grade since the 'eighties), and there were fewer marriages than in the preceding year.

What all this signifies must be left to the individual to say. The apostles of progress are rejoicing over it, the cynics are rejoicing over it, and the Malthusians are rejoicing over it. And he who belongs to none of these three categories is probably keeping quiet his counsel, and will concentrate on less problematical things until he has forgotten all about it.

CASKED CORDIALITY.

To the Editor of The Near East.

Sir,—Your contributor "Alter Ego" wonders how Europeans overseas fared in regard to beer before Kenton took to bottling it for export. So far as the East is concerned, the answer is that they got their beer in the cask. The outward fleets, especially those from Holland for Java, carried very large quantities during the seventeenth century, and one can trace in old invoices the distribution from Batavia, to Gombroon and Surat, to Pulicat and Chinsurah, to Formosa, Amboina, Macassar, and as far as Timor. Arrivals were, however, irregular, while the beer was apt to turn, so that periods of enforced abstinence recurred from time to time. In the official diary of the Batavia Administration there is a pleasant little idyll—the Governor-General sends his compliments to the English President at Bantam, and inquires if he can spare even one barrel of "good English beer"; the English President sends his compliments to the Dutch Governor-General, and regrets that Bantam is bone dry; the messenger says there's really plenty of beer, but the President is stingy; and feeling between the two nations becomes, shall I say, embittered. Then a ship reaches Bantam from the Thames, the President sends his compliments to Batavia with a barrel of the best, the Governor-General reciprocates with a keg of Rhine wine, and international relations become cordial—until the next drought.—I am, etc.,

W. H. Moreland.

MOSLEM FESTIVAL AT WOKING.

The Moslem festival of Eed-ul-Azha was celebrated at the Woking Mosque on July 13. The gathering, numbering between 200 and 300, included the Fadli Sultan of Lehej, the Begum Sahiba of Manawadar, Prince Abdul Khaliq of Mangrol, the Persian and Egyptian Ministers and their personnel, the Consul-General of Afghanistan and the Turkish Chargé d'Affaires and their personnel, the Consul-General of Czecho-Slovakia, Lord Headley, Sir Ali and Lady Imam, and the Raja of Shripanor.

Following prayers on the lawn adjoining the Mosque, the Imam (Khwaja Nazir Ahmad) delivered an address upon the present condition of Islam.

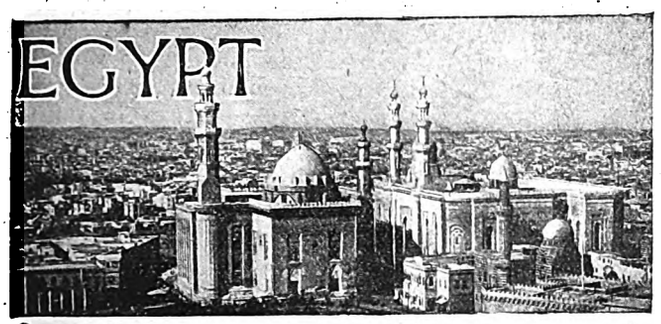
The Near and Middle East.*

From Our Own Correspondents.



Cairo, July 5.

The Position of the Premier.

During the past week Egypt has suffered a Ministerial crisis, Zaghloul Pasha having tendered his resignation to the King in consequence of the British Government's declaration on the subject of the Sudan. When he made his statement in regard to that declaration, prior to having his audience with the King, Parliament gave him a unanimous vote of confidence, and, as was fully anticipated, the King, acting strictly as a Constitutional Monarch, declined, in the circumstances, to accept the Cabinet's resignation. And so Zaghloul Pasha and his colleagues remain in office.

It seems clear now that, whatever Zaghloul's expressed excuse, the whole affair was a very astute expedient on his part to divert attention from the errors of tactics that he has certainly committed, and make of the difficulties which had resulted a rallying point for the country. His scheme has proved a brilliant success, and there is little doubt that in regard to the main political questions, he has regained whatever ground he had lost since his accession to power; and, in fact, he has materially improved his position.

As regards negotiations, Mr. MacDonald's speech has certainly revived the hopes which had been dashed by Lord Parmoor's statement, but the situation at the present moment is far too obscure for it to be possible for anyone to say anything definite on the subject. In his statement agreeing to remain in office it will have been noted Zaghloul Pasha made no reference to this matter, and what is confidently expected is that, without coming to any decision, he will proceed to Vichy for a cure, and that, if circumstances are favourable, he will proceed thence to London. It is, however, obvious that under the most favourable conditions negotiations cannot take place until mid-September.

I said that in regard to the main political question Zaghloul Pasha had regained his position. I said that advisedly, because an incident that happened in the Chamber of Deputies on Wednesday evening has shown that, however blindly the Deputies may follow him on the higher political questions, they are not inclined always to bow to his will. Saad Pasha, on the occasion in question, took them to task for having taken a decision to reject a Bill without giving the Government an opportunity to defend the project, and he asked them to go back on their decision. It appears that, having come to the end of the *ordre du jour* at an unusually early hour, the House took it into its head to deal with other matters which were awaiting attention, quite regardless of the fact that no notice had been given to the Government, and that, in fact, no representative was on the Government bench at the time.

Opposition in the Chamber.

The measure with which the Deputies decided to deal was the Bill regulating demonstrations and public meetings, which, promulgated before the framing of the Constitution, was amongst the laws that had to be submitted to Parliament for confirmation. And by a unanimous vote they decided to abolish this law. Undoubtedly, in doing this, they had borne in mind the fact that this was one of the exceptional measures, which Zaghloul Pasha had condemned so severely before he came to power, and it was probably with no little surprise that they learned from his lips that he had contemplated its retention, as some measure of this description was essential for the government of the country.

However, the Chamber stood on its dignity and categorically declined to go back on its decision, although it was abundantly evident that their action had displeased the leader whose wishes they had hitherto almost blindly respected. A compromise was eventually arrived at, and the Government will bring forward a new measure in the next few days, but this incident has revealed the Chamber in an entirely new light, and will have shown Zaghloul Pasha that he cannot entirely lead it by the nose as he likes.

IRAQ.

Baghdad, June 26.

Anglo-Iraq Treaty.

With the acceptance by the Constituent Assembly of the Anglo-Iraq Treaty, the country as a whole has experienced a sense of great relief. There has followed a cessation of those dangerous intrigues which were beginning to cause unrest throughout Iraq, an unrest which might at any moment have come to a head. Terrorism of the deputies has ceased, pro-Turkish, anti-Government, and anti-monarchist propaganda has to a large extent been discontinued, and no further demon-

strations have been made in the capital, though bodies of armed police still patrol the streets. The acceptance of the Treaty seems also to have nipped in the bud the reported intention of certain of the Euphrates sheikhs to set up a Government of their own, backed by their well-armed tribesmen.

A persistent rumour was current in the bazaars for some days that the qualified resolution by which the Assembly passed the Treaty was unacceptable to the British Government. The following announcement, which appeared in the local Press on June 19, set at rest all fears on that score.

"His Excellency the High Commissioner has been authorised by His Britannic Majesty's Government to state that the acceptance of the Treaty, Protocol, and Agreements by the Constituent Assembly under the terms of their resolution of the evening of June 10, 1924, is considered by His Britannic Majesty's Government to have fulfilled the condition required by Article 18 of the Treaty, which provides for ratification by the high contracting parties only after acceptance by the Constituent Assembly, as soon as the consent of the British Parliament has been obtained.

"His Britannic Majesty's Government are, therefore, prepared to proceed with the formal ratification, and it is hoped to obtain this consent as soon as possible after the reassembly of the British Parliament, which took place on Tuesday."

From this it will be seen that in point of actual fact the Treaty is still unratified, the Constituent Assembly having only authority to accept or reject it.

King Faisal has expressed his willingness to make the formal ratification as soon as His Britannic Majesty's Government are ready to do so. The ratifications are to be exchanged at Baghdad.

The Organic Law.

Many of the Deputies have obtained permission to return to their homes for a spell. The "Rump" continues languidly to debate on the clauses of the Organic Law. It has so far made only one innovation of any moment—namely, the addition to the flag of Iraq of two stars, representing, it is said, the dual control at present existing in the country.

The draft of the Organic Law considerably curtails the powers of the King, transferring them from His Majesty to the Parliament and Senate of the future. Many of the Deputies are anxious to see this change made, while others fear that such a step will be injurious to the country. The arguments of these latter have at least the merit of frankness. They state that they realise that the future Parliament will be composed of a large number of men, some unable to read or write, many devoid of any public spirit, most possessed of little previous political experience. If the fate of Iraq lies in their hands, they will be only too liable to come to ill-advised decisions which, by reason of the size of the Assembly and the conflicting interests of its members, the High Commissioner may be unable to influence. If greater power were in the hands of one man, namely, the King, they argue, so much the greater would be the influence wielded by the British Government.

Release of Suspected Assassins.

The two lawyers who were charged with the attempted murder of Sheikh Sulman al Barak and Sheikh Addai, two pro-British Deputies, have been released for want of evidence. Though he had previously identified his assailants, when it came to the point Sheikh Sulman refused to give evidence against them. This apparently inexplicable conduct is said in some quarters to be due to the feeling among the tribes that it is not in accordance with honour to resort to Government assistance for the avenging of a personal wrong. That, in their opinion, is a matter which should be settled according to tribal custom. The two sheikhs have recovered from their serious wounds.

The local Press, now that the Treaty has been accepted, is urging the release of those who were arrested in connection with the demonstration outside the National Assembly on May 29.

Italian Cruiser at Basra.

Basra has been entertaining during this week Commander Cacchia and the officers of the Italian cruiser R.N. Calabria. This ship, after two years in the China station, is returning to Italy, where she will be broken up, having been some twenty-five years in commission. She put in at Basra in order to coal after her visit to Bushire, where she picked up the bodies of the Italian aviators who were killed in the recent accident at Shiraz. The coffins were carried through lines of Persian troops, both British and Italian naval guards of honour being present, and were put on board the cruiser, which is to take them to Italy for burial.

PERSIA.

Teheran, June 20.

The Political Situation.

Though the political situation has been quiet and without incident for some time past, it would appear that things are not running as smoothly as they might with the Government, and even the Prime Minister is being criticised for the Cabinet's apparent inactivity. A few days ago Sardar Sepah proceeded to the Parliament and requested the President of the Mejliss to appoint a committee of twenty-four deputies to discuss the present situation and to act in conjunction with the Government. The Mejliss at present appears to be marking time, and no decisions on important matters before the House for discussion have been taken.

The papers published a short time ago the text of a telegram which purported to have been despatched to the Shah by forty of the Ulema urging on His Majesty the necessity for him to return to Persia as soon as possible, and other priests have followed suit. It would seem, therefore, as if the ground were being prepared for the sovereign's return, but no reliable information is available yet in this connection.

Presentation to Sardar Sepah.

A fortnight ago a large crowd was present at Bagh-i-Shah to witness the public presentation to the Prime Minister of a decoration in the shape of a miniature portrait of Ali, Amir el Momenin, the Prophet's son-in-law, sent from the sacred shrine

at Kerbela at the instigation of the Ulema of that place, in recognition of Sardar Sepah's services to the Islamic faith. The Afghan Minister and Turkish Ambassador were present, and the latter delivered a speech on the unity of the Moslem nations.

Attacks on the American Advisers.

While the Government is quite satisfied with the good work being done by the American Financial Advisers, as evidenced by the submission to the Mejliss of a Bill for the employment of four more advisers at a salary of $7,500 per annum, some of the papers have renewed their attacks on Dr. Millspaugh and his staff, alleging that their financial qualifications are inadequate for the difficult task confronting them, of suggesting and instituting reforms to place the chaotic finances of the country on a sound and profitable basis, instead of merely collecting taxes and revenue. The Ministry of Finance recently submitted to Parliament an Income-tax Bill which, if passed, will come into force from the beginning of the next Persian financial year, March 21, 1925. Income-tax is a quite new and hitherto unknown form of taxation in this country, and the Bill is being much criticised and apparently meeting with much opposition in the Mejliss. This Bill provides for the levy of income-tax on a sliding scale ranging from 1 per cent. on incomes of between 1,000 and 2,000 tomans a year to 8 per cent. on incomes of 25,000 tomans (about £6,000 at the present rate of exchange) and upwards, and foreign subjects and institutions will be liable to payment of such a tax if their incomes are earned in Persia. Much doubt is expressed as to the practicability and feasibility of such a measure in this country, and it remains to be seen whether the Mejliss will ratify it.

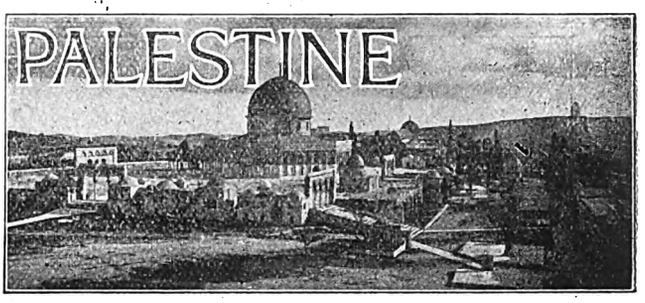
The Military Operations in Luristan.

Though the Government troops' campaign against the Lurs has been veiled by strict censorship, and only reports of heavy fighting came through, it is now officially announced that the tribesmen have met with a severe defeat, and that the Government forces have reoccupied the towns temporarily occupied by the Lurs, and that the district is quiet again. It is interesting to note that aeroplanes have been made use of for the first time for reconnaissance work in this country during these operations, the Government losing no time in utilising its newly acquired Air Force.

The King's Birthday.

On 3rd instant, on the occasion of His Majesty's birthday, the usual reception was held in the delightful garden of the British Legation, the Chargé d'Affaires, Mr. Ovey, being at home to a large gathering of Persian officials and notables, the *Corps Diplomatique*, and members of the British and European communities. This year the reception took place in the afternoon instead of in the evening as in the past few years, and a novel feature was an exhibition of physical "stunts" on one of the lawns by the six Indian cyclists who are riding round the world, of whom I made mention recently. The exhibition, of which the Prime Minister was an interested spectator, included a display of Indian wrestling and jiu-jitsu, and a three-round boxing match, at the end of which Sardar Sepah asked to examine the gloves. One of the Indians then proceeded to pull a motor-car with six passengers by a rope held in his teeth, and later allowed the car to be driven twice across his back, rather an alarming sight for the spectators to witness!

The new French Minister, M. Bonzon, arrived here a few days ago, and presented his credentials to the Valiahd (Crown Prince).



Jerusalem, July 5.

The Murder of Dr. De Haan.

The English Press seems to have given considerable publicity to the murder in Palestine of a certain Dr. Jacob De Haan—probably because his death, on the face of it, seemed so obviously a political crime and because Zionist enthusiasts seemed so obviously the only likely culprits. These conclusions may or may not be true; the local police are at present quite at a loss where to turn for either motive or culprit, and nobody, except Dr. De Haan's own small party of "super-orthodox die-hards," is prepared altogether to exclude the possibility of the murder being a case of purely private revenge.

Dr. De Haan was an exceptionally gifted man; but he was not a normal being, working along reasonable lines with a reasonable political or religious goal in mind; he seemed to have a lust for unpopularity and notoriety—and he certainly acquired an ample supply of both. Yet by the Administration, by the local Zionist Organisation, and by the Jews generally he was looked upon as just an irritating nuisance whose efforts might be disregarded, or at least not taken seriously, rather than as a dangerous political leader who—by regular or irregular means—should at all costs be suppressed. Few private men could have inspired so much dislike as did Dr. De Haan; yet in spite of this his activities—whether as correspondent of the *Daily Express* or as the brain and spur of a group of orthodox "separatists," or as an anti-Zionist stalwart—were in the main so grotesquely and increasingly perverse and wrong-headed that he had ceased to be dangerous except in his possible influence on those ignorant of existing conditions. Such a man is not usually the target of political crime, however severely he may suffer at the hands of indignant fellow-journalists. The police did, I believe, arrest two well-known local journalists who had recently delivered themselves of vitriolic abuse of De Haan, but they were quickly liberated. In his earlier days in Palestine De Haan did not figure prominently in his later unpopular rôles; he wrote attractively about the country, did his best to make himself journalistically efficient, and cultivated the Arabs and the British officials. It was with the visit of Lord Northcliffe to Jerusalem two years or so ago that De Haan made his greatest bid for unpopularity—by heading a deputation which informed Lord Northcliffe that they, speaking in the name of Orthodox Jewry, protested against Zionism. Lord Northcliffe was strongly impressed; he may have learned ultimately that this deputation did not represent "orthodox Jewry" in the real sense, but something very different. Later, De Haan became gradually revealed as the Jerusalem correspondent of the *Daily Express*—in whose pages he gave an astonishing exhibition of distortions, gradually more deliberate and unpardonable, of any and every local event which could be used to impose on an innocent public the idea

of a Palestine reeking with dissatisfaction, anarchy, and oppression.

All this does not, of course, justify his murder, and nothing but the strongest expressions of utter abhorrence have been forthcoming from every Jewish quarter at an act which all denounce as "utterly un-Jewish."

"La Juive."

This murder has rather driven out of mind the grievance, stirred up a few days earlier, at the Government's suppression of the Hebrew Opera Company's performance of Halévy's "La Juive." The performance of this opera had long been announced, and it was actually presented in Tel-Aviv and then in Jerusalem. A second performance in Jerusalem was, at a very short notice, prohibited on the grounds that it was unseemly and offensive to the susceptibilities of the Latin community. It is difficult to convey a due impression of the indignation among the Jewish public—that a Jewish opera, an opera played continuously for nearly a century in every town in the civilised world, should for the first time be officially banned when presented in the "Jewish National Home," in a city predominantly Jewish, performed in the Hebrew language, and presented by the "Palestine Hebrew Opera," that greatest creation of the Jewish cultural revival—it is felt that deliberate and callous insult of Jewish feelings could no farther go! The Latins, on the other hand, accuse the Jews of gross and deliberate ill-manners in presenting an opera depicting a Roman Cardinal, once guilty of a wife and child (though this was before his ordination vows), at the very moment when a Cardinal, the Papal-Legate, was in Jerusalem. The actual offensiveness or inoffensiveness of the opera in itself does not seem to have been seriously taken into account. To the independent onlooker the Cardinal in "La Juive" is a distinctly fine and human figure, while the Jew Eliezer is a perfectly horrid character.

THE EGYPTIAN ARMY DINNER.

The Egyptian Army dinner took place at Claridge's on July 8, when the following were present:—Field-Marshal Lord Grenfell, Admiral Sir W. H. Cowan, Generals Sir L. B. Friend, Sir T. J. Gallwey, Lord Gleichen, Sir G. F. Gorringe, Sir A. Hunter, Sir H. Lawson, Sir G. B. Macauley, Sir B. T. Mahon, Rawson, Sir L. F. Stack, and Sir F. R. Wingate, Captain C. M. Staveley, R.N., Colonels Lord Athlumney, Bassett, Broadbent, Byam, Chapman, Dove, Hadow, Hall, Hore-Ruthven, Hutchens, McCowan, Persse, Russell, Savile, Smith, Stallard, Spencer, Turner, Tweedie, Watson, Webber, Wilson, and Woodward, Majors Bailey, Bayly, Brocklehurst, Danels, Eaton, Elderton, Fairbairn, Flint, Giles, Greenwood, Hayes Sadler, Viscount Hawarden, Jarvis, Mills, Spencer, Stirling, Thorburn, Walsh, Waymouth, and Worthington Wilmer, Captains Burton, Campbell, Devereux, Garstin, Smedley, Soutar, and Wise, and Mr. Crispin, Mr. Herd, Dr. Hodson, Mr. Laidlaw, and Mr. Vingoe.

The Viceroy's programme for the rest of the year comprises a visit to Poona in August and to Kashmir in October, attendance at the opening of the session of the Chamber of Princes and the military manœuvres at Delhi, a visit to Kathiawar in November, and a month in Calcutta at Christmas-time.

An exhibition of the objects discovered during the last season's work of the joint expedition of the British Museum and the University of Pennsylvania in Mesopotamia, under the leadership of Mr. C. L. Woolley, was opened to the public in the Assyrian Basement at the British Museum last Tuesday.

MESTROVITCH.

Though loans may fail, and Raditch intrigue, and *komitajis* threaten, the estimation in which the work of Mestrovitch, the Dalmatian sculptor, is held by the world is surely and steadily increasing.

His exhibition at the Galleries of the Fine Art Society in New Bond Street enables one, perhaps more clearly than was possible during the days of the War, to appreciate his art. It contains many examples not hitherto exhibited. At once one can say that he is as stimulating, as forceful and masterful as ever one thought. But, in addition to the intensity and the intimacy which have long been granted to Mestrovitch, one sees in this exhibition a profundity, almost a serenity, that one had not hitherto wholly suspected. Not that he gets away from his provincialism, if one may without disrespect so call his burning love for his native types—he still sees the universal through the particular, as God through the flower; but he seems now to be so sure of his technique that, like a Busoni, he can roam at will in the remote fastnesses of his imagination, or superbly and boldly attack and overcome the problems of the immediate present.

Examples of his work are here to be seen in bronze, wood, marble, and plaster, and possibly the most admirable, certainly the most fascinating, are those in wood. It is a constant marvel and joy to see how the craftsman has used the very grain of his wood the better to inform his conceptions of Christs and Madonnas and Caryatids, and in marvelling at this technique one scarcely realises the unconventionality of his imaginative works—for his Christ (as in "Ecce Homo") is a Slav Christ, the Christ, perhaps, of Dostoevsky, or, again, of his fellow-countryman, Vladimirovitch. But one can ponder at will before these exhibits and find fresh things to admire. One thinks for a moment that nothing among his bronzes can surpass the vital expression—which creates the feeling of a real presence—of M. and Mme. Eumorfopoulos and of Lady Cunard; and then one turns with possibly greater admiration to the studies of "Pieta," to the "Girl at Prayer," to the "Girl Playing Guitar." Of his works in marble, the most remarkable is a study of a woman; it is called "Contemplation"—a beautiful example both of Mestrovitch's strength and of the closeness of his inspiration to Nature. One may mention of the plaster exhibits, "Emir Feisal," "Rodin," and "Man Thinking," of which the last is truly memorable for the fierce degree of thought to which it suggests the man has attained. To the representation of the King of Iraq Mestrovitch has unerringly brought the dignity and repose characteristic of the Emir, and there is not wanting that touch of placid kindliness; but he scarcely suggests any hidden depths or distant Arab dreams.

Public interest in sculpture is slowly re-awakening, and it is much to the credit of Yugoslavia to have played so fine a part in that renaissance. This exhibition has already attracted wide notice, and will attract still wider appreciation.

The Yugoslav Government has appointed M. Michel Gavrilovitch, the Yugoslav Minister in London, and M. Juritch, Yugoslav delegate on the Reparation Commission, to represent Yugoslavia at the forthcoming London Conference.

The Greek Minister of Education has introduced a measure for the purpose of founding at Salonika a second Greek University, states the *Morning Post* Athens correspondent. It is to have a Faculty of Literature, including English, and will specially cultivate economics and applied science in view of the country's practical needs.

THE VISIT OF RAS TAFFARI.

The visit to London of Ras Taffari Makonnen, Prince Regent of Abyssinia, has been conspicuous for the crowded character of the programme. Apart from the official engagements—the audience at Buckingham Palace of Tuesday, followed by King George's return visit to 2, Albert Gate, where Ras Taffari and his suite are staying, the luncheon with the King and Queen on Wednesday, the visit to the British Empire Exhibition and the Prime Minister's dinner on Thursday, and the luncheon at Lambeth Palace on Friday—His Imperial Highness has found time to visit St. Thomas's Hospital, the Zoological Gardens, Westminster Abbey, Windsor Castle, the Royal United Services Institution, the National Gallery, and the House of Commons, as well as to make a number of more private visits, including that to the British and Foreign Bible Society, to which he made a handsome donation of £100. On Monday Ras Taffari went over to Paris, to return in time to receive an honorary degree at Cambridge University on Thursday. He is to have a farewell audience of King George on Friday. The Prince expresses himself as highly pleased with his visit to England; while Sweden, of all the countries he has visited, has perhaps made the greatest appeal to him for scenery, he has appreciated the general comfort of English life, and was particularly impressed with the interior of Buckingham Palace.

THE BULGARIAN MINISTER IN LONDON.

News has been received from Sofia that the resignation of M. Dimitri Stancioff, Bulgarian Minister in London, has been accepted by the Bulgarian Government, and that he will vacate his post by the end of the present month.

A few months ago questions in the Bulgarian Chamber showed that extreme partisans among the supporters of the present Government resented the break with the Balkan tradition that requires a complete change of all State officials with every change of Government. M. Stancioff had been appointed to his present post by M. Stamboliski, and a certain number of deputies considered it incongruous that M. Zankoff's Ministry should continue to be represented by a nominee of the late Agrarian régime. In order to save the Government from any possible embarrassment, M. Stancioff placed his resignation in its hands, and, after considerable delay, this has now been accepted.

When M. Stancioff came to London four years ago he had nothing but his own personality and that of the members of his family to oppose to the reserve which the representative of an ex-enemy State was not unnaturally liable to meet. In this short time he has had the satisfaction not only of being himself made welcome in London, but also of seeing cordial relations established between his country and Great Britain. A combination of circumstances, with which must be associated the names of Mme. Stancioff and her three daughters, has made the Minister pre-eminently successful where many of his countrymen might have failed to advance beyond the stage of correct relations between the two countries.

Bulgaria, therefore, is indebted to M. Stancioff for his services in London, and opinion in England will be doubtful of the wisdom that has somewhat abruptly terminated his tenure of the post of Minister. M. Stancioff, however, adopted diplomacy as a life profession, and has never taken any part in Bulgaria's domestic politics. Educated at the famous Theresianum in Vienna, he entered the Bulgarian diplomatic service, and, after being for a short time Foreign Minister, was in 1898 appointed Minister to Paris and London. The double post was soon divided between two Legations, and M. Stancioff remained in Paris. After service in Rome, St. Petersburg, and other capitals, he was back again in Paris at the outbreak of the War. Already suspect as "Ententophil," he was removed to Rome, and when Bulgaria entered the War was sent on active service to Macedonia as a captain in the Reserve of Officers. After the Armistice M. Stancioff was appointed by the Prime Minister, M. Thodoroff, as Adviser to the Foreign Office, where he was found by M. Stamboliski. When the time came for the appointment of a Bulgarian Minister to London, M. Stamboliski nominated M. Stancioff, having satisfied himself that no other appointment would be as favourably received.

After a visit to their property in Varna (Bulgaria), it is not unlikely that M. and Mme. Stancioff will settle in London.

It is reported that the new Bulgarian Minister to London will be M. Hadji Micheff, who held the post at the time when Bulgaria entered the War against the Allies.

ARAB SONGS.

An extremely interesting recital was given on July 3 at the Wigmore Hall by a young American singer, who calls herself Miss Lalla Nejma. Her songs were wholly in Arabic, and were culled from Tunisia (with one or two from Tripoli), Syria, and Egypt. She accompanied herself with the tom-tom and with a plucked stringed instrument, and although it was with the latter that she sang the purest and most classical Arab songs—the Syrian, in which, incidentally, a dash of Persian influence manifested itself—the former were more intriguing. This was probably due to the facts that (1) the accompaniments were too much "arranged" after Western methods, and (2) the quarter-tones so characteristic of Arab songs were incapable of instrumental reproduction.

Almost all Miss Nejma's songs were love-songs, mostly plaints of jilted love. One particularly beautiful example, however, sung exquisitely, was the song that Jewish mothers sing in Tunisia on the birth of their child.

This singer is obviously a very earnest student of Arabic songs, and certainly she is well endowed for her difficult task of interpreting Eastern music to Western minds. There is any amount of research to be done in Arabic music; particularly, its rhythmical possibilities are almost inexhaustible. And its melodies, though strange at first to our ears, are marvellously fascinating. One need think only of some of the songs which come from the Mohammedans of the Caucasus and from the Yemen—two countries untapped by Miss Nejma—to realise how rich and varied Arab music is. This music is, moreover, neither stagnant nor set; it is perpetually creative.

M. Bratiano, Roumanian Prime Minister, has gone to Carlsbad for a month's stay.

The Khalif Abdul Mejid has accepted the Nizam of Hyderabad's offer of a monthly pension of £300.

Thirteen Greek refugees have been killed by the fall of part of the ancient wall of Salonika near the citadel.

M. Caclamanos, the Greek Minister in London, will represent Greece at the London Conference.

According to the *Tanin*, a new and improved service of trains between Haidar Pasha and Angora started on July 11. Two trains now run daily, and the journey is done in fifteen hours instead of twenty-six.

While General Sir Walter Congreve, V.C., the new Governor of Malta, was sailing in Grand Harbour last Thursday, a sudden gust of wind capsized his boat. He was rescued by harbour craft.

PERSONAL AND GENERAL.

TO-DAY.

July 17, 1924 (New Style).
July 4, 1924 (Old Style).
Julheggia 14, 1342, A.H., of the Moslem Calendar.
Tamuz 15, 5684, of the Jewish Calendar.

The Gaekwar of Baroda left London on July 8 for Paris.

Sir Cowasji and Lady Jehanghir arrived at the Hotel Cecil last week.

The King received the Maharao of Cutch at Buckingham Palace on July 12.

The Roumanian Minister returned last Monday to 50, Grosvenor Street from Switzerland.

Queen Olga of Greece, attended by Mme. Baltazzi, arrived at Buckingham Palace on July 12.

Sir Milne and Lady Cheetham have arrived at 102, Eaton Place from the British Legation, Athens.

Mr. Howard Carter, who returned to London on July 8 after a tour in America, expects to leave for Luxor in November.

Lord and Lady Olivier gave an "at home" at the India Office on July 9 to meet members of the Parliamentary Labour Club.

Prince and Princess George of Greece, who have been staying at the Savoy Hotel, left London last week for their residence at St. Cloud.

The Crown Prince and Princess of Roumania arrived in London on July 15 on a visit to the Roumanian Minister and Mme. Titulesco.

Prince Nicholas of Greece and Princess Elizabeth of Greece were among the guests of Lady Cunard at dinner at the Ritz Hotel on July 9.

Sir Herbert Samuel, His Majesty's High Commissioner in Palestine, called at Buckingham Palace last Thursday, and was received in audience by the King.

Mr. D. T. Chadwick, Secretary to the Government of India in the Commerce Department, has come home on leave, and Mr. G. L. Corbett is holding the acting appointment.

The Bulgarian Minister returned from Paris last week, where, in his capacity as a member of the International Olympic Committee, he went to attend the official receptions in connection with the Olympic Games.

The King has granted authority for the wearing of the insignia of the following decoration:—Order of the Nile.—Fourth Class: Mr. Alwyn Douglas Home, H.M. Consul for North-West Abyssinia, Commercial Agent to the Sudan Government.

The guests entertained at lunch by Lady (Charles) Henry at Carlton Gardens, S.W., on July 10 included Sir Ronald and Lady Storrs, the Hon. Sir Arthur Stanley, the Persian Minister, the Egyptian Minister, and Prince and Princess Omar Halim.

The inaugural dinner of the Anglo-Egyptian Association was held at Prince's Restaurant last Thursday evening. Viscount Milner presided, and among those present were:—Katherine Countess of Cromer, the Bishop of Egypt and the Sudan, Mr. H. Farnall, Colonel H. G. and Mrs. Lyons, Mr. and Mrs. A. T. Loyd, Mr. and Mrs. A. F. MacCallan (chairman, Executive Committee), Lieutenant-Colonel and Mrs. Clifford Hall, Lieutenant-Colonel and Mrs. Elgood, Major and Mrs. Liddell, Mr. John Langley, Mr. L. Weldon, and Mr. and Mrs. J. F. G. Hopkins.

SIR CLAUD JACOB'S NEW POST.

General Sir Claud Jacob, K.C.B., K.C.M.G., A.D.C., is spending the summer and autumn on leave out of India, on relinquishing the appointment of Chief of the General Staff. On the expiration of his period of leave he will return to India and take over the Northern Command, in succession to General Sir William Birdwood, whose tenure expires at the end of October. Sir Claud Jacob began his service in the Worcestershire Regiment before transfer to the Indian Army. He successively commanded the Dehra Dun Brigade, the Meerut Division, the 21st Division, and the 2nd Army Corps.

THE 10TH BALUCH DINNER.

The 10th Baluch regimental dinner took place at the Monico Restaurant on June 28, and was presided over by Colonel Sir Charles Yate, Bart., C.S.I., C.M.G., D.L., M.P. The following officers were present:—Major-General Fowler, Brigadier-Generals Tanner and Wooldridge, Colonels Dyke and Hay, Lieut.-Colonels Craufurd-Stuart, Faithfull, Hulseberg, Holbrooke, Phillips, Twigg, and Yate, Majors Harvey-Kelly, Jacob, O'Neile, and Russell, Captains Blanford, Browne, Burden, Jardine, Jones, Lindsay, Miller, Parks, Pilcher, Powell, Pratt, Rendell, Stanger, Tomkins, Wace, and Lieutenants Allen, Arnold, Barber, Bartle-Pye, Hayes, Porter, and Salmon.

Mr. Avinoam Yellin, son of Mr. David Yellin, has been appointed Assistant District Officer for Jerusalem.

The new Belgian Minister in Athens, M. Guillaume, was formally received by the President of the Republic on July 8, and presented his credentials.

PEACE IN PALESTINE.

It is ironical that just as one was beginning to feel some approach to normal political conditions in Palestine news should arrive of the murder of Dr. De Haan, the anti-Zionist leader of the Orthodox Jews in the Holy Land. For so long and well our Administration had fought to deal out even-handed justice, to quell party passions, and to reconcile post-War differences, that the success hinted at in the letter from our Jerusalem Correspondent in the issue of last week seemed almost about to crown its efforts. It is true that British officials in Palestine themselves could not yet see daylight, but they had certainly given to the Zionists the understanding that future applications of the Balfour Declaration would be whittling-down applications, and to the Arabs the impression that, whatever progress in the outside world might be made in the great scheme of the Arab Confederation, in Palestine the first and main aim—the creation of a Palestinian nation, in which Arab and Jew might live in harmony and prosperity—would persistently be worked for. Yet this murder of Dr. De Haan, lamentable and inexcusable as it is, does not at once plunge Palestine back again into the darkness which surrounded her when Britain found her, though it may depreciate Zionist currency in the eyes of the world. Such unfortunate incidents as this are a chronic phenomenon in Eastern countries; and it may be timely to remember, in condemning crimes like this, that political murders—if this be such—are by no means unknown in the West. Any constructive value that was attaching to the movement with which Dr. De Haan associated himself will not, we may trust, be nullified, and the delegation of Orthodox Jews—a highly respected and respectable body of men, whose opinion must be taken into account in any conceivable Palestine polity—which he was to have led in London, should find here sympathetic hearing. At the same time as announcement is made of this intended visit—one which concerns essentially the harmony of Palestine—another is made that representatives of Jaffa, both Arabs and Jews, are coming to London to protest against the building of a harbour at Haifa to the detriment of the town of Jaffa. Into the details of this dispute we have no desire to enter, except to remark that Mr. Frederick Palmer, the engineering expert, recommended that a harbour should be built at each port; what we would emphasise is the ease with which Arab and Jew can come together in common interest. At Jaffa, the town of evil memory, a real approach, it would appear, has been made to harmony. All over Palestine, indeed, Arab and Jew can live in peace where economic interests coincide.

Now, the political situation cannot be properly consolidated until Palestine is granted a loan to enable her to rid herself of existing liabilities, and we are pleased to see that the Home Government intends to guarantee such a loan. It need not be imagined that the loan would have any immediate effect, but politically it would be of immense value. At the moment the Administration's hands are tied almost in every direction; the one harassing cry is "Retrenchment, retrenchment"; and if Palestine could but settle her debts and once get a clean slate, the economic position would rapidly improve. Of this delay in the ridding of Palestine's financial incubus business men in that country are heartily, sometimes despairingly, tired; and no one will be more glad than they if the High Commissioner, now in London, can return to Palestine with the definite promise of a Government loan. Economic ills, however, cannot all be cured by political means. And not everyone in the Holy Land is waiting for the Government to effect an improvement in the situation; pleasant news comes from both Arab and Jewish sources that the fact is being realised that the remedy lies with the people themselves. As is well known, the future of the Holy Land must be with the agriculturist—attempts on any large scale to industrialise it are, we think, doomed to failure—and it is one of the most hopeful signs in the history of the country since the British Administration assumed control that the new Hebron Peasant Party, which, accepting the situation as it is, intends to develop a severely practical policy, should have sprung into such prominence. This prominence it certainly deserves, for it has the extraordinary but common sense, denied to many of its rivals of both races, of recognising at once the British Mandate and a certain limitation to its aims. The emergence of this party from a situation which many, especially outside, observers had declared to be irremediable is without doubt, as our Jerusalem Correspondent suggests, an exemplification of the fact that the fatalistic Palestinian will inevitably make the best of things as they are. One may hope that the Administration will quickly recognise the merits of this party, and, if possible, foster similar movements elsewhere. On the other hand, the type of Jewish immigrant, which had caused so much trouble to the native inhabitants of the Holy Land and fear in the hearts of the Zionist Executive that the land had reached saturation point, has recently changed for the better. Zionists are now going to Palestine who are self-supporting, and who therefore will not wish, as did their predecessors, in a few months' time to emigrate. Jewish unemployment, which but a short time ago was the source of nightmares, is now very low indeed, and it looks as if the Zionist movement in the nick of time has saved itself.

As we have said above, some officials in Palestine cannot yet see daylight. But it may be that, so close are they to Arab intransigence and to Jewish assumed superiority, they cannot see the wood for the trees. We, at any rate, are inclined to think that, unheralded and almost unsuspected, dawn may at last be breaking over the Judean hills. May not the quiet that nearly without interruption Palestine has for months enjoyed be the hush before such a dawn; and the survival of a terrible 1923 and of an extremely bad winter season 1923-1924 proof of an irresistible vitality which many observers, both pro- and anti-Turk, would swear she did not possess? Whether this view be too optimistic or not, the British Government's great experiment in Palestine will, to all appearances, be persisted in; there is as yet no thought of withdrawal. Britain is in Palestine for the purpose of building a Palestinian nation: it is not, as was stated in a recent Haifa commercial report, there for its own ends; nor is it, as Zionist papers both in Palestine and in England assert that it should be, there to enable the Jews to become dominant over the Arabs. It is there simply to

Digitized by Google

fulfil, to the best of its ability, its promises both to Arab and to Jew. We recognise that we should beware of false dawns, and we remember especially the fact that in the immense scheme of the Arab Confederation Palestine is still included. In particular, the Arabs of Syria yet look with hope for the incorporation of Palestine in a Greater Syria and subsequently in a Greater Arabia, but in Arabia itself, we believe, a truer appreciation of the facts obtains. A more correct perspective is, in fact, befalling both Arab Nationalist and Zionist. They are now down—at least, a sufficient percentage of men are down—to bedrock; and, while they may continue to quarrel about excrescences and superficials, they can build on the fundamental fact that Palestine is held, and is to be held, by Great Britain, an edifice worthy of their respective intellects and ideals. Palestinians may, in a word, look with benefit both to Arabia and to Britain—to the West as well as to the East.

And not by eastern windows only.
When daylight comes, comes in the light;
In front, the sun climbs slow, how slowly,
But westward, look, the land is bright.

THE REAL MIRAGE.

By V. C. BOYLE.

Mirage is a distortion of the appearance of remote objects due to refraction of the rays of light. It is brought about by the differences of temperature making layers of air differ from each other in optical density. The effects have been variously described.

It fell to my lot, whilst on service in Mesopotamia, to live out of doors for nearly three years, and during that time and for the fifteen months I was in India I kept notes and drawings made on the spot of mirage phenomena. It seems to me now that either I had a very unusual series of experiences, or that travellers, geographers, and essayists have been engaged in a vast conspiracy to out-mirage the mirage.

Physiography books are safe. They describe exceptional appearances and name them as such. Ships have been seen upside down in the sky, cities in the air, and trees on a horizon where no trees are. The trouble is that these scientific descriptions have been unintelligently used by untrained observers to eke out their meagre supply of first-hand knowledge. It has become the fashion to describe mythical cities of Manoa and impossible Edens in the midst of deserts.

I believe it has been done innocently enough. The keen, quick Englishman engaged on supply or engineering work in a Mesopotamian base, and having a weekly ride into the country, is just the kind of person who publishes his experiences. But he writes with preconceived notions, and dimly remembers the pictures in the physiography text-books. His account of mirage is ruined.

Ordinary mirage, the sight that one sees every day over the desert and silt plains of Iraq, is commonly said to look like water. Men appear to be wading, convoys are said to look as if up to axles in a broad, placid lake. A writer who was in Amara in 1916 says that the chief thing which arouses suspicions that there is not actually any water is that little spirts of dust are seen among the wheels—a quite clever observation.

As a matter of fact, this thin ribbon of pale blue which stretches along the horizon, detaching a slip of earth from its place and lifting it up, this "lake" is more like water than anything else in the world, but it is not *much* like water. Though it seems to bear reflections of the people and buildings on the further margin, it is easily disposed of by one infallible test, so that no intelligent person need be deceived a second time. The poor pilgrims who have toiled on hopefully towards a delectable lake which ever receded from them must all have been very stupid and unobservant persons.

For the lake bobs as one walks, and if one kneels down it broadens and comes nearer, which is quite the reverse behaviour to that of a real expanse of water. At Es Sinn, near Kut, in 1916, I saw "pools" of mirage about 500 yards away. I sat down. They doubled their area and also "doubled" towards me till they seemed within two hundred yards of me. I remember that the ground there was hard and bare. This was the closest that any considerable mirage ever approached me.

On any sunny day in Mesopotamia men and animals change their appearance as they recede. On the skyline a couple of miles away they become mere grey feathery moving blobs, a little raised into the pale sky. Grazing camels look like fantastic loops and arches when seen through field glasses. The horizon quivers, especially if there is wind. Tamarisk bushes wave and blur at half a mile away when the sun is high, and all objects at that distance become elongated vertically. "Eye-Witness," a distinguished war correspondent who has been all over the East and much in the desert, says that tamarisks often look like men, and vividly describes how, whilst he was riding out with some cavalry one hot day when the air was full of blowing dust, the whole party was deceived by mirage, and actually prepared to receive the attack of some phantom Arab horsemen. And these horsemen turned out to be mud pillars! I accuse "Eye-Witness" of having a journalistic imagination; for though bushes do not look like bushes on such a day, neither they nor mud pillars look in the least like men.

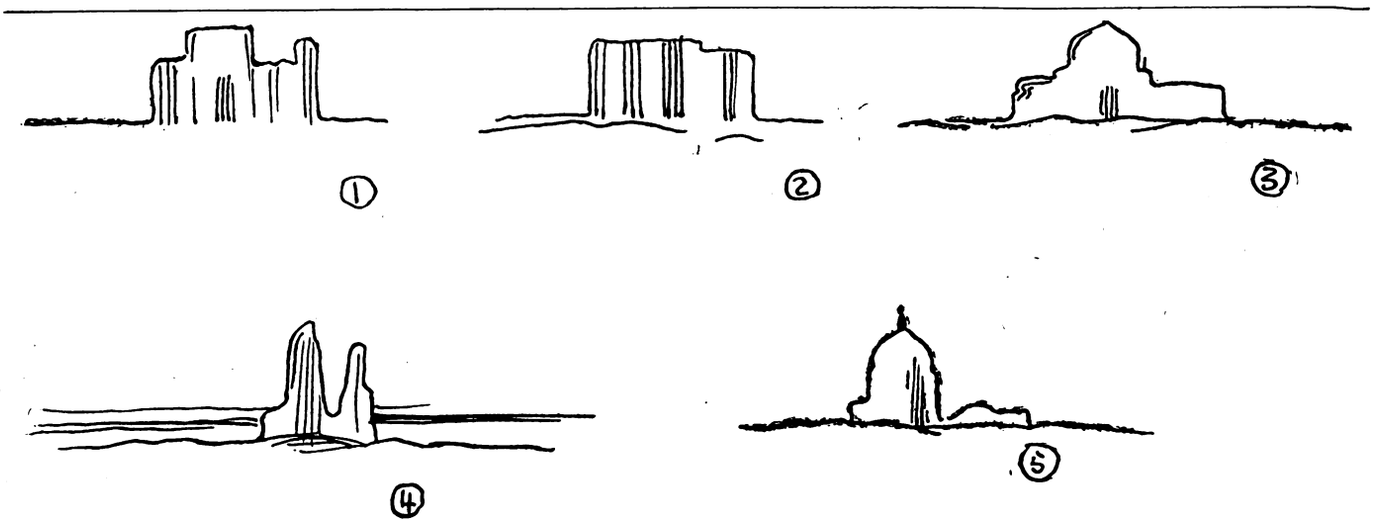
The only case I know of where a man was so deceived was that of a comrade of mine who, during a terrible march we made in May, 1916, nearly died of thirst and exhaustion. He told me that as he lay there alone in the burning sun he seemed to see the quivering scrub around him change into Turks and Arabs. I do not wonder at that.

Mirage distortions are generally greatest at midday, and, except for a few hours in early morning and evening, both our artillery and the enemy's was silent, owing to the utter impossibility of ranging and observing fire.

It must be noted that mirage either elongates an object vertically or else lifts the image bodily up; so that every strange-looking dot or smudge on the skyline has, so to speak, some foundation

ASK FOR WHITE HORSE WHISKY BY APPOINTMENT.

Digitized by Google



A series of five sketches made between 7 5 a.m. and 7.15 a.m. on the morning of October 24, 1917. Ana's tomb, a small mud shrine with a dome, in the desert, about 20 miles from Basra. Sun in mirage through field glasses. The changes were all over in each case in two minutes. After 7.15 the appearance was normal, roughly as in No. 3. In No. 4 the horizontal lines in rear are a Euphrates marsh, probably eight miles further off. In No. 5 the black object on the dome is an Arab scout who has climbed there for a look round.

in fact, exactly below it, but further off. There is never any lateral displacement. Thus the cities and ships in the sky of the physiography books are always images exactly over the real cities and ships, which the traveller may reach—how soon may not be guessed. This fact disposes of most fanciful stories. As an instance, a few years ago a reputable monthly published an account of a ride from Baghdad to Babylon. The writer alleges that he saw a charming little mosque beside a pleasant date grove on the verge of a lake, all on the horizon ahead; and that when he approached this delightful oasis there was no more material than a dilapidated mud dome and *two* draggled date trees.

What he really saw was no doubt the wavering images of *two* trees and the smudged mass of the mosque, all striated vertically. No mirage ever turned two trees into a grove.

In February, 1918, whilst over thirty miles west of the mouth of the Shatt-el-Arab and well out of sight of it by reason of the earth's curvature, I stood at my tent door and saw some long, intensely bright streaks under the sun, which had not long been up. I got out my telescope, which had a magnification of thirty, and saw easily the features of the river, with lagoons, beaches, and clumps and rows of date palms. There was a little flaring here and there of the silvery "water," but otherwise no distortion. I told my commanding officer what I saw, but he only laughed at me. "Why, man," said he, "there's no water within a day's ride that way!" Nevertheless, I was right, and before we parted I described to him accurately some country which ordinarily would have been invisible unless one could get a view from a station two hundred feet high. It was Umm Qasr, thirty miles away.

This recognition of "mirage over water," and experience in naming blurred images of buildings and other objects, has often been useful. It will be noticed that a glass of some sort is necessary. In 1917 I was able to make a drawing of Kut-el-Amara from a point fourteen miles away on ground which was perfectly flat except for a long ridge, fifty feet high (the Sinn Abtar Redoubt), which rose between me and the village. The whole distance was "lifted up," and I was able, at leisure, to draw it house by house, tree by tree. It was much striated, and experience was needed to interpret the details. I used a glass magnifying only three times.

Mirage occurs at night to a surprising extent. Whilst my regiment was in this same district we were tantalised by lights as of lanterns or fires. glowing on the skyline at night. We could see them from the fire-step of my blockhouse, when our eyes were almost on the ground level, so that one would suppose they could not be more than a thousand yards away. An enterprising machine-gun crew even went out and lay in wait thereabouts. I was able to prove that the fires, which were in the camps of Bedouin shepherds, were fifteen miles or so away. As in the former cases, I was laughed at, and later on I heard of a company commander who advanced a similar explanation and was discredited.

Sometimes amusing tricks are played by mirage with the shapes of buildings, as will be seen from the drawings of a little mosque, Imam Anas, which I made one morning near Shaiba. All these shapes were drawn on the spot within ten minutes. The distance was about two miles.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Patiala State.

We give this week a review of the exhibits in the Patiala State Court in the Indian Pavilion at Wembley, together with an account of the State and of the career of H.H. the Maharaja. Far too little is known in this country of the Indian States, and it is eminently satisfactory that a number of them—among whom are to be numbered some of the leading States—have taken advantage of the opportunity afforded by the Exhibition to give the rest of the Empire a glimpse of their material progress and their possibilities. It is to be regretted that the appeal of the Exhibition was not more universal; perhaps, if it is to be continued next year, the ranks of the exhibiting States will be largely increased.

The Egyptian Tribute Loans.

Considerable disquiet has been occasioned in the City in view of the attitude adopted by the Egyptian Government in respect of the Ottoman loans secured on the Egyptian Tribute, and this feeling has found expression in the development of a pronounced weakness in the securities in question. The view taken by the Finance Committee of the Egyptian Chamber is briefly that, since Egypt is no longer connected with Turkey, the liability to continue the tribute ceases to exist. That this represents the view of the Egyptian Goverment has been made clear by Zaghloul Pasha, who has stated that no further payments will be made after the instalment that fell due on July 12, until the liability or otherwise of Egypt has been settled. The Egyptian Government favours a conference to determine the question, and otherwise it intends to bring the question before The Hague. What the outcome will be it is impossible to tell.

Sudan Trade Expansion.

The figures of the trade of the Sudan for the first four months of this year make an excellent showing. The value of the exports is £E1,241,360, as compared with £E957,044 for the corresponding period of 1923, while the figures for the imports are £E1,794,755, as against £E1,205,099. Including re-exports and goods in transit, the volume of trade at £E3,123,062 shows an increase of £E831,582. It will be noticed that the expansion of imports has been greater than in the case of exports, so that the adverse balance of trade is rather more pronounced. It will not be long, however, before the opposite tendency is to be noted, as the works of development now in progress in the Sudan come to fruition.

The Turkish Position.

The report on conditions in Turkey last year of Colonel Woods—extracts from which are given elsewhere in this issue—gives a vivid sidelight on the difficulties with which traders were confronted in a period when the Turks, in their enthusiasm for new things, were introducing all manner of rules and regulations without a clear appreciation of their incidence. As the months wore on and growing experience came to reinforce unbridled enthusiasm, things began to change slowly for the better, but it would represent excessive optimism to say that even now the conditions confronting the commercial community are not extremely adverse. Still, progress is being made, and it is something that the tendency is in the right direction.

The Roumanian Mining Law.

The text of the Roumanian Mining Law scarcely gives the impression that its operation is likely to prove so innocuous to foreign enterprise in the oil industry as appeared probable from the summarised reports of the measure when it passed into law. Of course, the measure does not owe its inception to the desire to facilitate foreign enterprise, but Roumania needs foreign assistance as much as any country in the development of her great resources, and any steps that tend to hinder foreign co-operation can only have the effect of retarding the country's progress. As a result of representations from various quarters, amendments were introduced during the passage of the measure which have had the effect of greatly improving it from the external point of view, but as it stands it cannot be regarded as satisfactory, and very much will depend on the way in which it is administered. *Prima facie*, it would seem doubtful whether the effect of the law will not be to restrict the operations of foreign oil companies to their existing holdings. Should that prove to be the case, Roumania may swiftly find herself confronted with the necessity for altering the law.

The Trade Outlook.

Opinions are divided on the future course of trade, but there is no division of views as to whether or not we have seen the worst of the depression which has hung over commerce for so many weary months. Europe is still an obstacle to a real trade recovery, and any revival that takes place which does not represent a very real advance in reconstruction in that region will have no solid foundation. It is satisfactory to know, however, that real progress is being made, and if only the forthcoming Conference can produce a solution for the problems that are hindering developments in Europe we shall be within sight of a period of unlimited trade expansion.

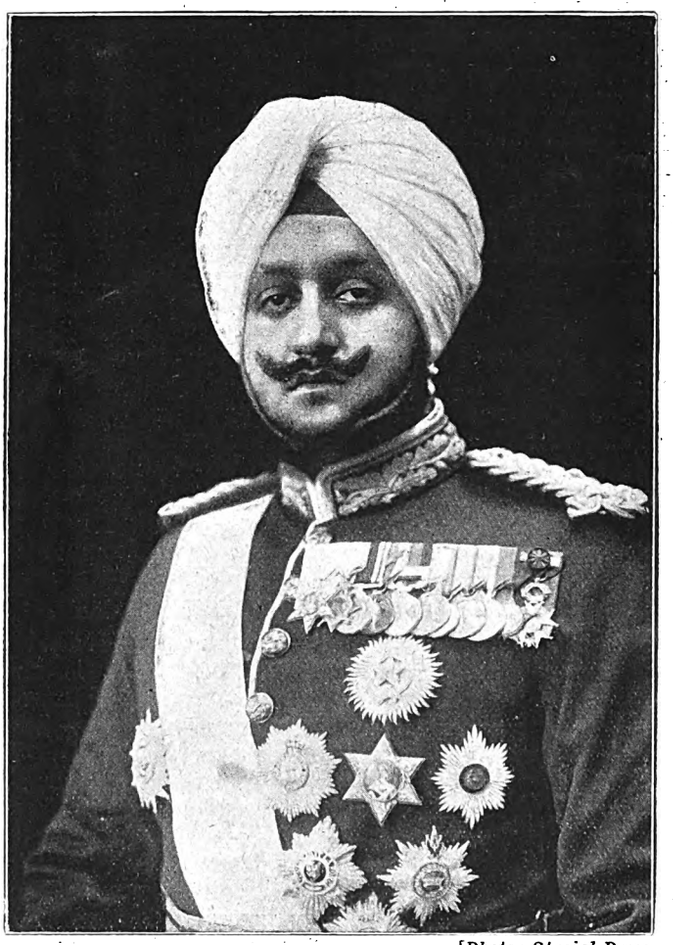
PATIALA STATE AT THE EXHIBITION.

Just as it can be said with truth that those who visit Wembley and omit to see what India has to show have missed one of the most interesting things in the Exhibition, so it can also be emphasised that the omission to see the Patiala Court in the Indian Pavilion would mean that one of its most notable features had been overlooked. Of all the sections in the pavilion there is certainly none calculated to make a greater appeal to the visitor, with the magnificent specimens of tigers and other wild animals that are shown and with the fine display of heads of game on the walls. Sport is, in fact, the predominant characteristic of the Court, and the exhibits might well serve as an epitome of a side of Indian life with which everyone is familiar. But there are many other exhibits of interest besides the wonderful collection of trophies of the jungle, most of which have fallen to H.H. the Maharaja of Patiala himself. There are a variety of minerals, notably marble in several colours and of wonderful beauty. There are also examples of the numerous small industries of the State, of cloths in most alluring patterns and designs, of exquisite lace in gold and silver leaf, fit to adorn the robes of kings, and of a variety of other objects. Two special features of the Court must be mentioned before saying something about the State and its ruler. One is a jewelled book containing a poem which is illustrated throughout in a superb manner. Mere words cannot describe it adequately, for it is a veritable masterpiece, and of its kind probably ranks among the wonders of the world. The other is an intricate mechanical chessboard complete with two single clocks, and each time a piece is moved the time of the move is automatically recorded, so that instead of knowing that one has made, say, 36 moves in 119 minutes, one has the exact time for each of the moves.



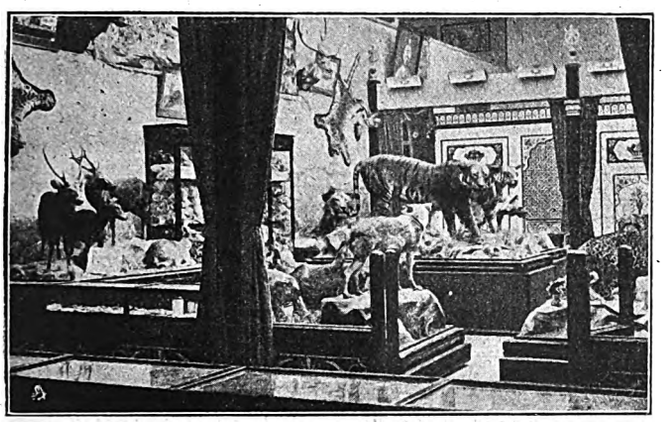
[*Photo: Special Press*

Major-General H.H. THE MAHARAJA BHUPINDER SINGH OF PATIALA, G.C.S.I., G.C.I.E., G.C.V.O., G.B.E., A.D.C.

Patiala State lies in the Punjab, and is the largest of the three Phulkian States. Its area is about 6,000 square miles, and the population at the last census was 1,499,739, while the revenue of the State amounts to £8,500,000. The territory comprising the State is rather scattered, and it naturally follows that conditions vary considerably in the different parts. In certain tracts the heat is very great in the hot season, while in the Pinjaur Hills district it is bearable. The rainfall also varies greatly, ranging from 12 ins. up to 40 ins., which is reached in the part of the State that lies below the Simla hill region. Agriculture is, of course, the staple industry, and cultivation is well developed; indeed, rather over four-fifths of the total area is utilised, and only a comparatively negligible area still remains to be brought into cultivation. The chief food crops are grain, barley, wheat, millet, and maize; other crops grown include rice, tobacco,

Digitized by Google

mustard, potatoes, cotton, and sugar-cane. It will be seen that the range of agriculture is fairly extensive. The system of cultivation has been considerably improved during the last decade or so, and though the old-fashioned implements are still in use, the introduction of modern methods is gradually leading to their replacement by present-day machinery. The forests of Patiala are very valuable, and the timbers produced occupy an important place in the Court. The State also possesses valuable mineral resources. The minerals found in-



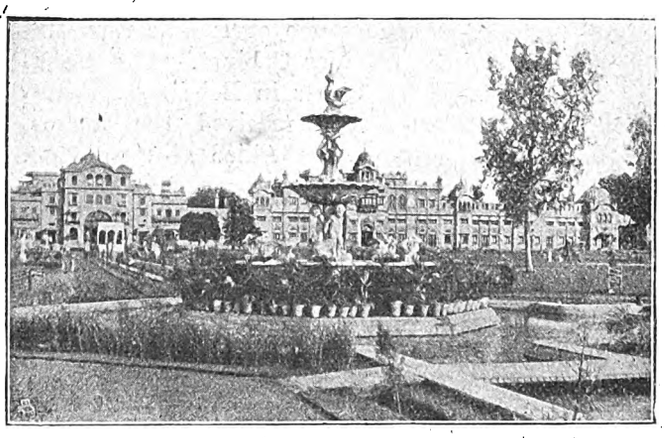
PATIALA STATE COURT: A GENERAL VIEW

clude copper and iron ores, mica, saltpetre, and marble. Examples of all these are on view, and the exhibits include a piece of marble made of the seven different kinds of that mineral that exist in the State. It is by the medium of the mineral deposits that the State is likely to develop important industries. In a report issued four years ago by the State Mines Department, following the prospecting of the mineral-producing areas by the Department on the initiative of His Highness, detailed reference is made to the possibility of initiating iron and steel works, and the view taken was that the development would be quite practicable. The establishment of a cement industry was also advocated, and in both these directions much promise is entertained for the future. At present, as in the case of all purely agricultural regions, industries are relatively unimportant. The manufactures include cotton fabrics, and a large selection of these is shown in red and gold and yellow. Silk is another of the country's principal industries, and among the exhibits are silk waistbands in yellow, blue, pink, and red. The gold and silver lace industry is of considerable importance, and, as indicated above, the reels of gold and silver lace are a feature of the Court. There ought to be an extensive market for this lace in this country. Wooden posts for beds are produced at more than one centre in Patiala, and a selection of these products is shown, while another side of the State's economic progress is illustrated by the exhibits of gold sleeve-links and studs. Of special interest are some charming head coverings in red with an exquisite border, while the exhibits also include a variety of ornate sandals. There are many other things of interest, notably a choice collection of old arms belonging to the State Armoury.

As already indicated, the wild game trophies make a wonderful showing. There is much to interest the sportsman, and it is not surprising that the Court should be one of the most crowded places in the Indian Pavilion. The walls are tastefully adorned with heads of game, among which may be mentioned an Indian gazelle with 15-in. antlers—the record—a specimen of a Chitral deer, also a record head, and a jungle sambar. A specimen of a man-eating tiger, measuring 9 ft. 8 ins., is on view, while other specimens include a group of hog deer, hyenas and jackals, black buck, and the boar which fell to the prowess of the Prince of Wales during his visit to the Maharaja.

H.H. the Maharaja Bhupinder Singh, the present ruler of Patiala, was born on October 12, 1891, and from the death of his father, H.H. Maharaja Rajinder Singh, in 1900, to the termination of his minority in 1909, the affairs of the State were managed by a Council of Regency. He was educated at the Aitchison College, Lahore, and soon showed indications of the great qualities that he has displayed throughout his reign. One of his first public appearances was at the Delhi Durbar in 1903, when only twelve years old, when he attracted much admiration by the gallant way in which he led the troops at the Review. Two years later His Highness was invited to meet the King-Emperor (then the Prince of Wales) at Lahore, and on that occasion he gave one lakh of rupees for the foundation of a foreign scholarship, and commemorated the safe return to England of the Prince and Princess of Wales by a further gift of 50,000 rupees, which was divided between the Queen Mary Girls' School and Lady Minto's Fund for Nurses.

On September 30, 1909, His Highness took over the reins of Government, and on November 3, 1910, he was invested with full ruling powers at Patiala by the Viceroy, Lord Minto. His career has been memorable in the history of Patiala for the way in which he has furthered in every way the material progress of the State. Education and sanitation have come in for special attention. It may be mentioned here that Patiala is the only



MOTI BAGH PALACE, PATIALA.

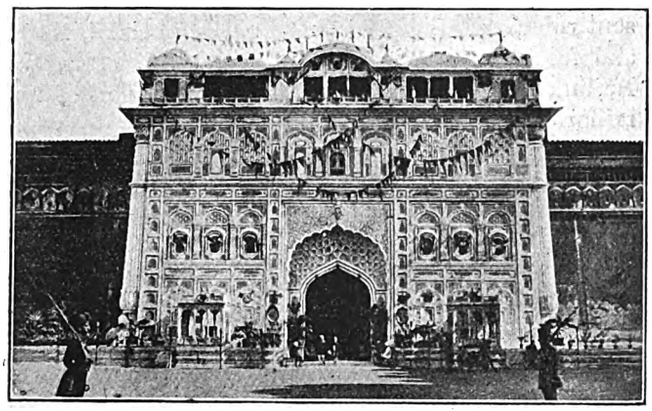
State in Northern India where free education is provided.

His Highness is a keen sportsman, as the trophies in the Court testify, and besides the delights of the hunt he takes a special interest in cricket, and captained the Indian XI. in England in 1911. He was present at the Coronation in that year, and also took a leading part at the succeeding Delhi Durbar, when the G.C.I.E. was conferred upon him. At the Purdah reception at the Durbar it fell to Her Highness the Maharani to

Digitized by Google

present to the Queen-Empress an address, together with a magnificent jewel, on behalf of the women of India.

The outbreak of the Great War marked a new chapter in the history of the State. The loyalty of the rulers of Patiala is traditional, and His Highness at once offered all the resources of the State to the King-Emperor, and claimed the privilege of leading his troops in person. His Highness was one of the Ruling Princes chosen to go to France with the Indian Expeditionary Force, and was given the



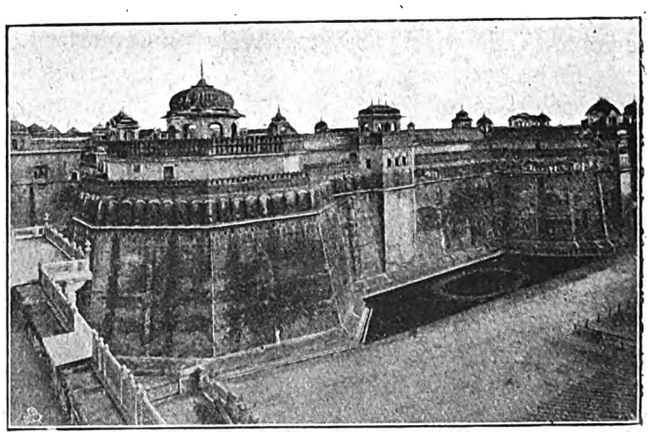
PATIALA FORT.

rank of Honorary Lieut.-Colonel in the British Army. On October 5, 1914, the Maharaja left for the Western Front, but was unhappily taken seriously ill at Aden, and, on medical advice, had to return to India. It was a bitter disappointment to His Highness, who devoted himself thenceforward to serving in other ways, and owing to his efforts Patiala continued to send out a stream of men, money, and material, and when the war ended its record in this direction was second to that of no other State in India. Following the Russian collapse His Highness was invited to sit on the Central Recruiting Board, and in April, 1918, in response to the Premier's appeal, he at once offered to raise three new battalions. His great services to the Empire received signal recognition by his selection as one of India's representatives on the Imperial War Cabinet. The Maharaja visited the Allied Fronts in Belgium, France, Italy, and Palestine, and received the highest honours and titles from the Allied Governments. The King-Emperor invested him with the insignia of the G.B.E., and he was also promoted to the rank of Major-General. Subsequently His Highness was appointed Honorary Colonel of the 15th Ludhiana Sikhs and also Honorary Colonel of the newly raised 140th Patiala Infantry. The decorations of His Highness, in addition to the G.B.E., are the G.C.S.I., the G.C.I.E., and the G.C.V.O. Among the foreign decorations His Highness has received are the Grand Cross of the Legion of Honour, the Grand Cross of the Order of Leopold, the Grand Cross of the Crown of Italy, the Grand Cross of the Order of Roumania, and the Grand Cordon of the Order of the Nile. In 1917 His Highness and his successors were exempted for all time from the presentation of Nazar, while the personal salute has been raised from seventeen to nineteen guns.

It may be of interest here to place on record the statistics of the part played by the State in the Great War. Altogether, Patiala contributed about 28,000 men, and the Patiala troops served in all the main theatres of war and gained no less than 125 battle distinctions. The State also furnished 1,000 camels, 259 mules, and 400 horses for transport and remount branches, and a motor flotilla for service in Mesopotamia. Further, Rs. 35 lakhs were subscribed to War Loans, and the State helped the British Government to tide over the currency crisis by a timely loan of Rs. 10 lakhs of silver crores without interest. The State's contributions in money amounted to nearly Rs. 1¼ crores, and in material to about Rs. 9 lakhs.

The year following the conclusion of the Great War was unfortunately marked by disturbances in the Punjab. His Highness gave the fullest assistance to the Government, and detachments of the State troops were stationed at important railway junctions in Patiala territory, while lines of communication, roads, telegraphs, and telephones were adequately protected. As a result of these prompt measures order was maintained in Patiala and in the neighbouring territory. In the Afghan War of the same year His Highness immediately offered his services and those of his troops. The offer was accepted by the Government of India, and His Highness served on the staff of the G.O.C., North-West Frontier Forces. The State cavalry served in Baluchistan, and the infantry on the Peshawar front throughout the campaign.

It remains to be added that the Maharaja is one of the leading figures in the Princes' Chamber, and is keenly interested in the deliberations of that body. His main pre-occupation, naturally, is with the special problems of the State over which he rules, and he is now concerning himself with such important innovations as the introduction of the principle of representation in municipalities and district wards. Very important agricultural and industrial schemes are also in train from which excellent results are to be anticipated, and, of course, these and other developments will be much facilitated by the existence of the State Bank, which was founded in 1917, and has already fully justified its existence. Patiala may never have industries in the sense that they are understood here, but there is no doubt that with the assistance and



PATIALA FORT: A SIDE VIEW.

inspiration of far-sighted rulers like the present Maharaja, who is ably supported by his Prime Minister, the State can proceed far on the path of material progress. The exhibits in the Patiala Court illustrate very clearly the possibilities of the State.

Mr. W. Chand is responsible for the excellent arrangement of the Court, in which task he has been assisted by Mr. W. M. Hutton, naturalist and taxidermist.

British Consular Reports.

IV.—TURKEY.

The Situation in 1923.

The following extracts are taken from the report on the economic and commercial conditions in Turkey in 1923 of the British Commercial Secretary at Constantinople, Colonel H. Woods, O.B.E. :—

The latter part of 1922 and the earlier part of the period under review were marked by the enforcement of Angora's legislation in Constantinople and in other centres hitherto estranged from the authority of the new régime. One of the first acts of the régime was the application of the Specific Tariff, the rates of which had been considerably increased at different times, and which, by a law promulgated in May, 1921, were in several cases raised from a five-fold to a fifteen-fold rate, import prohibitions being applied as well, on a large number of articles classified by Angora as articles of luxury. A serious impediment to trade has been the payment twice over of customs duties on goods shipped from Constantinople to Ottoman ports in Asia Minor which had already been subjected to duty on their import to Constantinople.

Customs Regulations.

Several restrictions were also imposed in connection with customs legislation generally.

(1) Monetary guarantees equivalent to the value of prohibited goods not yet cleared from the customs were imposed on the same on their reshipment from the country.

(2) Guarantees equivalent to the higher rates of duty were also imposed in cases where consignees, rather than clear their goods, preferred to ship to foreign ports.

(3) Bank guarantees equivalent to the value of goods in transit were exacted, the refund only being effected in cases where convincing documentary proof was forthcoming to show that such transit goods had arrived at their destination.

(4) Customs regulations were applied, based on legislation promulgated in April, 1918, in conformity with the general policy whereby the Turkish language was made compulsory for business houses and firms. Shipping agents were called upon to present manifests and orders of delivery in Turkish, special forms being provided by the customs authorities. These forms, which are still in use, caused at the time considerable annoyance to parties interested owing to the very limited space allotted for the designation and markings of consignments, as well as the difficulty in translating technical terms and markings. A further point to which shipping agents took exception was that the use of a uniform order of delivery form greatly increased the possibility of fraud, in that the shipping companies no longer could issue their own forms, over the issue of which the strictest control can be and was exercised. Shipping agents were further called upon to supply lists in Turkish of merchandise delivered direct to consignees from the ship's side, hitherto supplied in a foreign language. Agents were further called upon to draw up export manifests in Turkish before vessels sailed, as well as bills of lading for goods shipped in Turkish ports.

(5) In accordance with legislation promulgated in April, 1918, vessels were obliged to obtain a permit before the discharge of their cargoes could be effected, such permit only being granted after the vessel had been boarded by a customs official.

(6) Restrictions were also imposed on the discharge and shipment of cargoes, in that these operations could only be effected between the hours of sunrise and sunset. Great delay was, therefore, caused to shipping, for to obtain a permit to discharge, a vessel was obliged to wait its turn for the visit of the customs officer. The customs control of steamers arriving at Constantinople with cargo from foreign ports also consists, before the permit to discharge is granted, in comparing the original manifests (issued at these ports) with the steamers' check books. Attempts have been made by the customs to fine steamers for discrepancies between the check book and the manifests. Steamers leaving Constantinople with cargo loaded at Turkish ports for foreign destinations were also subjected to a control of manifests with the shipping notes issued by the agent.

(7) A particularly difficult exaction of the customs is the payment of double duty on goods which, owing to unforeseen circumstances, were not manifested. In cases where the captain does not declare the existence of such goods before his vessel commences to discharge, the customs confiscate them, there being no appeal.

(8) Customs immunity granted to goods imported for schools and religious institutions was cancelled.

(9) In April, 1922, the Grand National Assembly made certain amendments in connection with laws governing consumption taxes. The following articles were submitted to a consumption tax of (piastres per kilog): Rice, 10; margarine, 80; candles, 30; ordinary soap, 5; sacks (old and new), 5; spices, 30. Moreover, all sweetstuffs, glucose, biscuits, chocolate, condensed milk, and helva were subjected to a consumption tax of 15 piastres per kilo., according to the degree of sugar they contained.

(10) The customs without due warning raised the five-fold tariff rate on certain farinaceous products such as macaroni, pastes, biscuits, etc., to a twelve-fold rate, adding linseed oil to the list of articles subjected to consumption taxes, classifying this commodity with margarine.

Improvement in Conditions.

There was a marked improvement in customs legislation later on, for as the new régime gradually established relations with foreign trade, it was realised that hasty legislation in many cases was in conflict with the economic interests of the country. Goods figuring on the prohibited list were granted a month's delay to be cleared on the 15-fold basis. The monetary guarantees referred to were abolished. The guarantees under (2) were partly abolished, the presentation of duplicates of original bills of lading being considered sufficient proof that the goods were shipped to a foreign port. These facilities were granted in cases where the goods were shipped on vessels belonging to well-known established lines. Goods in transit were also freed of vexatious restrictions, such as the guarantees referred to in (3). Eventually the fifteen-fold rates referred to were reduced to a twelve-fold co-efficient and the prohibitions can-

Digitized by Google

celled. Shipping agents were permitted to furnish on orders of delivery a rendering in a foreign language of the inscriptions in Turkish.

A marked improvement in conditions which prevailed at the customs was the transfer back to Constantinople of the Direction General of the Customs Administration. This has been a wise step of the Government, which realised that customs administration could not be efficiently directed from the interior of Asia Minor. The Director-General is placed in direct contact with the merchant, and litigious matters can in many cases be settled without an appeal to Angora. Co-ordination has been established. A tariff commission has been instituted with a view to settling difficulties in so far as the classification of goods for clearance is concerned. The consumption duty on linseed oil has been abolished.

Vessels are now authorised to discharge or load at any time of the day and night provided permits for these operations have been obtained. There are further signs of improvement, and the Direction-General has shown willingness to consider and modify any restrictions which may be considered to be detrimental to trade, provided always that with such modifications a strict control on customs operations can be maintained and an efficient check on contraband established.

Although there have been rumours from time to time regarding the re-establishment of prohibitions on certain commodities, such as coal and artificial silk, the protectionist tendency of the new régime has considerably calmed down, and also taking into consideration the gradual readjustment of customs administration and the fact that in some cases the Specific Tariff rates, e.g., cotton goods, Group XV. of the Tariff, do not exceed the pre-War 11 per cent. ad valorem régime, and that payment twice over of customs duty on goods shipped from Constantinople to Anatolian ports has been abolished, there is no reason why the present customs administration should be an obstacle to trade.

The Dry Régime.

The "dry régime," the application of which was threatened throughout the year, was finally put into effect. The import of alcoholic liquor had already been prohibited early in the year, but holders of stocks in the town of Constantinople had a good opportunity of disposing of a considerable part of them. With the application of the "dry régime," however, the open sale of alcoholic liquor ceased, and stockholders were called upon to declare their holdings, which were duly registered by the police and placed under seal. Wholesale importers, unable to clear their consignments through the customs, were very severely hit, as well as holders of stocks in town, for, although the latter were able to sell a certain quantity of stock at high prices before the police authorities applied their control, it is doubtful whether they were able by means of these high prices to compensate themselves for the loss entailed by the immobilisation of part of their stocks The authorities, by the application of the "dry régime," have been successful in: Destroying the spirit revenue of the Ottoman Public Debt; depriving a large number of persons from earning a livelihood; destroying an industry; and considerably reducing the culture of the vine. It is stated that the authorities, having realised that the application of the "dry régime" has immobilised a native industry, affected the revenue of the State, and increased unemployment, have decided to abolish Prohibition, and to permit the sale of alcoholic liquors under Government control. It is thought that the manufacture and sale of alcoholic liquors will be re-established in the form of a State monopoly.

Cabotage and Port Services.

The period under review concluded with the publication of an order emanating from Angora, governing the nationalisation of cabotage and port services. According to these regulations, salvage work was to be confined to the national flag as from January 1. Two foreign salvage companies were affected by this decision. With the exception of the lines privileged to continue cabotage service, all foreign vessels were ordered to cease cabotage in Turkish waters, their activities being limited to disembarking passengers and cargoes from foreign ports only. Foreign tugs, steamboats, motor-boats, lighters, barges, rowing boats, dredgers, rafts and fishing boats trafficking in Turkish ports, in the Straits, and Sea of Marmora, were ordered to cease functioning. Foreign fishermen, divers, pilots, stevedores, bumboatmen, lightermen, captains, and seamen were also warned that, as from January 1, they would no longer be authorised to carry on their work.

Shipping circles viewed these regulations with alarm. This alarm was justified, for, with their application, chaos ruled in the port of Constantinople. Pilotage under Turkish management was defective. Towage likewise, owing to inexperience and lack of craft. There being no Turkish salvage organisation, master mariners and agents viewed the situation with grave apprehension. Here, again, they were justified, for there was more than one instance of vessels in distress having to remain in a hazardous position until the authorities were made to realise the grave dangers to which their own shipping was exposed as a result of these ill-conceived regulations. In addition, by the immobilisation of foreign-owned lighters, the lightermen's guild obtained complete monopoly, and it was feared that, owing to lack of competition, charges would increase. Owing to the reservation of cabotage, freights as between Ottoman ports rose considerably, which not only increased the cost of living in certain native commodities, but, owing to lack of Turkish bottoms, shortage in certain native commodities was felt, especially as regards coal.

Although the situation has gradually ameliorated, due to an improvement in Turkish pilotage and towage, on the one hand, and to the fact that foreign salvage vessels are now permitted to function, nationalisation of port services is handicapping the efforts which certain organisations are making for the economic revival of the port of Constantinople. There are, however, signs of genuine desire on the part of the authorities and of Turkish commercial circles in general to revive the economic conditions in the port. In this connection two important national institutions—that of the "Union Nationale de Commerce Turc" and the Constantinople Chamber of Commerce, have given proofs of their willingness to co-operate with foreign institutions. There have been many criticisms in the Press from time to time which are justified to a great extent. The new régime, which so successfully revived the military ardour of a defeated people, has naturally experienced some inevitable difficulty in setting up an effective civil administration.

Good progress might have been made by the Government early in 1923 to encourage trade. Wise legislation might have accomplished a great deal towards the re-establishment of confidence. Unfortunately, this has not been the case. The Government has endeavoured to encourage development of native industry by the application of protective legislation, which in many cases has not

Digitized by Google

had the desired effect. There are signs, however, of an awakening. The Government is already perturbed at Constantinople's decreasing importance as a transit centre. Some considerable progress has already been effected towards the modification of hasty laws and regulations. Further mistakes will be made without doubt, progress will be slow, but even at the present slow pace, if continued in the right direction, happier results than those recorded in 1923 will be obtained.

(*To be concluded.*)

COTTON TRADE REVIEW.

The Crop Outlook.

The Manchester cotton trade review of the Imperial Ottoman Bank for the week ended July 12 states :—

Raw cotton has regained a little of the fall caused by the publication of the Bureau report last week, but the expectation continues strong in Manchester that the crop will be a good one, and that lower prices are bound to follow. Apparently the same idea prevails in the consuming centres abroad, for, although there has been an extensive inquiry, a large proportion of it has not resulted in business, and seems to have been made with the object of testing prices on the new basis of cheaper cotton.

Yarn.—Only a moderate business has been done, and operations of any magnitude have been few, particularly in American spinnings, for which prices remain very irregular. A fairly steady, if not large, trade goes through in Egyptian counts, and prices are firm. Shipments of yarn last month amounted to 15,000,000 lb., compared with 18,029,000 lb. in May and 10,029,000 in June of last year.

Cloth.—Conditions in this section appear to be a little better. Inquiry has been on a considerable scale, and more business has been done than in recent weeks. Offers for shirtings for both India and China have been more numerous than for some time back. Egypt also has shown a little activity. Shipments of cloth last month amounted to 346,762,000 sq. yds., as compared with 394,513,000 sq. yds. in May and 300,669,000 in June of last year.

Raw Cotton.—In the early days of the week prices showed a hardening tendency, culminating in a rise in American "spot" of 47 points on Thursday. Yesterday, however, a drop of 31 points occurred. Reports from America this week regarding the growing crop have not been quite so favourable, although there is nothing of a particularly disturbing nature. Reports from Egypt continue to be good. Closing quotations yesterday were as follows :—American Fully Middling, 16.95; Egyptian Fully Good Fair, 23.25.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Construction of a Metallic Bridge over the Mahmoudieh Canal at Karmous.—The Municipality of Alexandria invites tenders for the construction of a metallic bridge over the Mahmoudieh Canal at Karmous. September 23. (D.O.T.)

Turkey.

Safes.—The Direction de l'Intendance des Postes et Telegraphes, Constantinople, invite tenders to be presented not later than September 23 next, for the supply of fifty safes. (D.O.T.)

IMPERIAL OTTOMAN BANK

FOUNDED 1863.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Fairly Steady.

The Alexandria Commercial Company, in their report for the week ended July 3, state :—

During the past week the futures market has been fairly steady. The net changes on the week are :—Sakellarides, 1.30 dols. down for July, 0.78 dols. down for November, 0.75 dols. down for January; Ashmouni, 1.17 dols. down for August, 1.38 dols. down for October, 1.18 dols. down for December. On the 2nd inst. the American Bureau report was published, showing a condition at June 25 of 71.20, against 69.90 last year; the publication of this report produced a drop of 100 points in New York, and the drop in our market to-day is the direct result of this decline. The relative strength of Sakel new crops has been remarkable. November shows a loss of only 78 points, against 138 for Ashmouni October, so that the difference between these two months has now widened to 768 points, and looks like going wider. There is very little interest in old crops. Yesterday was the first tender day of July; no dockets were issued, and with the present premiums which tenderable grades are obtaining on the spot, tenders against contracts are not likely, and it would not be at all surprising to see July go out without any dockets being issued. Business continues to be poor. With trade conditions not improving and crop prospects favourable, spinners are not buying, and only offers at very low prices have any chance of acceptance. The consumption figures of cotton in the U.S.A. for the month of May are 414,000 bales, against 480,000 bales the previous month and 621,000 bales during May last year. The total August 1, 1923, to May 31 is 4,975,000, against 5,660,000 bales the previous season.

Spot.—Sales this week amount to about 4,200 bales, of which we estimate 3,600 bales Sakel and 600 bales Uppers. Practically all the good style cotton in both varieties has now been taken off the market, and what little remains for sale is very strongly held, and fancy prices must be paid to obtain it.

Sakellaridis.—The demand during the week has ranged from Good Fair to Fully Good Fair/Good, and the price of spot as compared with contracts has again stiffened considerably for these grades. A small business has also been done in Good at fairly high premiums.

Uppers.—There has been rather more demand for the lower grades, and the bulk of the business transacted has been in cotton below Fully Good Fair, and prices of spot as against contracts for these grades show a slight increase.

Crop 1924.—Crop news is good, and with a continuance of the present good conditions we shall be receiving the new Uppers cotton within the next 5-6 weeks. A good deal of leaf worm is reported from various districts of the Delta, but energetic measures against this pest are being taken, and we do not anticipate much damage. The discharge from the Assouan reservoir has been increased, and it is now almost equal to the discharge at the same time last year.

LIVERPOOL COTTON REPORT.

A Quiet Week.

Messrs. Reynolds and Gibson report as follows for the week ended July 9 :—

Egyptian Spot.—We have again experienced rather a quiet week in this department. During the earlier days the declining tendency of the markets evidently caused a fair amount of business to be withheld; however, with more stability in evidence during the past two days, consumers have shown a greater disposition to cover their more pressing requirements, and the inquiry has assumed more promising proportions. Increasing evidence has been forthcoming that in many quarters the standard Sakel qualities F.G.F. to Good are urgently required, and all indications are that both the stock here and in Alexandria will be completely swept of these during the next four weeks. The alternative will have to be found amongst the lower graded qualities or in the Sudan varieties, both of which are offered in fair quantities, and in many cases at quite an attractive basis. In one or two instances holders have made material concessions in basis to get out of their stocks in the premium month. Whenever the cotton has graded within the tenderable range they have experienced little difficulty in finding ready purchasers. The above remarks refer solely to Sakel cotton, the coarser Egyptian qualities being neglected in the inquiry throughout the week. Business in both Sudan and Tokar Sakel has been restricted, and the basis still runs in the buyers' favour. White Sudans have been rarely mentioned. Spot sales, 1,200 Egyptians and 100 Sudans. Quotations are unchanged on the week, with the exception of Fair in all qualities, which is reduced 50 points. Fully Good Fair Sakellaridis to-day 23.35d.

The quantity of gold extracted from the mines in India during April amounted to 36,269 oz., valued at Rs.22,29,921.

The directors of Westminster Bank, Ltd., have declared an interim dividend of 10 per cent. for the half-year ended June 30 on the £20 shares, and the maximum dividend of 6¼ per cent. on the £1 shares for the same period. The dividends, 10s. per share and 1s. 3d. per share respectively (both less income-tax) will be payable on August 1.

Company Meetings.

P. AND O. BANKING CORPORATION.

Current Year's Outlook.

Viscount Inchcape, Chairman of the P. and O. Banking Corporation, Ltd., presided on July 11 at the bank's fourth annual meeting. The reports and accounts were taken as read.

His lordship said that he did not propose on that hot afternoon, when, no doubt, many of them were anxious to get off and go to Lord's, to inflict upon them a long oration. The results for the past year had not been achieved without strenuous efforts on the part of the management, both at home and abroad, to whom they were greatly indebted for having realised the surplus which the board were able to show on the year's operations. This was sufficient to enable them to pay the same dividend as last year, place £20,000 to reserve, and to carry forward about £2,000 more than they had brought in. They were going slowly; they were showing no disposition to push their business. It was coming to them by degrees. They were gradually building up their reserves without distributing too much in the way of dividends, which he was sure they, the shareholders, would agree with him was the right policy to adopt. If they fell on bad times he would, so far as he was concerned, have no hesitation in recommending a lower dividend. He trusted, however, that would not be necessary.

As regarded the outlook for the current year, it was, he continued, too early to make any forecast; only three months had gone, and much would depend on the working of the nine months ahead of them. But he would ask them not to reckon on a larger distribution; it was the board's object to build up their reserves.

Turning to the figures for 1923-24, they would observe that the total of the balance-sheet showed a contraction on the figures of 1922-23. That was a feature common to most banking institutions. Current and deposit accounts stood at £9,491,000, against £10,360,000; their loans payable had contracted by £1,300,000, and there was a small decline in their acceptances. On the other hand, they had taken a larger part in the financing of the trade to and from the East, as would be observed from the increase of over £2,000,000 in the bank's holdings of bills. Their advances to their customers had expanded from £2,850,000 to £3,832,000; while they had simultaneously decreased their holdings of investments.

He would like to add a word or two about their affiliated institution, the Allahabad Bank. After making full provision for all bad and doubtful debts out of the year's profits, the bank had paid its usual dividend and bonus of 18 per cent. It had also added materially to its reserves by appropriating thereto from the current year's profits the sum of Rs. 300,000, and at the same time increasing slightly its carry-forward, and it had also found it possible to transfer to the reserve fund the sum of Rs. 600,000 hitherto held in a contingency fund, as this was not now required for the purpose for which it had been created. Its total reserves now stood at Rs. 44½ lakhs, with a paid-up capital of Rs. 35½ lakhs. He thought they would agree that that was not an unsatisfactory position.

He noticed that a great trade boom in the near future was prophesied in some quarters. He hoped the prophecy might come true. It was badly wanted. If they could only get Europe working again, not only the P. and O. Bank but also the P. and O. Company would benefit, as would every other commercial undertaking in the country. He concluded by moving :—"That the directors' report and statement of accounts for the twelve months ended March 31, 1924, be and the same are hereby adopted."

Mr. F. A. Johnston seconded the motion, which was carried unanimously.

The Chairman then moved :—"That a dividend of 5½ per cent. per annum, less income-tax at 4s. 0¼d., on 259,416 shares be and the same is hereby declared payable on July 17, 1924, to the members who were on the London and Bombay registers of the corporation respectively on July 4, 1924."

The Right Hon. the Earl of Selborne, K.G., seconded the motion, which was unanimously adopted.

Mr. W. O. Grazebrook proposed :—"That the retiring directors, namely, the Right Hon. the Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E., Sir Montagu Cornish Turner, and Alexander Kemp Wright, Esq., C.B.E., D.L., be and the same are hereby re-elected directors of the corporation."

The Hon. Alex. Shaw seconded the motion, which was unanimously approved.

Mr. F. Ritchie moved :—"That Messrs. W. B. Peat and Co. be re-elected auditors of the corporation, to hold office until the next annual general meeting, and that they be paid an annual fee of £300 for the audit of the corporation's accounts."

Mr. W. Langridge seconded the motion, which was carried unanimously.

Mr. E. Darlington, C.I.E., then moved a vote of thanks to the Chairman, which was seconded by Mr. F. O. Green, and was unanimously accorded, and after a brief acknowledgment by the Chairman the proceedings terminated.

BANK OF BRITISH WEST AFRICA.

Lord Selborne on the Trade Position.

The annual general meeting of the Bank of British West Africa, Limited, was held on July 10 at the office of the company, 37, Gracechurch Street, E.C. The Rt. Hon. the Earl of Selborne, K.G., G.C.M.G. (chairman of the company) presided.

The Secretary (Mr. G. B. Bennett) having read the notice convening the meeting and the report of the auditors,

Lord Selborne, in his speech in moving the adoption of the report and accounts, said: The dividend of 5 per cent. paid a year ago is maintained, although profits show a reduction of £4,600. Amongst the liabilities, capital and reserve remain the same, but it is gratifying to be able to point to an increase in the current deposit and other accounts, which, in common with most banks, had fallen consistently from the record of 1920. The bills for collection show a trifling reduction on last year. On the other side, our cash in hand represents almost 22 per cent. of our current and deposit account, and our Treasury Bills and investments in British Government securities, mainly of short date, indicate that we are in a

strong position to meet demands upon us when an improvement in trade definitely sets in. Other bills and loans combined show an increase of £424,000 over the same items on the previous balance-sheet, and this result arises from a considerable increase in seasonal loans, while bills discounted are lower.

In Egypt we are making headway. We are fortunate in having a local adviser in Mr. Ismalun, who takes an active interest in enlarging our business circle. It would not be fitting that I should appear to offer advice to the Egyptian Government, but I may express the earnest hope that they will hesitate before altering an economic system which has stood the rude test of the past ten years. The absence of serious exchange problems is a boon which few countries have enjoyed during that period, and a stable currency is an inestimable benefit to trade. Business in Morocco, as in the period which I reviewed when addressing you last year, suffered greatly from the instability of the franc. I fear that imports into Morocco from Britain are unlikely to reach their former volume until the value of the franc improves and becomes stabilised.

At both our last two general meetings each year I have been very cautious not to prophesy an improvement of trade in West Africa, and to point out that the causes of depression were not local but world wide, and my caution has been justified. For no turn of the tide has yet taken place. On the Gold Coast the cocoa crop was bought out at low prices. In Nigeria the demand, and so the price, for ground nuts and for palm oil has slightly improved, and cotton has become a regular feature of the trade. But I cannot say that merchants are buying freely or extending their stocks to meet a demand which they foresee. No, it is the old questions of the war legacy, of the unsettlement of Europe, of the open sore of reparations, of strikes and lock-outs at home, and want of confidence in the immediate future, which are holding everything back. If only we could have a rational treatment of trade disputes, if the bargain struck was strictly kept, if the Allies and Germany could come to a final settlement, then the world's trade would certainly and quickly react. We can only express our fervent hopes for the success of the European negotiations on the Dawes Report.

The local political conditions under which we are working are varied and interesting; on the West Coast a new development has taken place, the introduction of an elected element into the Legislative Councils, to which we wish every success. In Morocco perfect tranquillity prevails under the wise, strong, and sympathetic rule of that great Frenchman Marshal Lyautey. It is a matter of mutual congratulation to France, Spain, and the British Empire that the vexed question of Tangier has been finally settled. We owe a great debt of gratitude to that accomplished diplomat Sir Malcolm Robertson. In Egypt there has been a great change. Egypt is now ruled only by Egyptians. There are, as we all know, some points of importance still unsettled between Egypt and the British Empire, but let us remember the experience of the past. When Egyptians ruled Egypt before the days of British intervention and Lord Cromer, I never heard that the Egyptian rulers of the country were ever anything but friendly and sympathetic to all legitimate business enterprises, whether conducted by natives or by foreigners. Banks have no concern with politics, and we look forward with confidence to the same just treatment.

The motion was carried unanimously.

COMPANY NOTES AND REPORTS.

Egyptian Delta Light Railways.

The report of the Egyptian Delta Light Railways for the year ended March 31, 1924, states that the gross receipts were £339,475, against £343,792, and the working expenses £248,323, against £259,716. The company has now received from the Egyptian Government instalments amounting to £E70,000 of the £E90,000, balance of the purchase price of the Cairo Helouan Railway. The balance carried to the net revenue account is £91,152, which with interest earned £6,483 and £61,599 brought in gives a total of £159,234. After providing for the interest on debentures and for all fixed charges, and making provision for the proportion of profits due to the Egyptian Government, £112,777 remains. The board recommends a dividend of 4 per cent. on the preference shares for the year, carrying forward £71,146. Meeting, Winchester House, E.C., July 25, noon.

NEWS FROM ALL SOURCES.

The production by the British Burmah Company and the Rangoon Oil Company in June amounted to 62,680 barrels.

The annual general meeting of the East Indian Railway Co. will be held at the Cannon Street Hotel on July 23, at 12.30 p.m.

The Roumanian Cabinet has decided upon a 25 per cent. increase in the existing railway rates, which are at present the lowest in Europe.

The progress reports of Phœnix Oil and allied companies for June show the total crude oil production for the month was 14,265 tons, and the throughput of the refineries 12,310 tons.

SUDAN PRODUCE.

The following extracts are taken from the monthly report of the Central Economic Board of the Sudan Government, dated June 20 :—

Gum.

The exports during May were as follows, the value being given in parentheses : Via Port Sudan, 13 tons bleached (£E957), 1,966 tons hashab (£E88,029), 439 tons talh (£E10,734), via Halfa 11 tons talh (£E269).

Darfur Province.—April : 21 kantars of gum were brought into El Fasher market during the month.

Kordofan Province.—22,021 kantars of gum were sold in El Obeid market during May as against 24,889 kantars during the same month last year. The average price was £E1.053 m/ms. per kantar. The arrivals at El Obeid from Nahud were 8,208 kantars, as against 10,029 kantars during the same month last year. The amount sold at Nahud during the month was 13,787 kantars, as against 8,306 kantars during the same month last year, the average price being £E0.898 m/ms. the kantar. 3,268 kantars were sold at Um Ruaba at an average price of £E1.054 m/ms. the kantar, as against 3,425 kantars during the same month last year. At Rahad 527 kantars were sold at an average price of £E1.041 m/ms. as against 778 kantars during the same month last year.

Upper Nile Province.—384 tons of gum were exported from the Province in March. 764 kantars were exported from Renk in May.

Cotton.

The following figures show the exports of ginned cotton from the Sudan during May and the total exports for five months ending May 31, 1924, compared with the same periods in 1923 :—May : 1923 26,663 kantars (£E105,361) ; 1924, 59,655 kantars (£E480,515). Five months ending May 31, 1923 : 53,983 kantars (£E203,879) ; 1924, 124,152 kantars (£E981,100). There is no doubt that the total value of the cotton exported will exceed £E1,000,000 by the end of the season.

Red Sea Province.—Tokar : There has been a steady increase in the price of first-class cotton, which has ranged from P.T. 874 to P.T. 908 per kantar of 315 rottles and averaged over P.T. 894. Towards the end of the month the price gradually fell to P.T. 855. The price of second-class cotton ranged from P.T. 838 to P.T. 888, with an average of P.T. 858. The total value of the cotton sold during the month was £E79,625. The total crop is expected to be a little over 63,492 kantars. Port Sudan : The last of the season's crop of Khor Arbaat cotton, amounting to 144 kantars of 315 rottles (unginned), was sold by auction on May 23 at P.T. 880 per kantar. The area of approximately 1,100 feddans gave a yield of 650 kantars, or, roughly, 59 kantars per feddan. The average price was P.T. 850 per kantar, and the total value of the crop amounted to £E5,589. Work for the coming season is progressing well.

Dongola Province.—286 kantars of Sakia cotton have been brought in up to the end of May. Pumping Stations Reports.—Ghaba, April : 450 feddans are under cotton. 1,643 kantars of 315 rottles (unginned) of cotton have been received into store up to the end of April. This shows an average yield of 3.66 kantars per feddan. May : 1,690 kantars of cotton have been received up to the end of May, and there is still a small quantity of cotton to come in. The average yield up to date is 3.75 kantars per feddan. Gureir, May : The total quantity of cotton received to date is 785 kantars of 315 rottles (unginned), which represents an average yield of 2.45 kantars per feddan. Nuri, May : Cotton has been coming in well throughout the month, and a good deal still remains. The average yield per feddan reached 4.75 kantars of 315 rottles (unginned) by the end of May.

Berber Province.—Bouga : 194 kantars of 315 rottles of cotton were brought into store during the month, making a total of 2,938 kantars up to the end of May. Mikeilab, April : 230 feddans are under cotton. 79 kantars of 315 rottles of seed cotton were received during April, the total to the end of April being 759 kantars. Kitiab : 8 kantars of 315 rottles of cotton (unginned) were brought into store during the month. The final figures for the season are 2,381 kantars of pump cotton, representing a yield of 3.73 kantars per feddan and 16 kantars of sakia cotton. The burning of cotton bushes has been completed.

Kassala Province.—As the cotton season 1923-1924 is now drawing to a close it is possible to give a fairly accurate estimate of what the final crop will be. It will probably not exceed 10,793 kantars of 315 rottles, of which 7,619 kantars from Government cultivation and 3,174 kantars from shaiotes.

The Fung Province.—17 tons of cotton were exported by rail from Makwar River Siding during May.

Upper Nile Province.—420 sacks of cotton seed were distributed to cultivators throughout the province, each district receiving its quota, and 40 sacks are being held in reserve. The Shilluks have shown great keenness, whilst the Dinkas appeared to be indifferent.

SHIPPING INTELLIGENCE.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Brocklebank Line.—S.s. Masireh for Port Said, Colombo, Madras, and Calcutta (London, July 26).

Anchor Line.—S.s. Circassia for Bombay (Liverpool, July 22).

British India Line.—S.s. Malda for Bombay and Karachi (London, July 18) ; s.s. Naringa for Colombo, Madras, and Calcutta (London, July 19).

Clan Line.—S.s. Clan MacVicar for Bombay and Persian Gulf (Birkenhead, July 31).

Ellerman "City" Line.—S.s. City of Christiania for Calcutta (Birkenhead, August 1).

Ellerman Lines.—S.s. Malatian for Gibraltar, Malta, Alexandria, and Constantinople (Liverpool, July 31).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 9) ; s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 6) ; s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 13).

P. and O. Line.—S.s. Naldera for Bombay (London, July 25) ; s.s. Nellore for Colombo, Madras, and Calcutta (London, July 26).

IONIAN BANK, Ltd.

LONDON, GREECE, EGYPT.

The only British Bank or Financial House in Greece originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia, and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has agencies throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

In Turkey the Bank has a branch at Constantinople.

NOTES OF THE WEEK.

The Greek Republic.

Greece's troubles have not ceased with the establishment of a Republic. Rather have they taken on a new character, which suggests that personal antipathies are finding much more scope than when the possible displeasure of the Court exercised a restraining influence. Last week a sitting of the Chamber was enlivened by a wrestling match, unhampered by any rules, in which two ex-Ministers of Marine are reported to have rolled for fully half a minute on the dusty marble floor of the lobby, and some hours later an argument between two deputies was terminated by one felling the other senseless to the ground with a thick walking-stick. More serious perhaps in its political significance is the action of a body of military police in Salonika in entering, with two warrant officers, the offices of two local newspapers, and in the scrap that followed wounding some of the occupants. It may be that the action was prompted solely by the desire to avenge the head of the police, who was considered to have been insulted by the newspapers; but the incident will serve to remind the civilian population that it has not yet eliminated military domination from Greek politics. The scenes in the Chamber and the Salonika incident seem to have sealed the fate of M. Papanastasiou's Cabinet, which has rapidly lost ground since his successful handling of the situation at the time of the plebiscite. An adverse vote of the Chamber, leaving the Government in a minority of forty-seven, led to the resignation of Papanastasiou. The opposition was headed by M. Michalakopoulos and M. Kaphandaris; of these two politicians the former would seem to be the more likely to bring about political peace for Greece.

Yugoslav Politics.

Ministerial crises in Yugoslavia have a habit of recurring almost as regularly as quarter-day. M Pashitch, who reconstructed his Cabinet in March, resigned in April, and formed another Ministry in May, has again informed King Alexander that he cannot remain in office unless a fresh appeal is made to the country. This is the latest move in the interesting trial of strength between the King and his veteran Minister. The former has been unwilling to see the country plunged again so soon into an electoral struggle while party passions are still running high, and has tried hard to find another Minister willing and able to form a Government. After vain attempts extending over nearly two months, King Alexander was compelled to have recourse again to M Pashitch. This time his Majesty is also consulting the Opposition leaders and the President of the Skupshtina before returning an answer to M. Pashitch's request. The political uncertainty cannot fail to retard Yugoslavia's economic recovery, and such progress as the country is making is an eloquent testimony to her recuperative powers. At the same time the absence of political stability encourages the enemies of the State to further activity. M. Raditch, in Moscow, would seem to have abandoned the attitude of an impartial observer, with which he claimed to be visiting Russia, and is identifying himself more and more with the Soviet system. This development, it might be thought, would help to simplify Yugoslav politics.

Bulgarian Reparations.

The statement that the payments to be paid by Bulgaria as reparations will amount to a third of her Budget for the next thirty years has been promptly refuted by Sir Elliot Colvin, late British representative on the Inter-Allied Commission for Reparations in Bulgaria, who points out that, under the arrangement concluded last year, Bulgaria will have to pay by way of reparations during the year ending March 31, 1925, a sum amounting to less than one-fortieth of her revenues as budgeted for during the same year; and he adds that the proportion for the next ten years, even if Bulgarian revenues do not increase, will be less than one-twentyfifth. Whether the subsequent admission by the author of the original assertion that the word "reparation" was meant to cover all Bulgarian payments resulting from the War—payments under the Serbo-Bulgarian Convention, the cost of the Armies of Occupation, the service of foreign war loans, and the expenses of a volunteer army—invalidates his plea for entire remission is not stated; but it is to be hoped that the

Digitized by Google

problem of changing into gold the leva in which the money for reparations will be collected in such a way as not to depreciate the rate of exchange will be carefully considered. It is an axiom of the Dawes Report in regard to Germany that to enable her to convert her Budget surplus into a foreign balance with which to pay reparation it must be equalled by a surplus of exports, visible and invisible, over imports, visible and invisible. A balanced Budget and a stable currency, which are interdependent things, are declared to be the first essential, and to this end a new Bank of Issue is contemplated. The position in Bulgaria may not be so serious as it is in Germany, but it is on all fours with it. The Sofia Government controlled a sufficient balance abroad to be able to make its first payments, but unless Bulgarian exports exceed imports, it will not be able to continue to buy gold without seriously affecting the rate of exchange. This question is clearly one for an expert expression of opinion from the Reparations Commission or another competent source.

The Bulgarian Amnesty.

A general political amnesty covering the members of the Cabinet that pushed Bulgaria into the War and a large number of Agrarians involved in the disturbances in September, 1922, is a wise move on the part of the Bulgarian Government, and no exception will be taken to the exclusion from its provisions of M. Radoslavoff. Not the least satisfactory feature is the special treatment accorded to General Jekoff, Commander-in-Chief during the War, who returned voluntarily to Bulgaria to stand his trial and was, nevertheless, sentenced to ten years' imprisonment. He is not only pardoned, but full rights and his army pension are restored to him. The step now taken by the Zankoff Government should go a long way to moderate political bitternesses in the country and help to consolidate all parties against the Communists. A considerable amount of attention is being called publicly these days to the Communist menace in Bulgaria. In a matter of this nature the Bulgarian Government must be credited with knowing what is the best course of action to adopt. Foreigners who know the Balkan States well will still pin their faith to the sturdy independence of the peasant majority as the best weapon against Communism, provided that justice and fair play are not withheld from that majority by the politicians. Whether it is better to proclaim aloud the machinations of the Communists and so place them on their guard or merely to wait quietly for the tortoise to put out its head and then to strike is for the Government concerned to decide.

Macedonia and the Bolshevists.

Macedonia, it has to be admitted, presents an unknown factor and a possible complication in the future of Communism in the Balkans. According to a correspondent of *The Times*, an arrangement was made on June 1 in London between M. Rakovsky, the Soviet representative, and M. Todor Alexandroff, the Macedonian leader, by which Bolshevist Russia undertook to assist the Macedonian organisation with a supply of arms and money and in other ways on condition that the latter should remain strictly neutral in the struggle of the Bulgarian Communists and Agrarians against the Zankoff Government. The suggestion at the end of the correspondent's communication that as a result of the agreement the position of the Bulgarian Government might become very dangerous seems to link up the information with other reports of the Communist menace in Bulgaria. It would have been supposed that the main danger rested with Yugoslavia, against whom the Macedonians will act, or with the Macedonians themselves, who can hardly hope to achieve any lasting success, if it came to actual war with the whole Yugoslav army.

Macedonian Aims.

The chief concern of Europe should be that no unnecessary risks should be run in regard to a serious disturbance of the peace of the Balkans. Whether the alleged agreement between the Macedonians and the Soviet Government has been made or not, whether the latter is or is not able "to deliver the goods," a policy of *laisser faire* on the part of the Allied Powers in regard to Macedonia would seem to be inviting trouble in that territory. If the Macedonians are now coquetting with the Bolshevists, it will be because they despair of meeting with justice from Europe or of finding support from any other country than Russia, not because they have any leanings towards Bolshevism. Their attitude can be very briefly expressed. The Allies in the War declared that it was their aim to bring to small nationalities the right of self-determination; the Macedonians will be neither happy nor quiet until they get it. Self-determination for them spells autonomy. Yugoslavs, Bulgarians, Greeks, all know that in similar circumstances they have done, and would continue to do, exactly what the Macedonians are doing. Would not the most statesmanlike course on the part of the three countries be to come together in order to devise a settlement of the Macedonian question which will give peace to the Balkans, and most assuredly bring nearer the day of prosperity for the whole Peninsula?

Persian Fanaticism.

A deplorable outrage is reported from Teheran, where the United States Consul, Major Imbrie, has been killed by an angry mob, and another American has been badly injured. The disturbance is said to have arisen as a result of the action of the Consul in attempting to photograph a fountain held in special reverence by the Shiah populace, and at first there seemed ground for hoping that it was a case—regrettable enough, but isolated—of sudden mob passion, to which Eastern peoples are particularly prone. An ugly feature, however, was the palpable negligence of the Teheran police and military, who failed to protect the two Americans, even if a military sabre did not deal, as is suggested, the fatal blow. The incident follows upon an anti-foreign agitation in the Persian Press, against which the Government of the Sardar Sepah appears to have taken no steps. Although mainly directed against the British, this agitation has also included Dr. Millspaugh, the American Financial Adviser, whom the Persians affect to regard as unequal to the demands of his post. Persia, having set out rather hastily on a downward path, is finding it hard to retrace her steps. There has been a noticeable relaxation of the satisfactory hold that the Sardar Sepah was exercising over the country, ever since he coquetted with the idea of a republic, and was compelled by the Ulema to go back on his own views.

Indian Grievances.

Indirectly, the grievances of the delegates of the National Convention of India are a striking tribute to the great work of the British in India. The main preoccupation of the Convention is to substitute its own Constitution—an Indian-made Constitution—for that introduced by the Montagu-Chelmsford reforms. The existing Constitution is liable to revision in 1929, but the Convention is opposed to any delay. Consequently we have the spectacle of such great patriots as Mr. Sastri and

Digitized by Google

his fellow delegates illustrating by their actions that there is nothing of greater moment to India at present than this moving of the clock on five years. The caste and the outcaste questions, famines, education, agricultural problems, the interpretation of constitutionalism to India's ignorant millions—the hundred-and-one questions on which it would be thought that the great intellects of Indian patriots would concentrate in the short time at their disposal before revision of the Constitution is due—all these are to them of no account. In a speech which Mr. Sastri made last Friday to the guests of Sir Ali and Lady Imam he was far more exercised over the fact that a non-Indian had for four sessions represented India in the League of Nations and at the London Conference, and that missionaries charged with the spending of funds to further Christianity in India should not leave out religion in giving education to Indian children.

A One-Sided Point of View.

No one who listens to Mr. Sastri can fail to be impressed by his earnestness and outstanding ability, and it seems a pity that his unmistakable talents should be spent merely in telling the English how unworthily they have performed their task in India instead of preparing his own people for the time when the responsibility will be theirs. Sir Ali Imam, in introducing the speakers, had pointed out that the National Convention wished to steer clear of the extremists on either side, and one might have expected Mr. Sastri to take the line that, in view of Great Britain's wonderful achievements in India on behalf of the people of India during the last century, a matter of five years more or less of restricted Dominion status was not worth talking about. The other speaker, Mrs. Besant, said that far too much was made of occasional riots between Mussulmans and Hindus, of which there were comparatively few, but went on to attack the division of the sects into separate electoral units under the existing Constitution as being responsible for embittering religious animosities. Here, again, as the speaker represented these animosities as having been so seriously enhanced by British action, and the rioting arising from them as being negligible, the audience was left to infer that in the maintenance of public order the present system of Government had also deserved well of India. But as far as any admission on the part of either speaker was concerned, it might be supposed that British rule in India had been one long dismal record of failure and oppression, unrelieved by the bestowal of a single benefit upon the country or its inhabitants.

THE WEEK AT HOME.

London, Tuesday Morning.

Conservatives and Nomads.

While all the parties are protesting their complete confidence in the result of the next elections, their essential happiness, and so on, they are all in reality a little afraid of the country's decision, and, of the three, the Conservatives are probably the most afraid. Fear on the part of the Liberals cannot, of course, be very considerable—it is in proportion to their hopes. But the Conservatives have latterly been showing much activity, and there are signs that Mr. Baldwin has regained the nerve that he appeared to lose after the last election. He has not only demolished the case that Mr. Lloyd George the other day made out against his administration, but he has actually invited those nomads, Mr. Winston Churchill and Captain Guest, within his fold.

This invitation is rather amusing. Everyone realises that if Mr. Churchill were to accept Mr. Baldwin's suggestion that he should publicly confess what a foolish little boy he has been in the past, and then join the great and extraordinarily happy Conservative Party, he would very soon be leading it. These terms of admittance are possibly too high for the protagonists of the Centre Party, but some sort of fusion between these two schools of negative thought is probably inevitable. The trouble with the Conservative camp is that around it are prowling all sorts of disreputable or unscrupulous characters, and that it seems doomed either to accept them at the price of honesty or remain in dull probity under Mr. Baldwin's guidance. At the moment convictions are being tested not so much from the standpoint of principles as from that of the next election—the inevitability of which, incidentally, is more loudly proclaimed as it becomes more remote.

Peeresses in the Lords.

There was hardly a paper that did not poke fun at Lord Banbury for his opposition last week to the proposal that peeresses should sit in their own right in the House of Lords. He maintained that the dignity of the Upper House was not worth sacrificing for all the efficiency in the world—a statement which all our pushing journals have pleased themselves in ridiculing.

One drearily has to assume that Lord Banbury, in spite of the fact that he is right, is standing up against the tide of the age, and will consequently be drowned. We are now witnessing a perfect orgy of letting things go to what is called their logical extremes (which means, of course, reducing things to an absurdity), and because we have already admitted the theoretical equality of the sexes there can be no disputing the right of peeresses to sit in the Lords.

Advertising Men.

A confession must be made. I last week read (Heaven help me, I did) much of what those wonderful men, the advertising men, and those still more wonderful men, those who paid tribute to the wonderfulness of the advertising men (they were mostly politicians), said at the British Empire Exhibition. This I did in search of Goethe's "mehr Licht." But a woeful melancholy assailed me, and I had to relinquish the task. The emotion of these men was simply too terrific. Not content with "doing" Great Britain in about three days, and with proclaiming that they were the greatest force of the age, they ended up in quite the approved American style in an overwhelming indulgence in sob-stuff. They applauded in affecting fashion a resolution, the pertinence of which it was difficult to discover, that there should be no more wars. As Sir Charles Higham would say in his penetrating tautologies: "This is gup. This is bosh."

These great men at Wembley unfortunately did not have time to discover a way of stopping wars. They did not even have the time to reflect that since more wars than one have been caused by the national desire, however indirectly expressed, to make money, they, the very apostles of this desire, are hardly the most suitable people to preach the necessity of content with things as they are. One could hardly deny that the most contented nations, and those who are, therefore, least prone to war, are precisely those in whom advertising and publicity men play the smallest part.

Byron and the Abbey.

The gust of enthusiasm which the centenary brought to the name of Byron has not quite died down, and a move was recently made by several

Digitized by Google

eminent men to gain for Byron a monument in Westminster Abbey. But it was not to be. The Dean and the Chapter, in the best and most reasonable manner, put their feet down, on the ground that Byron was guilty during his lifetime of many acts that were not in strict accordance with Christian principles, and that to commemorate him in a Christian building would therefore be absurd. To the ordinary reasoner there is no getting away from the logic of the Dean's objection.

A fuss is certain to be raised over the matter. Both sides, of course, are claiming that they have the majority of British people behind them. It is probable that of those who know anything of Byron the majority would be against the Dean, but in this country verdicts of this kind are not built on the opinion of those who know. It seems a little curious, however, that those who despise ecclesiastical objections should be so keen to honour Byron in this way. One was not aware that the world thought any the less of a man because he was not buried or commemorated in the Abbey.

The Bungalow Murder.

For weeks past I have refrained from mentioning what everybody has either been reading about or has heard about—the murder that will be known to history as the Bungalow Murder. This case was the most nauseating thing one has ever met: it far exceeded any fiction. And there can be no doubt that it took hold of what is called the public imagination. This fact was not due to the sordidness of the crime, but to the motive of it and to the clever way in which it was reconstructed by the prosecution.

It has been the habit, in discussing the worse sort of these crimes, to put them down to the effects of the War, but in this case it has been proved to be due to nothing of the sort. The truth, inexplicable as it may be, appears to be that every generation has its peculiar monster, although there can have been few worse than this one of 1924.

Alter Ego.

MRS. ALEC TWEEDIE'S SKETCHES

Once again Mrs. Alec Tweedie has gustily descended upon London, loaded with her efforts of the last four years. At the Alpine Club Gallery, Conduit Street, Bond Street, are to be seen nearly four hundred products of her brush, from subjects in Europe, Asia, Africa, and America. This artist —for as such she has now definitely established herself—has been practically all round the world in free indulgence of her self-taught art, and the result almost takes one's breath away.

The majority of these pictures, such as, for instance, those dealing with Japan, have not before been exhibited in London; but it is difficult to perceive from the pictures not shown in her previous exhibition, some three years ago, much else than technical improvement. Mrs. Tweedie can "knock off" the most brilliant generalisations; she seizes the topic of the moment, and has, in fact, a perfect flair for reporting; but after seeing all these pictures, whether of Greece, or the Sudan, or Syria, or Egypt, one feels that they are to painting what the best forms of journalism are to literature. Mrs. Tweedie appears to work so quickly, to be informed with such complete suddenness, that she does not always avoid the danger of plunging headlong into the superficial, although it can certainly be said in her favour that she never makes the mistake of floundering in pools out of her depth. The disadvantage of this hasty, "impressionable" method may, perhaps, be best seen in the deprived dignity of the Bacchus Temple at Baalbek, in the Temple at Karnak, and in the Cenotaph.

But there are very definite achievements in this exhibition. There is an amazing display of richness of colour—a richness that is never so lavish as to become gaudy, but is always ordered and appropriate—it is perhaps to be seen in greatest profusion in the studies of the Riviera. Of subjects taken from the Near East one would draw particular attention to "Salonika, Refugees"—a really admirable descriptive picture; to "a Bit of Old Jerusalem," to "Night Work on Sennar Dam," "Three Types of Men," and "Shilluks," and to "A Cairo Mosque." All these hundreds of drawings, however, have essentially a hodiernal interest, and many much more than that. It is too easy and obvious to admire Mrs. Alec Tweedie's power of keeping one interested, to expatiate on her versatility, and so on; one can just stand against her advancing on one, like Mr. H. G. Wells, from all directions at once; but one's reserve, it must be confessed, is a little shattered when one discovers that her uncanny cleverness is so extensive that she contrives by it to make New York look beautiful. She patently has an "eye"—or a "nose," as by those somewhat American methods of publicity which add to the success of an exhibition it ought perhaps to be called—for a good "story." All the world loves a "story": in other words, nobody will be disappointed at this exhibition.

TURKISH MILITARY MISSION.

General Nadgy Pasha, Divisional Commander of the Turkish Army, accompanied by members of the Turkish Military Mission, recently arrived in London from Constantinople. They visited the War Office, Aldershot, Bisley, Gravesend, and Military Colleges, concluding their visit on July 22, when they proceeded to Italy, Poland, and Germany.

KHARTOUM SOLDIERS' INSTITUTE.

Subscriptions to the Khartoum Soldiers' Institute should be sent to the Church of England Soldiers' and Sailors' Institute, The Church House, Westminster, S.W.1. They should be earmarked "Khartoum Soldiers' Institute."

THE UNION OF EAST AND WEST.

The Union of East and West is presenting in English some short Indian plays by Tagore at 4 o'clock this afternoon, and at the same time on July 26 in Lord Leverhulme's garden at Hampstead. The cast includes Moyna Macgill, Florence Saunders, Colette O'Neil, Gordon Bailey, Henry Oscar, and Chandra Nath. The unique art collection will be on view before and after each performance.

The Grand National Assembly of Turkey will open its session on September 23 at Angora.

M. Venizelos has arrived in Switzerland, where he will make a stay of six weeks. He will afterwards visit London.

Zaghloul Pasha has arranged to leave Alexandria for Europe to-morrow. He will be accompanied by Madame Zaghloul, Wassef Pasha Ghali, the Minister for Foreign Affairs, Kamel Bey Selin, his private secretary, and an Egyptian doctor.

The Aden correspondent of *The Times* writes (July 17): The Fadli Sultan, Hussein bin Ahmed, died near Aden on Sunday, June 29, at the age of 110 years. He had been an invalid for some time, and his grandson, Sultan Abdul Kader bin Ahmed, had for long acted on his behalf. The Fadli Sultan was presented to the Duke of Connaught and to the Prince of Wales in 1921, and was entitled to a personal salute of nine guns.

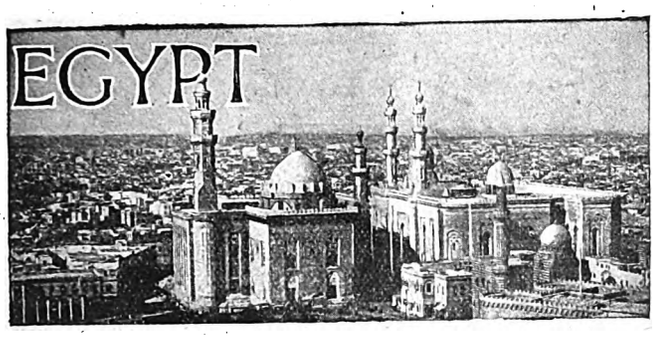
The Near and Middle East.*

From Our Own Correspondents.



Cairo, July 12.

The Negotiations.

There is every reason to believe that Saad Pasha Zaghloul has at last signified to the British Government his acceptance of Mr. MacDonald's invitation to go to London to discuss the Egyptian question with him. Although various statements made during the past few days would appear to throw some doubt on this fact, no attention need be paid to them, as they are merely intended for local consumption.

One thing is perfectly clear, and that is that Saad Pasha does not intend to commit himself at the outset to negotiation in the strict sense of the word. What apparently he intends to do is to go to London, accompanied possibly by Wassif Pasha Ghali, his Minister of Foreign Affairs, and discuss the whole question with Mr. MacDonald in a more or less informal manner. If he finds that a satisfactory solution is possible, these conversations will then assume a more official character, the main lines of settlement will be agreed to by the two Prime Ministers, and then, and only then, will an Official Delegation be appointed to negotiate a settlement in detail.

When one comes to consider the matter, the plan which Zaghloul Pasha proposes to follow is undoubtedly the wisest, for if official negotiations are entered upon right away, and for some regrettable reason or other no satisfactory settlement is arrived at, there must inevitably be a rupture and an atmosphere of strained relations very similar to that obtaining in 1921. On the other hand, if informal conversations fail to show the possibility of a reconciliation of the interests and claims of both sides, the parties can agree to part without the official relations between the two countries being in any way affected thereby.

Saad Pasha has definitely booked his passage for himself and Mme. Zaghloul Pasha by the steamer leaving Alexandria on the 25th instant for Marseilles. He will go to Lyons and Paris in order to consult his doctors, and then will undergo a cure either at Vichy or Mont d'Or. His meeting with Mr. MacDonald cannot therefore take place until some time in September, and the exact date has been left to the British Prime Minister to fix.

Parliament.

Parliament managed, after all, to complete its labours before the Feast of Bairam, which begins to-morrow, and early yesterday morning it was prorogued until the autumn. There was a terrific scramble at the end to complete all the formalities in connection with the various measures that had still to be passed, but all—Ministers, Under-Secretaries, members, and clerks—worked with a will, and at one time it looked as if the session would be completed at midnight. But at about 11 o'clock some keener eye detected that the Senate had not got a quorum, and, a hurried search in the corridors not producing the extra number required, urgent messengers were despatched to fetch the necessary number of senators from their homes. At last, at 12.30 a.m., all business was completed, and Zaghloul Pasha, after a short speech which was mainly devoted to thanking the members for the work they had done, read King Fuad's rescript proroguing Parliament to the autumn.

The Turkish Tribute.

One of the last most important questions dealt with by Parliament was the item of £E664,826 standing in the Budget for payment of the annual charge on account of the Turkish loans of 1855, 1891, and 1894. Prior to the War this amount had figured under the heading of "Turkish Tribute," against which, according to decrees signed by the Khedives Tewfik and Abbas Hilmy on orders from the Sublime Porte, the interest charge on these loans was paid.

The Egyptian Government maintains that when the suzerainty of Turkey disappeared in 1914 the obligation to pay the tribute went also, and it holds that, as these loans were contracted by Turkey direct with the lenders for her own benefit, Egypt is under no liability to continue the payment. Both Houses endorsed the Egyptian Government's point of view, and approved its proposals to pay the instalment due to-day, but to deposit the balance of the annuity inscribed in this year's Budget with the National Bank of Egypt, and invite the Powers in question to confer with Egypt with a view to arriving at some settlement.

It is true that the Lausanne Treaty laid down that Egypt should continue to meet the interest charges of these loans, but the Egyptian Government holds that this decision is not binding on Egypt, as she was not represented there, although she was at the time an independent State. If no satisfactory settlement can be reached with the Powers, the Egyptian Government proposes to submit the matter to the International Court of The Hague.

GREECE.

Athens, July 11.

The Arrival of the British Fleet.

The British Mediterranean Fleet, under the command of Admiral Sir Osmond de B. Brock, arrived in Phaleron Bay on the 27th of last month, and left for Malta on July 3. Despite the fact that the Greek Navy, as a consequence of the resignations mentioned in my last letter, was left with less than one-third of its combatant officers, the official programme for the entertainment of the British officers and men was carried out without a hitch. A dinner was given by the British Ambassador and Lady Cheetham at the British Legation, and a reception was held at the Royal Palace by the Acting President of the Republic. On Monday afternoon the British officers gave an "At Home" on board H.M.S. Iron Duke, which was attended by the majority of the members of the British colony in Athens, while on the following evening a reception was held on board the Iron Duke in honour of Admiral Kounduriotis.

The Association football match between the British Fleet team and the Greek Fleet team, which took place at New Phaleron, resulted in a victory for the British by six goals to one. The Greek water-polo team, however, succeeded in beating the British team by three goals to two.

The Naval Officers' "Strike."

The Hellenic Navy continues to remain with practically no combatant officers, one hundred and fifty, including twenty Flying Corps officers, having resigned. It was at first thought that, with the exit of Captain Hajikyriakos (the ex-Minister of Marine resigned immediately after the departure of the British Fleet) the "incident" between the Ministry of Marine and the naval officers would be mutually forgotten, and that the latter would immediately withdraw their resignations and return to their ships and other duties. But, contrary to expectations, M. Papanastasiou, who has temporarily taken charge of the Ministry of Marine, adopted his predecessor's tactics and insists upon punishing the leaders of the movement. The officers point out that there are no leaders, and furthermore maintain that the act of handing in their resignation is not punishable. They state, however, that, in order to prove their willingness to bring about a reconciliation, they are prepared to undergo any punishment which the Minister would impose upon them, provided such punishment is not confined to the so-called leaders, but embraces all the resigned officers. Meanwhile the various naval services have been entirely disorganised. Some of the ships have not a single officer on board, while the naval arsenal can boast of one officer only—its C.O.!

Fall in the Cost of Living.

According to statistics compiled by the National Bank of Greece, there has been a further decline in the cost of living during May and June, 1924. Thus, whereas the index number of the cost of living in Athens was 1,343.0 during April (100 in 1914), it fell to 1,285.4 in May, and to 1,240.4 in June. It is generally believed that the fall in prices is due to the more or less steady rate of exchange.

BULGARIA.

Sofia, July 15.

The Sobranye.

The Sobranye, which was to have been dissolved at the end of June, is still in session, but it is expected that to-morrow will be the last day. All the Deputies are anxious to leave Sofia, and it is probable that the next session will not open until the end of October.

The Bill pardoning Radoslavoff's Liberal Cabinet is at present being discussed, and the third reading is likely to pass to-day. The Socialists have opposed this amnesty, while the Agrarians have insisted that it should include members of their party now in prison. It seems, however, probable that the Bill will pass, although Radoslavoff himself, as well as one or two other Ministers, will not be pardoned. After two months' discussion, the Budget was finally approved last week, and has now become law. Other business discussed includes a law which aims at reducing the cost of living, various educational measures, and the tariff on letters and telegrams, which has been greatly increased.

The Inter-Allied Commission.

With reference to the correspondence which has appeared in the foreign and local Press concerning the future composition of the Inter-Allied Commission at Sofia, it is learned that the Conference of Ambassadors will discuss this matter during August. Without going into the various theories which have been brought forward by different persons, it is well to state that the wish of the Bulgarian Government can only be directed towards one goal, which is the total suppression of the Commission. So much publicity having been given to the points of view of the Allied countries concerned, it would seem hardly necessary to point out that the work of the Commission can only suffer by a continuance of the present situation, which is, to say the least of it, humiliating and sordid to the impartial observer. Now all that remains to be hoped for is that the competent body, which in this case is the Conference of Ambassadors, will speedily decide how the three countries concerned are to be represented in Bulgaria.

The Macedonians and Moscow.

From Yugoslavia comes a report that several prominent Macedonians, including M. Peter Shouleff, have gone to Moscow. This report must be treated with great reserve.

There are signs, nevertheless, that Macedonians of the extremer element continue to be attracted by the specious promises which M. Stephan Raditch, the Croat Leader, has held out to them. M. Raditch is still in Moscow, and it appears that the Soviet have received him with open arms. Disillusionment will surely come sooner or later, but just at the moment M. Raditch seems to be unduly influenced by Bolshevist theories and Bolshevist advice. Fortunately, saner elements amongst the Macedonians realise only too well that if they nail their standard to the Moscow mast their cause will be greatly jeopardised. It is for this reason that one or two important Macedonians, who are not directly associated with the revolutionary organisa-

Digitized by Google

tion are contemplating a visit to the principal Allied countries in order to reassure the latter concerning any Macedonian-Croat-Bolshevist pact.

The Roumanian Minister.

M. Lango Rascano, who has been Roumanian Minister at Sofia for the last three years, has been appointed Minister to Athens. It is understood that his successor will be M. Biherelesco, who is now holding an appointment at the Roumanian Foreign Office.

Communist Activities.

A good deal of prominence has recently been given to the activities of the Bulgarian Communists and their Russian brethren, the Third International. In this connection it is reported that a barque was recently discovered on the Black Sea coast near Varna. This barque had been used to smuggle in arms and munitions from Russia and had been abandoned by its crew. As the weather is at present propitious for such operations, it may be expected that further attempts will be made to land arms.

YUGOSLAVIA.

Liubliana, July 13.

The Little Entente Conference.

The Prague Conference of the Little Entente has come to an end, and, in spite of many unfriendly prognostications, its success is beyond doubt. For the Little Entente is only an alliance with a strictly limited scope, and, therefore, its decisions cannot pursue any aim other than to safeguard the *status quo* and maintain the validity of the Peace Treaties. And in this complete unanimity was again achieved.

But unanimity was achieved in other questions also, in so far as they might bear on the Little Entente. Thus the official *communiqué* says that the Little Entente has from the first been interested that the Governments of the Great Entente should see eye to eye with each other, and points out with special satisfaction that the Powers are steadily approaching an agreement, the object of which is the final solution of the Reparations question—a question which closely touches the interests of the Little Entente, as, in these days, all efforts are concentrated on the pacification of Europe.

The Conference furthermore showed that the unity of the Little Entente was maintained in the face of all incidents, and that it is to-day on a firmer basis than ever.

The decisions of the Little Entente in regard to the recognition of Soviet Russia were awaited with special eagerness. It is well known that relations between Roumania and Russia are somewhat strained on account of the question of Bessarabia. For this reason it was rumoured that Roumania had stipulated with other States of the Little Entente that the recognition of Soviet Russia on their part should be dependent on Russia's consent to the annexation of Bessarabia. But as Yugoslavia and Czecho-Slovakia are not interested in this question, and as it, moreover, goes beyond the scope of the Little Entente, it was very doubtful whether the recognition of Russia would be discussed at any length at the Prague Conference. This view proved correct, and every member of the Little Entente was left quite at liberty to effect the recognition *de jure* of Soviet Russia or not.

The Conference came to a close on Saturday, July 12, and the official *communiqué* says that it dealt with questions on the agenda of the next Conference of the League of Nations, more especially the question of disarmament and the Treaty regarding mutual frontiers. Complete unanimity was reached in all these matters, and the new position in Europe was duly taken into account.

In an interview with the Press, Dr. Benesh stated that the Little Entente would continue to do its duty, as it had done it at the time of Karl Habsburg's *putsch* and the Hitler case, and prove itself the guardian of the peace of Central Europe. As regards Germany's entrance into the League of Nations, Dr. Benesh said that the Little Entente was, in principle, in favour of Germany's admission, but not until relations between her and France had been cleared up, as otherwise the inevitable disputes arising from them would only handicap the work of the League.

The next Conference of the Little Entente will take place at the end of the year in Bucharest.

Raditch and the Communists.

According to certain reports, Raditch and Radek, the Secretary of the Third International, have come to a complete agreement. M. Raditch is to undertake the management of the Communist propaganda centre for the Balkan States, which is located in Vienna. All Communist organisations in the Balkan States are to defer to M. Raditch's orders. A fairly extensive credit is said to have been granted by the Soviets for this purpose—a million, so it is stated, being devoted to the Yugoslav propaganda centre alone. But M. Raditch will experience some difficulty in taking over the management of his centre, as the Austrian Government has forbidden him to reside in Vienna. One consequence of M. Raditch's alliance with the Bolshevists may be noted in a slight *rapprochement* between the Governments of Belgrade and Sofia, both being prepared to stand fast against Communism. It remains to be added that it is highly improbable that M. Raditch's party will remain faithful to its leader after this last move of his. The peasant Deputies, in particular, are loud in revolt, and it is scarcely probable that at the next General Election the present number of his mandates will be maintained, let alone increased.

The Internal Situation.

The internal situation is by no means cleared up, but everything points to a General Election this autumn, and to its being conducted by a Pashitch Government. By M. Raditch's joining with Communism, the Opposition has been greatly weakened, and to-day it is not in a position to demand more than a "concentration" Government.

But this cannot be effected without the Radicals, and as the Radicals refuse to take part in one, it is out of the question, although at the moment it would provide the best solution of this country's problems.

The Italian Frontier.

Incidents on the Italian frontier have been rife of late. In spite of their frequency, it would be well, however, not to take them too seriously. They are practically all the result of the fact that the Italo-Jugoslav frontier has not been settled in detail to this day. The reason for this is that the Commercial Treaty between Italy and Yugoslavia has not yet been concluded, and that Italy is trying to get better conditions by bargaining with frontier concessions. Meantime the negotiations concerning the Commercial Treaty are progressing satisfactorily, and it is to be hoped that before long the definite delimitation of the frontier will in its turn put an end to these unnecessary frontier incidents.

ALBANIA.

Tirana, July 16.

Tirana and Valona.

The seat of Government has been removed from Tirana to Valona. This is the natural consequence of Valona's having been the centre of the revolutionary movement. It does not mean that any decision has been arrived at with regard to the future capital of Albania.

Tirana was never more than a provisional capital. The two most civilised and largest towns in Albania are Scutari and Koritza. Both these towns, however, are situated close to the frontier, the one in the north-west, the other in the south-east, and the possession of both was contested by Albania's neighbours. Tirana, on the other hand, occupies a central position—less central, it is true, than Elbasan, on the River Skumbi, which divides Northern from Southern Albania, the Ghegs from the Tosks—but enjoying the advantages of being completely free from malaria, and of having road communication with the sea at Durazzo.

Valona is not very suitable as a capital. It is badly smitten with malaria, and it is within range of the Italian guns on the Island of Saseno. But it has undoubtedly a commercial future. It is the port of the most progressive part of Albania and close to a wide district offering exceptional agricultural prospects, if the malaria could but be checked. It possesses the only first-rate natural harbour in Albania, and it is the nearest point to the Italian coast—so that one might almost say it is destined to become one day the railhead of the quickest route, served by ferry boats from Brindisi, between Rome, Salonika, and Constantinople. The potential oil districts in Albania are, moreover, close to Valona, and the town is already comparatively well served by roads.

The Work of the Government.

The Government has decided not to reassemble the old Parliament, easy as it would be to obtain from it now a vote of confidence. There is no need, however, for such a vote. New elections will be held towards the end of the present year or at the beginning of 1925. Meanwhile, the population is to be completely disarmed without fear or favour; and until this is accomplished martial law will continue.

It is probable that the new elections will be held under a system of direct suffrage, instead of under one of electoral colleges, as the law stands at present. The new Assembly will provide a revised Constitution for the State and settle on the permanent seat of the capital.

IRAQ.

Baghdad, July 2.

The Organic Law.

A complete calm has overtaken matters political in Baghdad; there is not so much as a puff of wind—though no more, it is generally stated, is needed to cause the fall of the present Cabinet. The Constituent Assembly continues to discuss the clauses of the Organic Law, half of which has now been examined and passed. The deputies are all anxious to return home after their long absence in the capital, and it is not anticipated that the remaining half will take long to complete. Only one clause has provoked any serious controversy—namely, that which states that "No member of Parliament shall be arrested or tried during the session unless the Assembly to which he belongs shall, by a majority vote, declare that good reason exists for the accusation of such member, or unless he is taken in the act of committing a crime or misdemeanour, or immediately after the commission of the same. Every member shall have complete freedom of speech within the limits of the rules of the Assembly to which he belongs, and no legal proceedings shall be taken against him in respect of any vote given or opinion expressed or speech made by him during the deliberations of the Assembly."

The bone of contention is the last half-dozen words. Certain tribal deputies, who are sailing very close to the wind in such matters as payment of revenue, maintenance of law and order in their tribal areas, and so on, were anxious to obtain immunity from arrest during the whole of a deputy's term of office—namely, four years—and not merely during the deliberations of the Parliament. Others, including the Prime Minister, foresaw the administrative difficulties in which the Government would be plunged if the leaders of turbulent tribes obtained and took advantage of this immunity. Two heated sessions were spent in debating the proposed amendment, and the Assembly eventually decided to adopt a rendering of the clause substantially the same as that given above.

Royal Air Force Display.

A most interesting demonstration of bombing was given by the Royal Air Force at Hinaidi on the morning of June 27. The display took the form of offensive action against the village "X," which had been specially constructed for the occasion, and was supposed to be occupied by an armed and hostile tribe, who had "been ordered to disband, but had neglected to obey the instructions and had displayed a hostile attitude." Ten machines from Squadron 45 dropped bombs on the village, the very first hitting its target with such deadly precision that the whole village simply disappeared in a cloud of smoke. One after the other the aeroplanes passed overhead, dropping their bombs, four at a time, with amazing exactitude, while Squadron 1 circled round to protect them from any possible attack by air. The village having been utterly destroyed, the imaginary fugitives were further harassed by smaller and lighter machines, which swept them with machine-gun fire. Finally, seventeen armoured cars swept across the plain, spitting fire as they went. The display amply demonstrated the power and effi-

Digitized by Google

ciency of the Royal Air Force, and greatly impressed the spectators, among whom were H.E. the High Commissioner, the Air Vice-Marshal, and the Emir Zaid, brother of H.M. King Faisal.

Indian Cyclists in Baghdad.

Five out of the six Indians who are attempting to cycle round the world—one having returned home for urgent family reasons—have left Baghdad this week. They have now to tackle the worst part of their undertaking—the crossing of the burning Syrian desert. The cyclists, who are members of the 2nd Bombay Pioneers, have already covered about five thousand miles since leaving Bombay on October 15, 1923. They were received in Baghdad by H.M. the King and by H.E. the High Commissioner, and were also the guests of the Baghdad Indian Association.

CYPRUS.

Nicosia, July 8.

Cyprus and Greece.

The refusal of the Labour Government to accede to the cry for "union with Greece" is described by several papers as a bitter disappointment for the Greek community. Both Conservative and Liberal Governments have always, they say, turned a deaf ear; but great hopes were based on the Labour Government and the statements made at various times by some of its leaders. Hitherto the champions of the movement have put their faith in memorials and deputations—generally headed by the Archbishop and the ablest lawyers and politicians. That policy has been shipwrecked, and must be abandoned. The plain statement of the Duke of Devonshire about the "Cyprus question"—as some here affect to call it—followed by the declaration of the Labour Government, shows that it is necessary to inaugurate a new policy. The *Phoné tes Kyprou* (July 5) says that the reason why the British Government has refused to admit the "claims" of Greek Cypriots is that there is a want of sympathy on the part of public opinion and feeling in England; and this again is due to want of enlightenment regarding their case. It is suggested that the only method by which the desired change can be brought about is by efforts directed from the real centre of opinion in England—that is to say, London. It advocates, therefore, the establishment of some representative body, even if it should consist but of one person, resident in London. This course has indeed been advocated before, but it should no longer be delayed. If no influential person in London is able to undertake the task, Cyprus possesses citizens well qualified for it.

Government Tithe Wheat.

The Government, yielding to a widespread desire, has decided to adopt a change in the disposal of its tithe grain, and to sell some, if not all, of the wheat in smaller quantities. The Commissioner of Nicosia has been authorised to issue, at current market rates, 2,000 bushels a week to eighty bakers of the capital, on condition that bread is sold at moderate prices. The present rate is 60 piastres (6s. 8d.) the bushel. But agreements without bargaining are unthinkable, and the bakers have begun by objecting that the quality of wheat taken in kind is inferior to that sold in the market. No doubt an arrangement will be arrived at. Meanwhile, it is hoped that the Government will allow sales to others besides the favoured bakers.

The Silk Industry.

Good progress is being made in the movement for establishing a silk factory in the island. Mr. Breton, representing the London firm of Henckell Du Buisson and Co., has been making full inquiry into all local conditions, and has been receiving much assistance from Mr. Noble, who is acting Director of Agriculture (in the absence of Mr. Bevan in London). He has visited most of the areas in which sericulture is carried on. Naturally the terms on which the firm would undertake to start a manufactory require very careful determination. One essential is that a site must be found situate near a sufficient and suitable water supply. Another condition is an assured annual delivery of 50,000 to 60,000 okes (62 to 75 tons) of cocoons—about a quarter of the total island output. It would accordingly be desirable that cultivators or local silk merchants should become shareholders in the enterprise. It is calculated that an outlay of from £15,000 to £20,000 would be required for the erection of a manufactory, with its machinery and equipment. If successful, this would, of course, lead to the construction of branch factories. While most village producers would no doubt gladly take shares, not a few are unfortunately indebted to merchants, which may cause some difficulty at the outset. It seems clear in any case that the prospects of the villagers should be very much brightened should the present project materialise. And there is no question that sericulture could, under better conditions than those now existing, be very largely developed. It is much to be hoped, therefore, that the report of Mr. Breton, who should leave for England on July 17, will be a very favourable one, and that the proposed scheme will be realised.

THE INDIAN NATIONAL CONVENTION.

Sir Ali and Lady Imam held a reception at the Hotel Cecil on Friday in honour of the delegates of the Indian National Convention. In welcoming their guests, Sir Ali Imam explained the object of the Convention, which hoped to steer a middle course between extremism on either side. Mr. S. Sastri and Mrs. Annie Besant spoke on behalf of the delegates. The former testified to the amount of pro-Indian sentiment that the delegates had met with in this country, but confessed to their difficulty in mobilising it for practical purposes. He touched upon the Labour Government's dilemma in dealing with India, but held that, if it were true to its principles, it must respect the freedom and liberty of other peoples. M. Sastri then went on to enumerate Indian grievances against Great Britain in delaying the grant of full self-government. Mrs. Besant deprecated the excessive attention paid in the British Press to an occasional riot in connexion with religious festivals in India, and explained the Indian case for a Constitution drawn up by Indians.

Among those who had accepted the invitation of Sir Ali and Lady Imam were Lady Aberdeen, Sahibzada Aftab Ahmed Khan, Mr. W. H. Ayles, M.P., Lord Henry Bentinck, Miss Margaret Bondfield, M.P., Sir Edward and Lady Boyle, the Dowager Lady Boyle, Lord and Lady Buckmaster, Sir Thomas Berridge, Sir Edward Cook, the Persian Minister, Commander and Mrs. Kenworthy, Major-General Sir Edward and Lady Locke Elliot, Lord and Lady Lamington, Mr. and Mrs. Pethick Lawrence, Mr. Oswald Mosley, M.P., and Lady Cynthia Mosley, Lord and Lady Meston, Sir Basanta and Lady Mullick, Lord and Lady Pentland, Lady Polson, Sir Dorab and Lady Tata, and Mr. Wheatley, M.P.

General Nadir Khan, lately Minister of War in Kabul, sailed from Bombay on July 20 to take up his appointment as Afghan Minister in Paris.

THE BRITISH CITIZEN'S HANDBOOK OF INDIA.

"INDIA: A BIRD'S-EYE VIEW." By the Earl of Ronaldshay. (London: Constable and Co. 18s. net.)

This book is a more ambitious effort than the author's "Lands of the Thunderbolt," recently reviewed in these columns, which was a well-written account of personal travels in Sikkim, together with chapters dealing in a "popular" manner with Buddhism and its Lamaistic developments. The object of the present work is, to quote the author's own words, "to bring together vignettes of Indian history, glimpses of Indian architecture and archæology, sketches of the social and industrial economy of her peoples, indications of the modes in which their religious thought has found expression, illustrations of their unceasing war with their environment, particularly in the matter of climate and disease."

It may fairly be said that Lord Ronaldshay fulfils his programme, and that his book is one that deserves to be read by all who desire to have some idea of the responsibilities which they have in respect to the Indian Empire as citizens of the paramount Power which governs it. It comes at a specially opportune time, when all of us hear much of India and its problems, and most of us feel that the lack of knowledge of its circumstances makes it difficult or impossible to grasp the points at issue.

It is quite frankly a popular book; in fact, it is of the nature of journalism in its best sense, of the authoritative kind which our best newspapers give us with greater frequency than was formerly the case. The writing is good and vivid, the matter well chosen, and the points of importance are well brought out. It is greatly to Lord Ronaldshay's credit that he has seen that a book of this kind is much more likely to be read by those whom he desires to reach than one on more learned or specialist lines. We are glad to gather from certain indications given by him that we may not have to wait long for a further work examining the political problems of India from the same pen. If, as we have good reason to hope, this is characterised by the same clear thinking and careful writing as we find in the work under review, it will be a valuable contribution to Imperial politics.

It is, unfortunately, not possible in the very limited space available to criticise the book in detail in the manner it deserves. We would only add that twenty-four excellently reproduced plates from photographs taken by the author add considerably to its interest in bringing ocular presentation to assist in understanding the various matters treated of.

C. S.-W.

THE HUMAN SIDE OF INDIAN LABOUR.

"LABOUR IN INDIAN INDUSTRIES." By G. M. Broughton. (Oxford University Press: Humphrey Milford. 9s. net.)

Miss Broughton's treatise can be recommended almost without reserve as the first book which should be mastered by the serious student of Indian labour problems. It is not light reading—few theses for the London doctorate in economics are that—there are lots of statistics, and the material side of the question is kept prominent throughout, but, happily for the reader, the writer has felt, as well as studied, and she deals, not with the abstractions which fill official schedules, but with the human beings who dig coal, or mind machines, or otherwise function in the ranks of organised labour. Obviously she knows these human beings at home, and her incidental remarks about the way they look at things are generally just right. The trained works manager of to-day can learn as much from Miss Broughton as the promoted foreman of yesterday, and we hope both of them will seize the opportunity. The only grumble we have is that the twentieth century is not shown in its due relations to the seventeenth and eighteenth. To give a single illustration of our meaning, the attitude of employers in Western India towards their workers is very puzzling to the ordinary observer, but it becomes understandable enough when one recognises the interaction of two definitely Indian ideas, artisan-slavery on the one hand and ultra-humanitarianism on the other, with the currents of Western thought which reached India along with machines: and it would be a great benefit to students if Miss Broughton, or someone equally well qualified, would set out clearly the old ideas and sketch the gradual movement towards the present position.

INDIAN ART AT WEMBLEY.

Sir Arthur Hirtzel officially opened the Retrospective Exhibition of Indian Paintings at the British Empire Exhibition, and emphasised in his speech the importance of the proper appreciation of Indian art in this country as a means of understanding between the two races.

It was announced that the India Society would issue a volume, with illustrations, dealing with these Indian paintings. The selection of the illustrations is in the hands of Mr. Laurence Binyon and Professor William Rothenstein, both of whom served on the Indian Fine Arts Sub-Committee of the British Empire Exhibition. The text will be supplied by Mr. Lionel Heath.

July 11, 1924 (Old Style).
Julheggia 21, 1342, A.H., of the Moslem Calendar.
Tamuz 22, 5684, of the Jewish Calendar.

Prince Cantacuzene has left London for Paris.

The Aga Khan left the Ritz Hotel last week for Aix-les-Bains.

Sir Henry Seymour King has left England for a cruise in the Baltic in his yacht Heartsease.

The Tikka Raja of Kapurthala arrived in London last week from Paris.

Fathollah Khan Noury, Secretary at the Persian Legation, has left London for Devonshire on a month's leave.

Prince and Princess Omar Halim and the Marquis de Villavieja have left Claridge's Hotel, London, for Paris.

The Earl of Altamont left Southampton last Thursday for India to rejoin his regiment, the Royal Scots Greys.

Mr. Charles T. Allen, C.I.E., who sailed from India in the P. and O.s. Macedonia, arrived in London on July 20.

The Crown Princess of Roumania has arrived at 50, Grosvenor Street, where she will remain during her stay in London.

Prince N. Mirza Arasteh, Counsellor at the Persian Legation, and Princess Mirza Arasteh have left London for Belgium.

Major E. W. P. Newman, Secretary to the Anglican Bishopric of Jerusalem, has returned to Jerusalem from Europe.

Mr. and Mrs. John de Lisle have left Wootton Hall, Warwickshire, for India, where their address is Narayanganj, Eastern Bengal.

The Marquess Curzon of Kedleston has returned to London from Paris. He has benefited greatly by the treatment he has received.

The Prince Regent of Ethiopia honoured Mr. and Mrs. Charles Rey with his company at dinner at the Ritz Restaurant last Friday night. His Imperial Highness was attended by his suite.

Sir R. B. Shadi Lal, Chief Justice of the Punjab, who is at present in London, occupied a seat on the bench with Mr. Justice Eve in the Chancery Division last Thursday, and was formally introduced by his Lordship to the Bar.

Mrs. Alexander van Millingen was unavoidably prevented, owing to absence abroad, from obeying their Majesties' command to attend the Court at Buckingham Palace on Friday, June 27, and to present her daughter, Miss Frances van Millingen.

Queen Olga of Greece, Princess Nicholas of Greece, the Grand Duchess Xenia, Countess Orloff Davidoff, Lady Katharine Meade, and Lady Swettenham were among those who visited M. Serg. Yourievitch's studio at 9, Regent Street, on July 15 to view his sculptures.

The Council of the Royal Society of Arts have awarded the Society's silver medals, among others, to the following authors of papers read before the society during the past session :—

Paper read at the ordinary meeting.—Mrs. Arthur McGrath (Rosita Forbes).

Papers read in the Indian section.—Brigadier-General H. A. Young and Sir Richard M. Dane.

Mr. and Mrs. Robert Williams gave a luncheon on July 17 at the Ritz Hotel in honour of Major-General Sir Lee and Lady Stack. The following were present :—

Sir Cecil Budd, Mr. Bardsley, Colonel and Mrs. Follett, Mr. H. P. Hewins, Mr. and Mrs. Holland, Mr. G. C. Hutchinson, Sir Murdoch and Lady Macdonald, Mr. and Mrs. MacMichael, Said Pasha and Mme. Shoucair, Mrs. Urmston, and Sir Reginald Wingate.

A meeting of the Near and Middle East Association will be held on Wednesday, July 30, at 8.15, at 14, North Street, Westminster, by kind permission of Mrs. de Bunsen. Mr. Leland Buxton will read a paper entitled "How Peace May Be Established in the Balkans," written by M. Vladimir Popovitch, late Mayor of Cettigne, who will be present. Major-General Lord Edward Gleichen will preside.

APPOINTMENTS, PROMOTIONS, ETC.

The King has approved the appointment of the Prince of Wales as Colonel-in-Chief, 4th Prince of Wales's Own Gurkha Rifles, Indian Army.

Lieutenant-Colonel E. D. W. Greig, M.D., D.Sc. has been appointed by the Edinburgh University Lecturer in Tropical Diseases. He graduated in medicine in 1895, and entered the Indian Medical Service four years later. He finally held the position of Director of Medical Research in India.

Major-General Sir Charles Vere Ferrars Townshend, K.C.B., D.S.O., of Brooks's Club, St. James's Street, S.W., who commanded the 6th Division during the siege of Kut-el-Amara, and who also saw service at the siege of Chitral in the Sudan and in South Africa, Independent M.P. for the Wrekin Division of Salop, 1920-22, at one time Military Attaché in Paris, who died in Paris on May 18, aged 62, son of the late Mr. Charles Thornton Townshend, and heir presumptive to the Marquess Townshend, left unsettled property valued for probate at £119.

ENEMIES OF EGYPT.

The attempted assassination of Saad Pasha Zaghloul will, it is to be hoped, give pause to those Egyptians who are fond of proclaiming, or of thinking, that Britain is the only enemy of Egypt, and that, once rid of the British, the country will be free from all anxiety. As the medical student who fired at the Prime Minister had only recently arrived in Cairo from Berlin and was well primed with the political situation in Egypt, it is unlikely that he had evolved his supposed grievances from his own inner consciousness. The Egyptian Government appears to have had its attention directed to possible machinations among the Egyptian community in Berlin, and has had resort through its Consul to domiciliary visits among Egyptian residents in that city. Investigations in Egypt, it is stated, point to complicity in the movement culminating in the attempt on Zaghloul Pasha of leading members of the Nationalist Party and of the suspicious activity of certain men said to be agents of the former Khedive. That the latter has never abandoned hope of regaining the throne of Egypt is well known. He is represented in Cairo by a French agent, who occasionally visits him in Turkey, and it is at least improbable that political matters are excluded from the subjects discussed by them. But the most convincing evidence of the support behind the movement is provided by the existence of a Press organ of the Egyptian Nationalist Party, published in Austria. This paper, under the title *Die Ægyptische Fahne*, appears once a month at Innsbruck, and is distributed gratis. It aims at providing a rallying point for Egyptians in Austria, and is able to record sufficient success to justify the recent formation of branches of the Egyptian Nationalist Party at Graz and Vienna, in addition to the one at Innsbruck, where an Austrian-Egyptian Union, on the lines of the German-Egyptian Union in Berlin, has now been established. So long as Egyptian activities in these countries were directed against Great Britain there would be no reason for them to be frowned upon from Cairo. Latterly, however, denunciation of everything British has been interspersed with criticisms of the attitude of the Egyptian Government, culminating in an open attack on Saad Pasha Zaghloul.

How quickly this latter movement has developed may be judged from the fact that, whereas in the June issue of *Die Ægyptische Fahne* the only reflection on the Egyptian Government was contained in the remark that it was maintaining its usual passivity in the face of the British action in granting loans to the Sudan, and that nothing better was to be expected from "the Egyptian Lord Cromer" (*scilicet* Zaghloul Pasha), the greater part of the July issue is devoted to attacks on the Prime Minister. On the subject of the suppression of the two Opposition newspapers in Egypt, one article declares that "if Zaghloul believes that in this unheard-of way he will destroy the Opposition and intimidate the Constitutional Party he will be greatly mistaken," and continues: "His Excellency Zaghloul should bear in mind that he is neither Dictator nor Pharaoh. We should much prefer him as the latter, and would leave the excavation of his mummy to his dear English. But as the negotiations with England are about to begin, it was necessary for his personal safety to silence newspapers which are informing the people of his achievements." A second article is written by a former supporter of Zaghloul Pasha's who has become a member of the Nationalist Party, in this respect resembling the student who fired at the Prime Minister. It lays stress on the change that has come over the Prime Minister's attitude. It pours ridicule on the "absolute incompetency" of his Government, and asks why he does not resign in order to make room for a competent Government. It enumerates the promises that he has failed to make good. Yet another article declares that the third journey of Zaghloul's to London can bring only disgrace to the Egyptian people, and its result will be a betrayal of Egyptian interests. Finally, a report of a speech by Mr. Ramsay MacDonald in the House of Commons moves the editor of *Die Ægyptische Fahne* to a bitter outburst. No one, he points out, could have imagined that Zaghloul in his "negotiations" would so basely abandon the interests of his fatherland. It is seen how diseased and illogical is the whole of "Zaghloulery," which tries to reach its goal by means that it does not possess. "We merely want our freedom, but by the way of compromise it will never be obtained from the English vampires. Nevertheless, the political blockhead Zaghloul contrives again and again to deceive the people with his alluring pictures and to befool it. The Egyptian National Party has, therefore, always been a thorn in the eyes of Zaghloul, as it opposes with all the means at its disposal his plans, which often border on treason."

Internal evidence suggests that the Egyptian colonies in Austria are hardly numerous or flourishing enough to require a newspaper of their own. From the fact that this particular organ is distributed gratis, it is obvious that it is intended to serve some form of propaganda, and few people will suppose that the Egyptian cause against Great Britain is in need of the support of a paper published in Innsbruck. On the other hand, if the object of those behind *Die Ægyptische Fahne* is to intrigue against the present Administration in Egypt, it may well seem worth their while to win over to their way of thinking the Egyptian students attending German or Austrian Universities. If, moreover, these same leaders do not intend to stop short of murder in order to secure their ends, they are the more likely to find willing tools among youthful Egyptians who are removed from such steadying influences as may be found in their own country and have no correctives for the poisonous doctrines so carefully instilled into them. In the face of this state of affairs there could be no more dangerous policy for an Egyptian Government than to encourage its more extremist followers by seeming to endorse all their demands. It must know that many of those demands are impossible of realisation, and if failure to secure their fulfilment is to be the prelude to assassination, it will be better advised, by working with the British authorities, to lay stress on the aims that are capable of fulfilment, and so be able to point to something definite in the way of achievement. As things are to-day, Zaghloul Pasha has allowed the Sudan question to oust in popular interest every other item on the agenda paper of his negotiations with the British Government. Disillusioned on this point, the agitators try to persuade themselves that

Digitized by Google

all is lost, and that the independence of Egypt is a sham. An attempt is made to kill Zaghloul Pasha, and there is no politician in the country man enough to inform the people that Egypt is moving along the path of independence as rapidly as its capacity will allow.

LABOURS OF HERCULES.

By JANUS.

More than five years have passed since I discussed under this title Sir Henry Sharp's seventh report on the progress of education in India. Mr. Richey's eighth report has now been published, and I confess that after the first reading I was tempted to substitute for Hercules the name of another hero of antiquity whose work had a knack of coming undone. Things are not just so bad as that, but, on the face of it, the record is depressing enough—a huge increase in expenditure with practically nothing to show for it, whether in numbers or in quality, more widespread worship of golden calves and other pestilent idols, no sign as yet of the Moses who will one day put the nation on the track leading to the promised land. The actual retrogression during the quinquennium was, however, due to a quite exceptional cause, which had almost ceased to operate at its close. Saints and politicians conspired to wreck the whole system, but the system stood firm, the wreckers are now quarrelling among themselves, and the only result of the episode is to confirm the current doctrine that the devil's best workmen are politicians and saints, for though the system was not wrecked, many young lives were. Passing by that episode, and ignoring all the minor matters of interest in the report, I proceed to the two outstanding topics—the lads of the town and the children of the country.

The whole education of the lads of the town is blighted by the degree, a title of no cultural significance, but of a very definite economic value, as being conventionally indispensable to all respectable employment. Mr. Richey leaves us in no doubt as to the ravages of this intolerable pest. In the colleges, he tells us that the dominance of the examination is universal, while in the schools everything that really matters is subordinated to getting into a university. The shadow of the examination is rarely lifted, private reading is scarcely known, games are for the few, and spare time is devoted to extra coaching. Now it seems to me that, when matters have come to such a pass, the only effective remedy is, first, to deprive the degree of its economic value, and then endue it with some cultural significance. Examinations should operate as a blister, not as a blight, and a combination of employers could effect the change in a very few years, but, unfortunately, the largest employers are the Governments, who cannot face the temporary unpopularity involved in such action, and so matters have gone from bad to worse. The desired result is, however, being brought nearer by the multiplication of universities, many of them short of funds, and consequently forced to compete for students by making their examinations easy. Mr. Richey tells us that standards are already being lowered, and that students are migrating in search of the most lenient examiners. That process must lead to the devaluation of the degree, which is the first step. Employers will have to look deeper, and ask where candidates were educated, and how; a demand for quality will arise; universities will have to meet it or go under; mass production of graduates will prove unprofitable; and presently the slate will be clear. I fear Mr. Richey will not accept these views just yet, for he asserts that "no one would desire to see any differences recognised in the value of the degrees conferred by different Indian universities." Why not? Is a first in Greats the same thing as a Theology Special, or as honours in Manures granted by Brissingham or Liverchester? If I could generalise like Mr. Richey I would say that every friend of India must desire the thing which he deprecates, but I have not the gift, and can only put forward my own view, which is that, after a quite short period in the wilderness, some of the new universities are likely to find a way out, and then the rest will be bound to follow. It will not be the most direct way, but it will get there at last, and from this point of view alone can I see any hope of progress in the record of the last five years.

But town lads, important as they are, are almost negligible compared with the children of the country, and in regard to rural education there is very little encouragement in the record. A game of cross-purposes is in progress. India needs a system which shall bring the best boys to the top, and at the same time equip the mass to be better peasants than their fathers, but peasant parents ignore the latter consideration altogether. Obsessed by the race-memory of centuries of misery and oppression, they want their clever boys to get out of it altogether; if they are not good enough for that, then education means nothing, and the village school is merely a convenient crèche. So we find the reformers trying to ruralise the curriculum, while the parents demand its urbanisation; they want their boys taught English first of all, and the report tells us of a case where they gave the schoolmaster a good beating because he had set their boys to work in the garden. Mr. Richey sees no remedy but compulsion, and no doubt that is the proper departmental point of view, but the question is whether it is practicable. He makes it clear, though not in these words, that the movement for compulsion, which has resulted in so much ineffective legislation, is merely the work of a few busybodies; local authorities will neither compel nor tax, and we read that the initiative must come from the Government. Education is, however, in charge of Ministers, not bureaucrats, and the former are, if anything, greater cowards than the latter. I shall believe compulsion in the villages to be practicable when I see a Minister going to the country on it and coming back with a mandate to levy the necessary taxes, or rates, or whatever the sources may be called. I have not seen this yet, and scarcely expect to see it in the next few years, so that the important question just now is what can be done to make education so popular that the peasants will agree to pay taxes on the necessary scale? In other words, the need of the moment is to educate the parents rather than the children.

Educate the parents! Can anyone suggest a more utterly hopeless slogan? Consequently, people who know India will not be greatly surprised to hear that the parents are beginning to educate themselves. To some extent, it is those terrible people the co-operators who are at work with their night schools, some of them attended by sexagenarians, who frequently pay fees for the privilege of enlightening their declining years. One society has decided to expel illiterate members after a period of grace, another has made education compulsory for its members' sons; and, though these are isolated examples, which may prove to be

Digitized by Google

freaks, the movement is alive, and Mr. Richey feels justified in saying that "it is probable that the present quinquennium will have a considerable advance to record" in this matter of adult education. I hope his department is backing that probability for all it is worth. Economists, politicians, social reformers, all want to see India literate, and none of them can afford to wait for the next generation before a beginning is made. With a curious perversity, Mr. Gandhi has chosen the spinning-wheel in the home as the symbol of the national rebirth. India doesn't like that symbol very much. Will she choose the slate instead?

RELIGION AND DAILY LIFE IN THE EAST.

For many years past it has been the practice in Egypt, on appearance of the cotton insect, for the Ministry of Agriculture to apply to that of Wakfs (Charitable Trusts) for the issue of instructions to the Imams of the mosques in Egypt, ordering them to preach on three successive Fridays (where the true believers assemble on the day for prayers), and to exhort the hearers of the husbandmen to try to destroy the said insect. A religious tint is given to this mere duty of the husbandmen, as it is the practice in the East to blend a little of religion in every affair related to the daily life—politics, economics, society, or any other thing. The preacher, complying with the instructions thus issued to him, exhorts the hearers, in the name of the religion, to take strong and speedy steps against this destructive insect.

The following is the translation of a sermon preached on such an occasion :—

"Praised be God, who exceedingly prefers the diligent persons to the lazy ones, and He ordained labour for earning the living to be the best worship. Praised be He who facilitated the difficulties of life and rewarded the labourers. I supplicate for His pardon and testify that He is the only God, who bestowed upon us His open and hidden favours. I testify also that Mohammed is His Apostle, who instructed us to work for this world and for the next one.

"God said, 'It is a sign unto them, the dead earth; we quickened and produced thereout grain of which they eat. And we make therein gardens of palm trees and vines; and we cause the springs to gush forth in the same, that they may eat of the fruits thereof and of the labours of their hands.' (Koran, Chap. 34, vrs. 32-35).

"The noblest of God's favours to you is that He has made it easy to you to live happy and satisfied. He quickened the earth to you in order to enable you to enjoy its fruits, so that you may eat from your Master's blessings and thank Him, and He, in return, may increase His favours to those who thank Him.

"It is a natural law that every thing in the world has cause and to every disease there is a remedy. The cotton insect is the cause of the disease (plague), and its remedy is to combat and destroy it.

"Any person leaving the plague to destroy his crop and not combating the insect commits offence against himself and his own children. He brings destruction upon his own family and country. Such a person will be unsuccessful in this world and that to come.

"Know well that the husbandman who neglects to destroy this insect shall have double regret—the one on seeing the flourish of his neighbour's crop and the other on the day of meeting his Lord, who will make him to account for the loss of his crop, for neglecting the favours that He bestowed upon him and for following the idlers.

"Therefore, let nobody refrain himself from fighting and destroying this insect; and let nobody say that this is 'God's visitation,' for God created both the disease and the remedy; and He ordered us to ply and labour. The person neglecting the precautions against the plague which afflicts his crop is no doubt a transgressor. Likewise the person who carelessly leaves his cotton to be eaten up by the insect is also the transgressor. 'God helps man so long as man labours to help himself.'

"O, God's servants, preserve the means of your living and fight this injurious insect. If you take these steps you will need nobody's aid.

"God said, "Seek to attain by means of which God hath given you the future mansion, and forget not your portion in this world; but be you bounteous, as God hath been bounteous to you, and seek not to act corruptly, for God loveth not the corrupt doers.' (Koran, Chap. 28, vrs. 77 and 78).

"Prophet Mohammed said, 'The angels pray God for forgiveness on behalf of the husbandman and the planter so long as their sowing is green.'

"The person of good heart, doing his work in the best way and at the same time fearing God, will enjoy blessedness in this world as well as in that to come."

Jerusalem, June 29. J. STEPHAN.

RAS TAFFARI.

Ras Taffari Makonnen, Prince Regent of Ethiopia, concluded his visit to this country on Saturday, and left for Abyssinia. On Friday the King, when receiving his Imperial Highness in audience, expressed his intention to present to the Empress Judith the crown of the Emperor Theodore, which was captured by Lord Napier at Magdala in 1868.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Conditions in the Near East.

At the general meeting of the Imperial Ottoman Bank General Sir Herbert Lawrence referred to the adverse conditions in the Near East during the past year, and pointed out that various factors, political and economic, tended rather to aggravate the state of uneasiness which for years had paralysed business in that region. The new political order in Turkey, he pointed out, had been slow in settling down. The new Government there was faced with the arduous task of restoring a country exhausted by twelve years of continuous warfare, and of directing its adaptation to a new order. From an economic point of view, then, he added, it was not surprising that 1923 should have been marked by a stagnation even more pronounced than that of the previous year.

The Outlook in Turkey.

Sir Herbert went on to refer to the question of production, which, he pointed out, with the important transit trade of Constantinople, forms the future basis of Turkish prosperity. During 1923 the crops in Anatolia, one of the richest agricultural regions in the world, were below the average. In the regions served by railway lines the cereal harvest was moderate, while the yield was abundant in the eastern provinces where communications are lacking and the crop could not be conveyed to consuming centres. Other crops also made an unsatisfactory showing. The yield of mohair was 25,000 bales, as compared with 100,000 bales, the yield of opium was 2,000 cases, as against 5,000 cases, while the production of silk was 10 per cent. of the pre-War level. The diminution of the population has been largely responsible for these results. The transit trade of Constantinople remains on a small scale, the value of the imports for the first half of 1923 being £T38,475,000, while the figures for the exports for the same period are £T12,942,000. Sir Herbert went on to refer to the general position in those parts of the Near East with which the bank is concerned, and indicated that there were signs of improvement in Palestine, Egypt, Mesopotamia, Persia, and Greece.

The Position in Persia.

At the general meeting of the Imperial Bank of Persia the chairman, Sir Hugh Barnes, was able to give a satisfactory account of conditions in Persia. The present Prime Minister and Commander-in-Chief, Sirdar Sepah Reza Khan, he said, appeared to have established the authority of the Government throughout Persia in a remarkable degree. He was able to announce the renewal of the bank's charter from His Majesty's Government. The bank's concession from the Persian Government is for sixty years from February, 1889, while the Royal Charter was granted by the British Government in the following September for thirty years, and was renewed in 1919 for five years, and will now cover the whole period of the concession.

Furness Withy Report.

There was a slight increase in the profits of Furness, Withy and Co., Ltd., for the year ended April 30, the figures being £572,443, as compared with £552,511. It is stated that, owing to the continued depression in the shipping industry, the profits are again derived mainly from other branches of the company's business and from dividends and investments. It is proposed to pay a bonus of 2½ per cent., making the distribution 7½ per cent. free of tax, as in the previous year, to place £200,000 to depreciation, as before, and to carry forward £216,637 as against £202,316.

The Rubber Outlook.

The rise in the price of rubber to 1s. per lb.—a price which, if my memory is correct, has not been touched for several months—has naturally had an instantaneous effect on the share market, which has ever been ready during this prolonged period of depression to respond hastily to any encouragement, however slight and however scanty its foundation. The fact is, of course, that there is very little stock on the market, for the present holders, speaking generally, are probably determined to see the thing through, so that a very small development of buying can produce quite disproportionate results. The references I have made to the rise must not be taken as meaning that I anticipate another descent in price; on the contrary, I believe that now we may look forward to a gradual rise until the commodity is in the neighbourhood of 1s. 3d. The immediate cause of the present movement is an expansion of demand, and if, as would appear to be probable, this tendency steadily develops, the effect must be obvious.

The Exhibition.

It is practically certain now that the Exhibition will be open for another year. There is no doubt whatever as to the advisability of this course, and with added attractions it should continue to be a great success. It will probably have to be considerably enlarged, as the results obtained by the exhibitors have been so uniformly good that there will be a much greater demand for space. It is also likely that there will be far more visitors from abroad, especially if the world economic conditions continue to improve.

Near East Markets.

CROP CONDITIONS IN IRAQ.

The following particulars are taken from the Agricultural Bulletin of Iraq for the month ended June 15 :—

The period under review was characterised by relatively high day temperatures and low night temperatures. The fairly constant south winds made the air oppressive, but as the weather was associated with high humidity it was favourable to the growth of summer crops. Early in June the cold north wind set in; this change was accompanied by an appreciable fall in temperatures.

Wheat and barley harvest, which commenced early in May, has now been completed in Lower Iraq, and it is nearing completion in Upper Iraq. Cereal prices are about 50 per cent. above last year's prices, but there are no large consignments offering pending completion of assessment of crop by the Government. The export of cereals is practically at a standstill. It is expected that trade will be resumed at greatly reduced prices within the next few weeks. The exportable surplus of wheat and barley is believed to be between 50 per cent. and 60 per cent. of that of last year, but the quality of both grains is distinctly inferior owing to a widespread attack of rust. Wheat seed issued by the Department of Agriculture withstood the rust attack and has created a favourable impression amongst growers.

Heavy financial losses by more than one firm which has handled Iraq grain during the past two years have forced all exporters in grain to reconsider their antiquated methods of handling the grain prior to shipment and of financing the crop in up-country districts. Machinery is in course of erection in Basrah by a British firm to clean and grade cereals by power-driven machinery. It is highly probable that great economy in labour and an improvement in trade will follow.

There is a very keen desire amongst landowners in most of the irrigated areas to undertake flax cultivation on a large scale. Very favourable reports have been received from London on flax samples from Iraq. There are now fair prospects of a commercial agency undertaking the erection of the necessary machinery in Baghdad to handle the flax crop.

The condition of the cotton crop is good and climatic conditions have been very favourable. There is a noticeable improvement in the treatment of the crop as compared with previous years. Ridge cultivation of cotton, which was new to the Arab, is now an established custom. Thinning of the crop and intercultivation have been generally attended to. The bollworm attack is believed to be normal. Most of the area near the Hamrin Hills on the Diala River, where cotton seedlings were eaten by locusts, has been resown.

It is too early in the season to make a forecast of the date harvest. The present indications are that the Hafawi crop will be well above that of 1924, which was about 25 per cent. below normal. Khadrawi and Sayer varieties do not promise as well as the Halawis. Preliminary researches on the shedding of immature dates indicate that about 90 per cent. of the fallen dates are shed owing to physiological causes, and about 10 per cent. fall as the result of insect attack.

Good progress has been made towards concluding the terms of the land concession referred to in last month's report. It is expected that negotiations will be completed by the end of June. If this is accomplished then it is highly probable that immediate steps will be taken to form a land company with the view to ensuring a crop next season on one of the two demonstration areas, which will be allocated to the concessionaires.

The July to May exports of wheat from Iraq were 81,396 tons, and of barley 104,472 tons—total 185,868 tons, as compared with 176,021 tons for the same period in 1922-23. The total export of the 1923 crop of dates to the end of May, 1924, was 123,191 tons, valued at Rs.15,606,064, as compared with 107,803 tons, valued at Rs.13,079,498 for the corresponding season last year.

The July to May exports of wool were 6,104 tons, as compared with 1,541 tons for the same period of 1922-1923.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Iron Bars.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of iron bars, different dimensions, for the workshops and trades schools of the Ministry during the school year 1924-1925. August 30.

Construction of a Metallic Bridge over the Mahmoudieh Canal at Karmous.—The Municipality of Alexandria invites tenders for the construction of a metallic bridge over the Mahmoudieh Canal at Karmous. September 23. (D.O.T.)

Turkey.

Bell Tents.—A department of the Turkish Government proposes to purchase 1,000 bell tents. (D.O.T.)

Safes.—The Direction de l'Intendance des Postes et Telegraphes, Constantinople, invites tenders to be presented not later than September 23 next, for the supply of fifty safes. (D.O.T.)

Roumania.

Cotton Waste, etc.—The General Administration of State Monopolies invites tenders for the supply and delivery of certain quantities of cotton waste, cotton mops, hemp string, cord and rope, aloes rope (Manilla), and jute cloth. August 7. (D.O.T.)

Greece.

Construction of Works at Kavalla Harbour.—Tenders are invited by the Kavalla Harbour Committee for the construction of works at Kavalla Harbour according to the specifications drawn up by the engineer, Mr. A. Ghinis. These works are estimated to cost drs. 76,000,000. The adjudication will take place on December 1, 1924, and tenders must be submitted by that date. A guarantee deposit of drs. 600,000 must be made in the Public Treasury, and this deposit will be returned to unsuccessful competitors within three days after the date of adjudication. In the event of two or more competitors tendering at the same price, lots will be drawn. (D.O.T.)

British Consular Reports.

IV.—TURKEY (Continued from page 73).

The Government has taken some steps to encourage and assist the peasant of Anatolia by the gratuitous distribution of seed and agricultural machinery. In September, the National Assembly voted a credit of £T1,100,000 for the purchase and distribution of seed, cattle, and agricultural instruments to necessitous peasants. This credit having been exhausted in November, the National Assembly voted a further credit of £T2,000,000 for the same purpose. At the end of 1923 some 250 Fordson tractors had been sold in Turkey, mainly along the railway lines and coastal regions. Since the beginning of 1924 the Government has acquired sixty tractors from an American firm only. The Turkish authorities were also instrumental in encouraging the formation of co-operative societies with a view to intensifying production. A special credit was also voted for the payment of reparation to peasants and others for Government requisitions effected during the military operations in Anatolia. Although it has not been possible to obtain precise information as to the activities of the Agricultural Bank during the year 1923, it is known that large quantities of seed have been distributed to the peasants in Anatolia and Thrace.

Although several schemes have been submitted to the Government from time to time in connection with the reconstruction of devastated regions, little or no work of this nature has been carried out. Surface plans are being prepared at the request of the Municipalities of Broussa and Ada Bazar by the "Société Anonyme Ottomane d'Etudes et d' Enterprises Urbaines," which had already prepared surface plans for the greater portion of Constantinople and its suburbs.

Negotiations between the Smyrna authorities and foreign groups were proceeding during 1923 for replanning and rebuilding the town of Smyrna, but, with the exception of a call for tenders for a surface plan of the town, which is to serve as a basis for plans for building the town, little progress has been made in any of the districts such as Smyrna, Magnesia, Ushak, Alasheir, Panderma, Soma, Aidin, Sparta, Nazli, and Denizli, although more than one scheme has been submitted to their respective municipalities and to Government authorities.

Offers to reconstruct burnt-out areas of the town of Constantinople and the suburb of Sari-Yar have also been made to the Constantinople Municipality, but no work of reconstruction, even on a small scale, can be recorded.

Turkey has never been an industrial country. Few factories existed in pre-war days, factory industry being far less important than domestic handicraft. In districts served by railways, domestic handicraft has also declined, peasants finding it more profitable to export their raw materials and buy foreign goods brought within their reach by railway transport.

Industry and domestic handicraft have suffered considerably through military operations, terminating with the Greek débâcle and the partial destruction of Smyrna's industrial and commercial centres, as well as those in other localities of the vilayets of Aidin and Hudavindikiar (Broussa) during the Greek retreat and the Turkish advance. Lack of skilled labour, due to the exodus of the Christian element, is considerably prejudicing the remaining industries in these localities.

It is not possible at this juncture to form a correct estimate of the ravages caused by the unfortunate campaign in Anatolia. Previous to the war no statistics of Turkey's factory industry and handicraft were ever published.

Statistics were prepared in 1921 by the Government at Angora, but they only covered areas under its direct administration, which did not constitute the richer industrial centres, such as those of the vilayets of Smyrna, Hudavindikiar (Broussa), at that time in Greek occupation, as well as Constantinople, then occupied by the Allies. These statistics are interesting, however, as showing how unimportant Turkey's factory industry and domestic handicraft were in 1921 in the areas controlled by Angora's administration.

The richer industrial centres have suffered very heavily, especially those in Smyrna and neighbourhood, in the Broussa district, and in some regions situated on the Asiatic littoral of the Sea of Marmora.

By the close of 1923 the whole Anatolian railway system in Turkey passed under the administration of the Turkish Government, pending a final solution of the question of its future exploitation. For the first nine months of the year a section of about 70 kilometres from Haidar Pacha to Guebzé was under Allied military occupation, but, with the final withdrawal of the Allied forces in October, the Turkish authorities assumed control of this section also.

The *pourparlers* between the Turkish Government and the Anatolian Railway Company in regard to the future of the line have so far been inconclusive. An agreement between the Ministry of Public Works and the representatives of the company was drawn up during the month of November in virtue of which the line was handed back to the company. This agreement, however, was not ratified by the Assembly, a considerable section of which has manifested a strong desire that the line should be acquired by the Government. No decision has yet been reached, and the future exploitation of the line has still to be decided.

The total length of railways in Anatolia at the present time is the following (in kilometres):—Anatolian Railway, 1,035; Baghdad Railway, 633; Smyrna-Aidin Railway, 606; Smyrna-Cassaba et Prolongement, 677; Moudania-Broussa Railway, 42; total, 2,993. In a total area of 775,300 square kilometres, therefore, the length of railway per 100 square kilometre is 0.38 kilometre.

Whilst the western and southern districts of Asia Minor are served by these lines, large areas to the north and east and in the centre of the country are without railways, and this state of affairs, coupled with the absence of good roads, has been a permanent handicap to the agricultural development of the country and has rendered impossible any systematic effort to utilise the mineral resources of Anatolia.

The backward state of agriculture has been aggravated by lack of man-power and the absence of modern technical methods of cultivation. The construction of new lines would undoubtedly give a much-needed impetus to agriculture, but until the country is re-populated and more effective methods are employed, the railways will fail of their full effect. The "Chester" scheme, had it ever been carried out, would have endowed the areas of Anatolia at present without railways with a system fully adequate to present requirements.

After the failure of this scheme, however, the Turkish Government itself undertook the construction of the Samsoun-Sivas line and of the Angora-Sivas line. In addition, the construction of broad-gauge lines between Diarbekir-Erghené

Digitized by Google

and Ineboli-Castamouni and of narrow-gauge lines from the Arghana copper mines to Diarbekir and thence to Resul Ain on the Baghdad Railway, have received consideration, though no definite decision has yet been reached.

In regard to the Angora-Sivas Railway, a broad-gauge track, constructed during the European War, is already in existence for a distance of 114 kilometres, and a restricted form of service on a decauville line has been maintained. It is now proposed to lay down a broad-gauge line on this track and to extend it to Sivas, and, at the same time, a certain amount of preliminary constructional work has been carried out on the Samsoun-Sivas line. It is reported that a credit of £T10,000,000 for the commencement of these two undertakings will be voted for the financial year 1924-25.

MARKETS FOR PUMPS IN THE NEAR EAST.

The countries of Eastern Europe and the Balkans do not at present offer an extensive market for pumps for domestic and farm use, although in some instances the possibilities for building up a future market are good (says an American Commerce Report). Dug wells predominate throughout these countries, and water is generally raised by more or less primitive methods, while there is little use of pumps for irrigation or for industrial purposes.

It is only in the towns, the oil fields, and certain truck farming districts where irrigation on a small individual scale is beginning to be practised that pumps are to be found in large numbers in Roumania. Only the larger Roumanian towns have municipal water systems, and in these towns the water mains rarely extend to the more distant suburbs and outlying quarters. A few chain pumps are used in the Banat and Transylvania, but the types principally employed are suction pumps placed at the surface and cylinder pumps with the cylinder below the water. No one type of power pump for farm use predominates, and small centrifugal and rotary pumps driven by gasoline engines are the most used. A small but increasing market for power pumps has developed in the truck farming districts in the neighbourhood of the larger cities, and there is a demand for power pumps discharging into overhead or other tanks in the small towns without municipal water systems. Domestic manufacture of pumps is negligible. Austrian and German pumps almost monopolised the market during the war, and have now practically regained their supremacy.

Hand pumps are used to a limited extent in Bulgaria, and the equipment for the comparatively few installations that have been made was purchased in Germany prior to the war, and some dealers still carry left-over stocks. Wells are usually dug by hand, and the water is extracted by means of buckets on long chains. The villages usually obtain their water supply from one or two wells from which the water is drawn by means of buckets and chains, and the towns by means of hand-operated lift pumps, and sometimes through terra-cotta pipes placed horizontally into the hillsides, which collect the natural flow from the hill strata and eject it into long reservoir troughs. In the larger towns hand pumps are used almost exclusively where pressure service is not available. Power pumps are practically unknown, although before the war gasoline pumps were used in a few places for irrigation purposes.

Individually owned hand pumps are not extensively used for domestic or farm use in Yugoslavia, as public pumps are found in practically every town or village, as well as in the larger centres, which do not have a water system; while in the agricultural regions farmers can easily draw their water from shallow wells, which do not require pumps, as buckets on ropes or chains suffice for the raising of water. Practically all of the smaller pumps used are operated by rods, and the use of cylinder pumps in which the cylinder is placed below the surface of the water is very limited, as there are very few deep wells. Power pumps discharging into overhead tanks are not in great demand, but the United States supplies about 30 per cent. of the demand for this type of pump. Germany is the leading source of supply for pumps of all kinds and supplies practically all the hand pumps used, although Austria and Czecho-Slovakia supply a small proportion.

Hand pumps are used in Greece for pumping water from wells of 4 to 7 metres in depth, and also for pumping water from the ground floor to the upper stories of houses in towns where the pressure of the water-supply system is not sufficiently strong. All kinds of pumps are used, but suction pumps placed at the surface are most used. Germany is the most important source of supply, while the United States generally ranks second, Great Britain third, and France, Italy, and the Netherlands also enjoy a fair amount of the trade. American windmills are used to some extent, with some competition from German manufacturers, which, however, has not developed to serious proportions. The largest proportion of motive power for deep-well farm pumps is furnished by horses and oxen, and it is unlikely that other forms of power for pumps will be used extensively until more satisfactory economic and exchange conditions prevail.

Turkey does not at present offer a large market for pumps, but unquestionably a large potential market exists. Pumps are not required in the city of Constantinople, which is supplied by canalised municipal water, but in the extensive outlying residential districts the water supply is entirely derived from wells, of which 40 per cent. are equipped with hand pumps, 5 per cent. with windmills, a few with motors, and water is drawn from the balance by hand. A great many crude chain pumps of native manufacture are used for irrigation on small farms, and are made principally of wood. Most of the pumps imported since 1920 have been of German manufacture, while Great Britain has furnished about 10 per cent., and a few have been imported from the United States.

TANKER CHARTERING REVIEW.

Higher Freight Rates Expected.

Messrs. John I. Jacobs and Co., of London, in their half-yearly report on oil-tanker chartering, state :—

Since the issue of our last report the tank steamer market has seen rates at a level not attained since the boom of 1920, but the peak rate of 52s. 6d. for clean tonnage from the Gulf to U.K. Continent which was reached in February and March did not last for long, as a decline in rates set in very quickly, which, towards the end of May and June, was very marked. The main factor contributing to the rise was activity on the part of European buyers to cover their summer requirements when a temporary rise in f.o.b. prices occurred in America; this rise was soon off-set by uncommonly bad weather on the Eastern Sea Board of the United States, which made gasoline prices particularly drop week by week, when normally they should have been advancing. This factor, combined with a marked decline in the amount of crude oil shipped from California to Eastern U.S. Sea Board, as well as the political uncertainty and exchange fluctuations in Europe, caused the temporary demand for tankers to diminish very rapidly.

A continued expansion in the world demand for crude petroleum and its products has again to be recorded; the total world production again shows an increase, in spite of further declines in many well-known fields, especially those of Mexico. It is considered that Venezuela will in the near future become one of the most valuable producing countries of the world, and a number of special shallow draught tank steamers are being built in readiness for the transportation of large quantities of crude oil over Maracaibo Bar. The United States herself easily dominates the whole oil situation on account of her enormous consumption, which is now considered to reach about 2,000,000 barrels per day, and will increase year by year.

Bunker oil prices have recently been reduced in the U.K. by 5s. per ton to 82s. 6d., but this reduction will hardly prove sufficient to tempt owners of steamers in the tramp trade who have converted back to coal to return to oil, and it seems likely that prices will have to be further reduced in the near future. Nevertheless, the proportion of new steamers fitted for burning oil continues to increase. The amount of tonnage fitted with internal combustion engines continues to increase, and is now equal to about 45 per cent. of tonnage actually building, whilst in Germany the percentage reaches nearly 60 per cent. on account of the large motor tankers being built in that country for American account.

The higher rates which tankers commanded during the period above mentioned caused a considerable increase in the number of orders placed with builders for new tonnage, which in nearly every case is to be Diesel-driven. Prices for new boats of about 9/10,000 tons remain on the basis of £12 per ton d.w. for reciprocating and £15 to £16 for Diesel engines. Second-hand tankers can be obtained for about £3 per ton d.w.

At the end of 1923 there were on the stocks tankers aggregating 175,164 tons gross, of which some 90,000 tons gross were being fitted with internal combustion machinery; most of the boats being so fitted were of large size. The returns for the quarter ending March, 1924, show a total of 35 tankers building with a gross tonnage of 183,850, whilst the returns for the half-year ending June, 1924, show a world-wide construction of 28 tank steamers with a gross tonnage of 180,170; of these, roughly half are being built in Great Britain and Ireland. It will be noted from these figures that the tendency continues towards larger carriers as the oil trade of the world expands and depot facilities are increased. As in other trades, this commodity can be carried at a cheaper rate per ton by employing the largest possible steamers. The number of tankers of 1,000 tons gross and upwards launched during 1923 was 23, of a gross tonnage of 126,181.

During the period under review representative rates of freight have been as follows :—

Time Charter.—There has been considerable activity, and rates have varied from 6s. earlier in the year to 9s. 10½d. during the period of activity, and latterly clean tankers have been fixing at 8s. and dirty tankers at 7s. for about twelve months period. These rates are for steam-driven tankers, motor vessels having secured up to 11s. 6d. on the d.w. for a minimum of twelve months. No charters for long periods have to be recorded, but there are still owners willing to build on the basis of obtaining a 10-year charter for a Diesel boat at about 7s. 3d.

Northern States of America.—Rates from New York or Philadelphia are still based on a parity which is not commensurate with the difference of the length of voyage as compared with a Transatlantic trip from the Gulf of Mexico. In the majority of cases the rate is based on the Gulf with an option for charterers from Northern States, and this is usually fixed at from 5s. to 7s. 6d. less, whereas the true parity should be considerably greater. Marseilles took a considerable amount of tonnage at rates which varied from 31s. 6d. to 45s. paid in February and March, whilst North Spain paid as high as 38s., with the option of South Spain at 5s. extra. Earlier in the year black oil tankers were fixed at 23s. 6d., as against 25s. for clean boats; the highest rates recorded are 47s. 6d. for a handy lubricating oil boat and 42s. 6d. for a large boat; also for lubricating oil. Current rates can be taken at about 22s. 6d. for white oil tonnage and 20s. for black oil. A fixture has to be recorded for white oil from Northern States to Gothenburg at 47s. 6d.

Gulf of Mexico.—The business done from these ports has, as usual, been much greater than that from the Northern States. White oil boats have throughout the period under review attained considerably higher rates than those carrying fuel and/or crude oil. In January the rate was as low as 22s. 6d. Gulf/U.K. Continent, but by the end of February it had risen to 52s. 6d., on which basis it remained throughout March, but from April onwards it declined, and tonnage can now be obtained for black oil to this side at 24s. 6d., or white oil at about 30s. White oil tonnage was fixed to Copenhagen at 52s. 6d., and to Finland 55s., whilst from the Gulf to Mediterranean representative fixtures were 45s. to West Coast Italy and 56s. 6d. to Cette and/or Arzew.

Russia.—The amount of oil moved by tank steamer from the Russian ports continues to increase, the main commodities shipped being lubricating oil and kerosene from Batoum and motor spirit from Novorossisk. The rate for lubricating oil earlier in the year to U.K. Continent was 21s. 6d., and the highest figure paid 45s., whilst to-day's rate is in the neighbourhood of 25s. Clean boats have commanded from 36s. to 47s. 6d. at the end of February, but tonnage is now plentiful at about 25s.

Digitized by Google

Roumania.—So far as export trade is concerned, there is not very much movement. Two small tankers have been fixed during the period under review—one at 26s. and the other at 36s. for U.K. Continent.

Tank steamer owners do not expect the present depression in freight rates to continue longer than the summer months, and expect a reasonable rise in freights in the early autumn. The owner of the handy tanker is finding difficulty in making a voyage pay at the rates now ruling.

WINTER CRUISES.

Early in the New Year the well-known Canadian Pacific liners the Empress of France and the Empress of Scotland will leave Southampton on a voyage around the world and a Mediterranean cruise respectively. Both vessels are oil-burners, and are sumptuously fitted. The world cruise, which will occupy some 137 days, embraces visits to countries affording the greatest amount of interest to the traveller; many places off the beaten track will be included, while lengthy stays will be made at Egypt, the Holy Land, India, and Ceylon, etc. On her way home the Empress of France will make a daylight trip through the Panama Canal. The Mediterranean cruise by the Empress of Scotland will occupy fifty-seven days, and includes visits to Northern Africa, Athens, Constantinople, Syria, the Holy Land, Egypt, Italy, the Riviera, etc.

The British Commercial Secretary at Constantinople reports that the tobacco crop in 1923 amounted to approximately 20 million kilogs., as compared with a pre-war output of between 35 and 40 million kilogs. The principal centres of production are the Samsoun-Trebizond region, the Smyrna region, and the Ismidt-Broussa-Balihissar region.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Masireh for Port Said, Colombo, Madras, and Calcutta (London, July 26).

Anchor Line.—S.s. Olympia for Bombay (Liverpool, August 6).

British India Line.—S.s. Turkistan for Colombo, Madras, and Calcutta (London, August 2); s.s. Mulbera for Bombay and Karachi (London, August 8).

Clan Line.—S.s. Clan MacVicar for Bombay and Persian Gulf (Birkenhead, July 31).

Ellerman "City" Line.—S.s. City of Christiania for Calcutta (Birkenhead, August 1).

Ellerman Lines.—S.s. Malatian for Gibraltar, Malta, Alexandria, and Constantinople (Liverpool, July 31).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina; Galatz, and Braila (Liverpool, August 9); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 6); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 13).

P. and O. Line.—S.s. Naldera for Bombay (London, July 25); s.s. Nellore for Colombo, Madras, and Calcutta (London, July 26).

Prince Line.—S.s. Scottish Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, August 2).

IMPERIAL OTTOMAN BANK

FOUNDED 1863.

Company Meetings.

IMPERIAL BANK OF PERSIA.

Conditions in Persia.

Sir Hugh Barnes's Speech.

The thirty-fifth ordinary general meeting of the members of the Imperial Bank of Persia was held on July 16 at the Cannon Street Hotel, E.C. Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., the chairman, presided.

The Manager and Secretary (Mr. Sydney Rogers) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—At the general meeting in December last I explained the reasons why we had decided to close our financial year in future on March 20 instead of September 20. Our meeting to-day is the first under the new arrangement, so the accounts presented to you are for six months only—viz., from September 21 to March 20.

Before I refer to them I think you will wish me to place on record our sense of the loss we have sustained through the sudden death last December of our colleague Mr. H. E. R. Hunter. Mr. Hunter was a banker of wide experience in the East. He had been for many years manager of the Shanghai branch of that great institution, the Hongkong and Shanghai Bank. He was also a director of Hambros Bank, and, when he joined us early in 1916, shortly after the death of your former chairman, Sir Thomas Jackson, we believed, and the event proved, that we had obtained a very valuable addition to the board.

His death came as a very great shock to us all. We feel we have lost not only a colleague, on whose advice we could confidently rely, but also a very charming friend and companion whose cheery presence at our weekly meetings is greatly missed. You will, I am sure, unite with us in expressing our sorrow that he has been taken from us, and our sympathy with his relatives.

As regards affairs in Persia, so short a time has elapsed since I last addressed you on the subject that there is not much to relate. His Majesty the Shah is still on tour in Europe, and, though there have been several changes in the Cabinet in Teheran, the Sirdar Sepah Reza Khan, of whose achievements in regard to the improvement of the army and the maintenance of order I gave you some account in December, has succeeded in maintaining his position as Prime Minister and Commander-in-Chief. He appears to have established the authority of the Government throughout Persia in a remarkable degree. There have, it is true, been some disturbances among the tribesmen in Luristan, but I understand these have now been satisfactorily composed.

You have no doubt seen in the newspapers that at one time in the early spring there arose in Teheran a considerable agitation in favour of the establishment of a Republic in Persia. The movement evidently lacked popular support, since, for the time at any rate, it seems to have died down. In the circumstances it is not surprising that such a proposal should have been put forward and should have captured the imagination of many people. The widespread unrest in the East which followed the War has led already to the downfall of the Sultan of Turkey and to the disorder in the Chinese Empire, and it would have been strange if the ferment had failed to penetrate into Persia. But the Persians, fortunately, are a cautious and conservative people, proud of their country's great past, and I am inclined to think their ancient institutions are likely to display much more stability than they are commonly supposed to possess.

At any rate, the examples presented in Russia and elsewhere are hardly calculated to encourage in others a desire for violent constitutional changes. Meanwhile, despite such unrest as exists, the Persian merchant, who understands little of politics and probably cares less, pursues his lawful occasions in business unperturbed, and it is to his class we look to take advantage of the facilities which the bank offers for carrying on and financing the local and foreign trade of the country.

With this brief introduction I turn to the accounts. I do not propose to compare in detail the results of the past half-year with those of the previous twelve months. The only items in the balance-sheet to which I need direct attention are the increase of nearly £130,000 in our note circulation, and, on the assets side of the account, the large sum shown under the head of cash in hand, at bankers, and money at call. In proportion to other items this may seem unduly large, but it is a good fault, and, if you add to it our investments—which are all in first-class securities—and the total under bills receivable, you will see that our financial position is very strong and liquid.

As regards the profit and loss account, including the balance brought forward, the total sum at our disposal, £87,738, enables us to transfer £20,000 to our reserve account—which now stands at the substantial figure of £390,000—to write £5,000 off bank premises, to pay you a dividend of 5s. a share, free of tax, and to carry forward £34,552. You will, I hope, regard this as very satisfactory. Our bank premises now stand in our books at only £51,100, notwithstanding the fresh expenditure which our expansion has called for.

The only remark I would make about the dividend is that you must not suppose that the payment now of 5s., as against the 3s. paid this time last year, foreshadows any increase in the 9s. which we have paid you annually for the last two years. The present dividend is a final one. Next December's dividend will only be an interim dividend. We cannot, of course, predict what it will be, but we hope it will be sufficient to prevent your losing anything in the current twelve months owing to the change in our financial year.

It will interest you to know that in recent correspondence which has taken place between His Majesty's Treasury and the bank, we have been informed that our Royal Charter will be renewed for the period necessary to carry us on to the expiration of our concession—that is to say, for nearly another twenty-five years. The bank's concession from the Persian Government is for sixty years from February, 1889. The Royal Charter granted by the British Government in the following September was for thirty years. In 1919 the charter was renewed for five years, and it will now be extended further so as to cover the whole period of the concession.

We have just received the figures of Persian foreign trade for the year ended last March. Imports amounted to Ts.69,400,000 and exports to Ts.76,700,000, a total of Ts.146,100,000, an increase over last year's figures of Ts.11,000,000.

In conclusion, I may add that our relations with the Persian Government continue to be very satisfactory. We fully recognise our responsibilities as the State bank, and have given, and are always prepared to give, to the Persian Government all the assistance in our power.

I have only to add that during the past six months we have received very valuable assistance from our staff, who have done their work in a most excellent way, as usual. I have now to move: "That the report presented be adopted, that the accounts to March 20, as rendered, be accepted, and that the final dividend of 5s. per share, payable free of income-tax on July 17, be, and is, hereby confirmed."

Mr. E. A. Chettle seconded the resolution and it was carried unanimously.

The Chairman next proposed the re-election of the retiring directors, Mr. V. A. Cæsar Hawkins and Mr. E. A. Chettle.

This resolution was seconded by Col. Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., and unanimously approved.

On the proposition of Mr. Turton, seconded by Lieut.-Col. G. K. C. Westropp, the auditors, Messrs. Kemp, Chatteris, Nichols, Sendell and Co., were unanimously reappointed.

Mr. Vere H. Smith moved a vote of thanks to the chairman, the directors, and the staff at home and abroad, which was seconded by Col. Westropp and was unanimously accorded, and after a brief acknowledgment by the Chairman the proceedings terminated.

IMPERIAL OTTOMAN BANK.

The annual general meeting of shareholders of the Imperial Ottoman Bank was held on July 16 at Winchester House, Old Broad Street, E.C. General the Hon. Sir Herbert A. Lawrence, K.C.B., presided.

The Secretary of the London agency (Mr. Charles E. L. Corthorn) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: You will regret, as we do, that we have lost the valuable collaboration of Lord Goschen, who has been called upon to fill one of the most important posts in the Government of India. We congratulate him most heartily on the honour conferred upon him. The public service has certainly gained a devoted administrator.

The Near East in 1923 did not see the arrival of the prosperity and calm which it had been hoped that peace would bring. Various factors, political and economic, tended rather to aggravate the state of uneasiness which for years now has paralysed business in the countries with which our establishment is chiefly concerned.

In Constantinople the market has remained inactive and business has been limited to operations of little importance. The principal causes of this inactivity are the uncertainty as to the internal policy of Turkey and to the general policy of Europe; the danger to peace which arose in the early months of the year on the check to the negotiations at Lausanne; and, lastly, the destruction of capital resources in various forms, caused by 12 years of warfare and the consequent inability of the population to produce and therefore to purchase commodities. Movements in exchange have contributed to the stagnation of business.

The unfavourable factors which I have just brought to your attention had their inevitable influence on the volume of the operations and on the results of our Constantinople office, and a large number of our branches in Anatolia. However, certain regions of Asia, notably Adana, have shown an important commercial movement in which our branches have had their part.

In Palestine, Egypt, Mesopotamia, and Persia the state of stagnation which we described last year has shown an improving tendency. In Greece our business shows a very appreciable progress, which is most encouraging for the future of our branches in that country. The financial and banking operations of our western agencies pursue their normal course.

In Syria, the year 1923 has been marked by continued progress in the general organisation of the mandated territory and an improvement of the economic situation, which has had a happy reaction on public finances. Our Filiale, the Banque de Syrie et du Grand Liban, has profited thereby and has been able to maintain its previous dividend of 5 per cent. The Banque Franco-Serbe and the Bank of Roumania have equally had a satisfactory year.

Our concession in Turkey, as you know, is due to expire next year. In view of this fact we entered recently into negotiations with representatives of the Turkish Government in order to determine the basis and conditions of its renewal and prolongation. We are glad to be able to say that our delegates signed a convention to this effect on March 10 with the Government of the Turkish Republic. This agreement provides for the prolongation of our concession until March 1, 1935. It will be submitted to the Grand National Assembly of Turkey for ratification on the opening of the next session of the Assembly in October. This will permit our establishment to render to Turkey important services, which it has never withheld in the past, towards the maintenance of its credit and towards its economic development.

It is with this expectation, and in order to be prepared to meet any objection which the Turkish Government under its new Constitution may make to the word "Imperial," that we have embodied in the agenda of the present meeting notice of a resolution to empower the committee to modify the title of the bank as and when they may deem advisable.

The resolution was carried unanimously.

The Roumanian pre-War debtors have accepted the agreement negotiated by M. Titulesco for the settlement of their debts in Great Britain, says a Reuter message from Bucharest.

(*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold (see "Journel Officiel" of October 30, 1916.)

Morums Oriental Stores.

The report of Morums Oriental Stores, Ltd., for the nine months to March 31, shows a loss of £31,787, after meeting all charges, as against a loss of £42,707 for the previous period of one year. The turnover increased by approximately £20,000 over the corresponding period of the previous year, while for the first three months of the current year there is a further improvement both in sales and gross profit.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Firm.

The Alexandria Commercial Company in their report for the week ended July 10 state :—

During the past week the market has been steady at the advance. The net changes since last Thursday are : Sakellaridis 1.95 dollar up for July, 1.40 dollar up for November, 1.05 dollar up for January. Ashmouni : 0.42 dollar up for August, 0.63 dollar up for October, 0.78 dollar up for December.

There have been no new features of importance to account for the firmness of the market. American prices show a rise of about 50 points, whereas Novembers here are up 140 points and Octobers 63 points. New crop Sakel has been especially in demand. Straddlers during the early part of the week continued buying Novembers and selling October, and the difference between these positions was on Monday pushed out to nearly 900 points. The straddling has ceased, and the difference has now narrowed in to 845 points. During the last fortnight November has been largely bought by speculators as well as by straddle operators, and we think that there must be a fairly large speculative long interest in that position. There has again been very little inquiry from trade centres, and it rather looks as if consumers are prepared to stand off until the new crop starts moving, in the anticipation that the movement of the crop will induce lower prices. The week's receipts amount to 1,969 krs., against exports 65,570 krs. ; the stock stands at 516,925 krs. Spot : Total sales this week amount to about 2,700 bales, of which we estimate 2,300 bales Sakel and 400 bales Uppers; with the exception of Tuesday's session, the market has shown very little activity.

Sakellaridis : All grades have been dealt in during the week, the greater proportion of the business transacted being in Good Fair and Good Fair to Fully Good Fair, with a consequent stiffening in premiums for the latter. There is still a good demand for Fully Good Fair, but the paucity of the supply of this cotton on the market has restricted business. As compared with the past few weeks, rather less interest has been shown in the higher grades.

Uppers : The small business done has been spread over all grades from Middling Fair to Fully Good Fair to Good. A good deal of cotton below Fair still remains on the market; holders are anxious to get rid of their stocks, and this cotton can be picked up at fairly reasonable prices.

Crop 1924 : The crop news continues quite good. The leaf worm attack has passed without much damage ; the attack was fairly heavy, but energetic measures were taken, with satisfactory results : the rather high temperature also helped in this direction. The hot weather has increased the consumption of irrigation water, and although, generally speaking, the supply has been sufficient for requirements, some complaints have been heard from growers with lands at the tail ends of canals. Bolling is proceeding satisfactorily, and the present outlook is excellent.

The report of the Ministry of Agriculture for the month of June reads : Lower Egypt condition, 101 ; Middle Egypt condition, 96 ; Upper Egypt condition, 100 ; average whole Egypt, 100. Lower Egypt forecast yield, 3.57 krs. per feddan ; Middle Egypt, 3.75 krs. ; Upper Egypt, 4.88 krs. ; average whole Egypt, 3.67 krs. per feddan.

The weather has been favourable to growth, particularly in late-sown fields. Flowering is general in early cultivations, and bolls are forming, especially in the case of Upper Egyptian cottons. A few egg masses of cotton worm were seen towards the middle of the month, but were confined to leaves, and the pest was actively dealt with. Many of the newly hatched larvæ were killed by heat, and the crop has not suffered from the attack. Wilt was noticed on Sakellarides, but caused very slight damage, and the attack is now dying out. The aphis attack was also slight and confined to small areas on the borders of fields, so that the damage caused by this pest was insignificant. The general condition of the crop is satisfactory.

The Irrigation Report of the Ministry of Public Works, May 21 to June 20, reads :—

Lower Egypt : Sowing of rice progressed rapidly throughout the month, and very much of the land in authorised rice zones has already been sown, besides large unauthorised areas lying outside these zones. Cotton was also found to cover larger areas than usual, so that difficulties naturally arose in the distribution of water. Towards the end of the month the water supply was hardly sufficient to meet all demands.

Upper Egypt : Difficulties were experienced in connection with the supply of water to tail ends of canals on account of extensive "sefi" crops cultivated this year. The necessary compensations, however, were given and irrigation was carried out satisfactorily.

The report of the Alexandria General Produce Association for the month of June reads :—

Lower Egypt : The temperature during the month of June has been on the whole favourable. The crop is, generally speaking, in good condition and earlier than last year at the same period by ten to fifteen days. Sakellaridis variety planted is less than last year in proportion by about 15 per cent. to 30 per cent., according to the district. Pilion and Zagora have increased, particularly Zagora. As regards other varieties, such as Nubari, Afifi, and White, the proportion appears to be the same as last year. Water for irrigation has been barely sufficient. Leaf-worms have appeared everywhere, but without causing damage, the growers having taken energetic steps to destroy them.

Upper Egypt and Fayoum : The temperature during June has been favourable to the growth. The crop everywhere is in good shape and in advance of last year at this time. Water for irrigation has been barely sufficient. The appearance of leaf-worm has been insignificant.

LIVERPOOL COTTON REPORT.

A Quiet Week.

Messrs. Reynolds and Gibson report as follows for the week ended July 16 :—

Egyptian Spot.—Another quiet week has been in evidence, spinners having shown no disposition to depart from the hand-to-mouth policy upon which they seem to have definitely embarked whilst awaiting the advent of the new crop. The moderate inquiry has been of a fairly general character, with the bulk of the business taking place in Sakel cotton of the strict F.G.F. to Good variety, at about 250 to 350 on July. The scarcity of spinnable Sakellaridis becomes daily more apparent, and spinners are being slowly forced to buy among the lower grades (which they do with extreme reluctance), but their purchasing power is not yet of sufficient weight to harden prices in this quarter; in fact, so far, holders of "off" cotton are generally willing

Digitized by Google

to meet buyers in every way possible. There is still a certain interest displayed in Uppers, the demand being met, generally speaking, by re-sales from Home and Continental spinners. Here again the tendency is to favour the buyer. Sudan cotton has been in poor request, very little business having been reported in either the Sakel or the White varieties. Other growths have been neglected. C.i.f. business continues quiet. Forwardings to spinners for the week ending 11th inst. were returned as 4,362 bales. Estimated sales, 1,500 Egyptians and 100 bales Sudan. Quotations of Brown and Upper are reduced 35 points for Fair and Good Fair, and 20 points for Fully Good Fair and above. Sakellaridis remains unchanged on the week, with the exception of Fair, which is reduced 10 points. Fully Good Fair Sakellaridis to-day 23.35d.

COTTON TRADE REVIEW.

Rise in Cotton Prices.

The Manchester cotton trade review of the Imperial Ottoman Bank for the week ended July 19 states :—

The chief feature of interest during the past week has been an upward movement in raw cotton rates, which, being contrary to the expectations of this market, has been a depressing factor. Although reports from America regarding the crop have been less favourable, the rise in values is not yet considered here to be justified.

Yarn.—Conditions in the American section remain very irregular, but the turnover for the week shows, perhaps, a little improvement, although some of the prices taken are said to be very low. Egyptian spinnings have been in fair demand. There has been an upward tendency in quotations owing to dearer cotton.

Cloth.—A little more business has been done than recently, the principal demand being, of course, from India. China has placed a fair amount of orders, and Egypt has displayed more activity than for quite a while back. Business for the home trade also would appear to be improving. On the whole, there is a tendency for more machinery to be run in the weaving centres.

Raw Cotton.—The advance in the price of American raw cotton, attributed to only moderate weather reports, has already been referred to, and Egyptian has moved accordingly. Closing prices yesterday were as follows :—American fully middling, 17.38; Egyptian fully good fair, 23.85.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended June 30 amounted to £E6,860, making the total from April 1 £E64,066.

Phœnix Oil and Transport.—Well No. 4 Gura Ocnetei started producing at the rate of 200 tons per day on the 7th inst., since when it has been producing continuously at an increasing rate which attained 300 tons per day on the 12th inst. Well No. 71 Tintea produced on the 11th inst. 180 tons in five hours. Well No. 4 Pascov struck oil and after producing 124 tons became plugged but is now being cleaned. Well No. 7 Runcu and Well No. 112 Tintea.—These two wells have struck the oil sand and entered the producing stage.

ROUMANIAN OIL IN 1923.

Expansion of Production.

The report on conditions in Rumania in 1923 by Mr. Alexander Adams, Commercial Secretary to the British Legation at Bucharest, contains a report on Roumanian oil by Mr. Louis Johnston, from which we give the following extracts :—

In 1923 there was an enormous increase in drilling activity, for 114,705 metres were drilled, as against 84,052 metres in 1922 and 47,127 in 1921. The Astra-Romana, the Phœnix group, the Steaua-Romana, and the Romana-Americana were mostly responsible for this record. . . . At the end of 1923 there were 907 producing wells and 501 being drilled, nearly all in the district of Prahova, as against 777 producing wells and 410 in drilling in 1922. During 1923 the supply of electric power was more regular than in previous years, for in May the new electric power station at Floresti built by the Steaua-Romana began to work and satisfied all requirements.

Production.

1,509,804 tons of crude were produced during 1923, as against 1,372,905 tons in 1922. At the commencement of 1923 the daily production was 4,000 tons per day; at the beginning of February it was 4,250 tons; and throughout the year it rose and fell, touching as high as 4,500 tons daily in November, and never dropping below 4,100 tons daily. The average production daily was 4,136 tons. as against 3,742 tons daily in 1922. The increase in the production amounts to more than 10 per cent. on the production of 1922, which was 18 per cent. more than in 1921. The 1921 production was 12½ per cent. more than in 1920, whilst the 1920 production was 12 per cent. more than in 1919. It is thus clear that the production is steadily increasing. The pre-war (1913) production was 1,850,000 tons, so that the industry has only regained 82 per cent. of its production after five years.

The production was obtained from the following fields (the figures representing tons) :—Moreni, 665,490; Ochiuri, 202,594; Bustenari, etc., 197,094; Gura Ocnitzei, 104,038; Arbanash, 88,860; Baicoi, 78,981; Campina, 65,357; Tintea, 52,865; other fields, 54,525.

It is interesting to note that the production has increased 70 per cent. in Ochiuri (a comparatively new field near Targoviste) and at Gura Ocnitzei, in the same district. Nevertheless Moreni, also in the same district, claims 45 per cent. of the total production as last year. On the other hand, Baicoi has not proved a success, for its production during 1923 is 40 per cent. lower than in 1922, whilst there are 53 producing wells at Baicoi and 78 in drilling. The average production of each of the

Digitized by Google

producing wells in Baicoi is only 4 tons per day. Nevertheless, the companies have the courage to be drilling the above further 78 wells. The Romano-Americana (Standard Oil) have by far the biggest interest in this field. Curiously enough, Tintea, which is hardly more than a mile from Baicoi, has improved and is still improving. Here there are 43 producing wells and 25 in drilling, and 52,865 tons were produced at Tintea during 1923 against 46,029 tons in 1922. The average production per well is not more than at Baicoi, but Tintea is a very old field in comparison, and has been neglected by all the big companies with the exception of the Orion Company, which had 21 producing wells and 11 in drilling, and obtained practically all the production, the average production of each of its wells being more than 13 tons per day. This is a very satisfactory figure because Tintea is only about 5 miles from Ploesti, the refining centre, and transport and all other expenses are much less than at any other field in the country.

The following are the companies that obtained the production:—Astra-Romana (Shell group), 414,122 tons; Steaua-Romana (Roumanian, British, French), 222,676 tons; Romano-Americana (Standard Oil), 163,630; Concordia (French, Belgian), 166,518 tons; Credit Minier (Roumanian), 158,050; Phœnix Oil and Transport Co., Limited (British), 104,816; I.R.D.P. (Roumanian), 57,453. The Romano-Americana, the Steaua-Romana, and the Concordia produced less than in 1922; otherwise most of the principal companies all shared in the increase of production.

It was obtained mostly from fountain wells. The Steaua-Romana had a well at Runcu spouting 930 tons in twelve hours. The Astra-Romana had a well at Bana Moreni spouting 450 tons per day and six others in the same district spouting from 60 to 350 tons per day. The I.R.D.P. had spouters of 200 tons and 220 tons daily, the Colombia Company 300 tons and 180 tons, and the Phœnix group two wells giving each 120 tons, another giving 60 tons, and a fourth giving 100 tons daily.

The value of Roumania's production in 1857 is recorded as lei 11,000; in 1899 at lei 10,000,000, in 1921 at lei 1,163,765,000, and in 1923 at lei 4,151,961,000. Roumania's production of crude for 1923 is approximately 1.2 per cent. of the world's production.

A Steaua-Romana well at Aricesti reached an important source of gas at 417 metres. The average production was 240,000 cubic metres in twenty-four hours. It is being piped to the Floresti electric installation and used there as fuel.

Prices of Crude.

In February, 1923, Bustenari crude was sold for 2,000 lei to 2,250 lei per ton. In March the price was 2,400 lei to 2,650 lei, and in April 2,800 lei to 2,900 lei, but dropped to 2,000 lei in May and June because of a slump in the price of light benzine following upon increased production in America. Later in June, however, the price rose to lei 2,700 and then to lei 2,850 per ton, on account of increased maximal prices for products consumed in the country. These prices were maintained until December, when, on account of proposed new regulations, the price rose to lei 3,200 per ton, and was rising at the end of the year. The price rose to this figure without being influenced by the rate of exchange, so that at the time of writing, crude oil is being sold for the equivalent of over £4 per ton, whilst before the war the price was £2 per ton, which compensates for the increased cost of drilling material.

1,337,224 tons were treated at the refineries as against 1,212,823 tons in 1922. These 1,337,224 tons produced at the first distillation the following: Benzine, 300,847; lamp oil, 213,206; mineral oils, 126,103; residuals, 667,535; total, 1,307,691.

Only 87 per cent. of the production passed through the refineries, which, as the crude stocks on hand remain about the same, indicates that some of the crude was still being used as fuel.

There are 22 refineries in the Prahova district, nearly all at Ploesti; 13 in Bacau, 1 in Constantza, 6 in Dambovitza, 4 at Buzau, and 16 others. Altogether there are 62 refineries, of which 39 are very small installations; nevertheless, the country's production is but a small percentage of the quantities these refineries are capable of dealing with, and some of them are frequenfly closed down.

Exports.

During the year the exports were as follows:—To Austria, 53,852 tons; Egypt, 45,303 tons; Hungary, 40,658 tons; Italy, 37,086 tons; England, 33,645 tons; Germany, 32,225 tons; Turkey, 31,009 tons; Yugoslavia, 29,339 tons; France, 20,590 tons; other countries, 60,435 tons; total, 384,142 tons. 430,226 tons were exported in 1922, so that in 1923 the exports were 10½ per cent. less in sympathy with the increased internal consumption.

The quantity exported in 1923 was 25 per cent. of the production, against 31 per cent. for 1922 and 1921. The percentage of production exported has decreased regularly since the armistice. In 1913, for example, 55 per cent. of the production was exported, having steadily increased from 1907, when 38 per cent. was exported. This is accounted for by the fact that Roumania had 7 millions population before the war, whilst in 1923 there were 17½ millions, and naturally the internal consumption is much greater and on the increase.

Most of the export was effected through Constantza on the Black Sea, viz., 219,222 tons, whilst 110,391 tons were dispatched from Giurgiu on the Danube. The balance of 54,529 tons was sent by rail except for 10,779 tons dispatched from Oltenitza on the Danube, and very small quantities from Braila, Cerna-Voda, Orsova, Sulina, Galatz, and Turnu-Severin.

There are two State pipelines from Ploesti, the chief refining centre, to Giurgiu on the Danube, one for refined and distilled lamp oil and the other for gas oil and crude oil. 450 tons daily can be conducted by each of these lines and they pass Bucharest. The State line to Constantza on the Black Sea transports 700 tons daily of white spirit or other special product. 37,150 tons of refined lamp oil were pumped to Giurgiu, and 22,960 tons of crude for a refinery at Cerna-Voda. 37,560 tons of refined lamp oil were pumped to Bucharest and Buzeu. 34,680 tons of refined lamp oil were pumped from Bucharest and Ploesti to Constantza. Difficulty has been experienced in delivering the consignments at destination because of the oil that remains in the lines, and companies were invited to provide the necessary quantity of "dead stock" but refused.

The production of the Anglo-Egyptian Oilfields for the week to July 11 was: Gemsah, 18 tons; Hurghada, 3,519 tons.

The production of the Indo-Burma Oilfields in May was 4,465.3 barrels, being 2,637.5 barrels from Yenanma Field and 1,827.8 barrels from Padaukpin Field.

The British Vice-Consul at Skoplje reports that the old Turkish measure of weight, the oke, hitherto general in Southern Serbia, has been replaced by the metric system.

IONIAN BANK, Ltd.

LONDON, GREECE, EGYPT.

The only British Bank or Financial House in Greece originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia, and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has agencies throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

In Turkey the Bank has a branch at Constantinople.

For particulars apply to THE SECRETARY.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment, of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALI-IMLI PURE WOOL

Makers of the famous Lali-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Great-coat Cloths. All requirements in Wool at lowest prices consistent with quality.

Cawnpore Woollen Mills Co., CAWNPORE.

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.

The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

Cawnpore Cotton Mills Co., CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO., CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mills Co., DHARIWAL.

NOTES OF THE WEEK.

The Greek Republic.

The occurrence of a Ministerial crisis within four months of the establishment of the Greek Republic is not the best augury for the stability of the new order. It is the more unexpected, as the conversion of Greece into a republic appeared to be largely the work of M. Papanastasiou, and his position at the head of the Government was almost to be regarded as essential to the successful working in its early stages of the republican system. He has, however, been unceremoniously driven from office after a stormy four months, during which period he will have learnt, perhaps, that it is harder to build up than to pull down, and that forms of government are of comparatively little moment compared with efficient administration. To replace M. Papanastasiou, the acting President of the Republic has had recourse to M. Sophoulis, a former President of the Chamber and Minister of the Interior in two previous Cabinets. The new Prime Minister had not taken any prominent part in the overthrow of M. Papanastasiou, and his selection would seem to have been determined by the unwillingness of the four chief leaders of the opposition to the late Ministry to serve in the Government of any one of their number. They have accorded their support to M. Sophoulis, but have not entered his Cabinet—an arrangement which may prove embarrassing to the Prime Minister. It is expected, however, that he will be accorded a vote of confidence by the Chamber, which will shortly afterwards adjourn, and he will thus be given a little time to consolidate his position before any disruptive tendencies can make themselves felt in the Ministry.

Cabinet-Building in Yugoslavia.

The political situation in Yugoslavia has been passing through a curious phase. Without formally handing in his resignation, M. Pashitch informed King Alexander of his inability to carry on the government of the country under existing conditions, and requested leave to hold new elections. M. Yovanovitch, President of the Skupshtina, himself a Radical, was thereupon invited by the King to see whether he could form a Ministry and continue to administer the country without a dissolution. As a number of Radicals held M. Yovanovitch's view that fresh elections were not desirable at present, while the Prime Minister showed no sign of giving way, the party was threatened with a split. M. Yovanovitch was said to have been promised the support of the Opposition parties, who on this occasion would advance no claims for separate representation in the new Cabinet, but would be content to be represented by Dr. Koroshetz. The question was finally submitted to a meeting of the Radical Club, at which, in spite of the backing promised to M. Yovanovitch, the majority of the party sided with M. Pashitch, and M. Yovanovitch is reported to have been won over to his leader's views regarding the desirability of new elections. King Alexander at once turned to the Opposition, and entrusted M. Liuba Davidovitch with the task of forming a Ministry.

King Alexander and the Crisis.

Not the least interesting feature of the Ministerial crisis in Yugoslavia is the long-drawn-out struggle between the King and his masterful Minister. Ever since the last elections, which left him in a minority of the Skupshtina, M. Pashitch has set his heart on a dissolution and on holding new elections, at which he hoped to improve the position of his party. King Alexander considered that it was not desirable in the interests of the country to hold a second general election within a year, until every effort to carry on with the existing Skupshtina had been tried and proved to be impossible. By his insistence upon this point the King has gradually brought about a practical measure of co-operation among the Opposition parties, and M. Davidovitch, leader of the Democrats, has been able to form a Coalition Ministry. He is supported by Dr. Koroshetz, the Clerical leader, and M. Spaho, leader of the Bosniaks, and has included a Dissident Radical in his Cabinet. If, as seems probable, he can count on the support of the Croats, he will have a satisfactory majority, which should assure his Government the necessary stability essential to the interests of the country after the political uncertainty of the last two years. Coalition Cabinets, however, are notoriously insecure, and many divergent views have been grouped together under the Davidovitch umbrella. The Croats will presumably remain an unknown

Digitized by Google

factor until a leader arises to take the place of M. Raditch, who may have to make Russia his permanent place of residence, if no other country will receive him. Perhaps the one factor making for political stability in Yugoslavia is the country's weariness of so much party strife.

Albania's Capital.

It is an established axiom that the words and acts of politicians out of office offer little criterion of their conduct and achievements when holding the reins of power. Accordingly the new Albanian Government of Monsignor Fan Noli must be allowed a little longer time in office before the prejudices either of its friends or its enemies can be accepted as a final verdict by impartial observers. If it be true that it has already transferred the seat of government to Valona, it will at least have a definite step, presumably in accordance with a definite line of policy, to its credit. Whether the step is altogether wise is another matter. There was much to be said for abandoning Tirana; the efforts of previous Governments to make that town fulfil the rôle of capital had not been strikingly successful. Valona, however, has its drawbacks, so, too, has Scutari, another claimant for the honour. One difficulty associated with the latter—its proximity to the Yugoslav border—would seem to be overcome by the very fact of making it the capital. There could be no better security for any Albanian town than the presence in it of the representatives of all the Great Powers. From the point of view of buildings suitable for the purposes of Government it is superior both to Tirana and to Valona, and is certainly healthier than the latter. Whether the south would agree to the establishment of the capital of Albania in the north is another matter.

Zaghloul Pasha's Journey.

Saad Pasha Zaghloul has left Egypt for the Continent, and for the present, it is to be hoped, will allow nothing to interfere with his physicians' plans for the complete restoration of his health. He goes first to France, where the details of his "cure" are to be settled. On the eve of his departure from Alexandria he explained further his attitude towards the proposed negotiations by stating that, if he found that to open them did not mean that Egypt would lose and that others would gain any rights, he would take part in them. This would seem to be an entirely new phrase in the mass of words already uttered on the subject. As far as the Sudan is concerned, it is hardly to be expected that, in the case of a friendly agreement with Great Britain, Egypt will be called upon to "lose any rights." The main difficulty all along has been her insistence upon gaining fresh rights and her apparent intolerance of the existing state of affairs. No attempt seems to have been made to show how Egypt's "rights" in the administration of the Sudan have extended in actual practice beyond the mere fact of the condominium. Nothing that has been said by the spokesmen of the British Government so far has suggested that Great Britain would not be prepared to see the British and Egyptian flags flying side by side over the Palace at Khartoum. That would imply, however, loyal acceptance by Egypt of the present arrangement, which gives a British character to the administration of the Sudan, and would entail the complete elimination of the intrigue and deliberate attempts to undermine British authority in the country of which Mr. MacDonald has complained. That there should be no loss or gain of rights on either side is a very different matter from the immediate evacuation of the Sudan by the British and the annexation of the country by Egypt, which were supposed to be the terms that the Egyptian Chamber had imposed upon Zaghloul Pasha as the minimum to be demanded. If such a demand were seriously to be made, and insisted upon, there would be an end to any friendly agreement that might render possible the continued flying side by side of the British and Egyptian flags. It is to be hoped, therefore, that Zaghloul Pasha chose his new phrase advisedly, and that the way to an amicable settlement is not completely barred.

India in the Lords.

The interest of last week's debate in the House of Lords centred in the Secretary of State's reply on the three points raised by his predecessor, the Lee Report, the situation in some of the provinces, and the question of amending the Constitution. Lord Olivier's statement was, as usual, very hard to hear, but, comparing some of the different reports, we gather that it contained little nourishment, though it was formally and bureaucratically correct: The India Office is working very hard on the Lee Report; the provincial Governors can, and will, carry on; the constitutional question is still in the stage of inquiry, and no judgment can be formed. What puzzles us is Lord Olivier's attempt to whitewash, or, rather, greywash, Mr. Das's now notorious act of homage to the memory of a wretched murderer. In one breath we are told that this gentleman is of upright, even saintly, character, and that his act of homage was probably a piece of deliberate deceit, intended merely to frighten the British public. Surely it would be wiser to face the facts without imputing motives. Whatever his character or his intentions, Mr. Das has publicly taken up a position in which he is supported by his own faction, but condemned by a majority of the extremists, and his action constitutes a fact which will not frighten the public in the least, but will certainly tend to confirm its distrust of some of the elements which the ferment in India has recently brought to the surface.

Implementing the Lee Report.

The debate was also marked by a spirited plea from Lord Lee of Fareham for prompt acceptance of the report of the Commission over which he presided. There was, of course, nothing new to be urged, but he marshalled the familiar arguments forcibly and effectively, and obviously he had the House on his side. Here again Lord Olivier seems to us to have attempted to prove too much. He claimed in effect that the India Office needs at least six months to deal with the report. The Commission spent just about that time in recording a large mass of evidence, and formulating its conclusions thereon, so that, to justify his claim, we must infer either that the India Office is not equipped with sufficiently high gear, or that the old machine would not stand the strain of its employment. The fact is that due deference has been shown to the desire of the Legislative Assembly to consider the report at leisure, and we take

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. it that the India Office is accommodating its pace to the circumstances. There is nothing discreditable in that, though the delay is naturally vexatious to those who want to see the matter cleared out of the way, and there does not seem to have been any real necessity for saying anything more.

Politics in the Law Courts.

The curtain has now fallen on the first act of the little comedy which has been staged in Bengal. It will be remembered that the Calcutta High Court recently granted an injunction against a certain motion being brought forward in the Legislative Council, thereby causing considerable inconvenience to the Administration. An appeal was lodged, and the lawyers on both sides seem to have entered thoroughly into the spirit of the play, but the Secretary of State has intervened with a statutory rule making legal that which the Court had held to be illegal, and we suppose the Council will now get to work. The fact remains that the Court has secured some sort of a position in regard to legislative procedure, and those who know Bengal lawyers will have no difficulty in realising that they are eagerly on the watch to exploit the situation for all that it is worth. We expect, therefore, that there are several acts still to come, and that some time must elapse before the combination of legal decisions and amendment of rules shall have established a comprehensive and workable code, of course with the chance of some disastrous deadlock on the way; but, whatever happens, Bengal may be trusted to stand by its High Court, the most purely British institution in the country, and at the same time the most popular.

THE WEEK AT HOME.

London, Tuesday Morning.

The Government and the League.

The chief significance of Mr. Ramsay MacDonald's refusing of the draft treaty of Mutual Assistance lies in its dividing effect upon the Labour Party—it was scarcely a decision of national importance. But it does seem quite effectively to have split the sentimental supporters of the League of Nations in the Labour Party from the severely practical opponents of the League in that party. One cannot by any course of reasoning make out that the decision has been arrived at on purely patriotic grounds, so that, generally speaking, the effect of it is, although it has been widely blamed and lauded in the Press, quite negligible.

General Apathy.

The Government goes from defeat to defeat as merrily as a marriage-bell rings. The Premier recently said, with blighting truth but with less obvious moral than usual, that no other Government than his could "suffer ten defeats and not turn a hair." The only possible comment on this is that the Government is bald, bald of achievement if not of ideas. It is trying hard, no doubt, and there is no point in decrying its endeavours; but one has had to refrain from chronicling such epoch-making events as the progress of the London Conference and of the Soviet negotiations with Whitehall simply because there has been no progress. And in front of all these disappointments the public still seem quite indifferent—almost as indifferent as the official Conservatives and Liberals.

Après M. MacDonald.

In the absence of any action, discussion rages over the coming election. The general opinion appears to be that Mr. MacDonald in his desperate endeavours to reform the world will fail as the result of overwork, and that without him the Labour Party is of little weight. Certainly there is no one at present prominent in Labour counsels who could possibly take the Premier's place, although those who are apt to deride the present Government as a one-man show sometimes forget how easily a leader is pulled out of the rough, so to speak, when emergency arises. One imagines that the Labour Party is far richer in potential leaders than are the older parties.

And, incidentally, the Liberal Party is particularly loud in its cry for a leader just now. There seem to be very few young men in this party now—just a handful of intellectuals who have not yet reconciled themselves to service under the Labour standard.

Newspaper Protagonists.

It is true that important things like agricultural wages and housing are discussed, with not very helpful results, in the House of Commons, but the country is a little tired of inaction in regard to them, and turns with a frolicsome eye to the occasional encounters between Mr. Baldwin and Mr. Lloyd George. One of these men finds it extremely difficult to make the other agree to his version of exactly what happened in the negotiations over our debt to America. They speak, and then they write to the newspapers. Then the newspapers write about them, so that at the end of it all we are a little fogged. But there is one thing that is perfectly obvious between these two protagonists. Whereas Mr. Baldwin's is simple, direct, unbending English, Mr. Lloyd George's is slippery, evasive, and unconvincing. But the ex-Liberal Premier has been through so much and experienced so many things that if he were able to recall them all as accurately as he claims to do, Macaulay's power of memorising would soon be forgotten. As yet, however, it is still possible to think Macaulay's power superior.

A Cricket Rule.

I have never yet met a cricketer who knew all the rules of cricket: the infallibles are always the civilians who write to the papers. A few weeks ago we were all startled to find an M.C.C. ruling interpreted in a strange way, and had consequently to reform our dusty conceptions. When Cambridge University were playing Surrey at the Oval, one of their batsmen had one of his bails removed—it did not fall to the ground, but it was shifted

out of the stick's groove. An appeal was made, and both umpires agreed that the ruling "if a bail be struck off" applied in this case, and the batsman was given out. We rubbed our eyes when we read of it, and resolved to remember the case in future.

Curiously enough, I was playing in a game the following Saturday, and the same thing occurred. The batsman was one of those delightful farmers who do not have to read the newspapers, and, knowing nothing of the Oval decision, he returned to the pavilion more ponderingly than usual.

But now all's right with the world again. Last week the M.C.C. gave a ruling which meant in effect that one bail must be on the ground before a batsman can be given out.

Spiritual Healing.

It was a member of the Catholic Church who brought up the cases of the Lourdes miracles before a body of British medical men—the cases which, as I reported recently, were adjudged by the doctors as "not proven." But there is obviously a tendency among Christians generally to wish to explore, or to have genuine medical opinion explore, all avenues of spiritual healing. Before the British Medical Association the other day the Archbishop of York pleaded that the place of the mind and spirit in the art of healing be established. He went further than this, and foreshadowed "a great revival of healing through faith made active by self-discipline and prayer," which one supposes implies the interposition of religious rites.

Such progress would be reaction with a vengeance. It will be recalled that the Committee of the Lambeth Conference appointed to inquire into this matter did not arrive at very heartening results, and stated definitely that healing was not the Church's function, if merely the recovery of bodily health were being sought. What Dr. Lang, however, appears to desire is a complete merging of science and religion in this matter.

The Political Harvest.

It is said that this year's harvest is to be the most political in all our recent history—that our very social structure, in fact, depends upon it. In English farming there is a lamentable lack of capital, and the banks have advanced up to their limit. Upon this year's grain, therefore, now goldening, depend the futures of many farmers, and, consequently, that of our national agricultural policy.

SUN INSURANCE OFFICE

FOUNDED 1710.

THE OLDEST INSURANCE COMPANY IN THE WORLD.

Head Office: 63, THREADNEEDLE ST., LONDON, E.C.

Branches and Agencies throughout the World.

Principal Agents in the Near East:

ALEXANDRIA	BEHREND & CO., LTD.
ATHENS	Dr. C. A. ANDRIKIDES
CAIRO	VICTOR HANAN
CYPRUS	C. S. CRAMBY
PORT SAID	L. SAVON & CO., LTD.
PORT SOUDAN	A. FRANK & CO.
SALONICA	WHITTALL & SALTIEL, LTD.
SOFIA	THE LEVANT CO. (BULGARIA), LTD.

THE ESSENCE OF INSURANCE IS SECURITY.

So far as I have seen—and it is delightful to have seen it—the fields of wheat are splendid. Ripening has been beautifully equal, the ears are well-filled and long, the straw is strong, and, indeed, faith in the land fills one as one passes by these fateful fields. It is true that there seem more weeds than there used to be (though is there more lovely a sight than poppies among oats with the sun after rain upon them?), but farmers presumably simply could not afford the expense of weeding.

The countryside is, indeed, glorious just now. Where fields are not turning white and gold, they give out a scent of rich, strengthening hay. Even cricketers, for such a sight as this, forgive the Rain God his orgies during May.

Guaranteed Audiences.

Very much of London's theatrical entertainment in recent months has been due to the enterprise of Mr. Barry Jackson and his company from Birmingham. He has given us splendid productions of "The Immortal Hour" and of "Romeo and Juliet." And he has now brought forward a scheme, which, although, of course, far from new, may do much towards saving the theatre. This is nothing less than the securing of an audience before the production of a piece. To his own Birmingham he has promised that he will grant a repertory season of several weeks if it will guarantee him that his theatre there (a small one) will be at least three-quarters filled.

This is a very sensible way of tackling the business. Theatre managers in recent years have dropped too much for the old, unorganised ways to be persisted in much longer. There is no reason why, for certain plays, sufficient audiences should not be booked in advance.

Subterranean Gardens.

One finds many things on the Underground, chiefly, perhaps, good and beautiful advertisements. But one has been especially pleased to notice lately the efforts which the workers on the Underground make to add a little gaiety to a life which must at times be excessively drab. I mean the gardens which are cultivated along the line. The other day the directors made a tour of inspection to choose out the prizewinners.

It is said that in the East End there are marvellous triumphs over natural obstacles, and that the marigolds on Whitechapel Station are a joy to behold. I know that at South Kensington there is a linesman who fights a winning battle with his antirrhinums and dahlias against the gloom of the place. Farther West, of course, the gardens are much richer and brighter. I believe the company supply earth for the cultivation of these gardens, which certainly make an enormous difference to one's attitude towards a belated train.

Alter Ego.

MONTENEGRIN RELIEF FUND.

It is announced that the Montenegrin Relief Fund, which was instituted at the outbreak of the Great War by Sir John Roper Parkington, Consul-General for Montenegro in Great Britain, who died last year, is about to be closed. About £80,000 in all was collected, and many thousands of destitute Montenegrin refugees were helped, including a member of the late King's family and some of the Cabinet and representatives of the aristocracy. A large number of refugees proceeded to America. Outstanding contributions should be sent to the Fund's offices, 36, Bucklersbury, E.C.4, addressed to Sir William H. Thomas.

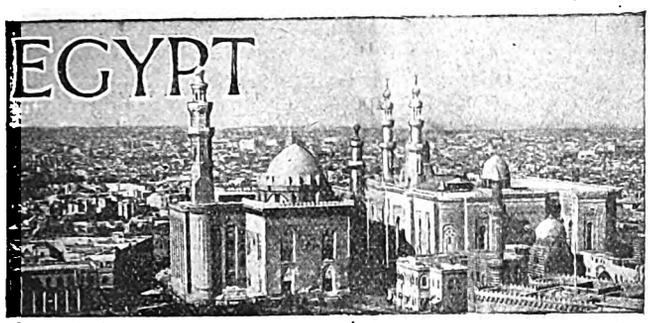
The Near and Middle East.*

From Our Own Correspondents.



Cairo, July 19.

The Attempt on Zaghloul Pasha.

The messages cabled back here to the vernacular Press indicate that the details of the attempt on Zaghloul Pasha have been so fully communicated to the British Press as to render it unnecessary for me to deal with the immediate event. The Premier when he arrived at the station to take his seat on the Alexandria train was accorded a most enthusiastic reception, and it was with difficulty that he managed to make his way through the crowd of joyful admirers who pressed around him to kiss his hand or the hem of his coat. Like a flash that happy atmosphere was turned into a scene of fury by the attempt on their idol's life. The assailant was seized and pulled on to the ground, where the whole crowd threw itself on him in a body. One man in his rage leaped at him and bit a piece out of one of his ears, while another was seen, as the man lay on the ground, to lift his heavy boot to smash in his skull. Had it not been for the intervention of the police he would have been beaten to death within a few minutes. As it was he was pretty severely mauled and had to receive medical treatment, as soon as he could be got away from the station.

As the news spread one could notice a distinct wave of excitement sweeping over the city. At one time indeed there was some fear of disturbances. It was but natural that the anger of the Zaghloulists should be turned against the political opponents of their beloved chief, but good sense soon gained control, and beyond a demonstration or two outside the offices of the various opposition papers there has been nothing in any way to disturb the public peace. Nevertheless, it was only timely action on the part of the authorities that saved a massacre of Armenians. As has happened so often before, no sooner was the attempt known than it was bruited abroad that the aggressor was an Armenian. The attitude of the crowds in the streets became so threatening that the Armenian shopkeeprs at once put up their shutters, and it is certain that they would have been attacked before evening had not the Government got wind of the trouble and immediately issued a *communiqué* to the effect that the assailant had been arrested and had proved to be a young Egyptian.

The attempt came as a great shock and created widespread indignation. There was no mistaking the general feeling and the so-called Opposition wholeheartedly joined in the repudiation of this odious crime. In any case no useful purpose even to party interests could be served by the removal of the head of the Government just at the moment when he was about to enter upon negotiations with Great Britain. Such an act, had it been successful, could but have had for effect to plunge the country into a relatively chaotic state and indefinitely to postpone the settlement which, from their various points of view, every section of the population wants to see. It is because this would have been the inevitable result that the inspiration for this foul deed is attributed to the element that has most to gain from the creation of trouble in Egypt —viz., the Khedivist faction.

The Source of the Crime.

Various facts are adduced to confirm this theory. The assailant came from Berlin, and is a member of the Egyptian Society formed there by Sheikh Abdel Aziz Shawish, the notorious agitator and extremist Nationalist. That society has all along been in touch with the ex-Khedive and his agents, and has always been regarded as a branch of the Hasb El Watani, with certain prominent members of which Abbas Hilmy has maintained close relations. The assailant, as soon as he arrived in the country, went straight to Hasb El Watani friends, instead of to his family. He frequented them throughout his stay, and the night before the attempt was in the company of the redoubtable Sheikh. Moreover, a certain lady has been interrogated, and papers found at her house and her own statements show that there was an extensive Khedivist organisation in this country in which various members of the Hasb El Watani had an active hand. All this is regarded by the authorities as clearly indicating the complicity of leading Hasb El Watanists and of Khedivist agents, and the inquiry is being directed along these lines. It promises to be a long business, since its scope extends beyond the present crime far back into the past; but it is hoped to be able to find out something more definite with regard to the connection of Sheikh Shawish with the various political crimes that have taken place since 1909.

The Premier's Recovery.

Meanwhile Zaghloul Pasha has made a wonderful recovery. Not that the wounds were in themselves so serious, but his advanced age and general state of health, as well as the presence in his chest of the bullet, the removal of which was complicated by the malady from which he has so long suffered, aroused fears of the possible after-effects of this attempt. However, not only have the wounds healed more quickly than the doctors ever ex-

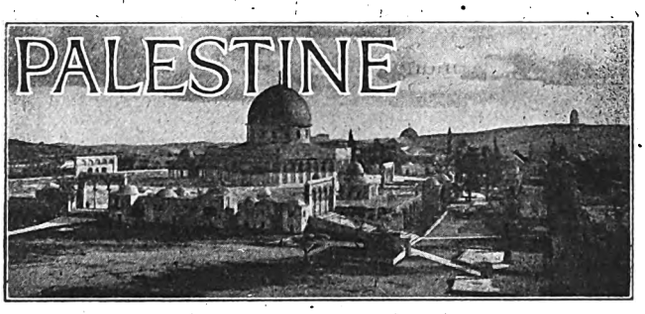
pected, but he has withstood the shock so well that he has been allowed to return to his house. The occasion was seized by the public as a good opportunity for demonstrating its feelings, and his drive from the hospital to his home partook more of the nature of a triumphal progress. Various receptions have been organised to celebrate his escape and recovery, and it looks as if the doctors had saved him from the hand of the assassin only to suffer under the well-intentioned demonstrations of joy of his supporters!

At the moment of writing it is virtually decided that he will carry out his original plan of sailing for Europe on the 25th, but it is not yet known whether his original programme of taking a series of cures in France and being ready to meet Mr. MacDonald in London about the middle of September may not have to be slightly varied, as a result of the changed conditions. One thing, however, is certain. While this attempt will in no way prevent the meeting between the British and Egyptian Premiers, Zaghloul Pasha goes to London more strongly supported than ever by the country. His previous sufferings gave him the halo of a martyr, but this attempt on his life has, so to speak, "canonised" him in the minds of his fellow countrymen.



Jerusalem, July 19.

Palestinian Collaboration.

It is becoming increasingly easy to pick out items of news showing Arab and Jewish collaboration, just as it is becoming increasingly hard to find—what was once so easy and what, till recently, gave Palestinian news its particular tone and interest—items proving active and passive hostility between Jew and Arab. That part of the Arab Press which has assumed the duty of preaching Arab nationalism and resistance to Zionist inroads finds its primary duty now in attempting to stir up the Arabs out of their indifference and supineness in face of "foreign oppression." The only political or semi-political response to such tirades is the successive formation of "Peasant Parties"—first Nablus, then Hebron, and now the Haifa district—whose main concern is to improve their own economic status, imitate Jewish agricultural schemes of co-operation and loans, and to bring in details of political creeds only as an afterthought.

A General Strike.

Two episodes are worth recording under the head of recent Arab-Jewish collaboration. A fortnight ago Palestine endured, for the first time, a thoroughly well-organised general strike. On July 1 a new tariff of taxes was to be applied to cars, public and private, and all hired vehicles; and on July 1 not a hired car or carriage of any kind was to be seen abroad The strike persisted for four or five days, by which time the horse-driven vehicles won their case, and motor vehicles obtained some revision of terms. Arabs and Jews here stood by each other with obvious effect. The only complaint one heard was that the Jews organised the strike and left the Arabs to do the less agreeable work of "picketing."

The Jaffa Delegation.

The second episode is that of the "Jaffa-Tel-Aviv Harbour Deputation" to London. This deputation, comprising a leading Jew (M. Dizengoff, mayor and creator of Tel-Aviv), a leading Moslem (Said Eff. Abu Khadra, vice-president of the Jaffa Moslem-Christian Association—no less!), and a conspicuous Christian-Arab Jaffa merchant—this deputation left this week for England to plead the case of Jaffa to be the first possessor of an up-to-date harbour, as opposed to Haifa. The case for Haifa was given in THE NEAR EAST some months ago. It is a strong case; but it does not follow that Jaffa should be neglected altogether* and forced to lose most of its trade to Haifa. The interested men of business in Jaffa and Tel-Aviv have an alternative scheme of putting up a jetty at the point where Jaffa and Tel-Aviv join; this they are prepared, if permission is given them, to do on their own financial responsibility.

Tel-Aviv.

One can scarcely fail to be impressed to-day with the growth and development of Tel-Aviv, this Jewish suburb of Jaffa. Four years ago, when the present writer first knew it intimately, it did not create a very favourable impression. It was just a very tidy collection of seemingly jerry-built houses, shot up rapidly in cheap material, painfully out of keeping with its Oriental surroundings; and its inhabitants were mainly, from the economical point of view, the unproductive class—officials, school teachers, professional men with little or nothing to do. Since then there befell the May riots of 1921, the chief result of which was to drive almost all the Jewish population out of Jaffa into Tel-Aviv; there has also been, of course, a steady stream of immigrants, and those immigrants who prefer town-life, and are able to make their choice, prefer Tel-Aviv to Jerusalem or the colonies. The impression one now receives is quite different from that of four years ago. The place is about four or five times larger; the population has increased in proportion (it is now about 22,000), and has been heavily impregnated with the industrial element (to such an extent that the Municipal Council is in the hands of the "Po'alim," the Labour Party). A better, more suitable, and more Oriental type of

* In the article referred to (THE NEAR EAST, December 6 1923), Mr. Frederick Palmer was clearly of the opinion that harbours should be built both at Haifa and Jaffa.—ED.

house is being built—though there are still innumerable atrocities going up in the shape of baby American "sky-scrapers," tawdry English suburban villas, and an odd-looking synagogue. The Mayor of Tel-Aviv is visiting London armed with all manner of statistical charts for display in the Palestine Pavilion at Wembley. His contribution to Palestine is a great one. It is hopelessly out of keeping with the idea of Palestine as an interesting archæological museum—but it is rapidly adding to our creature comforts as an industrial and manufacturing town.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

BULGARIAN REPARATIONS.

To the Editor of THE NEAR EAST.

Sir,—Your reference to the correspondence on Bulgarian Reparations which recently appeared in *The Times* shows that the subject is engaging attention, and that further elucidation would not be amiss, all the more so since some of the figures cited are liable to create an erroneous impression of Bulgaria's economic capacity, and mislead British exporters to that country into a false sense of security, involving them thereby in unnecessary losses.

Though, strictly speaking, less than one-fortieth of Bulgaria's revenue is required for payment of reparations, nevertheless between one-fourth and one-fifth of the total revenue is absorbed by the service of the national debt and for the payment of indemnities of various sorts. As for the upkeep of the army, it costs yet another milliard leva.

Some may find that this is not an excessive financial effort, and that it is well within the limits of Bulgaria's paying capacity. It should be remarked, however, that certain essential services have been positively starved, and that the functionaries are wretchedly underpaid—their salaries having been increased eight to ten times, while the cost of living has augmented thirty times. It is a truism that an underpaid civil service does not make for efficiency, nor even for economy, in the long run, and the Allies are going against their own interests by permitting this anomaly. Smuggling is one of the resultants of this state of affairs, and it is certainly no exaggeration to say that the Bulgarian exchequer has been defrauded of some hundred millions of leva by this illicit practice alone in the course of last year.

The crux of the problem, however, is not the raising of the money required for payments abroad, but its conversion into gold and this is a material impossibility so long as Bulgaria has an adverse commercial balance. Other States may allot a larger percentage of their revenue to the service of their respective debts. It will be found, however, that it is a matter of internal redistribution, and the question of transfer abroad, at least on such a large scale, as in the case of Bulgaria, does not arise.

That a catastrophic fall in the lev is bound to ensue sooner or later if the present policy is pursued is more than obvious, and the argument adduced in support of the contention that Bulgaria can pay—namely, the unreserved acceptance by the Bulgarian Government of the Allies' demands—is puerile in the extreme. For Stamboliski subscribed to them in order to obtain a free hand at home; he even made a very deft use of the reparation question, since he threatened to impose the whole burden of these payments on those electoral districts which would vote in favour of his political opponents. As for the Zankoff Government, it was clearly a case of duress; it could not but acquiesce, faced as it was with revolution at home and with aggression from outside. To the Serbian menace it could hardly add the risk of a conflict with the Allies.

The question of Bulgarian Reparations should be taken up at the earliest, and before the injury inflicted becomes irreparable. For a few thousand pounds that may eventually find their way into the British Exchequer, it is not worth while losing this small yet valuable market to British industry and commerce, besides plunging Bulgaria into the welter of an economic crisis which is bound to have very grave repercussions, not only on the political life of that country, but possibly on that of the whole Near East.—I am, etc.,

G. CLENTON LOGIO.

INDIA DAY AT WEMBLEY.

Friday, July 25, was kept as a special India Day at the British Empire Exhibition. In the morning a conference was held under the presidency of Lady Willingdon, at which various lady speakers dealt with different aspects of the life of Indian women. Lady Helena Victoria read a message from the Queen, and among those taking part in the conference were Lady Cowanjee Jehangir, Lady Ali Imam, Dr. Kate Platt, Mrs. Chaudhuri, Lady Galway, Mrs. N. C. Sen, and Mrs. Mitter. In the afternoon Sir Dadiba Dalal, High Commissioner for India, and Lady Dalal held in the forecourt of the Indian Pavilion a numerously attended reception, at which Princess Helena Victoria and Lady Patricia Ramsay were present. The other guests included the Prime Minister and other members of the Cabinet, representatives of the Dominions, Lord and Lady Willingdon, Lord and Lady Peel, the Nawab of Bahawalpur, the Maharao of Cutch, the Maharaja of Rajpipla, the Begum Saheba of Manavadar, Kunwar Shri Moinuddin Khan, Kunwar Shaikh Abdul Khaliq, Mumtazudowla Nawab Muhammod Mokarramali Khan of Pahasu, Maharaj Kumar of Wankaner, Nawab Bahadur Khwaja Habibullah of Dacca, Major Kanwar Shamsher Bahadur Singh, and many others prominently associated with India.

In a "Notice to Airmen," issued on Saturday, the Air Ministry states that the Roumanian Government, having deposited its ratification of the International Air Convention on May 31, the Convention came into force for Roumania, in respect of the Contracting States, on the 10th inst.

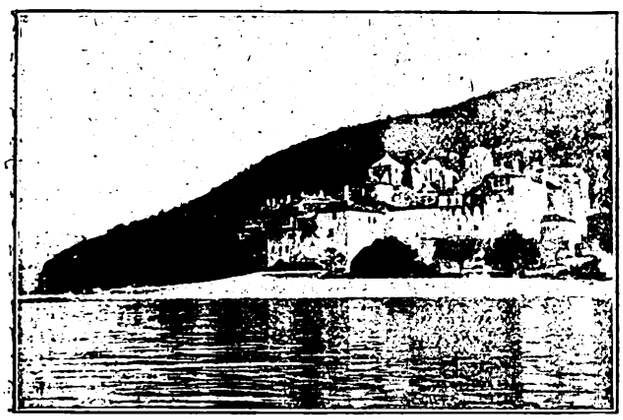
A MISCELLANY OF THE NEAR EAST.

"ANATOLICA." By Harry Charles Luke. (London: Macmillan and Co. 16s. net.)

Of books of travel there is no end; but Mr. Luke's "Anatolica" belongs to the very limited number which achieve the distinction of being literature as well. He has had the advantage not only of writing at leisure, but, more important still, of absorbing his subject also at leisure. Thus the three chapters on Cyprus are the outcome of

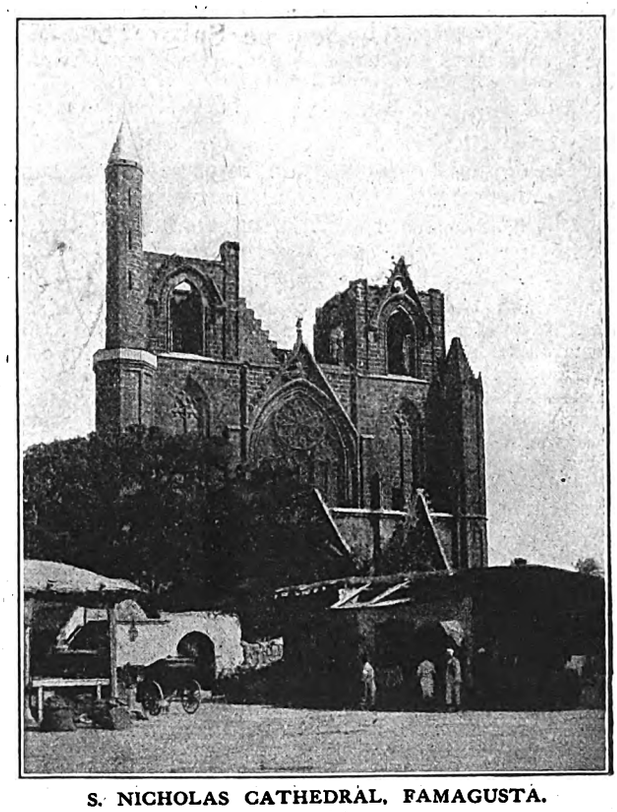


XENOPHON (MT. ATHOS).

six years of official residence in the island; and his knowledge of Transcaucasia is derived from his observations and study when in charge of the British Mission to the three republics. Even so, the book might have been far less attractive if the author had not been a keen observer and a good scholar, with a highly developed artistic sense. We can imagine no more pleasurable way of touring the Near East than with Mr. Luke as guide and mentor; failing him—for the time being he is engaged in discovering the amenities of Sierra Leone—we can strongly recommend this book as a delightful substitute. Even in an exhaustive description of the Old Seraglio on the Bosphorus our author contrives to combine the faithfulness of a guide-book with the artistry of an essay. Details have to be chronicled, but the narrative is not allowed to grow leaden-footed, and always at the right moment comes the apposite digression. Most readers, we imagine, will appreciate the occasional reference to original documents, as when they are reminded of our indebtedness to the Turks for the practice of inoculation against smallpox by the actual letter written by Lady Mary Wortley Montagu in 1717 from Adrianople, in which she describes the process to a friend.

It is for the "enchanted island" of Cyprus that Mr. Luke reserves his superlatives, and if only the inhabitants could give their political aspirations a brief respite and co-operate with the Government to make more widely known the restfulness and attractiveness of Cyprus as a holiday resort, they could hardly do better than borrow some of the descriptions contained in this book. "Although they are small when compared with the great ranges of the world," writes our author, "I claim for the mountains of Cyprus that they contain and are bounded by all that is most perfect in mountain-land and forest, sea and sky." Here is another passage:—

> This is Khalevga, beloved of the chosen few who know it as a place of pure delight, an enchanted nook well worthy of the "Enchanted Island." To the south lies spread below you the full expanse of the Mesaória, with Troodos in the background, and in the foreground the white road winding its way into Nicosia encompassed in its greenery. All this is pleasant enough; but to the north the view beggars description. On either hand the fantastic curves and precipitous slopes of the Kyrenia Mountains, capped with mediæval castles, delightfully wooded, infinitely varied, deeply indented by valleys red with oleander. Below them a narrow strip of fertile land, well covered with olive and caroub trees, and dotted with prosperous villages, glistening in the sunlight. Then forty miles of amaranthine sea, and finally the long line of the Karamanian Taurus, snow-clad and majestic. And what of Khalevga itself, whence all this may be seen? A green paradise, cool, and redolent of pine and cypress and wild myrtle and a hundred fragrant woodland shrubs, nestling against the peak of Qartal Dagh, the home, as its name



S. NICHOLAS CATHEDRAL, FAMAGUSTA.

> implies, in Turkish, of innumerable eagles. Around you, all covered with boscage, are lesser crags, where the wood-pigeons have their haunt; at your feet a carpet of ranunculus and anemones, wild hyacinth and violets and tender cyclamen. It is a place of quiet, undisturbed by human habitation other than the forest hut that gives you shelter.

The temptation to quote must, however, be curbed. The book is a mine of fact and legend. An old French belief, we are told, ascribes to Cyprus the origin of champagne; the Abyssinian Church is the only one "to which it has occurred to canonise Pontius Pilate." We are carried back to the days in the fourteenth century when Famagusta could vie in wealth and luxury with any of the cities of that time, to picture it eighty years ago as inhabited "by a miserable population of 500 Turks of both sexes," with its harbour accessible only to the smallest of sailing craft, and to think

ECHMIADZIN CATHEDRAL.

of it now, with a new lease of life as a result of the advent of the British, restored to ocean-going traffic and capable of becoming, "in competent naval opinion," the best harbour in the Near East.

In turn Mr. Luke takes us to the Church of the Holy Sepulchre in Jerusalem, with a graphic account of the ceremony of the Holy Fire, to Petra and the cities of Transcaucasia. In this latter section he has embodied an informative summary of the history of this comparatively little-known region, and closes a fascinating volume on the following note :—

> It is a meeting-ground of faiths, among which Christianity and Islam are very young indeed, a place where men pray to God, the devil, the Imam 'Ali, the sun, Queen Tamara, or pray not at all, where an officer may have been an Imperial page at the Court of Petrograd and worship at an altar of goats' horns, where people regard Noah and David as intimate and not too remote relations, where a man will dress in chain mail and be a follower of Karl Marx, where a peasant is often a prince, where Tatar lady physicians spend busy mornings driving their motor-cars from clinic to clinic. . . . Not wrongly was the Caucasus held in awe as the home of strange and fabulous beings, the mysterious scene of marvels, shrouded in Cimmerian gloom at the end of the known world; things as wonderful as those which amazed the ancients and enthralled the hearers of the Arabian Nights still happen in the lands and cities about Mount Qaf.

The book is well illustrated. We are indebted to Messrs. Macmillan and Co. for the photographs reproduced from its pages.

THE HOME OF AN EASTERN CLAN.

"A STUDY OF THE PALAUNGS OF THE SHAN STATES." By Mrs. Leslie Milne, F.R.A.I., M.R.A.S. (Oxford: Clarendon Press. 16s. net.)

When the present reviewer went to the British Empire Exhibition at Wembley he visited the beautiful Burmese pavilion to see whether he could find Mrs. Milne's Palaungs. He inquired of a smart young Indian, but he could tell him nothing, and referred him to another man wearing Burmese dress. He addressed the latter, and was taken to a figure representing a Kachin, in full war-paint, who is just the person, according to Mrs. Milne, the Palaung does not wish to be mistaken for, Palaungs being nice, clean, law-abiding Buddhists, who live by the cultivation and manufacture of the tea plant and rice-growing, whereas Kachins are wild and lawless animistic tribesmen, who live by plunder, who seldom if ever bathe, and whose clothes are worn till they drop off. So if anyone wishes to learn about the Palaungs, let him not seek for them at Wembley, but, rather, read Mrs. Milne's fascinating book.

Living as a Palaung, in a Palaung house, seated on the floor, for, to quote her own words, "fortunately to sit on the floor has never been a penance to me, as in my childhood the floor was my favourite seat," eating Palaung food, for she says, "fortunately I do not consider it a hardship if I can get nothing but rice, with curries made of the leaves of wild jungle plants, such as the Palaungs themselves eat; and I rather like to try experiments in new and strange foods," Mrs. Milne endeavoured, and, we believe, with success, to obtain and record the Palaung outlook on life.

The authoress of this book is no ordinary observer, and is, indeed, no ordinary woman, if, with due respect to her sex, one may say so, for the method of her inquiries, the accuracy of her observation of tribal custom, and the skill with which she has welded the result into shape are beyond all praise. As in her book on "The Shans at Home" (Murray, 1910), Mrs. Milne gives us much interesting and valuable information; in this case about a branch of the Mon-Khmer race, which before was practically unknown except to the few who are familiar with the Upper Burma and Shan States Gazetteer. She gives Palaung nursery rhymes, children's games, stories illustrative of courtship and marriage, death customs, a description of the Palaung form of Buddhism, and some delightful folk tales. There is space for a few details only—e.g., two forms of Palaung courtship. A young unmarried girl receives her suitors, either one by one, or several at a time, in her mother's drawing-room; the latter discreetly retires during the visit. Then they converse in symbolical language, which may be likened to a sort of Palaung language of flowers, but in verse, the whole being conducted with the greatest decorum. But Mrs. Milne informs us that in some cases when a young man "begins to pay respect to a young girl" he finds out where she sleeps, from his sister or from a girl cousin. Then at night, when her father and mother are still talking in the entrance-room, he cuts with a sharp knife a hole near the place where her pillow should be and feels round the hole for the girl (Palaung houses are made of bamboo). Marriage amongst the Palaungs is voluntary, and in order to make it as romantic as possible the Palaung girl elopes with the young man of her choice. If the parents object, the girl elopes again, and continues to do so until consent is given. An old man told the authoress that he had run away with his wife twelve times, adding that he would gladly have done this twenty times; then, turning to his old wife, who was present, said: "Perhaps in a future existence we shall run away together. What does thou say, grandmother?" And the old lady laughed and said: "May this be our Karma."

We leave this delightful book with much regret. Before concluding, we should remark that there are some beautiful photographs in it, the work of the authoress, and it has been produced in the usual excellent manner of the Oxford Clarendon Press.

The Crown Prince of Roumania has arrived in London from Paris.

Viscount and Viscountess Willingdon have left 5, Lygon Place for France.

Viscount and Viscountess Erleigh have left 65, Rutland Gate for Plymouth.

Commander Sir Gerald Talbot, formerly Naval attaché at Athens, has left London for Paris.

The ex-King George of Greece has arrived at Claridge's Hotel from La Bourboule. His Majesty will stay about a fortnight.

Lord and Lady Oranmore and Browne and the Hon. Kathleen Browne have left Portland Place for Mereworth Castle, Kent, for the autumn.

The Queen honoured with a visit Mrs. Alec Tweedie's exhibition of World Impression sketches at the Alpine Galleries, which closed yesterday.

Madame Gavrilovitch, wife of M. Michel Gavrilovitch, Minister of the Kingdom of Serbs, Croats, and Slovenes, left London last week for Belgrade.

M. Milan Stevanovitch, Secretary at the Legation of the Kingdom of Serbs, Croats, and Slovenes, has been transferred to the Legation at Sofia.

The Crown Princess of Roumania, Prince Paul, and Princess Irene of Greece visited The King and Queen at Buckingham Palace on Saturday afternoon.

Djevdet Bey, the newly-appointed Archivist at the Turkish Diplomatic Agency, has arrived in London from Angora and taken up his duties. He is staying in Portland Place.

Sir Horace and Lady Rumbold and Miss Rumbold left for Spain yesterday, and will stay at Zarnuz, near San Sebastian, till October, when they will return to the British Embassy at Madrid.

Prince and Princess Kamel Ed Din on Saturday concluded their visit to London, and left Victoria on Saturday morning for Paris. The Egyptian Minister, with Mme. Aziz Izzet, were at the station to take leave of them.

The Queen has honoured A. O. Lamplough by visiting his exhibition of pictures of Egypt at Klackner's Gallery, 20, Old Bond Street, London, W. Princess Helena Victoria also honoured the artist on the private view day.

The Maharaja of Bikaner, who is to represent the Indian Princes at the Assembly of the League of Nations, is arriving from India a fortnight later than was originally arranged. He will arrive in London on August 26 for a few days, accompanied by his heir and chief Minister, Maharaj-Kumar Sadulsinghji. After his return from Geneva he will remain in this country until October 21.

Mrs. Woods and Mr. H. Charles Woods were At Home to a large number of friends at 171, Victoria Street on July 23. Among those present were the Minister of the Serbs, Croats, and Slovenes, the Latvian Minister, Mme. Stancioff, Prince and Princess Soumbatoff, Mme. Dufour-Feronce, Count Bernstorff, Viscountess Dupplin, Lord and Lady Hemphill, Hester Lady Hart, Edith Lady Bradford, the Hon. Lady Norman, the Hon. Mrs. Durant, Sir Ali and Lady Imam, Brig.-General A. Burt, Mrs. Emile Mond, Sir Albert Seymour, Sir Edward and Lady Boyle, Lady (Willoughby) Dickinson, Lady Prichard Jones, Dame Maud McCarthy and Dr. McCarthy, Mr. Otho Nicholson, M.P., Sir Harry and Lady Lamb and Miss Lamb, Mrs. Cobham, Mrs. de Bunsen, Mr., Mrs., and Miss Montague Bell, Mr. Wratislaw, Mme. Guépin, Colonel and Mrs. Stirling, Miss Stead, and Lieut.-Colonel P. T. Etherton.

NEWS IN BRIEF.

The Turkish Military Mission, which has been in London for several weeks in order to study Army training, left on July 27 for Poland.

Mr. Justice Beasley, of the Burma High Court, has been appointed a judge in the High Court of Madras in succession to Mr. Justice Coutts Trotter, promoted Chief Justice.

The new colony in Palestine which Mr. E. S. Kadoorie, of Shanghai and London, is founding in memory of his wife, will be situated at Mount Scopus, near the Jerusalem University.

The *Pioneer's* Meshed correspondent telegraphs that Shau-Jaud-Dowleh, late Governor of Herat and Afghan Minister-Designate for London, arrived by motor from Herat and leaves shortly for London, via Duzdap.

The Viceroy of India has sent a donation of Rs.1,000 towards the funds being collected for the foundation of the Ross Institute and Hospital for Tropical Diseases, and the Maharaja of Nepal has sent a donation of Rs.1,500.

A large wreath of laurels and white lilies was laid on the Unknown Warrior's grave in Westminster Abbey on July 8 by M. Constantin Bacalbasa, president of the Syndicat des Journalistes de Bucharest, on behalf of the Roumanian delegates to the International Press Congress. M. Beza, the Roumanian Consul-General, and M. Ciotori, Press Attaché to the Roumanian Legation, were present at the ceremony.

Bolshevist activity in the Balkans, says the Belgrade correspondent of the *Morning Post*, is responsible for the establishment of a new paper called the *Fédération Balkanique*, the first number of which was published on July 23. It is to appear twice monthly in Bulgarian, Serbian, Croatian, Albanian, Roumanian, Greek, Turkish, and French. The editor is a well-known Communist named Harlakoff.

COMMUNISM AND THE BALKANS.

It is an ill-wind that blows nobody any good, and there will be no reason to regret the activities of the Communists in the Balkans, if they have the effect of narrowing, in the face of a common danger, the gulfs that divide the neighbouring States from one another. The reasons that prompt the Soviet Government to make a special effort at this time to spread Bolshevist propaganda in the Balkan Peninsula are not far to seek. Discontent is the most favourable forcing-ground for Communism, and, although it has been widespread in Bulgaria, there are signs that it is losing its hold on the people. If Bolshevism is to achieve any permanent result in that country, it must acquire a firmer grip now or abandon the ground—perhaps for ever. Appreciation of this fact has presumably given rise to the movement among the Bulgarian Communists which has alarmed M. Zankoff's Government. In regard to a menace of this nature, all the countries of the Balkans find themselves in the same boat; for the surrender of Bulgaria to a Soviet régime would be the signal for a concentrated attack on each of her neighbours in turn. If the master mind of Russian Bolshevism has not lost its cunning, it will see to it that all the gold at its command is employed in a massed effort to capture one outpost at least in the Balkans before the opportunity passes. In such circumstances, differences between the various States on whatever points embitter them assume a relatively insignificant aspect. The one thing that matters is to prevent the common enemy from gaining any important foothold in the Peninsula. As he is devoting his attention to Bulgaria, it is there that the attack must be met.

Until the Bulgarian Government, of its own accord, hoisted the danger signal within the last fortnight, it had been taken for granted that Communism had received an effective setback in the country as a result of the systematic campaign waged against it by the Zankoff Ministry. The measure of success, however, which that Ministry has attained will only encourage the Soviet Government to increase its efforts, and its scheme appears to be to bring off an attack on a double front, from within through Bulgarian Communists, and from without by stirring up Yugoslavia against Bulgaria by the agency of the Macedonians. Fortunately, the identification of M. Raditch with the activities of Moscow has robbed the Belgrade Government of much of the ground for its contention that Bulgaria must be held responsible for everything that happens in Macedonia. It is the realisation that they have nothing to hope for from the Bulgarian Government that has driven the Macedonian leaders to place themselves in touch with the Soviet régime. Their cause had already been espoused by M. Raditch in his quarrel with the Serbians, and the alleged negotiations between M. Todor Alexandroff and M. Rakovsky will have taken place since the Croatian leader took up his residence in Moscow. It is, therefore, to the interest of Yugoslavia, who also has to cope with intrigue at home, to strengthen the Bulgarian Government as far as possible in its fight against Communism. This can be done by removing all anxiety of Yugoslav aggression from that Government's mind and leaving it free to devote the whole of its strength to deal with any Soviet intrigue that may be on foot in the country. From this point it should prove a comparatively short step to reflection on Jugoslavia's part as to whether, having misjudged the Bulgarians on one question, she ought not to be more ready to give them the benefit of the doubt in regard to others, when it is a case of fears and inferences rather than of definite knowledge. The suggestion is made from the point of view of Balkan interests as a whole, and not in the interests of Bulgaria alone. It would not appear to be sufficiently realised by her neighbours that any agitation promoted by Bulgaria at this time must be confined within the limits of the Treaty of Neuilly. Article 48 promised her an outlet on the Ægean Sea, and she is entitled to claim the fulfilment of this undertaking. She has challenged the justice and expediency of the reparation clauses, and has converted the Inter-Allied Reparation Commission to her way of thinking. But no valid evidence has been forthcoming that she has gone out of her way to encourage the Macedonians to sacrifice themselves on the altar of her interests. Their quarrel is essentially their own, and at no time since the Armistice has there been any suggestion that it is subjection to or incorporation within Bulgaria, and not complete autonomy, that these stubborn fighters want.

We welcome the opportunity that the Communist menace in Bulgaria affords for preaching the cause of peace in the Balkans. It is the fashion to ascribe to pro-Bulgarian myopia insistence upon the fact that there can be no permanent settlement in the Near East until definite grievances have been removed. That some of the most prominent of these grievances are entertained by the Bulgarians is not due to any special tenderness felt towards that nation, but to obvious causes linked up with the Treaties of Bucharest and Neuilly. An equally potent grievance would have existed if Yugoslavia had remained excluded from Fiume and had been given no commercial facilities at Salonika. The Macedonian grievance is made up of even more inflammable material than any put forward by the Bulgarians, and no one acquainted with the tremendous pertinacity of the Balkan peoples can be blamed for refusing to believe that any considerable section of these peoples can be permanently held under subjection against their will. The domestic problem which the Kingdom of the Serbs, Croats and Slovenes is called upon to solve is a further testimony to the passionate devotion of every Balkan community to the principle now known as self-determination, which was a creed long before it was given the Wilsonian label. The loyalty of all these communities to the Peninsula is unquestioned. Before the War they may have been encouraged to look outside to this Power or to that as a means for advancing their own interests. To-day the tendency has ceased to exist; it is admitted that even among the Macedonians there is no enthusiasm for the leader's inclination to lean on Bolshevist Russia. Accordingly a greater or less degree of autonomy for any one section would in no way affect the strength of the Peninsula as a whole, but by introducing contentment among the people, would pave the way for the close co-operation among the component States which will give them the standing of a Great Power, and so make each one of them a real factor in Europe.

ALBANIA.

[*Recent events in Albania have given rise to various interpretations of the forces at work in the country. In the following article a correspondent states his own personal impressions.*—ED.]

While all the world searches patiently for peace, Albania, on the Adriatic coast of the Balkans, affects the political atmosphere of South-Eastern Europe as virulently as a sunspot affects the weather.

June 1, 1924, found her in the agonies of a revolution. To change a Government men were killing their neighbours across the poor valleys and the barren hills. To answer the call of their chiefs up every country track straggled ragged men with rifles. There was much, and empty, talk of Democracy and Aristocracy, and of many such catchwords. It was an internal and a private affair, but every nation in Europe watched it anxiously, and those who knew the facts began to doubt the future of the young State.

Albania was born in 1913, when, after the Balkan Wars, the soul-destroying Ottoman Empire receded. She was guaranteed by the Great Powers and given a king. But the World War swept over her before she had found her feet; and the Austrians held her in bondage. At the Armistice she was occupied by many of the Allies, until the mandate was delegated to Italy; but the Italians met with such opposition from the population that they wisely withdrew, and the new State found itself suddenly free and independent. In December, 1920, it was admitted as a member of the League of Nations, and in November, 1921, it was definitely recognised as a sovereign and independent State.

To strive for independence is one thing; but to form a Government, to organise a State, and produce a compact and efficient nation is a far different matter. Every difficulty stood in the way of the new administrators.

Out of centuries of Ottoman misrule the country had been born bankrupt. Its ignorant, poverty-stricken people are as lazy as they are quarrelsome, so that trade and agriculture are neglected, and the blood feuds make life insecure.

It was made either too large or too small, for its frontiers had been so drawn that in many places a district was given to Albania, and the market towns were put beyond the Yugoslav frontier, despite the fact that the population was entirely Albanian. Thus large tracts of country were left to decay into ruin, and the population was left to starve. Independence was followed by the failure for three years of the maize harvest; and a ruinous and terrible invasion by the Yugoslavs in 1921 laid waste the populous district of Dibra. Famine followed bankruptcy: and in the north especially the state of the country was worse than it had been under Ottoman rule.

Moreover, except in name, there was no nation. It was an artificial structure. Independence is the soul-cry of the Albanians, but it is for local independence. The idea of national unity does not come into their consciousness. The fierce Catholic and Moslem highlanders of the north; the Moslems of the centre, and the Orthodox Christians and Moslems of the south are alike in this. They resent one central government. Any Government formed has found a large percentage of the population against it. Just as through the centuries this spirit of local independence has kept the people free against successive hordes of invaders, so it has prevented, and still prevents, all progress towards national unity. Only now and again have they combined to resist some common foe, as when, in the fifteenth century, under Skander Bey, they withstood the Turks.

The Albanians have none of the bonds that bind a nation together. Their language is a debased mixture of other tongues. They have no common blood. From Vlachs to Turks, every race is represented and unabsorbed. There is no common religion, nor history; and even the natural bond of common interests is absent. Wild, tractless stretches cut the country into separate blocks. The River Skumbi divides it roughly into two, and the Ghegs to the north of it hate and despise the less virile Tosks to the south.

To add to the other difficulties, the delegates who attended the so-called Congress of Lushnia in January, 1921, to decide on a Constitution, made four regents to hold the supreme power, a Cabinet, and a one-chamber parliament. In unskilled and inexperienced hands these became so complicated as soon to be unworkable. To organise and run a State and nation under such conditions required capable, honest, experienced administrators, and during the last four years Albania has failed to produce any.

For some years, under various names, but eventually to be known as the "Clique," there existed a secret society for the independence of Albania. When Turks, Greeks, Yugoslavs, and Italians alike had been ejected, and the danger of partition temporarily dispelled, this society absorbed a large number of the ex-officials of the Ottoman régime. Very rapidly it became the ruling class. Its members were imbued with the Ottoman lust for personal gain. Posts obtained were treated as shops or places in which the holder filled his own pockets. It was in frank imitation of the Turkish Committee of Union and Progress. It crept into every department of the State, and permeated the gendarmerie and the army; until there arose the crude situation of the Government and the administrative services of the country being directed by a secret society for its own personal ends.

Among its most prominent members was a certain Ahmed Bey Zogu, a young man with a quiet, diffident manner, full of physical courage, but lacking in moral grit. His faults were his inability to judge men and to keep his word, and a lack of decision in critical moments. He had in him, however, the seeds of patriotism and some

ASK FOR WHITE HORSE WHISKY BY APPOINTMENT.

Digitized by Google

real administrative ability. Having risen to Commander-in-Chief and then to Prime Minister, with the aid of the Clique, he suddenly realised the baneful influence of his friends and set to work to free himself and his country from them.

It became a clear fight between him and his late associates. Despite plots, revolts, and attempted assassinations, he kept some form of order for eighteen months, but the Clique slowly sapped his strength. In December, 1923, the Constitution came to an end, and in the new election Ahmed Bey obtained only a nominal majority, and he retired behind a Government of his nominees.

The Clique realised that the fight had become one of life and death. By every argument and guile they roused the country, and, taking advantage of the murder of one Avni Rustum, the assassin of Essad Pasha, they called on Skutari and Valona to rise. The Government could have crushed the revolt, but it showed a cowardice that can only surprise those who have been brought up to believe in the courage of the Albanians.

After emptying the Treasury in Tirana and again the Customs House at Durazzo, the Prime Minister, Ilias Bey, and most of his Cabinet, together with one of the regents, ran for Corfu. Ahmed Bey, so deserted, found that the waverers and the half-hearted had joined his enemies. The army and the gendarmerie were disloyal and unnerved by the weakness and cowardice of the Government. The Clique marched triumphant into Tirana. The attempt to rule by the one man produced by free Albania had failed.

Meanwhile, on every side there were enemies watching. Italy and Greece were for the minute prepared to maintain this buffer State, but neither had forgotten her aspirations. They wait on the failure of Albania. Yugoslavia was kept back from marching on Skutari and from annexation only by the influence of the combined Powers. America was a source of discord, for she sought oil assiduously and with little tact. Each Power had its influence on the internal situation, and a false move was liable to lead to diplomatic complications or even war.

So to-day Albania nears the parting of the ways. In three odd years of independent existence she has shown none of the qualities that can make her into a stable nation. She is bankrupt, and half her people starve. At this minute she is without a Constitution or a reasonable Government. She has been a constant cause of quarrel and irritation to her neighbours, who still wait a favourable day for partition or annexation.

She might be saved by some form of mandate assisted by a large loan, foreign controllers, and a period of limited autocracy. But this the Albanians would never allow, nor will the Powers be able to agree as to details. Yet to avoid war and its constant menaces, the Great Nations, in the near future, must come to some decision.

To make Albania into a stable compact State is beyond the power of the Albanians unaided.

RED SEA SLAVE TRAFFIC.

After being eight months in dockyard hands, undergoing a thorough overhaul and repair for foreign service, His Majesty's sloop Lupin, which was constructed during the War, was commissioned at Sheerness dockyard on July 24 by Commander R. N. Sueter for service on the East Indies station. The Government recently announced that the naval force for preventing slave traffic in the Red Sea was to be strengthened, and the Lupin, on leaving England on August 12, is to proceed to the southern end of the Red Sea for this purpose.

A CYPRUS REUNION.

A largely attended reception was held on July 22 at the Cyprus Pavilion in the British Empire Exhibition by the Commissioner for Cyprus and Mrs. Bevan. Heavy rain earlier in the afternoon prevented tea from being served on the lawn in front of the Pavilion, but excellent arrangements had been made for the accommodation of guests in the building. The reception took the form of a réunion of Cyprus officials, past and present, and others connected with the island. Opportunity was taken of the gathering to examine the exhibits and to note the progress made of late years in the development of the resources and industries of the colony. After a photograph had been taken, many of the guests adjourned to the West African section of the Exhibition to view the Cyprus Cinema Film.

Among those present were: Sir Malcolm Stevenson and the Hon. Lady Stevenson, Sir Alexander Swettenham, Sir A. H. Young and Lady Evelyn Young, Sir Frank Warner, Archdeacon and Mrs. Beresford Potter, Colonel and Mrs. Hope Biddulph, Lady Clauson, Mr. R. N. L. Michell, Colonel and Mrs. Bird, Colonel and Mrs. Luscombe, Mrs. Scott Moncrieff, Major, Mrs. and Miss Bayley, and many others.

A young Jew, believed to be a recent immigrant, has been detained by the Jerusalem police in connection with the recent murder of Dr. De Haan.

According to the Constantinople *Tanin*, a portable bungalow of 12 rooms is being sent to Turkey in sections to serve as the German Embassy in Angora.

King Edward's Hospital Fund for London has received a gift of £500, sent by H.I.H. Tafari Makonnen of Abyssinia, with an expression of his desire to assist the excellent work done by the hospitals generally in London.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Egyptian Delta Light Railways.

At the meeting of the Egyptian Delta Light Railways Sir Montagu Sharpe, the Chairman, referred to the decrease in the first half of last year in the aggregate gross receipts from coaching and goods traffic, particularly in the former, and pointed out that so far as the coaching traffic was concerned it was mainly due to the poverty of the fellaheen and the motor car competition. Obviously it is out of the power of the railway to remedy the former factor, but the motor competition has been effectively met by drastic reductions in fares and a more frequent train service. The board has made an application to the Egyptian Government for a reconsideration of the terms of the concession regarding the method of calculating the Government's share of profits. The company is allowed 64 per cent. of its gross receipts to cover the working expenses. This arrangement, the chairman said, was entered into in 1913, when the working expenses were in the neighbourhood of 61 per cent., and would, he was convinced, have continued to be a most satisfactory one but for the intervention of the war. Since the beginning of the war the ratio of expenses to gross receipts has averaged about 70 per cent., and, added the chairman, it was evident that the existing arrangement bore very hardly upon the company.

Travancore State.

We give this week a review of the exhibits of Travancore State at the British Exhibition. While 17 Indian States are larger in point of area, Travancore ranks third among the States as regards population; and the position of the State—with its long coast line, its ample, even excessive, rainfall, and its varied conditions, ranging from hilly regions to high tableland—is such that it is not surprising that a very considerable economic advance has already been attained. As in other parts of India, industry, of course, takes a second place to agriculture in the State, and it is to further developments in connection with agriculture that the Travancore authorities most naturally look in the main for continued progress.

The Need for Markets.

Developments in the near future will be dependent to no small extent, however, on new markets, and it is in this connection that the British Exhibition should be of the greatest assistance to the State. Many of Travancore's staple products have long played an important part in the State's trade; others have so far been utilised internally; and in the case of some products it is not known for certain how far they could be of use to the manufacturer. Before the Exhibition ends in (may I take it for granted?) October, 1925, the Home manufacturer should be fully aware of the full range of the products of the State, and, let us hope, Travancore will have in view new trade outlets which will stimulate production in directions that are at present somewhat neglected.

The State's Industries.

If industry does take a subsidiary place to agriculture in Travancore, it cannot but be admitted by all who have visited the Indian Pavilion that the State's industries, such as they are, attain a very high standard of excellence. In our review attention is drawn to the exhibits of lace-work, silver ware, and ivory carving. They certainly merit high praise, particularly the lace-work and silver ware. The lace is delicate to a degree, and has just that daintiness that should charm the ladies of the Western hemisphere, while the workmanship displayed in some of the pieces of silver is literally beyond praise. There ought to be a very considerable demand for these commodities in the European markets.

Lake Copais Company.

At the meeting of the Lake Copais Company Mr. W. Sandford Poole, the chairman, emphasised the value of the company's work to Greece. He pointed out that the Copais estate—once a fever-breeding marsh—had been converted into some 60,000 acres of productive arable and pasture land. During 1923 the estate produced about 15,000 tons of cereals for consumption in Greece, besides other valuable crops, in addition to providing grazing for about 100,000 head of stock, while it was estimated that altogether the company directly supported in Greece from 12,000 to 15,000 people, and the estate was not yet fully developed. The company is entitled to 20,000 acres of the reclaimed land, and to the use of the rest of the estate rent free for a long period. The position of the respective areas, the chairman said, had, however, never been defined, the company had suffered through encroachments, and there were other rights under the concession that required clearing up. Agreements had been made, and Bills had been introduced into the Chamber of Deputies to give effect to them, but, owing to political changes, had never been ratified. The result had been that full development had been hindered, and though the company has rendered a national service to Greece, it has not yet earned a dividend on its share capital. The hope was expressed that no further time would be lost by the Government in arranging a settlement. By doing this, he said, they would show British investors that Greece intended to see that justice would be done to those who invested their capital in that country, while further delay by the Government in dealing with the company's grievances would have the reverse effect.

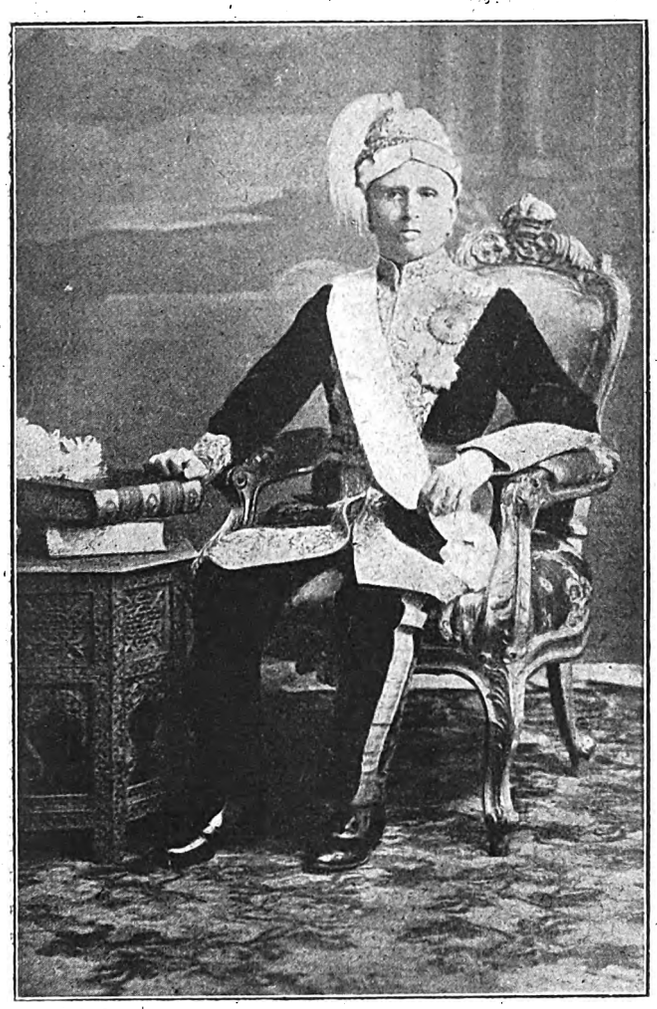
TRAVANCORE STATE AT THE EXHIBITION.

The Court of Travancore State is one of the most notable features of the Indian Pavilion at the British Empire Exhibition. It is one of the largest of the Courts devoted to the Indian States, and in general attractiveness is certainly second to none. Externally the Court presents a most artistic appearance. Above the entrance in bold relief is the Travancore royal emblem in rich blue, while the panels are adorned with scenic views of the State and a map showing the position of Travancore on the South-west



H.H. COL. SIR RAMA VARMA, G.C.S.I., G.C.I.E., MAHARAJA OF TRAVANCORE.

Indian coast. Within the Court the pleasing impression gained without is fittingly confirmed. While the basic products of the State, such as the coconut and its products, tea, and oils, are prominently displayed, there are also charming examples of the arts and crafts of Travancore in the shape of delicate ivory work and exquisite examples of silverware, while a large model of a house and its surroundings enable visitors who know India only from a distance to understand something of the conditions in the State.

Travancore is by no means large in point of area compared with other leading Indian States, being about 7,600 square miles; but it is the third largest State as regards population, which numbers over four millions, and the fourth largest in point of revenue. The State lies at the extreme south-west of the Indian Peninsula. Its southernmost extremity is Cape Cormorin, and it has a long coast line which includes a number of ports, chief among which is Alleppey. The physical features of Travancore are very striking. To the east are lofty mountains, while great rivers pursue their course through winding valleys, and along the coast is a long chain of backwaters linked by canals and surrounded by groves of coconut palms. During both the south-west and the north-east monsoons Travancore has a heavy rainfall, varying from 23 inches up to 200 inches.

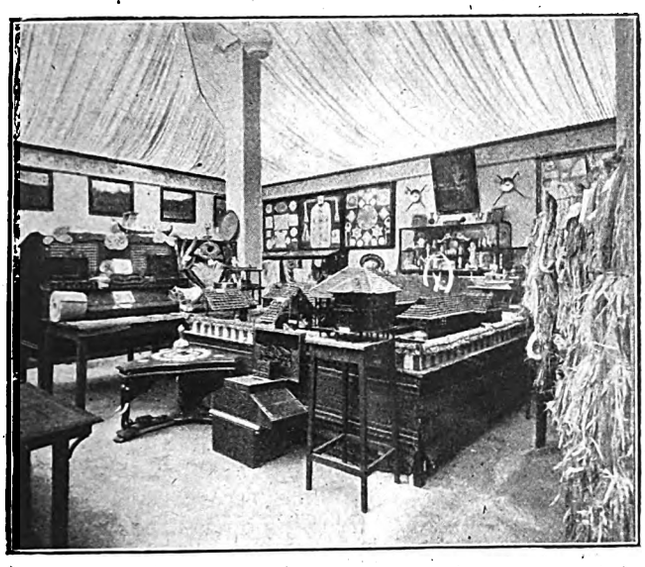
During the reign of the present Maharaja, H.H. Col. Sir Rama Varma, G.C.S.I., G.C.I.E., the State has made exceptional progress. The Maharaja, who was born in September, 1857, and ascended the throne in August, 1885, has devoted his life to the promotion of the welfare of his subjects, and to this end he has introduced many notable reforms. Travancore now occupies the first place in India as regards literacy, as a result of the liberal educational policy that he has pursued. Actually, over two-thirds of the population are literate, which is a very high percentage for India. During the last thirty years there has been a very striking advance in the social and material condition of the people. Democratic institutions have been introduced, and the people have gradually been more and more associated with the administration of the country. As long ago as 1888 a Legislative Council was established, and in its present constitution and functions it is not far behind the sister Councils in India. A larger and more democratic body, known as the Sri Mulam Popular Assembly, was inaugurated in 1904, while ten years previously the foundation of local self-government was laid by the establishment of Town Improvement Committees, which were later transferred into Municipalities. Measures for the further development of local self-government are under the consideration of the Legislative Council. The Maharaja is a devoted ally of Great Britain, and is ever ready to place the resources of his State at the disposal of the Paramount Power, as he did during the Great War. In recognition of the services that His Highness has rendered from time to time, the G.C.S.I. and the G.C.I.E. have been conferred on him, while in 1922 he was made Honorary Colonel of the 10th Battalion 3rd Madras Regiment.

As is the case throughout India, agriculture is the staple industry of Travancore, and more than half the population derive their livelihood almost exclusively from the soil. Rice is the principal food grain, and occupies a larger area than any other crop, while tapioca, the chief food of the poorer people, is also cultivated extensively. These crops are consumed in the State itself, while the principal crops which contribute to the export trade are coconut, tea, rubber, pepper, ginger, cardamoms, and lemongrass oil. The export trade amounts in value to about £5,000,000, and the contribution to this total of the products of the coconut palm totals half that amount, which shows very plainly the importance of the coconut palm to Travancore.

The various products of the coconut palm naturally occupy a very prominent place in the Court, and a glance at them is a veritable revelation of the varied uses to which the coconut

Digitized by Google

can be put. A variety of coconuts of different sizes and shapes is on view, also specimens of copra (the dried kernel), coconut oil, coir mats, coir rope, etc. A chart is displayed showing all the products of the coconut palm. There are three parts of the fruit—the husk, the kernel, and the shell, and all have their many uses. The first supplies fibre and then yarn, and is utilised for making mats and matting, machinery belting, and such things as stuffing for mattresses. The kernel, of course, yields the copra, also desiccated coconut, and from the copra is obtained oil which can be utilised for the manufacture of candles, soap, and



A GENERAL VIEW OF THE COURT.

margarine. Finally the shell is used to make buttons and fancy goods. At present about 450,000 acres are under the coconut palm in Travancore.

Tea and rubber come next to the coconut palm in the list of commercial products. Both are comparatively new and both are of growing importance. Cultivation of the tea plant dates from 1875, when the coffee crop failed; until 1895 there was only very moderate progress, but from that year onwards rapid strides have been made, and the area under tea is now about 48,000 acres. The different kinds of tea grown are on view in the Court. In 1899 the first rubber plantation was opened by the Travancore Government, and owing to the boom of 1906 there was a great extension of rubber planting, and to-day some 52,000 acres are under rubber. The various kinds of rubber and the commodities that are made from it, such as soles, mats, etc., are among the exhibits.

Special interest attaches to the exhibits of oils. Travancore produces a very large variety of oil seeds, and the oils that are obtained from them are at present mainly used in the State for illuminating purposes. So far it has not been determined as to what value would attach to them in foreign markets, and, indeed, the properties of most of the oils have not so far been fully investigated. It is believed, however, that several of them could be utilised by the manufacturers, notably *Calophyllum inophyllum*, for making disinfectants and lubricants and for other purposes. At present the production of these oils is limited, but once there is a certain export market for them the production would be greatly developed. The exhibits include specimens of the oil seeds and of crude and refined oils.

Other important crops are pepper, ginger, and cardamoms. For centuries pepper has been exported, and at the present time 48,000 acres are devoted to it. Most of the output is exported, the export trade ranging from 5,000 to 12,000 tons. The value of the trade may be illustrated by the figures for 1921-22, when 9.500 tons, worth more than £253,000, were exported. The exhibits include varieties of white and black pepper. 20,000 acres are under ginger, and in this case also the bulk of the output is exported. For 1921-22 the exports totalled about 3,750 tons, of the value of £73,000. Samples of both scraped and unscraped ginger are shown in the Court. About 50,000 acres are under cardamoms, and for 1921-22 the exports were about 6,500 tons, of the value of about £63 000. Samples of bleached and unbleached cardamoms are on view.

A word must be said as to the exhibits of farinaceous roots suitable for making flours and starches, in which Travancore is very rich. They include cassava, arrowroot, the sweet potato, and various kinds of yams. 400,000 acres are under cassava, which is the most extensively cultivated root crop.

It is hoped in the near future to start a mill with up-to-date equipment for making starch; for this purpose and other essential works of development the co-operation of capital from outside would be desirable, and, in view of the resources and undoubted possibilities of the State, it should not be a particularly difficult matter to interest foreign capitalists.

AN IVORY EXHIBIT.

The panelled walls of the Court draw attention to the important forests of Travancore. Actually about 30 per cent. of the total area of the State is reserved forest, and the average yield of timber is about 800,000 cubic feet, producing an annual revenue of about £90,000. Teak and rosewood are the principal timbers, the annual production of these two totalling about 300,000 cubic feet. Specially interesting features of the Court are two bookcases of the revolving type, showing apparently 170 books, but in reality that number of specimens of the timbers found in the State. The bookcases are made of rosewood, while the exhibits of woods also include a magnificent piece of rosewood 14 ft. 7 in. long and 3 ft. 7 in. wide.

On all sides in the Court are to be found choice examples of the small industries of Travancore.

Digitized by Google

Lace-making, which mainly owes its introduction to the missionary societies, is now one of the chief cottage industries, and some exquisite specimens of lace-work are on view, which make it easy to understand the high reputation Travancore lace has gained abroad. Ivory carving is another important industry, and some admirable examples of the craftsman's skill are shown—notably, a beautiful model of a lady on a swing supported by two elephant tusks. Finally, reference is called for to the wonderful display of silver work. The exhibits of silver ware include a number of exquisite mirrors and trays, one tray containing examples of all the coins in use in the State.

In this brief review it has been impossible to do full justice to the exhibits in the Court, but sufficient has been said to indicate something of the extensive and varied resources of the State, and the undoubted prospects for development that exist. It remains to be added that Dr. N. K. Pillai is responsible for the charming arrangement of the Court, and he is to be congratulated on a very effective display.

THE BULGARIAN ATTAR OF ROSES INDUSTRY.

(FROM A CORRESPONDENT.)

The production of attar of roses comes second in importance of the industries of Bulgaria, and is confined chiefly to the valleys of the Shipka, Balkan range, from Rahmanlare in the west to Nova Zagora in the east, where it has been carried on for many hundreds of years. The rose gardens are mostly situated on the southern slopes of the ferruginous hills. Here and there one sees gardens facing north, east, and west, but the results from gardens which do not face south are not as satisfactory as those which have that aspect, the oil or attar not having the delicate scent required. The red rose is the rose cultivated, although many of the gardens are hedged with the white rose, which is very rich in stearoptene, the oil of which is much easier to adulterate. The white rose was originally planted chiefly as a break wind for the gardens, being much hardier than the red rose; it is also very much more prolific. It comes into flower eight or ten days after the red rose has started to bloom.

The red rose bushes are grown to a height of about six feet; they are planted three feet apart in the rows, and six feet between the rows. They start to bloom in their third year, and have in many cases blossomed profitably up to their eightieth year, though twenty years is reckoned as their profitable life.

Two principal hoeings take place every year in the early spring. The pruning is very primitive, the dead wood only being cut away, and the bush is given a rest every five years by being razed to the ground. Very little manuring is done, farmyard manure being the only plant food which is used, and as there are few stalled cattle manuring is very scanty.

Up to twenty years ago all the peasants who owned about five acres of garden had their own copper alambics and distilled their own oil, and sold it to the larger producers for export. Within the last few years, however, large distilleries have been erected in all the valleys, principally with French capital, and agents of these companies purchase the blooms from the peasants and transport them to their distilleries. This has its disadvantages as well as its advantages. When the peasant distilled his own oil he picked his blooms from sunrise to 8 or 9 a.m. whilst the dew was still on them, then ceased plucking and commenced distilling, and it was reckoned that in a good season 2,800 to 3,000 kilos of roses would produce one kilo of oil, whereas under the present system of selling the blooms to the large distilleries the peasant will continue picking till 10 or 11 a.m. in order to fulfil his contract; the dew is then off the bloom, and a certain amount of evaporation has already taken place. The blooms are then handed over and weighed by the agent of the large producer, who transports them by bullock wagon to his distillery, which may be 10 or 15 kilometres distant, and by the time they reach their destination, which will be probably twelve hours after actual picking, they are faded and dry, and the loss in weight is considerable. Thus this year it is calculated by the distilleries that they required 4,250 kilos of flowers to produce one kilo of oil. This season has, however, been an exceptionally bad one, owing to the intensive heat and the lack of rain in the early spring. The quality of oil depends very much on the weather at the time of bloom and plucking. The peasant prefers to sell his flowers than to produce his oil, as the large producer makes his contracts with the peasants in January, paying them advances on the reckoned output from the date of the signing of the contract, and the final settlement being made with the last load.

In favour of the peasant system it must be said that, as every district and every different class of soil produces an oil of different quality, and the peasant very often found that his yearly production of one or two kilos did not sell readily as it did not happen to be the type required by the European market at that moment, he was therefore forced into the hands of the bank. Now he is able to get paid in full for his produce directly it is delivered; also there are not now so many types on the market. Each producer makes his own special type from flowers which may come from many different soils and districts, and the European buyer is now certain to be always able to get the same quality of oil which he has been accustomed to.

An acre of rose bushes should produce 1,600 kilos of roses annually, and if we take an average of 4,000 kilos of roses to a kilo of oil—that is, the produce of 2½ acres—at a price of 3½d. per kilo, which is the average price paid this year by the distilleries, we find that the cost would be £58 6s. 8d. for the flowers required to produce one kilo of oil; the cost of distilling and other overhead charges would be about £12 per kilo, which gives us a price of £70 6s. 8d. per kilo of pure unadulterated oil. Adulteration of oil is rife, as the European buyer will not pay the price of a pure oil and the price is fixed in Europe each year, therefore the distiller has to break his oil down and mix it with cheaper and inferior grades in order to meet Europe's price.

Near East Markets.

DECLINE IN IVORY PRICES.

Messrs. Hale and Son report as follows on the recent ivory sales :—

The quarterly ivory sales commenced on the 22nd and concluded on the 23rd inst. They comprised 55 tons (against 32½ tons same time last year), viz., 24¼ tons Zanzibar, Bombay, Mozambique, East African and Siam, 7½ tons Abyssinian, 9¾ tons Egyptian (Alexandrian description), 11¼ tons Congo, West Coast African and Lisbon, and 2¼ tons land carriage; also ½ ton sea horse tusks and boar tusks, and a few rhinoceros horns—total 55½ tons. Of the above quantities, 1½ tons consisted of lots previously offered or indirect import, viz., 1¼ tons Congo and ¼ ton East Indian and Egyptian.

The following was the assortment of the East Indian description: 16 tons soft tusks, 1½ tons hard and a few Siam, 1¾ tons billiard ball pieces, ½ ton bagatelle pieces, 1 ton cut points for balls, ½ ton cut points off large tusks, ¼ ton under-size and defective points, etc., ¾ ton scrivelloes, ½ ton billiard and bagatelle ball scrivelloes, and 1½ tons cut hollows. During the progress of the sales about 9½ tons were bought in, viz., 1¼ tons East Indian, 4 tons Congo, 4 tons Abyssinian, and ¼ ton Egyptian.

The sales were well attended, and there was fair competition, but the demand was not so active as at the previous auctions. The demand for America was restricted, and the Continent did not take so much; the home trade bought about the usual quantity. There was a good assortment of soft large and medium tusks and ball ivory, the prices for which ruled in buyers' favour. Hard ivory was firm.

Zanzibar, Bombay, Mozambique, East Africa, and Siam.—Soft large and medium tusks declined on the average £3 to £8 per cwt., hard were firm to rather dearer. Billiard ball scrivelloes were £10 to £15 per cwt. lower, and bagatelle scrivelloes £8 to £10 per cwt. lower. Billiard ball pieces declined £10 to £15 per cwt., and bagatelle points £5 to £10 per cwt. lower. Cut points for balls and cut points off large tusks were irregular but generally £10 to £15 per cwt. below last sales' rates. Defective points and under-size points steady. Scrivelloes £2 to £3 per cwt. lower. Cut hollows were very firm to rather higher. Cores sold well. Soft bangle tusks £5 to £10 per cwt. lower. A few lots of Siam ivory met with good competition.

Abyssinian was in larger supply than for some time past. Large and medium tusks were £3 to £8 per cwt. lower. Ball scrivelloes £10 to £15 per cwt. lower and scrivelloes £2 to £3 per cwt. easier.

Egyptian.—The moderate quantity offered sold. Soft tusks at £3 to £8 per cwt. decline, and hard firm. Ball scrivelloes £10 to £15 per cwt. lower. Scrivelloes £2 to £3 per cwt. easier.

West Coast and Central African consisted principally of the Congo description. Hard large and medium tusks were firm to rather higher, soft £3 to £8 per cwt. lower. Ball scrivelloes £10 to £15 per cwt. lower. Scrivelloes £2 to £3 per cwt. easier. Hard bangle tusks firm to rather dearer.

Only a very small quantity of the Lisbon description was catalogued, and no Ambriz, Niger, or Gaboon. Sea horse tusks sold at higher prices. Rhinoceros horns firm to rather higher.

THE INDUSTRIAL POSITION IN CZECHO-SLOVAKIA.

We have received the following from a correspondent :—

In the hardware trade the factories turning out enamel goods are profiting by Germany's inability to compete, and are working on full time. Considerable export business is being done with America, England, France, and the Far East. Employment in the iron trade is unsatisfactory, both inland and export orders having recently fallen off—the latter largely in consequence of the trade stagnation in the Succession and Balkan States. The hosiery trade has of late made a rapid recovery, and business is very brisk. A large export trade is being done with markets which were formerly the monopoly of the German hosiery trade. In leather the home trade is fairly satisfactory, and the boot and shoe factories are well employed. Export trade is slack; especially the Polish and Hungarian markets are practically closed for this country's products. The timber trade journal *Carpathia* states that prices in the inland market are maintained, and the demand for various categories of timber is such that a satisfactory autumn business may be looked forward to. Orders from France and Holland are unacceptable owing to the low prices offered. With England some business is being done, despite the strike in the building trade. The situation in the musical instrument trade in the north of Bohemia, which employs about 60,000 workers, has of late, says the *Bohemia*, considerably improved, and the industry is regaining its old markets.

THE ASIATIC REVIEW.

The July issue of the *Asiatic Review* opens with an article by Lord Winterton on the Lee Report, in which he advises its acceptance. The Indian Trade Commissioner deals with the trade statistics for the financial year ending March, 1924. He considers that commercially India is now in a strong position. The Finance Section treats of the banking difficulties in India, and the Tourist Section describes the beauties of Indo-China from the pen of Monsieur Garnier, sometime Résident Supérieur in that country. The section devoted to the East India Association proceedings deals with the Sukkur Barrage controversy and the forests and timbers of Burma.

British Consular Reports.

V.—MOROCCO.

The following extracts are taken from the Report on the Economic and Commercial Conditions in the French Zone of Morocco in 1923-24, by Mr. C. E. Heathcote Smith, O.B.E., H.M. Consul at Casablanca :—

The landing of the French soldiers on Moorish soil in 1907 marked the commencement of the economic awakening of Morocco. A gestation interval of five years was followed in 1912 by the formal proclamation of the birth of the French Protectorate. The period since 1912 has witnessed the endeavour of an intensive development of a country which up till then had lived in primitive stagnation.

The Moors, however, are an extremely conservative race, and their staple wants of pre-French days are still in the main their wants of 1924—sugar, tea, cotton goods, cloth, hardware, soap and candles. Proportionately it is not so much the 4½ to 5 million Moors of this zone who are responsible for the undoubted increase in the imports into Morocco, but rather the Government with its programme of public works and the 70,000 Europeans and a portion of the 70,000 Jewish inhabitants—for these two categories alone display a marked tendency towards progressive economic wants.

There has been a growth, however . . . a growth which has been misunderstood, having been distorted by an exaggerated view of the 1919-1920 boom. In consequence of this, the slow rate of subsequent increase has appeared as a definite set-back, whereas to form a complete picture of the developing capacities of Morocco the years 1919-1920 should in certain respects be put as it were into a parenthesis and regarded as abnormal. Indeed, a close scrutiny of available statistics reveals a comforting proof of growth, from whatever standpoint they be analysed.

It is intended rather to labour the point of Morocco's development, since not only is she a new country, and therefore lending herself to hasty and often faulty estimates of her potentialites, but already Morocco has earned an unfortunate reputation—particularly in France. It is probable that this is an undeserved reputation, due largely to the experience, fortunate or otherwise, of speculators. In either alternative the relative resources of the country become misrepresented.

Except for an abundant barley crop in 1921 (160,000 tons exported) the last four years have on the whole been distinctly disappointing in agricultural production; 1924 opens, however, with good crop prospects, and should this year prove as fortunate as it promises to be the local crisis will be largely alleviated—for Morocco, though affected by the world depression, is by her very situation largely self-contained. Even the depreciation of the franc cuts both ways: for as the country is essentially agricultural, if there are good harvests, and crops are sold abroad, payment will correspond with the rate of the franc. Thus the agriculturist and the exporting houses suffer but little from the high franc level, although all are apt to be affected by its fluctuations. It is mainly European and native importing houses that have suffered in the so-called "crisis" in Morocco—a crisis that has affected the following classes—those with overseas connections, architects, landlords, speculators, and personnel reduced for reasons of economy. The large bulk of the peasant farmers have not even realised that a crisis exists.

Imports.

For many years we held the premier position in Morocco's trade, and as recently as 1907 we were still in the forefront with a percentage of 44 of the imports; in 1922 we held the second place with 18 per cent. of the trade, and again the second place in 1923, but our share has dwindled to 15 per cent. The position of France in Morocco's import trade has become overwhelming; she held 63 per cent. of the trade in 1922 and 67 per cent. in 1923, as against 37 per cent. in 1908.

France and England, therefore, imported 82 per cent. of the total in 1923—to a value of 521 and 119 million francs respectively. The remaining 138 millions (i.e., 18 per cent.) of the trade were shared chiefly between the United States of America (38 million), Belgium (30), Spain (17), and Italy (15). Belgian trade has shown a steady growth, American has fluctuated violently with a recent tendency to increase, Italian on the whole is making strides, while Spain has suffered a sharp decline.

In franc face values the volume of British trade has fallen more than half since the boom year of 1920, while its percentage of the whole fell from 22 to 15. Unless a very serious effort is made, Morocco will have to be written off as another lost market, except in certain textile goods.

Foreign Competition.

Trade has been lost to Great Britain in favour of the following countries in the following articles: To France: In absolutely every article without exception other than cottons and coal. To Belgium: Glassware, motor-cars, iron bars, cement, machines, steam driven, and other machine tools, matches, nails, and screws, packing and printing paper, rails. To U.S.A.: Motor-cars, agricultural machinery. To Holland: Woollens, packing paper. To Italy: Motor-cars, matches, candles. To Sweden: Nails and screws, wood (deals).

The following is an analysis of certain imports:

Alcohol.—The British only compete in whisky. British gin and eau-de-vie are too high priced.

Automobiles.—No British cars are sold, nor will any ever be sold until a complete selling organisation with full equipment of cars and spare parts are on hand, and with competent mechanics is set up here. On the 3,100 kilometres of roads in the French zone (exclusive of pistes or tracks) there were some 800 lorries and 3,000 cars circulating at the end of 1922, against 700 in 1919. The total number of British cars that have percolated into Morocco is about 10. Yet the market is a healthy one for foreign makes.

Boots and Shoes.—British trade in this article is non-existent.

Candles.—Statistics show that forecasts were unduly pessimistic; whatever may have happened

in 1923, in 1922 we actually gained a little ground —official percentage figures of the British share are: 1919, 75 per cent.; 1920, 72 per cent.; 1921, 50 per cent.; and 1922, 58 per cent. The Italian candles are severe competitors of the British makes, and also the Fournier candles from Marseilles.

Coal.—With the opening and coming extensions of broad-gauge railways an increase to the benefit of our trade may be expected, as Cardiff coal is essential; and later on it is expected that Casablanca port will provide bunkering facilities: British coal again will profit by this.

Cotton Goods.—The consumption of cotton goods is one of the gauges of the prosperity of the country. Total figures have fallen since 1921, doubtless with the poor crops—Great Britain, despite determined onslaughts, appears well able to maintain her overwhelming superiority in white cloths, but no percentages can be given until the figures for cottons entering Morocco in the last three years through Oudjda are analysed, and this is not yet possible. Her firm hold, however, is especially with the Moroccans: very little of the cotton goods purchased by Europeans here comes from England.

The Protectorate brought a mission of French and Alsatian manufacturers here to study conditions in 1923, and these took back with them several expert Moors to advise them while experimental cloths were being produced in the French factories. Great hopes were based on these efforts, but it is not believed they will bear much fruit. One of our great assets is the extreme conservatism of the Moroccan, which should aid us in retaining in its present proportions our premier import into Morocco. Although the 1923 statistics are not yet available, the information has been supplied that we actually imported 51 millions of cotton goods through Oudjda last year, which is more than 50 per cent. of our total cotton imports. Opinions are rather to the effect that the higher tariff on the Eastern frontier will not affect the volume of British trade. Schreinered sateens of Italian and a calendered variety of Alsatian origin are now on the market and underselling British sateens. Their qualities are well spoken of, and the issue of this competition is in doubt.

Cement.—The stagnation of building has caused a big drop in cement and lime imports.

Cutlery and Glassware.—British manufacturers no longer even attempt consignments in these goods.

Hardware.—The Customs nomenclature *ouvrages en métaux* ranges from jewels and nails to steam engines. Great Britain retains a respectable position in household articles, galvanised buckets, pewter and nickel goods—all small ranges—but is driven from the market in the important categories.

In power-driven engines the United Kingdom has almost left the market. Some were re-exported out of the country (to Spain), the price preventing local sale.

Iron.—Some hoops and sheet iron still found their way from England in 1922, and there was in 1923 a fair demand for iron for public works (bridges, etc.). France and Belgium divide the market, however.

Linen Underwear.—Here French taste is catered for by France, and the Spanish, which is in many respects distinct, by Spain.

Machine Tools.—British tools do not appear on the market, because decimal measurements only are of use here, and the more elaborate devices and delicate accuracy of the French tools are preferred.

Mineral Oil, Petrol, Petroleum.—There has been a steady increase in the consumption of petroleum and gasoline in Morocco in the last few years; the growing mileage of broad-gauge railways will lessen but probably not entirely check this increase. None of this liquid arrived in transhipment from the United Kingdom in the past.

Rice.—As most other imports, this market has been very quiet. No shipments of importance come except through Marseilles and Spain.

Soap.—In soap British loss is overwhelming. In 1919 Great Britain held 80 per cent. of this market in ordinary soap; to-day she just appears with 3 per cent., while France does 96 per cent. All comes from Marseilles.

Sugar.—This is the premier import of Morocco (163 millions in 1920 and 108 in 1922), and France held 97 per cent. in 1922. Owing to large stocks during part of the year, local prices were well below Marseilles and losses made.

Tea.—The official figures show that British trade in tea, which was 74 per cent. in 1919, had dwindled to 39 and 40 per cent. respectively in 1921 and 1922. As stated in last year's report, London has been partly superseded as a result of the direct dealings of local merchants with Shanghai, transhipment of their consignments being effected at Marseilles. Statistics regarding 1923 shipments are not yet available, but we still figure for a fair share of the trade compared with 1922. The market has been overstocked throughout the year, and in some months (*e.g.*, August) no trade passed between London and Morocco.

Woollen Goods.—Sales were poor during 1923. Very little of this import comes from Great Britain. Here, again, France holds the field.

Without going into detail, it may be mentioned that several articles, owing to the overstocking of the market and the general diffidence of customers consequent on exchange, a poor crop yield, and lack of ready money, were sold locally at prices below those ruling in the exporting markets; for example, at various periods in the year 1923 this happened in sugar, tea, cottons, rice, coffee, ironmongery, and cement. With the prospect of a good crop all this would change, and a fair demand with remunerative prices will spring up. As stocks are fairly low and need replenishment, the import market of Casablanca is entering the year 1924 in a relatively healthy condition.

Exports.

Recent exports, total weights and value (in 1,000 tons and millions of francs) to all countries were:—1920, 164 (exclusive of exports to Algeria by land), 260; 1921, 358 (exclusive of exports to Algeria by land), 306; 1922, 338, 213; 1923, value 272.

To 1922 weights (the only year available) are added the 15,000 tons exported through Oudjda. The improvements made by the French in the agriculture of the country are so far insufficient to affect the total volume of exports, which have hitherto depended entirely on crop yields. This from now on will no longer be the case, as . . . . phosphates alone will soon exceed the total tonnage of exports hitherto attained even in a record year.

Harbour Works.

The port of Casablanca has been the greatest public work carried out by the French in Morocco The port, commenced in 1913 by the firm Schneider et Cie, is now nearing completion in its most arduous part. The massive grand jetty is to extend for 2,050 metres and is to-day 120 metres short of its goal. The transversal jetty has advanced 860 metres out of the 1,600 metres of its programme. Already the 150 acres of water space in the port are fully protected in all weathers. Two to three steamers can already lie alongside the grand jetty simultaneously and passengers be landed direct on to the quay. Supplementary

Digitized by Google

docks and wharves are to be built later, and the equipment will be sufficient to handle 1,500,000 tons of merchandise per annum exclusive of phosphates. 1923 figures; including phosphates (190,000 tons), gave a total of 680,000 tons handled in the port.

The port of Saffi—for lighters—was commenced in 1923, and work is proceeding actively on the port at the mouth of the Bou Regreg—the port of Rabat-Sallee. At Fedhala, where a small lighter port has been constructed, there is a scheme to continue construction and equip the harbour as the oil fuel port of Morocco, and it is believed the necessary steps will be taken shortly. Work is also proceeding in the small Mazagan port Finally Agadir, the southernmost port of Morocco, which the Protectorate have not yet opened to commerce, is being equipped with a lighterage harbour. The opening of Agadir will, it is feared, affect the prosperity of Mogador, as the Sous, or district south of the Atlas, is at present supplied through Mogador.

The policy of spending so much money (including Mehedia-Kenitra in the north) on a row of seven small Atlantic ports, in addition to the immense work undertaken at Casablanca, is declared in many quarters to be unnecessary and extravagant in view of the modest maximum yield that Morocco can render for many years to come.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Iron Bars.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of iron bars, different dimensions, for the workshops and trades schools of the Ministry during the school year 1924-1925. August 30.

Turkey.

Safes.—The Direction de l'Intendance des Postes et Telegraphes, Constantinople, invites tenders to be presented not later than September 23 next, for the supply of fifty safes. (D.O.T.)

TANGIER HARBOUR CONCESSIONS.

An international company, known as the Société du Port de Tanger, has been granted a concession to construct and operate a port at Tangier. The Shereefian Government is now inviting tenders for the construction of the harbour. Tenders are due to reach the Adjudications Committee at Tangier not later than 10 a.m. on November 27. British firms desirous of inspecting the conditions of contract, specifications, etc., should apply to the Department of Overseas Trade.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras, and Calcutta (London, August 9).

Anchor Line.—S.s. Olympia for Bombay (Liverpool, August 6).

British India Line.—S.s. Turkistan for Colombo, Madras, and Calcutta (London, August 2); s.s. Mulbera for Bombay and Karachi (London, August 8).

Clan Line.—S.s. Clan Murdock for Bombay and Persian Gulf (Birkenhead, August 15).

Ellerman "City" Line.—S.s. City of Christiania for Calcutta (Birkenhead, August 1).

Ellerman Lines.—S.s. Algerian for Gibraltar, Malta, Patras, Piræus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 16).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 9); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool September 6); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 13).

P. and O. Line.—S.s. Macedonia for Bombay (London, August 8); s.s. Novara for Colombo, Madras, and Calcutta (London, September 6).

Prince Line.—S.s. Scottish Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, August 2).

M. Tsouderos, the new Greek Finance Minister, stated in an interview with newspaper representatives that the financial situation of the country was good (says a Reuter message). Revenue had exceeded the estimates, so that, with the proposed economies, the estimated deficit of 500,000,000 drachmæ would be covered. The Minister stated that he would oppose all increase in expenditure and would repeal the laws of the late Papanastasiou Government providing for fresh expenditure.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Irregular.

The Alexandria Commercial Company, in their report for the week ended July 17, state: —

The market during the past week has been irregular. The net changes since last Thursday are: Sakellaridis, 1.35 dols. up for July, 0.13 dols. up for November, 0.43 dols. up for January. Ashmouni, 0.55 dols. down for August, unchanged for October, 0.05 dols. up for December, 0.15 dols. up for February. Sakellaridis old crop has been very firm by reason of covering. The small actual stocks of tenderable grades and the big premiums which these grades command on the spot are not conducive to tendering, and sellers of July have preferred to buy back their contracts. As a result of this covering, the premium of July over November has widened to 567 points against 445 points a week ago. New crops have been comparatively weak; New York prices have risen over 100 points on the week, but our market has not responded. Sakel is not so bad as Ashmouni in this respect, for it must be remembered that the rise of November Sakel last week was out of all proportion to the improvement of New York prices. Demand from trade centres continues poor, in spite of reports from Manchester of rather better inquiry. The consumption figures of cotton in the U.S.A. for the month of June are: B/s 350,000 against B/s 414,000 last month and B/s 542,000 a year ago. The total since August 1, 1923, is B/s 5,325,000, against B/s 6,202,000 the previous season. The week's receipts amount to 661 krs., against exports 21,796 krs.; the stock stands at 495,790 krs.

Spot.—Total sales amount to about 2,500 B/s, of which we estimate 2,000 B/s Sakellaridis, 450 B/s uppers, and 50 B/s white. We have only had three sessions during the week, the market being closed on Monday and Tuesday owing to the native Bairam festival.

Sakellaridis.—The feature of the week has been the greatly increased demand for fully fair and fully fair to good fair; a certain amount of this cotton still remains on the market, but it is mostly poor style. Practically no business has been done in cotton above fully good fair. The price of spot as compared with contracts is perhaps slightly easier owing to the rise.

Uppers.—All grades have been dealt in during the week. The price of spot as compared with contracts is about unchanged. It is now impossible to find any cotton round about fully good fair on the market.

White.—A small business has been done in good fair to fully good fair and fully good fair to good at prices ranging about a dollar cheaper than Sakel of similar grades.

Crop, 1924.—Crop news is, on the whole, good, although complaints reach us from some districts that the bolling of Sakel is not all that could be desired. Ashmouni and Zagora are maturing well, and the prospects for these varieties are splendid. Pink boll worm is already reported, but, naturally, it is too early yet to form any opinion as to the probable intensity of the attack. Temperature is somewhat lower than last week, owing to cool winds, and this may retard growth slightly in the northern districts. Water is, generally speaking, sufficient for requirements, and the flood is coming down well.

LIVERPOOL COTTON REPORT.

Interest in Spot Cotton.

Messrs. Reynolds and Gibson report as follows for the week ended July 23:—

Egyptian Spot.—More interest has been taken in spot cotton this week, and although the actual paper inquiry has been on modest lines, spinners have been keeping in close touch with the market. The chief impediments in the way of a further buying movement are (1) (as before) the discounts into the new crop positions, and (2) the attitude of manufacturers who persist in ignoring the recent rise in the raw material, with the result that spinners, who have been buying merely in hand-to-mouth quantities for some time now, are finding it impossible to sell their yarn except at a loss. The spot inquiry has been of a general description, and has covered practically all growths. In uppers, fully good fair at 100 to 150 on July has been in request, with here and there an isolated inquiry for good to fine, which latter cotton is conspicuous by its absence only. In Sakellaridis "50 off to 50 on" has been a popular range, but we doubt if much actual business has resulted from it. Fully good fair at 250 on to 300 on July has found support, and a small, steady demand for fine cotton continues, but the selection here is an extremely narrow one. Brown cotton still figures on the list, but buyers (when they do appear) only purchase in very small quantities. Scarto cotton has been purchased on several occasions at from 5d. to 12d. An improved business has taken place in Sudan cotton of the Sakellaridis variety, at prices varying from 23.00d. to 24.50d. The inquiry for white Sudan has been poor. C.i.f. business has shown some signs of improvement, particularly for prompt shipment, a sure sign that many spinners are short of cotton. Forwardings for the week ending 18th instant were returned as 7,871 bales. Estimated sales, 1,900 Egyptian and 800 bales Sudan. Quotations of Sakellaridis are raised 80 points for fair to fully good fair, and 90 points for good and above. Brown and upper are advanced

85 points. Fully good fair Sakellaridis to-day 24.15d.

Egyptian Futures.—The movement in this market during the past week has been rather more pronounced. July, the chief trading month of the old crop, fluctuating between 21.60 and 23.15. At one period the more buoyant tendency was counteracted by the easier American markets and some scattered liquidation, which caused a set-back from the early advance of some 50 points. Subsequent reaction to to-day's high level can be mainly attributed to the "bullish" American condition figures and to trade covering, which revealed a scarcity of contracts for the near position.

To-day's session opened quiet at about a farthing down, and showed an easier undertone, but on the appearance of Continental buying and trade covering, and with little cotton offering, the market made a rapid advance of 80 points, causing a new high level for the week, November at one time reaching 20.15. This figure was not quite maintained, and we closed 10 points from the top.

New Crop months have been subjected to some pressure, and transfers of hedges from July to November have accentuated the already considerable discount. At one time July was traded in at 320 points over November, but at the close to-day the difference stands at 300 points, or 25 points wider than at last week's close. Stocks of actual cotton in Liverpool suitable for tendering purposes are at a low ebb, and it is quite possible that a further tightening of the July position may be witnessed before the end of the month. This is rendered more probable as a considerable portion of the sales of this position have been effected on account of the trade, against cotton purchased "on call," the price of which will have to be fixed before the termination of the month, and this, of course, minimises the likelihood of a heavy tender.

NEWS FROM ALL SOURCES.

Lt.-Col. the Hon. Charles Clive Bigham has been appointed a director of the Ionian Bank.

In June 33,791 tons of sugar were exported from Czecho-Slovakia, compared with 16,240 in the same month last year. From October 1 last to June 30 exports totalled 621,069 tons, compared with 360,702 tons in the corresponding period of 1923.

A Reuter message from Bucharest states that the *Official Gazette* publishes particulars of a new Customs tariff to come into effect as from August 1. The dues, which will be sensibly increased, will be payable in gold and will be calculated provisionally at the rate of 30 paper lei for 1 gold leu. To those nations which do not extend to Roumania the principle of most-favoured nation treatment the tariff will be three times as high.

Bulgaria proposes to pay Serbian claims on Bulgaria fixed by the recent agreement by handing over corn to the total value of 3,500,000 gold francs, but owing to the bad harvest she is unable to deliver more than the 400 waggon loads already sent. The shortage has been agreed to be made up by a payment in dollars or in gold francs within a specified period according to the rate on the Antwerp market, says a Reuter message from Belgrade.

The first international management congress at Prague under the patronage of President Masaryk and the honorary chairmanship of Mr. Herbert Hoover, the U.S. Minister of Commerce, concluded its deliberations on July 24. About 400 delegates were present including 54 British and American. Among the subjects under discussion were the human element in scientific management, profit sharing and co-partnership, economic limitation to the application of machinery in agriculture, uniform world currency, coal storage, etc.

H.M. Representative at Constantinople reports that, according to the local Press, a law has been promulgated which authorises the temporary duty-free importation into Turkey of boxes destined for the packing of figs and raisins for export, as well as boards for the manufacture of such boxes, and of "Tcheuzgu" and "Kaskan" yarn for the manufacture of carpets. The boxes and boards entitled to duty-free entry will be limited to a fixed annual quantity, and re-export must be effected within one year. In the case of the carpet yarn, a period of two years is allowed for the re-export of the finished goods.

Company Meetings.

LAKE COPAIS COMPANY.

Value of Company's Work to Greece.

The ordinary general meeting of the holders of shares and debenture stocks of the Lake Copais Company, Limited, was held on July 28 at Winchester House. Mr. W. Sandford Poole, the chairman, presided.

The Chairman said he was pleased to be able to submit accounts which showed much better results in sterling than those of the previous year. The difficulties in regard to exchange had been a source of continual anxiety, and it had been so unsatisfactory to sell their produce for drachmae that a great part of the company's sales during 1923 were effected in sterling. Political conditions in Greece had been extremely unsettled. It was only in April last that the people declared in favour of a Republican form of Government, so that there had not yet been much time for the nation to settle down under the new *régime*. The value to Greece of this company's work would be appreciated when he pointed out that the Copais estate, once a fever-breeding marsh, had been converted into some 60,000 acres of productive arable and pasture land. During 1923 the estate produced about 15,000 tons of cereals for consumption in Greece, in addition to other valuable crops, such as cotton and lucerne, besides providing grazing for about 100,000 head of stock. It was estimated that, including the families of tenants, their dependents, and the estate employees, the company directly supported in Greece from 12,000 to 15,000 people, and as the estate was not yet fully cultivated it was hoped to increase these figures considerably as time went on.

The company held its concession from the Greek Government, and was entitled to absolute ownership of some 20,000 acres of the reclaimed land and the use of the remainder of the estate rent free for a long period. The position of the respective areas had never been defined by the Government, in spite of frequent applications by the company for a settlement. Moreover, the company had suffered serious loss, having been deprived, through encroachments by local farmers, of the use of large areas of some of the best reclaimed lands for the 30 years since the lake was drained. There were also other rights of the company under its concession which required clearing up, and for many years negotiations for the settlement of these outstanding questions had taken place with the various Greek Governments in power. Agreements had been signed and Bills to ratify them introduced in the Chamber of Deputies, but, owing to political changes, they had never been ratified. This long delay had been a constant source of trouble and expense to the company, had hindered full development, and had prevented the company from enjoying some of the privileges promised by the concession, in the development of which vast sums had been expended. The company, by draining and reclaiming the marsh, had rendered a national service to Greece, but had as yet reaped no adequate reward; it had never earned a dividend on its share capital, having, in fact, earned much less than full interest on its debenture capital.

The directors felt assured that it was the desire of the Greek nation that all enterprise undertaken for the good of the country should receive just treatment, and they hoped that no further time would be lost by the Hellenic Government in dealing with the case on its merits and according a definite settlement to the company. By doing this they would show British investors that Greece intended to see that justice would be done to those who invested their capital in that country, while further delay by the Government in dealing with the company's grievances would have the reverse effect.

The past year's crops were harvested from 24,668 acres, as compared with 22,657 acres in the previous year, and, with the exception of lucerne hay, the yield per acre was above the average. The quality of the grain generally was excellent throughout. In the present year a total of at least 30,000 acres would probably be cultivated, against 26,683 acres last year. Under the development programme it was hoped to plough and seed before the end of the year an area of approximately 5,947 acres of the central lands which had gone out of cultivation. The net profit in Greece for the past year was £23,606, as compared with £9,626 for 1922 and £17,567 for 1921.

The report and accounts were unanimously adopted.

EGYPTIAN DELTA LIGHT RAILWAYS.

The annual ordinary general meeting of the Egyptian Delta Light Railways, Ltd., was held on July 25 at Winchester House, Old Broad Street, E.C., Sir Montagu Sharpe, K.C. (the Chairman), presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Those shareholders who watch the traffic returns, which are periodically published in the Press, will have noticed that for the first half of the year there was a continual decrease in the aggregate gross receipts from coaching and goods traffics, particularly in coaching traffic, which at October 31 was as large as £26,500 below the returns for the corresponding period of the previous year. So far as the coaching traffic was concerned, this condition of affairs was principally due to two causes: to the poverty of the fellaheen and to motor-car competition which has arisen, principally in the Behera district, and to a considerable extent in the Gharbieh and Eastern districts. The poverty of the fellaheen is unfortunately out of our power to relieve, but it is otherwise with the motor competition.

Immediate measures were necessary to eliminate or at least to reduce this competition, and, after full consideration, the Board decided that the best course to adopt was to make drastic reductions in fares and at the same time to run a more frequent train service. This was done, special attention being given to the convenience of market passengers, for whom special market trains were run and cheap return tickets issued. I am glad to say that this policy has resulted in improved results. There was at once a large increase in the numbers of passengers carried, and the decrease in receipts to which I have referred, with the assistance of improved financial conditions in the provinces in the latter part of the year as a consequence of a good cotton crop, began slowly to disappear, and at March 31, 1924, it had been reduced by £22,200—namely, from £26,500 to £4,300.

Because of the large reduction it was necessary to make in fares, the receipts did not improve in anything like the same ratio as did the numbers of passengers carried, which were 5,135,454 for £207,169, as compared with 4,790,814 passengers for £210,562 during the previous year, but we have the satisfaction of knowing that the motor-car competition is declining.

If you will turn to page 5 of the directors' report you will find reference to an application which has been made by the Board to the Egyptian Government for a reconsideration of the terms of the concession relative to the method of calculating the Government share of profits, which, you will recollect, was that the company is allowed a fixed percentage of 64 per cent. of its gross receipts to cover its working expenses. This arrangement, as you are aware, was entered into in 1913, when our working expenses were in the neighbourhood of 61 per cent., and would, I am convinced, have continued to be a most satisfactory one but for the intervention of the war. As, however, the ratio of expenses to gross receipts has since the beginning of the war averaged about 70 per cent., it is evident that the existing arrangement bears very hardly upon the company, and your directors hope that our present application will receive the same sympathetic consideration from the Government as has hitherto been accorded to us.

I will now deal with the net revenue. If the balance of £61,599 0s. 1d. brought into the account from the previous year be deducted from the balance of £112,776 18s. shown as carried forward this year, it leaves an amount of £51,177 17s. 11d., which is our total net revenue from all sources for the year under review and available for distribution, after allowing for all fixed charges, provision for income-tax and for Government share of profits.

After careful consideration of the present somewhat unsettled conditions in Egypt, we have decided to recommend that a dividend of 4 per cent. be again declared on the Preference share capital, which will absorb £41,631 4s. and leave a balance of £9,546 13s. 11d. of the actual net revenue of the year to be added to our carry-forward. This balance, you will observe, is practically the amount of the third and final instalment of the sum which has been refunded to us by the Government, and which can no longer be included in future calculations.

The resolution was seconded by Sir William E. Garstin, G.C.M.G., G.B.E., and was carried unanimously.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment, of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALI-IMLI PURE WOOL

Makers of the famous Lali-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Great-coat Cloths. All requirements in Wool at lowest prices consistent with quality.

Cawnpore Woollen Mills Co., CAWNPORE.

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.

The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

Cawnpore Cotton Mills Co., CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO., CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mills Co., DHARIWAL.

NOTES OF THE WEEK.

Balkan Rumblings.

Recent news from the Balkans is of a disquieting nature. No actual incident of itself has had any special significance, but the cumulative effect of the reports is to suggest that forces making for trouble are receiving encouragement. There have been vague charges regarding collisions on the Serbo-Bulgarian frontier: a curious episode is said to have occurred on the Serbo-Greek frontier; a party of Yugoslav citizens was being escorted to the border for expulsion, when they are said to have tried to escape, and nineteen were shot. The news comes by way of Vienna, and, therefore, will need confirmation. Its importance does not lie so much in the shooting, with the stereotyped explanation of attempted escape, as in the fact that there should be, if the facts are as stated, a comparatively large number of Yugoslav undesirables in Greece calling for expulsion. The Bulgarian Government has followed up its warnings about Bolshevist activities in the country by asking the Allied Powers for permission to recruit three thousand volunteers for three months' service to deal with brigandage in Eastern Bulgaria, which, according to the official account, threatens to assume formidable proportions unless dealt with promptly. It will be understood that Bulgaria with her exiguous army will not want to deplete her forces in the west and south to take the field against brigands in the east. In the circumstance it seems inexplicable that the Allied Powers do not take the simple step of calling a round-table conference, at which Yugoslavs, Roumanians, Greeks and Bulgarians will be represented. All the facts of the situation can be discussed, and each State will be required to accept evidence which it cannot disprove or logically refute. At present charges are bandied freely, and it seems to make little difference whether they are met satisfactorily or not; they are not withdrawn, and the ill-will based on them continues. What is needed is that some higher authority should require the different Governments, if they cannot substantiate reasons for enmity, outwardly to maintain friendly relations and to abstain from pinpricks.

The New Yugoslav Ministry.

It is noticeable that no time has been lost in an attempt to discredit the Cabinet of M. Davidovitch, who has agreed to try to administer Yugoslavia for a period without recourse to fresh elections. The new Prime Minister is reported to have consented to the return of M. Raditch to Yugoslavia as the price of the support of the Croatian party in the Skupshtina. Whether this step is equivalent to an understanding between the Yugoslav Government and Moscow must at least be left an open question until there is more evidence on the subject. That M. Raditch is a visionary, and has given no indication of being able to cope with the actualities of everyday politics, is probably quite true; but there is still a distinction between his shortcomings in this respect and complete surrender to Bolshevism. A good many of M. Pashitch's opponents say that he has only to live long enough and to hold office often enough to convert everybody in Yugoslavia into red-hot Bolshevists. However that may be, it may well seem worth while from the point of view of M. Davidovitch to try to win M. Raditch to reasonableness before he is finally driven into the arms of Moscow. This cannot be done by keeping him an exile in Russia. If the Croatian leader does agree to return to Yugoslavia, he will probably understand that his personal security will depend largely on his good behaviour. Apart from the fact that he has alienated the sympathies of many of those who were opposed to M. Pashitch, he can hardly shut his eyes to the fact that a swing of the pendulum may easily bring the latter back to power, and to escape arrest he might again have to flee the country.

Yugoslavia and Macedonia.

The first task of M. Davidovitch's Government, we trust, will be to investigate the Macedonian question. Nine years ago Bulgaria's attitude in regard to the Great War hinged entirely on Serbia. She put forth certain demands which only the

Digitized by Google

Serbian Government could meet. That Government, in spite of the Allies' appeals, refused to consider the Bulgarian demands until it was too late. The War took its course, and the effect of the Serbian refusal is scored deep in the experiences of the Serbian people, and was a serious matter to her Allies. A similar situation confronts Yugoslavia to-day. The Macedonians make certain demands of the Belgrade Government, reasonable enough from their own point of view, altogether unreasonable from the Serbian point of view, which is not necessarily endorsed in every part of the Kingdom of the Serbs, Croats, and Slovenes. In 1915 the Serbians proposed to make short shrift of the Bulgarians, as to-day the régime of M. Pashitch considers itself able to deal effectually with the Macedonians. They may again be mistaken, and if they are, there can be little doubt that the effect will be to give a considerable stimulus to Bolshevism and the forces of general disorder in Europe. In these circumstances Yugoslavia can hardly be surprised, if her former Allies are asking themselves whether it is necessary to allow even the Near East to be plunged into chaos because a Belgrade Government refuses to look beyond its own nose. If M. Davidovitch can solve the Macedonian question, he will remove a very grievous stain from Yugoslavia's shield.

Fomenting Trouble.

There is much truth in the statement made by the Colonial Secretary last week that in the present position in Iraq things said may not be understood there in the same sense as they are in the House of Commons. It is difficult to believe that even the most disgruntled Englishman, who has once had the responsibility of administrative office, will, merely "to get his own back," deliberately embark upon a campaign which may, directly or indirectly, foment trouble in the East, and thus endanger life and property. There can be no doubt that a very dangerous position is created when, in the present temper of the world, an Englishman lends himself to a course of action which can be taken by an Eastern people as encouragement in their opposition to Great Britain, in view of the fact that opposition, as understood by them, must be supported by force to be effective. As far as Iraq is concerned, the fact is that the country is even more split up into factions than most Eastern countries. There is the rivalry of tribe and tribe, the antagonism between tribesman and townsman, the jealousy of individual leaders; some Iraqis welcome the presence of a Shereefian king as an alternative to the civil war that would inevitably have dogged the promotion of a local chief, others resent the importation of an outsider, others again may claim to be republican at heart; some Iraqis would like to see the British withdraw entirely from the country, others would prefer them to keep their hold on the administration; to some the Turk is anathema, to others his presence in the country would hold out the prospect of personal profit. In all this there is nothing surprising; it is the aftermath of the Upheaval caused by the War. When, therefore, all the circumstances are taken into consideration there would seem to be no room for doubting that the best that could happen in the interests of the Iraqis as a whole is that they should be given time to learn their own mind, to find their own level. It is certain that in their present frame of mind they would not accord unanimous approval to any form of government. The allegation is made that the passage of the Anglo-Iraqi Treaty through the Assembly was secured by fraud or force; on the other hand, it is known that the opponents of the Treaty sought to strengthen their case by murdering or intimidating the supporters of the Treaty. In this state of affairs can it be profitable for any Briton to become a violent partisan against what is manifestly the sum total of British policy, to help the country to help itself to settle down as quickly as possible? The election of King Faisal may have been encouraged; it may be difficult to conduct the affairs of the Assembly on lines familiar to countries with long constitutional experience behind them. But no anomalies nor even irregularities can be quoted as an excuse for the serious harm that would be done by throwing Iraq again into the melting-pot when there is not the least chance of her acquiring a status of greater stability than she now has.

The Arrest of Saiyid Talib.

In furtherance of the desire to prejudice to the utmost the British position in Iraq—for this seems to be the only aim of the fishers in troubled waters and such organs in the Press as support them—a London newspaper has revived an incident already disposed of more than two years ago in the House of Commons. Saiyid Talib, at one time Minister of the Interior in the Iraq Government, was arrested three years ago and deported to Ceylon. Rightly or wrongly, he was credited with holding the view that there was not room in Iraq for both himself and the Emir Faisal, if the latter should be chosen as Sovereign, and when at a dinner in his own house he was reported to have said that two of his guests, powerful sheikhs, commanding armed forces several thousand strong, were prepared to deal with the Emir Faisal, he was taken at his word and room was made for the latter by the elimination of Saiyid Talib. The attempt is made in connexion with his arrest to make capital out of the fact that it took place as Saiyid Talib was returning from tea at the British Residency. It was undoubtedly unfortunate that the arrest was effected at the precise moment when it was; but, unless we are mistaken, the Emir Faisal was due to arrive in Iraq, and the authorities could hardly be blamed for taking Saiyid Talib at his own valuation. There is no truth in the insinuation that the visit to the Residency was in any way connected with the arrest. Saiyid Talib had a week previously invited himself to tea on this particular day, and as it was not easy in the circumstances to cancel the arrangement at such short notice, the High Commissioner contented himself with stipulating that the Residency should not be in any way involved in the arrest. Owing to a misunderstanding, however, the arrest was effected as Saiyid Talib was on his way back to the town, and every now and then it is used quite unjustifiably as the basis of a charge of bad faith against the British authorities, who are supposed to have required a decoy to enable them to lay hands on a public man residing in Baghdad and at work in the Serai every day. The charge is foolish and lacks foundation, but because it is offensive it serves the purpose of those who use it.

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 156 of this issue.

The Brain of India.

Affairs in India are showing for the moment something of the tranquillity appropriate to a season when all good men should be talking mainly about the weather, and doing their thinking for the next few months. It is permissible then to ask who is thinking for India, but it is not easy to find a satisfactory answer. One must look either to Whitehall or to Simla, but if brains are active in Whitehall, its official spokesmen are adepts in concealing the fact, while it is common knowledge that Simla is, as it always has been, overwhelmed with departmental detail, and barely able to keep pace with events of wider importance, much less to anticipate the developments of the future. That hard, continuous thinking is necessary will be questioned by nobody who appreciates the magnitude of the work on hand, the establishment of self-government among a mass of peoples who scarcely know what the phrase means, and whose leaders in many cases are still hankering after the old tradition of autocracy: yet the members of the Government come to the council chamber, tired with their departmental work, to deal with the urgent business of to-day, or perhaps of yesterday, and with little time, or energy, left for the problems of to-morrow.

Thinking by Proxy.

Sir Basil Blackett gave an apt illustration of the position when he recently explained the genesis of the new Taxation Committee to a critical gathering of Bombay merchants. He wants the Committee to do the thinking, because, as he tells us, whenever questions of taxation crop up, the decision has to be taken in a hurry and without regard to scientific considerations. Undoubtedly there is now ample work for a committee of the kind, but the reason is that for some years past the responsible authorities have been forced to let these thorny questions alone, until they have got into a regular tangle, which must now be scientifically straightened out. There need have been no tangle if the authorities had been able to think ahead and reach definite conclusions on the relations between central, provincial, and local finance, the effect on taxation of the permanent rise in prices, and all the other elements of the problem; but the authorities were struggling to get through the day's work, and they have now reached the point where they must do their thinking by proxy. India has been showing signs of restiveness lately over the growth of the committee habit, but, if she wants to break it she must begin by giving her Government time to think.

The Taxation Committee.

The prospects of this latest Committee strike us as somewhat dubious. The Government lays such stress on the scientific nature of the inquiry that one naturally looks for the employment of experts in the science, which is by no means an easy one to master, but, in point of fact, the Committee consists of two civil servants, a territorial magnate, and a professor of pure mathematics, to whom a practical man of business may possibly be added. The Civil Servants may, or may not, have mastered the science in the course of their work, but neither they nor the other members carry any particular weight in scientific circles, and the most probable theory of their appointment is that the word "scientific" was used merely to warn the politicians off. We should prefer to describe the Committee as a body of practical men who can be trusted to reach sound conclusions on some branches of their subject, but who are likely to be handicapped seriously by unfamiliarity with expert methods, and are perhaps more likely to recommend a further inquiry than to reach a final settlement.

THE WEEK AT HOME.

London, Tuesday Morning.

Ireland Again.

Whatever one may have thought of the fundamental sense of the peace which Mr. Lloyd George's Administration made with Ireland, one doubted its permanence, if only because of the purely opportunist way in which it was secured. But such gloomy confirmation of one's forebodings as is now to be had was scarcely to be expected. The Irish Treaty was a confused Treaty, and over its interpretation Ulster is, it seems, slipping away from the rest of Ireland, and, in this country, Liberal from Conservative.

The trouble is over the Boundary Commission. The Free Staters assert under a Boundary Commission the principle of self-determination should reign absolutely (e.g., Londonderry should be incorporated with Nationalist Donegal); the Ulstermen equally emphatically state that all that is provided for under the Treaty is a mere ratification of frontiers. The Home Government, in receipt of the judicial decision that Ulster is not legally bound to appoint a member to the Boundary Commission, is resolving to-morrow whether or not to introduce a new Bill to clear up the situation.

It is all very distressing. Ulster appears to have practically whole-hearted support from the Unionist Party, while Government and Liberal circles are credited with favouring the Free State. Certainly there is not much doubt that, if, as the Government suggest, they were to go to the country on the question, they would be returned. The only thing—and apparently the hardest thing—is to restrain passion and to wait and see.

British Industry and Trade.

Orator after orator has promised us that the worst of our depression in trade is over, and that a boom is on the horizon; everyone is being told to "hang on a little longer" and things will certainly begin to improve. But, as matters turn out, it is obvious that no one man knows enough about industrial conditions in Britain to be able to generalise on the situation. Individual prophets, those foretelling prosperity and those foretelling woe, may safely be mistrusted.

Now, however, it seems that we are likely to get an authoritative opinion on the probabilities of trade in and out of this country, because the Commission of Inquiry which the Government appointed began its labours last week under the chairmanship of Sir Arthur Balfour. This Committee has both to collect information and to give advice, but it is the first which will be more widely welcomed; give the English manufacturer facts, and he is willing to draw his own deductions from them. But perhaps to the Government itself, which before it came into office was so convinced of its ability to restore the post-War industrial system, the information will be even more welcome. At the moment no jibe gets deeper home than the one which deals with the Government's failure to deal with unemployment.

The Liberal Summer School.

The Liberals are holding what they call a "Summer School," during the holding of which they are conducting what they also call an "intensive campaign" throughout the country. We know that these things are facts, because we have read about them in Liberal newspapers. But ask anyone who is not in the habit of reading Liberal newspapers, and it is a hundred to one that he will never have heard of them.

For the truth is that the Liberals are going down, down, down. Nothing has gone right for them since they put the Labour Party into office

Digitized by Google

(which, of course, does not mean that that was not, from the point of view of the country, a very sound thing to do), and the result of the last by-election, in the Holland division of Lincolnshire, is as that of the first: Conservative and Labour close together and Liberal a bad third.

These must be melancholy days for the Liberals at holiday in their summer school. Beautiful, well-thought-out plans, exquisitely phrased panaceas—and all rejected by the democrats of this country. Still, Liberalism is at least meeting its doom with dignity.

"Simpler Spelling."

The disciples of Simple Spelling, sometimes called "The Neu Spelling," who just before the War were so feverishly active, are rearing their heads again, and a day or two ago privately visited Mr. Trevelyan, Minister of Education. They are a little less impetuous now than they used to be, and would be content for a beginning that what they call "rational spelling" should be introduced into school: the phonetic way, they say, is *the* way for the child. Thus, they suggest, "head," "breast," and "heart" should become "hed," "brest," and "hart"; and we should become enamoured of words like "askt," "dippt," "dout," "gost," "agast," "tung," and so on.

I am not well acquainted with the results of the teachings of the phonetic system, but it is claimed by these radicals that children pass in later years quite easily from the phonetic spelling to that in current use, although what is eventually aimed at is, of course, the universal employment of "rational spelling."

One does not wish to attack the advocates of this memorandum to the Ministry of Education, for they include eminent men of all shades of mental activity. But their intentions are too painfully utilitarian to command wide support: are children and foreigners the only people to be considered in the teaching of our language? And do they intend to destroy all hint of the origin of a word? And if, as they suggest, "f" should be substituted for "gh," what are they going to do with "dough"? Nay, nay, one of the beauties of the English language (a language, incidentally, for aristocrats, and not for democrats, who alone could conceivably benefit under these proposals) lies in the difficulty, the variety of its pronunciation.

Lulworth Cove.

The War Office at the moment is in very bad odour with the newspapers. Possibly it might survive this ordeal, but it has also roused Dorset opinion against it, and, in fact, all opinion which is in favour of the preservation in their natural state of what in this country are called "beauty spots." The War Office, it seems, has set its eyes upon Lulworth Cove, which is really a delightful place, for the purposes of a Tank School. Hearing in its Olympian fashion of certain ill-bred opposition to this proposal, it went to the Courts for authority to proceed with its scheme; and lost it! Now it states that in spite of this it will go on in its bungling way, and it appears that no one is empowered to stop it.

The Purchase of Titles.

A little while ago, in writing of the subject of the sale of honours, I mentioned the fact that a certain man who had paid for a knighthood and had not received it was deemed by a jury to be worthy of the return of his money. This complacent and disastrous judgment was rudely upset last week by Mr. Justice Lush, who said sternly that the citizen who is willing to put down money in order to lower the repute of the Crown must be discouraged; in other words, that fools who grope financially after a title without ever actually touching it must be punished for their folly, and that their money thus lost is not returnable at law. With which judgment every decent-thinking man is in concurrence.

An attempt has been made in this case of Colonel Parkinson to make out how unspotted the Central Conservative Office has come out of the matter, and the insinuation has been whispered that things would have turned out differently had the application been made to the National Liberal Offices. This is unworthy, for between the two parties there is nothing to choose. Abuse of the practice depends almost entirely upon the man at the head of the party.

The Bishop of Birmingham.

London on the whole is sorry at the appointment of Canon Barnes, of Westminster Abbey, to the Bishopric of Birmingham, for his personality, which is essentially modern, had made him widely favoured, and it is thought that his light may not shine so brightly in the gloomy provincial atmosphere of Birmingham.

Generally speaking, the new Bishop is considered by Churchmen as unorthodox. And there are certainly grounds for this assumption. At Cambridge it used to be a joke about him and a notable historian that the one went up a Christian and the other an atheist, and that each converted the other to his way of thinking. The fact remains that Bishop Barnes knows the ways of Agnostic thought from beginning to end. His appointment is, one feels instinctively, a sign of the moving times. To what they are moving, however, it is not for me to say.

Alter Ego.

The body of Major Imbrie, the United States Consoul, who was killed by an excited mob at Teheran, will be brought back to the United States on board the cruiser Trenton. The vessel now at Naples, is expected at Bushire on the 26th inst.

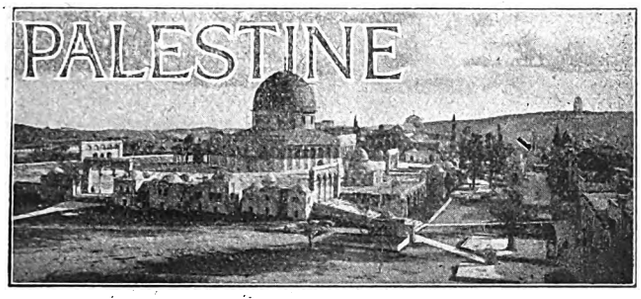
The Near and Middle East.*

From Our Own Correspondents.



Jerusalem, July 26.

The Political Arabs.

Things do not seem to be running smoothly and happily in the Palestinian Arab camp. At the very last moment the Secretary of the Arab Executive announced that the Seventh Arab Congress, which had been fixed to open on the 20th of this month, was postponed till some future date not yet determined. This postponement, so runs the official announcement, was decided upon in response to the requests of the Moslem-Christian Association of Haifa and Nablus, the Haifa Association preferring that the Congress should not meet until it had before it the conditions laid down in the final draft of the Anglo-Hejazi Treaty. Exactly what really lies behind this change of programme it is not possible to say; but it is obvious that a combination of causes has convinced the Arab Congress Executive that to hold a Congress at this moment is not to the real interests of their movement.

Some of these causes are clear: there is at the present moment a distinct lack of inflammatory matter with which to feed the nationalist passions, and to call forth the indignant resolutions of the Congress; furthermore, the past few weeks have seen a remarkable crop of new "Peasant Parties"—that of Hebron was reported in these columns a few weeks ago, and since then similar parties to those of Nablus and Hebron have sprung up, catering for the districts of Haifa and of Jenin, and the simple moral to be drawn is that the more substantial *fellahin* class despair of any advantage to be derived from the older Arab political methods, methods represented by the Moslem Christian Associations and the Arab Congresses, and think the readiest cure for their existing economic difficulties is to organise themselves on a local basis and attend solely, if not exclusively, to their local agricultural needs, and leave matters of higher politics to Allah alone. These "Peasant Parties" are loosely attached in sympathies and aims to the earlier "National Party" and therefore are openly at variance with the still earlier "Congress" organisation, and by no means in love with the Pan-Arab ideal, which turns on the protection and prestige of King Hussein. As other hindrances to the assembling of a solid and convincing Seventh Congress may be counted difficulties in the matter of elections and representation, and the present acrid dispute—a dispute which has even led to cases of personal violence—in the Jaffa Moslem-Christian Association (of which five members are on the Jaffa Municipality, which has accepted Rutenberg electricity, and so violated the express resolutions of the Sixth Arab Congress). Rather off the point, but worth recording, is the fact that a prominent member of the Arab Executive, Selim Abdul Rahman, the son of the Mayor of Tul-Keram, has been imprisoned on suspicion of being a leader in a local band of robbers which had recently been causing trouble in the neighbourhood; and the Arab Executive are now actively demanding "in the interests of justice" that he be released on bail.

IRAQ.

Baghdad, July 17.

Revival of a Dormant Feud.

The political changes and excitements of the last two or three years have led the casual observer to lose sight of the ancient feud between townsman and tribesman. A heated discussion in the Constituent Assembly, and the exchange of uncomplimentary recriminations between members of the two classes, culminating in the tribal deputies' leaving the building in a body, reminded all and sundry that the old feud which hampers the unity of Iraq, though dormant, still exists. Its origin dates back to the early days of Ottoman rule. The Turks regarded the tribes, organised as they were under patriarchal leaders, as a danger to their by no means strong administration; they therefore deliberately made it their policy to break the power of the big sheikhs and encourage tribal disintegration. As time passed, the townspeople were brought in on the side of the Turks, and were employed by them to assist in reducing the status of the sheikhly houses and the tribes over which they ruled.

At the time of the British occupation, the Ottoman policy underwent considerable modification. Instead of trying to scatter the tribes and diminish the power of the sheikhs, the British Government endeavoured to obtain the co-operation of the latter, and, in order to secure better administrative control, to unite the different tribes each under a single head. This policy was as remarkably successful in some areas as it was unsuccessful in others. Where the Turks had not completed their destructive work and the sheikhs still retained some authority over their tribes, co-operation secured a larger measure of law and order than had ever been known before. But in other districts, where the disintegration of the tribal elements was a *fait accompli*, the attempt to rule through men who, though descended from sheikhly families of renown, had lost all their authority, ended in catastrophe. The neglect of the urban elements, and the bol-

stering up of men who were sheikhs only in name, had much to do with the rising of 1920.

Since the formation of the Arab Government, the townspeople have, to a large extent, come into their own again, and are now as anxious to regain all their former advantages as the tribes are to retain the privileges granted them during the British occupation, privileges, it may be noted, to which the sheikhs by their birth and position and the tribes by their numerical superiority are justly entitled.

The match which lighted the train was that section of the Draft Organic Law which lays down that "Special courts or bodies may be established by law for the following purposes: (a) The trial of members of the military forces of Iraq for offences, as prescribed by the Army Law; (b) the settlement of tribal disputes in matters of a civil and criminal nature; (c) the settlement of civil disputes which may arise between the Government and its employees, in connection with their services; and (d) the settlement of cases concerning the enjoyment of and the boundaries of land." Of the above four sub-clauses, (b) attracted most attention.

Soon after the Occupation, the British authorities observed the injustice of applying the ordinary penal code to tribes whose social customs differed so widely from those of the rest of the community, and whose behaviour was governed by a number of strict though unwritten laws handed down from time immemorial. Hence they introduced the Tribal Civil and Criminal Disputes Regulations—a step which was welcomed by the tribes, but regarded by the townspeople as only another act of favouritism towards the tribes. *Primâ facie*, the townsmen would appear to have a legitimate grievance, for under the above regulations a tribesman guilty of an offence for which a townsman would be hanged, escapes with a small fine or a term of imprisonment; but they overlook the fact that they, unlike the tribesman, are under no obligation to take life. In the case of adultery, the townsman has his remedy in the courts; a tribesman, by the law of his forefathers and by the force of public opinion, is bound, if he wishes to retain his own honour and that of his tribe, to kill the woman concerned. In such cases even the ties of blood have to be sacrificed. Among some tribes, particularly jealous of the honour of their womenfolk, the mere breath of suspicion is sufficient cause for the woman's death, while cases are known in which the attempted rape of a young, innocent girl of ten or twelve years is her death-warrant.

Again, in the matter of tribal feuds, the old law of a life for a life is followed with the utmost rigidity. However many tribesmen may be caught and hanged on the charge of murder, the feud continues until settlement is made in accordance with tribal custom—usually the payment of so many women for each life. Hence, as the extreme penalty of the law does nothing to bring about the end of such a feud, with its heavy loss of life, special legislation has been brought into existence, aiming rather at hastening an amicable settlement between the contending tribes than at the promiscuous hanging of a few individuals, who, in taking life, are only fulfilling the most compelling of tribal obligations. Townspeople, being subject to no such obligations, are naturally tried under the penal code of the country, in which the penalty of murder is death.

The discussion in the Assembly arose over the wording of the first line of the above-quoted section —"Special courts may be established by law." The tribal deputies, having suffered in the past at the hands of the townspeople, viewed with suspicion the opportunity offered by the word "may" for the cancellation of the existing Tribal Disputes Regulations. They insisted that "may" should be changed to "must," a proposal which was opposed by the town deputies. This aroused the antagonism latent between the two parties, and led to much wild talking on both sides, ending in the retirement from the Assembly of all the sheikhs in a body. At a subsequent meeting, the wording was modified to meet the wishes of the sheikhs, though other extravagant claims put forward by some of their number were rejected.

Adoption of the Organic Law.

On July 10, amid applause, the Constituent Assembly adopted the Organic Law, the terms of which they have been discussing since the acceptance of the Treaty. Remarkably few amendments have been made in the draft law as put up to the Assembly, which has now completed two of the three tasks laid before it. The examination of the new Electoral Law is being undertaken as rapidly as possible, so as to permit of the new elections being completed by November. No difficulties are expected, unless the town deputies endeavour to curtail the electoral rights of the tribes.

The Asfar Concession.

The Asfar Concession, to which reference has already been made in these columns, has been definitely approved by the Iraq Government. The period of the concession is for sixty years from the beginning of each major project, and the capital, for the opening up of the experimental areas at least, will be found by British companies interested in the development of cotton.

Departure of the High Commissioner.

Sir Henry Dobbs, High Commissioner for Iraq, left Baghdad by air on July 14, on two months' leave, accompanied by his private secretary, Captain Holt. His departure, originally fixed for soon after dawn, was delayed by high winds until the afternoon; even then the machine had to make a forced landing at Fallujah owing to the prevalence of sand-storms at Ramadi, where he was breaking his journey for the night. Sir Henry intends to travel by the Lloyd-Triestino line to Trieste, thence to London by the Orient Express, arriving on July 23.

Mr. Nigel Davidson, Counsellor, will act as High Commissioner during Sir Henry's absence.

American Airmen at Baghdad.

July 8. In spite of their fatigue they at once attended to their machines, making all the necessary preparations for an early start on the following morning. Unfortunately their departure was delayed by electrical trouble in the "Chicago," the aeroplane piloted by Lieut. Smith, the leader of the expedition. As soon as the fault had been traced and rectified, the three American machines left for Aleppo, escorted for part of the way by a squadron of the R.A.F.

Outrages in Baghdad.

Two outrages have been committed in Baghdad during the past week, and it is believed that one of them, if not both, may be traced to the activities of one of the secret political societies of Baghdad.

A man entered the office of Mahmoud Shahbandar, one of the leading merchants of Baghdad, and produced a letter which bore the seal of an alleged secret society. In this the immediate payment of Rs. 2,000 was demanded. Mahmoud Shahbandar, although the man was armed with a revolver, immediately grappled with him, and with the help of his employees succeeded in overpowering him. Later the police arrested four accomplices.

In the second case, the Editor of *Al Mufid*, who has been conducting in his paper a campaign against certain Government officials, was held up in a narrow lane by two effendis, one of whom shot at but missed him. Both thereupon made good their escape.

Attack on R.A.F. Officers.

Some six months ago, while taking an evening stroll outside Baghdad West, two R.A.F. officers were set upon by a gang of Arabs. Flight Lieut. Gendle was killed outright, and Flight Lieut. Pearce seriously wounded. After exhaustive investigations, rendered more difficult by the fact that the suspected persons were tribesmen, the Criminal Investigation Department obtained sufficient evidence to arrest a number of Arabs. Two of these have now been given life sentences as accessories, while several others have been ordered each to give a bond of Rs. 1,000 to be of good behaviour, or, in default, to undergo one year's imprisonment.

PERSIA.

Teheran, July 8.

The Shah.

Upon the receipt of the Shah's wire in reply to the telegram from the Ulema, mentioned in my last letter, urging him to hasten his departure for Persia, the Prime Minister telegraphed the Shah a few days ago in the same strain. Sardar Sepah, after expressing pleasure at the news of His Majesty's improved state of health, and stating that complete order prevails in the country and the situation is quite quiet, requests him urgently to return as soon as possible in the interests of the nation. In reply, the Shah wired thanking Sardar Sepah for his message, and stated that he hoped to return shortly, as soon as his improved state of health permitted, and requested the Prime Minister to keep him well advised by telegraph in the meantime.

The Commercial Agreement with Russia.

Negotiations in this connection have been dragging on for nearly three years since Taghizadeh was sent from Berlin to Moscow by the Persian Government, and, after many interruptions, due mainly to the uncompromising attitude adopted by the Soviet Government, especially with regard to Customs duties on goods coming into and going out of the two countries, the Russo-Persian Commercial Agreement was finally signed here last Thursday, 3rd instant. A luncheon was given at the Ministry for Foreign Affairs following its signature, at which were present Sardar Sepah and the Cabinet Ministers, the Russian Minister (M. Shumiatski) and the staff of his Legation, Dr. Millspaugh, and the Administrator-General of Customs. Cordial speeches of mutual thanks were delivered by the Minister for Foreign Affairs and M. Shumiatski, and hopes expressed that this fresh agreement, supplementing that of 1921, would do much to bring the two neighbouring nations still closer together, and improve the relations existing between them, as well as to increase and encourage trade between them, to their mutual advantage. The Foreign Minister stated that, of course, no commercial agreement can be complete without the settlement of the question of Customs tariff between the two countries, which has been such a sore point during the last two or three years, but a mixed committee was working at this question, and he hoped that complete agreement would shortly be reached. The next day a reception was held at the Russian Legation in town, as well as up country, to celebrate the event. The agreement must now, of course, be submitted to the Mejliss for examination and ratification, but it is not expected that any material opposition will be offered.

Murder of a Newspaper Editor.

Considerable excitement and no little consternation were caused in town, and especially in the local Fleet Street, last Thursday morning by the news that Mirzadeh Eshghi, proprietor and Editor of the newspaper *Gharni Bistom* (Twentieth Century), had been shot in his house and removed to hospital in a dying condition. One of the two assailants managed to escape, but the other was caught and taken into custody. The fact that the victim's paper had written strongly against the Republican movement and had once been suspended for its outspoken articles gave rise to the suggestion that political significance attached to the crime, but this has not yet been established. Eshghi died a few hours after being shot, and his funeral the next morning was witnessed and attended by large crowds and was made the occasion of demonstrations of sympathy and consternation. Meanwhile, the Editors of the other papers had proceeded to the Parliament, where, as they advised the Deputies, they intended to take "bast" (sanctuary) as a protest against the outrage, and they would stay until the matter was thoroughly gone into by the Government, the motive of the crime discovered, and the murderer tracked and suitably dealt with, otherwise the lives of none of them would be safe from the weapons of their political opponents and they might share their colleague's fate. A deputation also waited on the Prime Minister, who is reported to have been most annoyed at being troubled on such a small matter, and asked them why they made such a fuss over the death of one man when hundreds of their kinsmen had been recently killed on the field of battle. The Editors are still at the Mejliss to-day. An amusing aspect of the case, which tends to show the hostile attitude of the gutter Press towards British policy in Persia, is furnished by the articles published in two of the irresponsible papers accusing the British of being the instigators of the crime, and making Eshghi out to be the victim of British grasping colonial policy! And this in consequence of the murdered man having, a few days before his death, published an equally ludicrous and fantastic article depicting John Bull

riding on the Republican donkey, and as being responsible for the agitation in favour of a Republic! Surely life is considered cheap by the British, according to these papers! It seems as if all Persia's troubles must be laid at the door of foreign intrigue, and when it is not the Russians it is invariably poor John Bull who is blamed for any untoward occurrence, and held up as a disturbing element in Persian politics! The movement in favour of a Republic was put down to British intrigue, and when it failed this was likewise our doing, as is also the delay in the ratification by the Mejliss of the Northern Oil Concession in favour of the Sinclair Company, and now comes this last equally fantastic accusation!

The Editor of another paper was arrested last night; for what reason is unknown.

A Twentieth-Century "Miracle."

The age of miracles is apparently not yet past in Persia, and the latest instance, which occurred a few days ago, has caused quite a stir in the town, and is being exploited to the utmost by the clerical party. The story goes that a water-carrier begged a few *shahis* (nickel coins) from a Bahai in a tea-shop in the name of Hazrat Abbas, the half-brother of Ali, grandson of the Prophet, with which to buy ice, and the man replied that he would give him nothing in that name, but if he asked in the name of Abbas Effendi (the late Bab) he would give him up to five tomans. No sooner had he uttered this blasphemy against a name revered in Mohammedan religious history than his eyes were seen to bulge from his head, and he became blind (the popular story asserts that his eyes actually dropped out of his head!). Whether the latter part of the story is true or not is, of course, a matter of conjecture (incredulous unbelievers tell me that the man was lighting a fire, and sparks flew into his eyes!), but eye-witnesses confirm (for the poor wretch was on view at the tea-shop, to which crowds flock) that his eyes are certainly very sore and swollen, and it may be that he is really blind. In any case, it has been hailed as a latter-day miracle, and a large number of tea-shops and other shops are decorated with carpets and other ornaments, in the Persian fashion, and illuminated at night in honour of the wonderful event, which is naturally being made the most of by the Mullahs as propaganda against the Bahais, whose rapidly increasing numbers throughout the country have made them very unpopular with the clerical party. Some Bahais were maltreated yesterday in the streets, and there was an attempt to loot some shops kept by Bahais, but nothing serious has so far occurred, though religious processions parade the streets at night, chanting and shouting, and otherwise disturbing the beauty sleep of the inhabitants in the neighbourhood!

General News.

Dr. Gilmour, a representative of the Health Section of the League of Nations, sent by the latter at the request of the Persian Government, arrived here some days ago to investigate malarial fever, which is such a scourge throughout the country, and to endeavour to prevent its spreading. Dr. Gilmour has the best wishes of the Persians in his task, as well as of the European community, very few of whom have not fallen victims to malaria.

Four of the armoured cars recently purchased in Europe for the army were driven through the streets the other day, and excited the curiosity and enthusiasm of the onlookers. Their camouflage of green and yellow is hardly suitable to this country, where trees and green fields are the exception rather than the rule.

GREECE.

Athens, July 26.

M. Papanastasiou's Defeat.

The Papanastasiou Cabinet has resigned after a severe defeat in the National Assembly. The Government's downfall, which was not altogether unexpected, was brought about by a fierce attack of the Opposition groups, which for once presented a united front in the Assembly The shocking scenes which occurred in the Chamber twenty-four hours earlier were probably to a certain extent responsible for the Government's defeat; the main reason should be sought, however, in the numerous mistakes made by M. Papanastasiou's Cabinet during its four months' reign, also in the carelessness and maladroitness with which it handled several important internal questions, such as strikes and the naval officers' resignation.

The Ministerial crisis which ensued did not, fortunately, last long, and a coalition Cabinet under M. Themistocles Sofoulis, a member for the Island of Samos, and four years ago President of the Venizelist "Voulé," was sworn in two days later. Although the Sofoulis Cabinet is generally inspiring a good deal of confidence, the fact that four of its members are soldiers makes people feel rather uneasy. The outrageous attack by a number of warrant officers and N.C.O.'s on the printing works of the two Metaxist newspapers in Salonika clearly proves that Greece is still under the influence of the military, and it was hoped that M. Sofoulis would have selected his colleagues from the civilian camp alone.

The new Cabinet will appear in the Chamber next week and ask the Assembly's confidence. The National Assembly will subsequently adjourn until next October.

A Wrestling Match in the Chamber.

A very serious incident, which, but for the laws of this country, would have assuredly led to a duel, occurred in the National Assembly last Thursday. While smoking in the lobby during a short interval, Admiral Kakoulidis, formerly Chief of Naval Staff, was addressed by Admiral Hajikyriakos, the former Minister of Marine, who, in a rather sharp tone informed Admiral Kakoulidis that he objected to certain statements made by him in the Chamber earlier in the evening. Admiral Kakoulidis, a little stout man of a nervous disposition, apparently took exception to the ex-Minister's remarks, for he promptly attacked him with his fists. As Admiral Hajikyriakos is not a boxer, the affair eventually developed into a proper wrestling match, the two admirals rolling for a good thirty seconds on the dusty floor, raining blows at each other. On the following morning the two admirals' seconds met in order to make the necessary arrangements for the duel. As duels are by law strictly forbidden in Greece, it was at first decided that it should take place on Serbian territory. But even for this the National Assembly's permission should be obtained, seeing that both parties are deputies. It is generally believed, however, that the Assembly will decline to grant any such permission; and the incident therefore might be considered closed.

CYPRUS.

Nicosia (undated).

Jamaica and Cyprus.

For some weeks past Greek papers have been dwelling at some length on recent events in Jamaica, and comparing the state of that island with that of Cyprus. The principal point of resemblance seems to lie in the fact that in both islands elected members of the Legislature, in order to signify their disapproval of the system which practically gives a majority to official members, or a casting vote, on occasion, to the High Commissioner on matters about which strong feelings exist, have absented themselves from the Council. The writers mostly ignore the fact that the circumstances and aims of the people in both cases are widely different, and they make no allusions to the obligations that exist in respect of the Turkish majority of 60,000 Moslems in Cyprus What they proceed to say is that ready and sympathetic attention is always given to the needs and interests of other British "Colonies" by the Home Government, the Press, and the people of England, whereas Cyprus has always been slighted and neglected. What is the cause of this? The Nicosia *Phoné* returns to the subject in a long article (July 12), under the heading: "Let us imitate the other Colonies." The reason, it says, for the unfavourable treatment meted out to Cyprus must be that other Colonies have succeeded in creating a sympathetic atmosphere in England. Hence any question of importance is taken up by one or other of the English papers, and this has a powerful effect. "We in Cyprus have never worked methodically to make our needs known to the British public. Nothing is ever heard of the island. The English public is silent because it does not know us or the nature of our claims. The English Press is silent because we have never sought to have relations with it. And on this account the Colonial Office is silent, is indifferent, and disregards us." Again, it insists on the need of a fresh start by the establishment of some influential representative body in London. This must be carried out without loss of time.

The Empire Exhibition.

Papers have noted with satisfaction the visit of the King and Queen to the Cyprus Pavilion, and the fact that Her Majesty admired the silks and embroideries of the island. Both the Queen and Princess Mary have purchased specimens of admirable lace work. It is realised at Nicosia and elsewhere that many Cyprus products only need to be better known in England, which is quite true. Reference is made to the King's visit to Cyprus in 1886 (he has paid other visits since), and to to the slow rate of progress since that date. One paper says that the thirty-eight years that have elapsed have been "years of stagnation." If His Majesty were to traverse to-day the road he travelled over from Larnaca to the capital, he would encounter similar clouds of mosquitoes, and would find a people still hopelessly overburdened by debt, and utterly disappointed in their hopes of a development, which successive High Commissioners have predicted would make Cyprus the "paradise of the East." On the other hand, however, the messages received from Wembley regarding the success of the Cyprus Pavilion, and of its attractiveness and great popularity, have had a very stimulating effect. There is a keen desire that the Government should do all in its power to back up the movements which are afoot for several co-operative undertakings.

The Outlook.

Harvest figures are not yet available. The prospect, though not very bright, is not so gloomy as some papers would represent it. Mention is seldom made of the great transformation that has been effected in Cyprus, although the process has been admittedly slow. Nor is it confessed how much more might have been done had the Greek leaders co-operated loyally with the Government instead of subordinating island interests to premature political aims, and by a policy of constant opposition and obstruction, which it has been foolishly believed would force the hand of the Government. A visitor to Cyprus to-day would find that there is a discontented section of the Greek community, which will not cease to work for "union with Greece," but that there is also a strong element which is bent on working for material progress on practical lines that may bring more prosperity to industry and agriculture. This party desires to let bygones be bygones, and that the elected representatives of the people in a new Council may co-operate whole-heartedly with the Government in their task. Among the agricultural classes there is a distinct and active movement for the development of island resources. Messages from London tend greatly to strengthen this new spirit. One thing is certain: the people want no more deputations to London. The Bill that Greek Cypriots have had to pay for successive delegations has been a very heavy one, and it is more than doubtful whether the people—town or country—would consent to throw any more "good piastres after bad" for missions now realised to be futile.

YUGOSLAV OLYMPIC TEAM.

(From Our Liubliana Correspondent.)

The closing stages of the Olympic Games in Paris and the returning of the athletes to their respective homes and countries, allowed Liubliana to accord a warm welcome to one of the Yugoslavian representatives, who had won high honour —Leon Stukelj, accredited in open competition the world's finest gymnast.

Leon Stukelj, who arrived in Liubliana on Thursday, the 24th ult., was met at the station by a crowd appreciative of his success and given a great ovation, justly deserved. His appearance was the signal for much enthusiasm, Liubliana being gratified to count Stukelj as one of its residents, paying tribute to an athlete, and ar amateur one at that, who had attained such personal success and brought credit to his nation in such a representative athletic gathering as that held at Paris this year.

ROUMANIAN PICTURES AND SMALL TALK.

"IN GYPSY CAMP AND ROYAL PALACE: WANDERINGS IN RUMANIA." By E. O. Hoppé. With a Preface by the Queen of Rumania. Illustrated. (London: Methuen. 15s. net.)

We have to thank Mr. Hoppé for thirty-two photographs of people and scenes in Roumania. With his name attached, their technical exactness goes without saying, and almost all have real artistic value and topical interest. They are the outcome of a short trip to Roumania which he thoroughly enjoyed. He makes no profession of study and sticks steadily to the surface of things, devoting much of his space to the excellent meals he had and the pretty girls he met. He travelled under Royal auspices, and seems to have been personally conducted throughout by Prefects and other high Government functionaries, who took care that he should not see more than was good for him, and treated him in a princely manner. The result is a very naïve book, quite readable and redolent of the happy time he had when he was made much of in a lovely country, but otherwise of no particular value. H.M. the Queen of Roumania contributes a Preface of great charm. We wonder whether Mr. Hoppé observed that her praise for his book is confined to the photographs?

THE BALKAN COMMITTEE.

At a meeting of the Balkan Committee held at 63, Queen's Gate, the residence of Sir Edward and Lady Boyle, on July 25, a presentation was made on behalf of the Committee to the Right Hon. Noel Buxton, M.P., Minister for Agriculture, in recognition of his services to the Committee over a period of twenty years. The presentation took the form of a large number of books whose authors are, or have been, members of the Committee. In his speech asking Mr. Buxton to accept the souvenir of his long connection with the Committee, Sir Edward Boyle drew attention to the erroneous impression that had gained currency of the Committee's attitude to Balkan affairs, which was credited with being one-sided. He pointed out that for years past most of the members had had close affinity with Serbia and with the cause of Serbia, and that the Committee was the first public body in this country to agitate for the restoration of the Ægean Islands to Greece. Its pronouncements in favour of Bulgarian claims had been put forward not so much in the interests of Bulgaria as of the Balkans as a whole. So long as unsettlement continued in Macedonia, and Treaty promises of an outlet on the Ægean were unredeemed, there would be dissatisfaction in Bulgaria, which would react on her neighbours. The object of the Committee was to promote peace and mutual understanding among the sorely tried Balkan peoples.

APPOINTMENTS, PROMOTIONS, ETC.

The India Office announces that Sir Arthur Hirtzel, Deputy Under-Secretary of State for India, has been appointed Permanent Under-Secretary of State, in succession to the late Sir William Duke.

The Selection Board announces that the following candidates have been selected on probation for the Sudan Political Service:—P. B. E. Acland, G. H. Barter, P. B. Broadbent, G. D. N. Clark, P. Coriat, G. M. Hancock, J. F. Madden, G. E. Sandars, J. F. Tiernay, and C. A. G. Wallis.

It is officially announced that Shuja ud Doula has been appointed Afghan Minister to the Court of St. James. He was for many years the Governor of Herat, and later was appointed Minister for Public Safety. As stated in The Near East of last week, the Minister is shortly leaving for London.

MEDITERRANEAN FLEET.

The following changes in the Mediterranean Fleet are announced by the Admiralty:—

Rear-Admiral William W. Fisher, C.B., M.V.O., at present Chief of Staff to Admiral Sir John M. de Robeck, Atlantic Fleet, to be Rear-Admiral in the reconstituted First Battle Squadron, Mediterranean Fleet, to date October 14. Rear-Admiral Fisher will fly his flag in the battleship Barham, which is now serving as the flagship of the Vice-Admiral commanding First Battle Squadron, Atlantic Fleet.

Rear-Admiral Hugh D. R. Watson, C.B., C.V.O., C.B.E., who has been Rear-Admiral, Fourth Battle Squadron, Mediterranean, since June last year, is to be Rear-Admiral Commanding the Third Battle Squadron, Mediterranean Fleet, and Second in Command, Mediterranean, in lieu of a Vice-Admiral, to date October 14. He will fly his flag in the battleship Iron Duke, on transfer of the Commander-in-Chief's flag to the Queen Elizabeth.

The Shah of Persia has arrived at Evian and is taking a cure. Afterwards he will leave for Teheran.

The Iraq Constituent Assembly has approved the Organic Law, and has turned its attention to the discussion of the Electoral Law. The new Parliament is expected to assemble in November.

A further donation of £600, which is being used exclusively for feeding refugee children in Greece and Armenia, has been sent to the Save the Children Fund by the Acting Agent-General for Victoria, Australia (Mr. H. G. W. Neale), on behalf of the Lord Mayor of Melbourne's Fund. This contribution makes a total of £30,100 which the people of Victoria have subscribed to the Save the Children Fund.

PERSONAL AND GENERAL.

TO-DAY.

August 7, 1924 (New Style).
July 25, 1924 (Old Style).
Muharram 6, 1342, A.H., of the Moslem Calendar.
Ab 7, 5684, of the Jewish Calendar.

The Maharaja of Tehri, Garhwal, has left London for the Continent.

The Raja of Rajpipla left London on August 3 for Paris.

Mme. Politis, wife of the Greek Minister in Paris, left London last week for France.

Viscount and Viscountess Chelmsford have left London for Friston Place, near Eastbourne.

Prince Arfaod Dowleh, Persian delegate to the League of Nations, has arrived in London.

Mr. W. Grant-Smith, the United States Minister to Albania, has arrived in London from Paris.

The Egyptian Minister left London on August 2 for Paris. Mme. Aziz Izzet has left for Switzerland.

M. Vintila Bratianu, Roumanian Minister of Finance, has concluded his visit to London and has left for Bucharest.

Shevky Pasha, Secretary of the Turkish Diplomatic Mission, has left London for Paris, and will be absent for about two months.

King Alexander of Yugoslavia is about to make a tour through Southern Serbia, Dalmatia, Bosnia, and probably Croatia.

Sir Frederick Whyte, President of the Indian Legislative Assembly, and Lady Whyte left London yesterday on their return to India.

Mr. H. E. Garle, British member of the Inter-Allied Assessment Commission in connection with Turkish reparations, has returned to London from Paris.

Sir Herbert Samuel, High Commissioner for Palestine, and Lady Samuel, who have been staying in London, have left for Switzerland. They will return to Palestine at the beginning of September.

Sir Percy and Lady Cox, who left Constantinople when the conference on the Mosul question came to an end, arrived in London last week after a short tour on the Continent.

M. Dimitri Stancioff, Bulgarian Minister to the Court of St. James', will be received by the King on August 12, when he will present his letters of recall.

M. Nicholas Mishu, Secretary at the Roumanian Legation, has left London for Bucharest owing to the serious illness of his father, who is Comptroller of the Household of the King and Queen of Roumania.

General Lord Rawlinson has left Bombay by the s.s. China, and is due to arrive in London on August 17. He expects to return to India at the end of October. In his absence General Birdwood will take over the duties of Commander-in-Chief.

During last week the Palestine Pavilion at the British Empire Exhibition was visited by H.R.H. the Duke of Connaught, the Archbishop of Canterbury, and the Bishop of London. The distinguished guests had the exhibits explained to them by Major R. T. Little, manager of the Pavilion.

The Counsellor at the Persian Legation, Prince Nader Mirza Arasteh, and Princess Mirza Arasteh have left London for a tour through Belgium.

The Crown Prince and Crown Princess of Roumania are staying at 50, Grosvenor Street, Mayfair, the residence of the Roumanian Minister and Mme. Titulesco. The Crown Prince left London on August 2 for a short visit to France.

The Nawab of Bahawalpur, Viscount and Viscountess Erleigh, son and daughter-in-law of the Viceroy of India, the Hon. V. S. Srinivasa Sastri, the Hon. A. C. Chatterjee, a member of the Viceroy's Executive Council, and Mrs. Chatterjee, the Hon. E. Burdon, of the Army Department, Sir Abdul Karum Fadhl Sultan, and K. B. Shatrugna Singh of Shahpura were among the passengers who left last week on the Naldera for Aden and Bombay.

OBITUARY.

The death is announced of Major-General Sir Charles Benjamin Knowles. He entered the Army in 1855, and became Major-General in 1890. He served in the Crimea in 1855, when he was wounded, receiving the medal with clasp and the Turkish Medal. He also served in the Afghan War of 1878-80, when he was twice mentioned in despatches.

The death has occurred at Hove, says the *Morning Post*, of Mrs. Rassam, widow of Mr. Hormuzd Rassam, a Chaldee Christian and British official, who played a prominent part in the events leading up to the Abyssinian War of 1868. Captain Cameron, British Consul at Massowah, and all other British subjects and missionaries having been imprisoned by King Theodore, Mr. Rassam, who was first Assistant British Political Resident at Aden, was sent to negotiate with Theodore, whose obstinacy led to war.

REMAINING IN IRAQ.

The discussion in the House of Commons last week upon British policy in Iraq amounted to very little; no new information was supplied on the Government side, and none but the old and now inapplicable objections to the construction of an independent Arab State in Iraq was raised. Perhaps it was in view of the feebleness of the opposition's case—which rested mainly on isolated hostile facts or inferences and not upon a reasoned alternative theory of action or inaction in Iraq—that the Government contented itself with a mere recapitulation of previous statements of policy. Upon the one genuine cause of anxiety that could be preferred by the opponents of British co-operation, as it is at present being pursued with the young State of Iraq—the future of Mosul—the Colonial Secretary found it impossible to offer any definite reassurance. He did not inform the House of any progress in the negotiations on Mosul, and when asked a question upon the probability of Turkish acceptance of a League of Nations' decision upon Mosul he was unprofitably silent. Other points, moreover, possibly not vital, but certainly interesting, such as those raised by Mr. Ormesby-Gore on the new Constitution in Iraq, on the international status of Iraq, on the estimates for Iraq for next year, and so on, were left unanswered; and it seems on the whole regrettable that the Government did not avail itself of the opportunity to be more explicit. For the probity of British intentions in Iraq is not so universally accepted that the mere continuance by a Labour Administration of past policy there will quieten foreign critics. We hope, therefore, that when next occasion offers, the Government will deem it fit frankly to inform the country upon the progress—and, if there be any, upon the incidents that do not make for progress—of affairs in Iraq. There can be, however, in spite of this undue reticence, no question that on main lines the Government is perfectly correct in carrying out in Iraq the policy that has been laid down by two previous Administrations. And it is gratifying to observe that even the party supporters of the Government, who might reasonably have been supposed to be likely to become easy victims to the cry that Britain was in Iraq for the benefit of oil monopolies, were practically silent while the Colonial Secretary was dissociating himself from any such idea of the *raison d'être* of British assistance to Iraq. One has only to look at present facts to realise the absurdity of the suggestion that Britain is in Iraq only because her hand is being forced by an oil trust. In recent months a syndicate other than that which is commonly connected with the Government has been successfully engaged in concession-hunting in Iraq and neighbouring countries, and is said actually to have offered to the Iraq Government more favourable terms for the fields of Mosul than has the better-known company. That Great Britain should expend money in Iraq so that rival syndicates may better wage contests between themselves and the Iraqis is too patently absurd to need further exposure. Certainly, the Navy requires the fields of Mosul for all the oil that may be found therein, but to suppose that Government action is necessary to secure it is ridiculous. And, indeed, oil companies are not interested in questions of political ownership: economic exploitation is their one and only end.

Vaguely, slowly, and learning by past mistakes, the Government must proceed to the fulfilment of its announced intention of setting up in Iraq a stable Arab State. That the difficulties in the way of this are considerable—so considerable, indeed, as to have made it impossible for the Colonial Secretary to promise definitely that Britain would evacuate Iraq at the end of the four years mentioned in the Treaty—it would be folly to deny. The fact that Britain has declared herself willing to modify certain clauses in the Anglo-Iraqi Pact is in itself a confession that severity on the part of this country may have been over-indulged, and it is possible that on the financial side of the Treaty alterations will have to be made before the minority in the Constituent Assembly which accepted the pact with Britain can make its views at all widely entertained in Iraq. At this moment a new campaign is being waged in a leading Baghdad newspaper against what is alleged to be the excessive number of British officials in the country—only eighteen being stipulated in the Treaty—and it would appear that something still remains to be done in the way of retrenchment before Britain attains any considerable avuncular popularity in King Faisal's State. Perhaps even more disconcerting news is that to be found in the letter of our Baghdad Correspondent in this issue of THE NEAR EAST, to the effect that the old feud between the tribesman and the townsman is breaking out again in Iraq, for a continuance of such a feud makes impossible the creation of any national feeling, and can facilitate but one thing—the disintegration of Iraq and the return of the Turk. We may hope that the new Cabinet, which has just been formed under Yassin Pasha al Hashimy, will do something to check this serious dichotomy. If the Treaty be reformed and administered in a generous spirit, we may yet believe that, in spite of the difficulties attending the creation of a native army and the ill-feeling at present existing between Iraqis and Assyrians and Chaldeans (the latter the most reliable of Iraq's soldiers), Britain may be able in a few years' time to see Iraq paying its way, and in due course to leave it in the knowledge that Turkey will not care lightly to attack the State of King Faisal.

One last word may be said upon the opponents of British policy in Iraq. These appear to range themselves in three categories: (1) Those who wish for a purely British administration, developing the country in British interests and for definite commercial rather than indefinite political ends; (2) those who wish to evacuate, either wholly or to retire to Basrah, leaving all the rest of Iraq to the returning Turk; (3) and those who wish to see an Arab State set up, but also the exclusion of all British officials other than those explicitly asked for as advisers by the Arabs themselves. The first two classes of thinkers seem to be answered simply by *noblesse oblige;* promises of Arab independence cannot be decently redeemed until the Arab is in a position to defend himself from those upon whom he was before the War dependent. And of the third class, it is sufficient to say that, however honestly and generously conceived their ideals may be, in practice their opposition to the Government plays directly into the hands not only of the Iraqi opponents of the Treaty, but of the extremest "intractables," the anti-British fanatics of such places as Baghdad, Muntafiq, Nejef, and Kerbela. Those

Digitized by Google

members who voted in the Constituent Assembly against the Treaty are not, it should be remembered, those in whom any worthy future for Iraq can possibly rest—they are opposed to all ideas but those of self-advancement and reaction. In this connection there is significance in the fact that deputies even of such places once fiercely hostile to us as Arbil and Suliemaniyeh voted for the Treaty. It is of such men as these last, we are convinced, that the independent State of Iraq will consist. One thing is certain: however much the pricks may be kicked against—and agility in this practice grows increasingly less with the passage of years—Great Britain will not relinquish the task to which she has committed herself until the Iraqis who have adopted Western institutions have cultivated also a sufficiently Western spirit. Much fretful water may flow down the Tigris before this is accomplished, but if the tempers of our own successive Houses of Commons be any criterion of the hopeful results of the spread of knowledge in this question, the end will be achieved.

PEACE IN THE BALKANS.

[*The following article is an extract from a paper written by M. Vladimir Popovitch, ex-Mayor of Cettigne, and read on July 30 by Mr. Leland Buxton before the Near and Middle East Association in the house of Mrs. de Bunsen, 14, North Street, Westminster. The first part of M. Popovitch's paper dealt mainly with the condition of Montenegro, and his conclusions, of which we give here the major portion, consist of an examination of the possibility of the formation of a Balkan Federation. It will be observed that M. Popovitch writes as a Republican Montenegrin.*—Ed.]

It remains yet to be seen how far the Balkan nations are responsible for the constant disturbances in the Balkans. This responsibility is trivial, and if external intrigues and dynasties disappeared, the Balkan nations would find a way not only to agreement among themselves, but also to the creation of the Balkans into a concrete political entity in the form of a Confederation, which would very quickly become, as in the case of other confederations, a federative State.

Unless the Balkans are organised in this way they will always be a constant danger to the peace, whatever settlement is made as regards the territorial and political questions. Until all the territory in the Balkans becomes the common possession of all the Balkan nations, that part of Europe will always remain in an eruptive state.

It is difficult to establish where the rights of certain nations cease and the extent of their ambitions.

The attempt to ensure peace in the Balkans on the basis of Nationalism was and will remain a Utopia. It is impossible, because it is not established whether certain people belong to this or that nationality, and in many a case a proper division is not possible.

The Balkan Confederation will only be realised through those countries which, geographically, economically, and, what is most important, historically constitute an entity. By such a solution the question of whether Thrace, Macedonia, Bosnia, and so on belong to this or that State will be avoided.

The question is, whether it is possible to organise the Balkans in the above-mentioned way, which ultimately would lead to the forming of a Confederation, and so a Federal State.

But before we answer this question we have to examine whether the Balkan nations are willing and capable of existing as a common State.

It is said that every evil has a positive side, and in this case the five centuries of slavery that the Balkan people endured under Turkish dominion have this good consequence, viz.:—

(1) They experienced a common life.

(2) Their psychological differences were in many respects levelled, and, although these nations belong to different races and speak different languages, they have almost the same mentality—that is to say, a common psychological type, which is essential to a State for its very existence; and its existence would depend not on force of arms, but on the conviction of its citizens that such a State were necessary.

To show how far this is true, it is enough to mention that two-thirds of the inhabitants of Serbia are by their mentality more similar to Bulgarians than to us Montenegrins, although we and the Serbians speak one and the same language.

To what great extent a common slavery influenced the creation of the same type of different Balkan races, excluding Montenegro, which was always free—will be seen from the words of the former Minister of Justice, Dr. Delzevitch. As the solicitor of General Veskovitch, the former Montenegrin Minister of War charged with "high treason," Dr. Delzevitch said the following words:

"We were one (*i.e.*, Montenegrins and Serbians), but five centuries of slavery has altered your faces (Serbians), whilst five centuries of our glorious struggle for freedom have developed our mind and spirit in a different direction. The present fight between us is the fight of centuries."

As was the case with Turkey in the Balkans, so also Austria had produced similar results in her administration of Serbians, Croats, and Slovenes, who up to the end of the World War were subjects of the Hapsburgs and are of the same race and speak the same language as the Serbians and Montenegrins.

The need for the creation of a Common State in the Balkans is therefore felt where it is most necessary—*i.e.*, among vast masses of the people.

The Balkan people has deeply rooted itself among us, especially after the World War. All of us know what the struggle for Thrace and Macedonia has cost, up to the present time, and we know in fact that others benefited from it. Meanwhile we do not wish to be instruments of anyone's policy; nor do we desire to be at the mercy of European diplomacy.

That desire for common existence is not latent, but is often, though indirectly, manifested in the present disorders and confusion, and such manifestation has as its object the removal of all opposition which is preventing the realisation of that desire and hope.

The day is not far distant when that manifestation will become evident, and when the fulfilment of its aim can no longer be checked. The question is whether this will be accomplished peacefully and by a gradual evolution, or by a revolution, and it is for the Great Powers and the League of Nations to choose which they desire—revolution and war, or a peaceful settlement.

The procedure need not necessarily be hard or complicated, and no change of international treaty need be involved.

(1) The Great Powers should, if they want peace in the Balkans, reconcile themselves for ever with the principle, "The Balkans to the Balkan nations," and put an end to the policy of *divide et impera.*

(2) The Great Powers should cease to help practically and financially the reactionary Governments in the Balkans, and so render a great service to those people and enable them to see the establishment of that form of government which is desired by a huge majorty of the people, I mean a Republic.

(3) The most important factor for peace in the Balkans is the just, honest, and rapid settlement of the Montenegrin question.

The solution of this question by the League of Nations, which in its report of November, 1920, admits that it is still unsolved, would produce great moral and political consequences and facilitate the maintenance of peace in the Balkans as well as the just settlement of the Balkan problem.

The first result would be to create confidence in the League of Nations and International Rights, and induce a better feeling among those who are dissatisfied. as these could hope for the adjustment of their lawful claims by just means and not through force of arms.

The political consequences of this would be far greater. If in Belgrade the Serbian rulers seriously felt that the Montenegrin question should become a subject of true interest to the public, they would not hesitate one moment to prevent international intervention, since by endeavouring to come directly to terms with the Montenegrin nation they would give a quite different solution to the Montenegrin question. It must be said, however, that the Montenegrin people will accept only such a solution as will allow the convocation of a legal Montenegrin parliament chosen by a universal vote, which since December, 1915 (owing to the Austrian and Serbian occupation), was never convoked, and consequently never discussed the country's destiny.

Such a parliament would settle the future relations between Montenegro and her neighbours, as well as the form of her government. Besides this, the convocation of this legal parliament is a question which involves the honour and rights of the Montenegrin people, which, like every other people possessing an independent and internationally recognised State has the right of deciding its own destiny through it.

The just settlement of the Montenegrin question is also the key to the Croatian question, that is to say, a key to the settlement of Yugoslavia on a federal basis—which would lead ultimately to a final settlement between Serbia and Bulgaria, and last of all to the creation of the United Balkan Republics; the Montenegrin question is, therefore, the key to peace in the Balkans.

Such a settlement of the Balkan question would greatly influence conditions in Central Europe.

It is known that Hungary—whether wrongly or justly—could not easily forget her past might and greatness.

To regain what she has lost, Hungary regards the Turks, Bulgarians, and even the Albanians as her natural allies, knowing that she could rely on their help at the necessary moment. By the creation of the "United Balkan Republics," these natural allies would cease to be considered as such, and consequently the Hungarians would lose their hopes of ever restoring their previous might by force. They would be induced to pursue their claims as far as they are justifiable by an agreement and the formation of Austria, Czecho-Slovakia, Hungary, and Roumania into a new organism, which organism in Central Europe would mainly benefit Hungary, which is actually its main centre.

In concluding this lecture it will not be irrelevant to mention that Russia alone of all the Great Powers formally and definitely favoured the creation of the Balkan Confederation. This was done by the Soviet Government in a memorandum delivered to the Allied Conference at Lausanne.

Public opinion in Great Britain is no doubt also in favour of the same solution.

Soon the future will show whether the policy of M. Poincaré—that known as the Balkan Central European policy—will be changed in France by the elections of May 11, 1924. This will depend mainly on a satisfactory settlement of reparations and securities. In this case the Little Entente, which is mainly composed of the three Governments, will lose very much of its importance in the eyes of Paris. This especially concerns Roumania and Yugoslavia, and undoubtedly will greatly influence peace in the Balkans, and create a confidence in those countries which by mutual agreement with their neighbours could find security for themselves.

It remains yet to be seen what would be the attitude of Italy towards the eventual creation of the United Balkan Republics, considering that Italy as well as Russia is most interested in Balkan affairs.

I state with the utmost conviction that the creation of the "United Balkan Republics" would benefit Serbia and her people more than any other nation in the Balkans, for many reasons, but particularly owing to its geographical position, in that Serbia would be the centre and axle of this new political organism.

As regards Italy, she would derive from such a solution more direct and real benefit than any other of the Great Powers.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Roumanian Mining Law.

Referring recently to the Roumanian Mining Law, I remarked, it will be recalled, that a perusal of the text of the measure scarcely served to confirm the not unfavourable view that was at first taken of it. It is true that as a result of urgent representations from the oil companies a number of very important modifications were introduced, but while the effect of these alterations was that the measure was shorn of some of its worst aspects, some of the clauses that remain will probably be found in practice to operate against a wider participation of foreign capital in the development of Roumania's mineral resources. One provision of the measure is that a concession of the State lands shall not be given to a company unless two-thirds of the directors are Roumanian citizens and a majority of the capital is Roumanian. This would seem to preclude the possibility of the formation of subsidiary concerns by the existing oil companies for the exploitation of these lands since the conditions would obviously mean that the holding company would have no real hold over the operating concern. Other clauses are no less open to exception.

A Notable Sequel.

If Roumania has failed hitherto to appreciate the incidence of the Act, the action of the O.P.Q. Syndicate is likely to be illuminating on the subject. The O.P.Q. Syndicate, which comprises five national groups, was formed for the special purpose of furthering the investment of foreign capital in the oil industry of Roumania. The syndicate has now decided to send a memorandum to the Roumanian Government stating *inter alia* that: "Careful study of the new legislation has made it clear that the Roumanian Government have no desire to develop their State oil lands in collaboration with foreign capital on generally recognised principles of adequate protection for the same. In fact, the whole tendency of late has been a campaign against foreign capital, such as precludes the possibility of the syndicate arriving at a friendly understandng with the Roumanian Government." The syndicate has, therefore, decided to withdraw their application for a concession of the State oil lands.

Shipping Competition.

The problems which confront British shipping to-day were the subject of a succinct survey by Sir Frederick Lewis at the general meeting of Furness, Withy and Co., Limited. Dealing with the question of shipbuilding, he said that the company and its associated lines had taken over some important vessels, and when circumstances justified it the company would be in the market for additional ships. At present, he explained, the company was faced with three alternatives—to build vessels in this country at uneconomical prices, to build abroad at lower prices, or to defer building until it could be done on a basis economically sound. The company has adopted the last of these courses.

The Trade Position.

Sir Frederick remarked that it might be that a trade revival was much nearer than the present outlook would justify them in believing, but he pointed out that it was an indisputable fact that on the one hand trade was still considerably short of the volume in 1913, and, on the other hand, the available tonnage was considerably in excess of requirements. At July 1 there were approximately 1,150,000 tons dw. of shipping laid up in British ports, apart from that laid up in foreign ports. "Whilst this state of things continues," added Sir Frederick, "and so long as foreign and colonial Governments are prepared, as they apparently are, to operate State-owned ships at a great loss, it is impossible to expect trade to improve to a sufficient extent to justify the building of new ships at the prices that are being quoted."

Further Rubber Restriction.

As a result of the low price of rubber during the past three months—it has averaged just under 11d. per lb.—there has been a further reduction in the percentage of standard production from 60 to 55. This is the first time that the percentage has been below 60, and it will remain to be seen whether the new reduction will have the desired result. So far it must be confessed that the operation of the reduced production scheme has been most disappointing, but its effects have, of course, been circumscribed owing to its not having universal application. The real remedy for the price of rubber is a revival of trade; when that happens long-suffering shareholders will come into their own.

ENGINEERING TOPICS.

New Vickers Steel Furnace.

Messrs. Vickers, Limited, have just installed at their Barrow-in-Furness works a new open hearth Siemens steel furnace of the very latest type, built and designed by Wincotts of Sheffield. The capacity is between 10 and 20 tons per heat, and it is now possible to get a total output from the steel foundries at the Vickers Barrow works up to 300 tons of castings per week, ranging from a few pounds weight each to a 20-ton casting. Castings to Admiralty, Lloyd's, and Board of Trade requirements, such as ship's structural work, can now be made at the Vickers Barrow works up to the above figures. In addition, it is anticipated that a good proportion of the output will be absorbed for commercial castings. The first heat was tapped from this furnace on July 18, with very successful results, as determined from the test figures and analyses, and it will now be possible for Messrs. Vickers, Limited, to give special attention to inquiries for steel castings of every description up to 20 tons weight.

Oven Furnaces.

I have just received from a firm which specialises in the manufacture of electric furnaces a copy of their new leaflet dealing with oven furnaces—*i.e.*, furnaces with the heaters inside the chamber, exposed but yet protected. It is stated that the ideal combination is one of these furnaces equipped with automatic temperature control, automatic clapper type switch and automatic time switch. The furnace is designed to give uniformity of temperature throughout the mass of material heated. The automatic temperature control secures that the temperature attained shall always be the same, and the time switch secures that the heating time shall always be repeated, a matter which is often of the utmost importance.

The cost of running is small. Comparative costs of heating by town gas with gas furnaces of the most modern type show that gas and electricity are on a par when gas costs 2s. 10d. per thousand feet and electricity costs 1d. per unit. Besides the very great advantage electricity has over gas in uniformity of temperature throughout the mass and the avoidance of fluctuations, there is very often a very great advantage to be obtained in the absence of fumes which for many classes of work are deleterious. The cost of handling is always very much in favour of electric handling, as with automatic control the operatives have no need to watch the furnaces and are free to go on with other work. As a result of inspections and comparative tests the firm have received a number of orders for these furnaces.

World Tyre Record.

The Royal Automobile Club have issued a certificate to the Dunlop Rubber Co., Limited, in connection with the recent Brooklands trial of Dunlop cord balloon tyres fitted to a six-cylinder "A.C." car. The trial occupied two days, and, excluding the stoppage overnight, the total time during which the car was stationary was 54¼ minutes. A total distance of 1,559.6 miles was covered at an average speed during running time of 67.41 miles an hour. After the trial, the average thickness of each of the four treads varied from 14.25 mm. to 17.06 mm., compared with an average thickness in an unused tread of 19.62 mm. While the Royal Automobile Club have no actual records showing whether any other tyres have ever run without attention or damage for twenty-four hours at over sixty miles an hour, it is claimed that the present performance is unique.

RAILWAY TRANSPORT FACILITIES IN IRAQ.

A circular has been issued by the Director of Railways, Iraq respecting facilities for the transport of goods by rail from Basrah to Bagdad. It is pointed out that for the sake of convenience, and possibly also largely on account of the habit resulting from the procedure in force before the Iraq Railways were in a position fully to offer the necessary facilities, goods are in many cases consigned to Bagdad on through bills of lading by sea and river for payment of Customs duty there. The use of such through bills is no longer a necessity, as the Iraq Railways undertake to clear consignments of all descriptions (except explosives and such dangerous goods as may be prohibited from being brought to the wharves in steamers) and transport them to the Railway Transit Khan at Bagdad North for Customs duty payment there.

Goods should be consigned now by sea to Basrah only. Every package must be clearly marked with the shipping mark as shown on the bill of lading, and if the contents of the packages bearing the same mark are not identical in quantity, quality, and value, each package must be serially numbered, and these serial numbers must be entered against the respective entries in the invoice. The bill of lading should normally be made out in favour of the consignee and endorsed to the Deputy Traffic Manager, Railways, Makinah. Bills of lading for goods shipped from Europe should be dispatched via the Haifa-Bagdad Overland Mail.

As a somewhat large percentage of consignments are received at the port damaged or short, it is essential that the Deputy Traffic Manager should be provided wih a copy of the consignor's invoice to enable him to place claims. All charges will be included in the railway invoice for payment by the consignee in Bagdad. The railways undertake to obtain certificates from the port for all shortages and damages and to make claims for the same against the ship's agents. (In order to carry this out satisfactorily the instructions above regarding marking of goods should be carefully complied with.) The railways will arrange delivery to any point in Bagdad on application. By adopting this procedure consignees ensure delivery of their goods in Bagdad more expeditiously than when a through bill of lading is used. All brokerage and commission charges are abolished. The total charges from overseas to Bagdad are reduced. Payment of railway freight, port dues, etc., is made in Bagdad at the time of delivery. There is additional safety in carriage by rail, and, finally, the advantage of the goods being in the Railway Transit Khan at Bagdad North, where they can be stored cheaply, sold, repacked if necessary, and dispatched by rail to Qasr-I-Shirin if intended for Persia.

IMPERIAL WAR RELIEF FUND.

On July 29 the offices of the Imperial War Relief Fund and the All-British Appeal were transferred from General Buildings, Aldwych, to 26, Gordon Street, Gordon Square, W.C.1 (telephone, Museum 5204). The address to which parcels of clothing for the Imperial War Relief Fund and the All-British Appeal should be sent remains the same, namely, New Hibernia Wharf, London Bridge, S.E.1.

Near East Markets.

LONDON PRODUCE REPORT.

(From Our Own Correspondent.)

London, July 31.

Almonds.—Mogador sweets have been in better demand, and sales have taken place at 112s. 6d. ex store. Buyers anticipate 110s. ex store for new crop.

Canaryseed.—Mazagan quality has been done at 28s. ex store and 26s. 6d. c.i.f. for prompt shipment; 26s. c.i.f. is obtainable for Larache quality to arrive. Turkish is quoted at 24s. c.i.f. for August/September shipment.

Linseed.—Sales of Mazagan quality for July/August shipment have been done at £22 10s. and £23 c.i.f., but £23 10s. c.i.f. is now asked. Casablanca quality is about 10s. per ton less.

Cumminseed.—Prices rose during the week to 93s. 6d. c.i.f. for Malta, but the market is now weaker, and 90s. c.i.f. has been accepted.

Beeswax.—The tone has been quiet. The nominal value of good pure wax is £6 10s. ex store.

Barley.—Prices have further advanced. Indian afloat has been done at 38s. 6d., and at 39s. for July/August. Danube afloat to London made 38s. 9d. on sample. Parcels of Persian have been in demand, 34s. 9d. being paid, and 35s. 3d. is now obtainable. Morocco for August/September is offered at 38s. 6d.

Beans.—Less inquiry has been about from United Kingdom buyers, but the demand from the Continent has helped to sustain prices.

Maize.—A good trade has been done in Plate, but prices show little change. July/August sold at 36s. and 36s. 1½d., August-September 36s. 6d., September/October 37s. 6d. and October/November 37s. 9d. to 38s.

MARKET FOR WINDMILLS IN MALTA.

The demand for windmills in Malta is small, although in relation to the size of the country it is fair (says an American Consular report). There are 17 windmills in use, of which 15 are American and two English. None are used on the neighbouring island of Gozo. Windmills are not carried in stock but occasional orders are given for them through a Catholic priest who has introduced them. They can be obtained within three months from date of order. There is no demand for windmills equipped to produce electric current for house lighting. Windmills used generally have a fan wheel of from 10 to 12 feet in diameter, and the towers are of steel and from 30 to 40 feet high. The location of the island insures a sufficient wind most of the time. Motors are used to propel the pumps in summer when the winds are inadequate.

The average depth of wells is from 100 to 170 feet. Windmills are used exclusively for irrigation and consequently the quantity of water desired cannot be estimated. The water is delivered in storage receptacles at the surface of the ground, 5 to 10 feet distant from the wells. The receptacles average from 5 to 7 feet deep, 10 feet wide, and 15 feet long. Irrigation is generally on a small scale and no large undertakings are carried on.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 10 amounted to £126,553.

It is announced by the Board of Trade that quarantine has been imposed at Sofia on arrivals from Patras and Kavalla, on account of plague, but that the precautions against plague imposed in the Bulgarian capital on arrivals from Constantinople have been withdrawn.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date August 1:—

Currants.—While there is little change to note in actual market conditions, buyers continuing to show no disposition to depart from the hand-to-mouth policy followed for some considerable time past, indications point to a steady consumption in the country. The Fabian, with about 126 tons, arrived during the month. The trade passing has been centred in cleaned Pyrgos at 42s. to 44s., and better grades 46s. to 49s. Zante, bags, have been sold at 48s.; quarter-cases, 49s. Vostizza, ordinary, 50s.; good, 52s. to 55s.; better class, shade dried, 60s. to 66s. Merchants, being anxious to progress, were willing to make small concessions to effect sales. The s.s. Brescia and Lesbian have just arrived with very small cargoes. Quotations:—Pyrgos, 41s.; Pyrgos, cleaned, 41s. 6d. to 42s.; Amalias, 42s.; Amalias, cleaned, 43s.; Zante, 43s. to 48s.; Gulf and Panariti, 50s. to 54s.; Vostizza, 50s. to 66s. New Crop.—Some forward sales in cleaned Pyrgos, first half September, at 36s. 9d. to 37s. 6d. c.i.f. have been effected.

Australian Currants.—Holders realising that if they wished to compete for the business passing they would have to come into line with competitors, reduced their ideas of value, and at the lower level established more interest was taken, sales being recorded at 46s. to 55s., according to quality.

Raisins.—Valencia: A few sales of a retail nature were possible at 34s. Cape have been in better request, and a fair business has been transacted. F.A.Q., 40s. to 44s.; G.A.Q., 50s.

Sultanas.—The improved tone noticeable in the early days of the period under review developed into quite an active market in the latter part of the month, and with a renewal of Continental purchases a considerable expansion in the volume of business resulted, Smyrna fruit being almost cleared, and stocks practically exhausted. The rebate in duty coming into force after August 1 has undoubtedly been one of the contributory causes. Quite a fair trade has been passing in new crop G.A.Q., cleaned, for September shipment, at 38s. to 39s. c.i.f. Spot sales, ordinary quality, were 48s. to 52s.; good quality, 54s. to 60s.; fine quality, 63s. to 66s. Greeks also participated in the demand, and good progress was made at 48s. to 52s. Australians continue to arrive. Unfortunately, the colour being very dark is against the sale, and in order to effect progress prices have had to be accepted which are exceedingly disappointing to shippers, the range being 46s. to 50s., a few coloury lots realising 54s. to 60s.

Capes.—Sun-dried varieties, 46s. to 48s.; bleached, neglected.

Afghans.—Sales were made as follows: Reds, 35s.; yellows, 42s.

Figs.—New crop bags genuine Naturals were sold at 23s. 6d. to 24s. 6d. c.i.f., September shipment.

The Turkish battleship Yawuz (formerly the Goeben) is reported to be leaking so much as to cause anxiety lest she sink. Her bottom was at one time extensively repaired with concrete.

V.—MOROCCO.

(*Continued from page* 126).

Transport.

1923 saw the opening of the first broad gauge railway in Morocco, and in the course of the next few years Morocco will be rapidly endowed with a system embracing the chief towns and nearly 1,000 kilometres in length. By the law of August 21, 1920, a concession was granted to the Compagnie des Chemins de Fer du Maroc for certain lines; but before enumerating them it must be recalled that the Franco-Spanish Company holds the concession for the construction of the Tangier-Fez railway. The French, therefore, built part of their section of this railway (section Meknez to Petit-Jean), the latter town being about midway and just north of a line drawn from Rabat to Fez. and this has rendered more practical for the Chemins de Fer du Maroc the execution of their programme.

On April 5, 1923, was opened the Rabat-Kenitra-Petit-Jean-Meknes route, and the Petit-Jean-Meknes section has now been extended to Fez. Of the Rabat-Meknes line the last 54 kilometres belong to the international company, and 124 to the Moroccan railways. The Rabat-Casablanca branch (four big viaducts), is expected to be terminated early in 1925 (92 kilometres). The phosphate line (Casablanca-Sidi-el-Aidi-Kourigha) was finished in September, 1923, and is already carrying phosphates. . . . Casablanca-Marrakesh (for 60 kilometres identical with the Casablanca-Kourigha railway) is to be completed by January 1, 1926 (340 kilometres). Fez to the Algerian frontier (Oudjda and Guercif), in part a very hilly route, is estimated for 1929 or 1930 (320 kilometres). Finally a small branch will run north-east from Kenitra to join (when constructed) the Tangier-Fez at Souk-el-Arba (85 kilometres). A sum of 300 million francs is set aside for the railroads of western Morocco, but of this sum 70 million must be found by the concession holder. The first railways are being built for the most part across plains and easy country.

Again the criticism has been made—how far can the country support and utilise these expensive railways? It has been urged that light railways running seawards to the ports from inland grain districts might have proved more profitable. As a matter of fact, the network of narrow-gauge military railways—mainly constructed in the early days of the conquest—are to be pulled up and gradually relaid so as to tap rich districts on either side of the main lines. These narrow-gauge railways at present cover 1,300 kilometres, and render good service commercially. It is believed that no British companies have tendered in respect of these new railways in Morocco, although, since much work remains to be put in hand, contracts can still be concluded, if exchange conditions allow.

Further, big stations and repair shops are being erected at Casablanca, Kenitra, and Rabat. As explained above for the lines running across fairly level country—i.e., Casablanca to Sidi-el-Aidi and to Rabat, and Sidi-el-Aidi to Marrakesh—the supply of electrical energy is foreshadowed and the necessary work is being put in hand.

Macadamised roads in Morocco extend over a length of 3,000 kilometres, and secondary roads or pistes over 1,000 kilometres. All the principal centres are linked up with Casablanca, whence most of the routes extend fanwise, and shortly a trunk road connecting Fez with Marrakesh direct (at present the route passes Casablanca) will be opened. It is unlikely that railway traffic will lessen motor passenger transport for some years, as the rail service at present averages barely 65 per cent. of the speed of equivalent road transport, and, further, is more expensive. Although goods will tend to be carried by rail much more, there will be still much scope for merchandise transport by lorry, anyway between intermediate points. Roads in this zone are excellent on the whole: some 40 kilometres mostly in or near towns have been asphalted, and provision is made for similar treatment of 400 kilometres. The military have opened up a new route across the Atlas west to east—extending on to Bou Denib, but this has at present a political rather than economic importance.

5, PHILPOT LANE, LONDON, E.C.

A VICE-CONSUL AT CETTIGNE.

We understand that Mr. G. E. A. C. Monck-Mason has received the appointment of Vice-Consul at Cettigné. Mr. Monck-Mason, who was born in 1886, has already seen much service in the Near East. He was appointed a student interpreter in the Levant in 1908, was Acting Vice-Consul at Uskub in 1911, and at Adana in 1911-14. In October, 1914, he was promoted to be Vice-Consul at Diarbekir. During the first three years of the War he was employed at Alexandria, Salonika, and Kavalla. He was Acting Vice-Consul at Saffi from August, 1916, and at Laraiche from August, 1917, to March, 1919. From September, 1919, to April, 1920, he was Acting Consul at Bengazi, and from May, 1920, to February, 1921, was Acting Consul-General at Salonika. He was Acting Vice-Consul at Suez from March to August, 1921, when he was appointed to the substantive post.

The traffic receipts of the South Indian Railway for the week ended July 5 amounted to Rs. 10,61,821, making the total from April 1 Rs. 1,44,76,418. For the corresponding periods of 1923 the figures were, Rs. 10,78,572 and Rs.1,42,07,811.

A Reuter message from Simla, dated July 30, states that the week's rainfall was heavy in North-West India, being three times the normal. The rains caused a serious breach in the Bikanir-Kolarat Railway, the service having to be suspended. The track will probably not be fit for traffic for six weeks.

NEW L.M.S. STEAMER.

Built by Vickers, Limited.

The launch took place at the shipbuilding yard of Vickers, Ltd., at Barrow-in-Furness, on July 31, of the s.s. Dearne, which has been built for the London, Midland and Scottish Railway Company's Goole and Continental service. The Dearne is a first-class cargo and passenger boat. The vessel has a cellular double bottom throughout, except in boiler and cross-bunker spaces, which are fitted with ordinary floors, the floors and bottom through the vessel being specially strengthened to minimise damage when grounding. Frames are spaced 23 ins. apart and joggled, all extending to the upper deck, the frames to poop, bridge, and forecastle decks being scarphed below the upper deck to the main frames. For about 30 ft. abaft the steam, additional intermediate frames are provided between each frame below the upper deck to strengthen the ship against the effects of ice. The poop deck extends for 48 ft., the bridge deck for 88 ft., and the forecastle deck for 35 ft.

The dimensions of the vessel are as follows:—Length b.p., 240 ft.; breadth moulded, 34 ft.; depth moulded, 16 ft. 4 ins. The vessel is built in accordance with Lloyds' A1 class. In the 'tween decks there is accommodation for the transport of fifty-seven horses, and, although the vessel is primarily designed for the carrying of cargo, there is also accommodation for eight passengers on the bridge deck forward, there being two staterooms on each side of the dining saloon. This dining saloon measures about 15 ft. by 12 ft., and is reached from the deck by passages on the port and starboard sides. The saloon is tastefully panelled in bird's-eye maple and mahogany. The floor of the saloon and passages is laid with indiarubber tiling, and at one end, instead of the usual stove, there is a handsome tiled fireplace. The whole of the accommodation for passengers, officers, and engineers is fitted throughout with steam-heating appliances, the seamen's and firemen's apartments being provided with stoves.

In order to facilitate the discharging of cargo, three derricks lifting 5 tons, 7 tons, and 12 tons respectively are arranged in conjunction with three steam winches made by Messrs. Clarke, Chapman and Co. For shipping lighter cargo three derrick gaffs are provided. The steam steering gear, which is by Messrs. John Hastie and Co., is placed in a steel house on the poop, and is controlled from the bridge by a telemotor of Messrs. MacTaggart, Scott and Co.'s make. In addition to the steam steering gear, the vessel is also fitted with a right- and left-hand screw steering gear over the rudder head. A complete system of electric light is fitted throughout the ship, with clusters for cargo-working purposes, a generator of 10 kw. being provided for supplying the necessary current.

BELGRADE'S FUTURE AS A PORT.

M. A. Panitch, of the Ministry of Communications in Yugoslavia, describes in the current issue of the Belgrade Economic and Financial Review the prospects before the port of Belgrade. He says:

Near Belgrade two great rivers, the Drave and the Tissa, which feed the King Peter and the Crown Prince Alexander Canals, join the Danube, while the Sava, its most important tributary, flows into the Danube under the very walls of Belgrade. This port, quite apart from its immense historical and political importance, is of great value and no other will be able to rival it, because it stands at the entrance to the Balkan Peninsula, at the threshold of the Iron Gates. Therefore it will long remain what it has been in the past, one of the principal ports on the Danube.

Austria-Hungary tried, more than twenty years ago, to turn to her own profit the great importance which Belgrade now enjoys owing to her geographical position. For this purpose she constructed several ports of less importance on the Middle Danube and on the Lower Danube. For example, near d'Orsava, on the Roumanian frontier, at Ada-Kale, she erected a great port with a long quay and all the necessary equipment. However, she was unable to diminish the importance of Belgrade and to deflect the traffic into her own ports. The port at Orsava fell into a state of complete abandon, overgrown by grasses and bushes, even before it was handed over to Roumania.

Although before the War small and without financial means, Serbia had the intention of constructing still another port on the Lower Danube, near to Prahovo, not in order to deflect the traffic from Belgrade, but because this was the starting-point of the trans-Balkanic railway which was to go from there to the Adriatic, and of which the section Prahovo-Nish has been completed, while the remainder, which should connect up with the port at Kotor, is in process of construction. The wars prevented Serbia from realising her plans with respect to the port of Prahovo, which has only received up to the present certain equipment for the transhipment of coal from trucks into boats.

It is an incontestable fact that the port of Belgrade has before it a very great future. It is a link between East and West. Beside the navigable rivers and canals which meet there, Belgrade is connected by railways with the whole of Europe, and will soon be connected with Asia Minor and the Far East by the Bagdad Railway. The principal line of the 45th parallel passes through Belgrade, and on this line circulate the Simplon Orient Express coming from London and Paris and the Orient Express coming from Brussels and Paris through Vienna, on its way to Constantinople and Athens. Belgrade is the capital of the Kingdom of the Serbs, Croats and Slovenes, which has 12,000,000 inhabitants. The city has about 160,000 inhabitants, but judging by its rapid growth, it will no doubt reach half a million in a few years. The city is not only a cultural and industrial centre, but also a great economic and commercial one, where enormous quantities of merchandise are concentrated for export and import and the needs of the greatest part of the Kingdom are supplied. Meanwhile, the thing that renders Belgrade a place of importance for all time is its geographical situation, unique in the whole length of the Danube, and the best adapted for the creation of a port of entrance and transit as well as a base for the whole traffic which will be developed between the West, the Balkan Peninsula and the East.

Taking into account the fact that in the great towns of the West four tons of goods are consumed per inhabitant in the year, it can be calculated that Belgrade already consumes 600 trucks or 6,000 tons per day, which makes about 2,160,000

Digitized by Google

tons a year. In a few years, because of the growth of the population, ten times this amount will probably be required. According to our statistics, in the course of last year, 63,730 trucks of goods arrived at the railway station of Belgrade, while 45,266 wagons were despatched from Belgrade. This amounts to 1,071 tons of traffic daily. Though the ports on the Sava and the Danube are not yet built nor equipped, the traffic comes nevertheless to a thousand tons per day: but as soon as these ports are built, and even if in the beginning they are equipped to deal only with the local traffic, this quantity will increase rapidly. Wth the transit and storage of goods from other lands, the tonnage of the merchandise sent to the port of Belgrade, or passing through it, will increase tenfold.

Facing Belgrade are the plains of the Banat and Srem, which are very fertile, and are the granary of the country: a little further up the Sava and down the Danube, Posavina and Podunavlje are equally fertile. All the products, such as the wheat, prunes, maize and vegetables, will pass through Belgrade, and will be sorted there, then dispatched mainly by water, this being the cheapest way of bringing them to the world markets, where they will be disposed of to great advantage. Besides, the distant provinces will direct their traffic towards these ports. In a year or two Belgrade will also be connected with the narrow gauge railway system (0.75 cm.), the only system in Bosnia, so that the coal, ores, and wood of this province will come directly to it. This traffic will assume large proportions, as soon as the projected line of the Adriatic Railway is constructed.

According to the new general plan of Belgrade made by well-known Yugoslav and foreign engineers, which will shortly be approved by the Government, the one railway station at present serving Belgrade will be transformed into a station for passenger traffic only. . . . The general plan foreshadows the construction of two ports, one on the Sava, the other on the Danube, as has already been stated. The Danube port will be the main port for the transport of goods and for river nagivation, but will also be used for passenger traffic.

It will be constructed as an open port with an outside length of 7,173 m. and an internal length of 4,300 m., which gives a total of 11,473 m. of shore which can be used. The quays will be divided in the following manner: For coal 1,054 m., grain 2,481 m., goods in packets 2,102 m. Besides these there will be a free part of the quay which will be situated in the inner basin. The quays for the handling of petrol and of benzine will be situated on the island of Huja. There will be other quays for building materials, wood, flour, cement, salt, plums, and a special quay for passengers. The capacity of the port will be about 1,520,000 tons per annum. The Sava Port will be constructed along the river starting from the island of "Ada-Tziganlija," which is situated just in front of the present bridge, and will stretch along the river down to the fortress, a total length of 3,245 metres. This port will consist of an ordinary quay which will be divided in the following way: First the quay for passengers, then, further up the river, quays for wood (500 metres), building materials and cement (300 metres), for salt (328 metres), for coal (635 metres), for cereals (265 metres), and for flour (380 metres). The capacity of the port will be 700,000 tons per annum. According to estimates the construction of the Danube port will cost 51,000,000 gold dinars, and that of the Sava port will cost an equal amount, for although the calculations have not yet been definitely made, it is expected that the importance of this work will be considerable in spite of the fact that its capacity will be smaller than that of the Danube, as it will be necessary to enlarge the channel of the Sava itself by some 60 metres.

Among the general plans for the reconstruction of Belgrade which have been received, that which was received under the name of "Singidinum Novissima" contains a favourable and practical scheme for the utilisation of the left bank of the Sava and the large plain which stretches up to Zemun railway station between the river and the railway line; but this plan cannot be undertaken now because the works would involve huge expenditure.

The construction of new stations and the transformation of the present station and its equipment will cost, according to the calculation of the expert commission which has made the General Plan, about 162,000,000 gold dinars. But as this work is divided into three categories in order of their respective importance and will be carried out in the course of ten and more years, for the time being only that work will be undertaken which is most important, and which will cost about 47,000,000 gold dinars.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras, and Calcutta (London, August 9).

Anchor Line.—S.s. Castalia for Bombay (Liverpool, August 25).

British India Line.—S.s. Mulbera for Bombay and Karachi (London, August 8); s.s. Takliwa for Colombo, Madras, and Calcutta (London, August 16).

Clan Line.—S.s. Clan Murdock for Bombay and Persian Gulf (Birkenhead, August 15).

Ellerman "City" Line.—S.s. City of Eastbourne for Calcutta (Birkenhead, September 4).

Ellerman Lines.—S.s. Algerian for Gibraltar, Malta, Patras, Piræus, Syra, Salonika, Smyrna, Constantinople, Bourgas Varna, and Constantza (Liverpool, August 16).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 9); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 6); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 13).

P. and O. Line.—S.s. Macedonia for Bombay (London August 8); s.s. Novara for Colombo, Madras, and Calcutta (London September 6).

1,060 merchant vessels called at Aden during 1923.

The total value of the imports of Aden in 1923 was 72,419,000 rupees, excluding Government stores; while the value of exports was 59,955 rupees.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Sharp Rise in Futures.

The Alexandria Commercial Company, in their report for the week ended July 24, state :—

The market during the past week has been rather excited. The net changes since last Thursday are : Sakellaridis, 2.97 dollars up for November, 2.95 dollars up for January; Ashmouni, 3.15 dollars up for August, 2.63 dollars up for October, 2.50 dollars up for December, 2.53 dollars up for February. The rise of about three dollars is not attributable to any new development in connection with the Egyptian crop—it is solely the result of the advance of prices in New York consequent upon the publication of the Bureau Report on the American crop. This report, made up to 15th inst., shows a depreciation of 2.7 per cent. from June 25. The figure given is 68.5, which is considerably below that anticipated; private estimates ranged between 69.8 and 73.7. The July position was squeezed during the last few trading days of the option, and the price was pushed up to 48 dollars—about 7.00 over November. This big advance induced the issue of dockets, and the tender on Wednesday amounted to 6,250 krs. As a result of the purchases of the last few weeks, quite an appreciable speculative position now exists in new crops, particularly in Sakel. Should American crop news improve, we might easily experience a sharp reaction; for the time being, however, there are no signs of such improvement, and, with profits in hand, speculators show no tendency to liquidate their positions. The new crop demand from the trade has been rather better this week than for some time past, but it cannot be called good, and spinners still seem to be holding off in anticipation of lower prices. The week's receipts amount to 4,073 krs. against exports 82,621 krs.; the stock stands at 417,242 krs. Spot.—Total sales during the week amount to about 4,000 bales, of which we estimate 3,300 bales Sakellaridis, 600 bales Uppers, and 100 bales Brown.

Sakellaridis.—The demand continues to be concentrated on Fully Good Fair and below; there has been practically no inquiry for the higher grades. Holders of cotton appear rather more inclined to liquidate their stocks owing both to the rise in futures and the approach of the new crop, and the price of spot as compared with contracts is, therefore, slightly easier all round.

Uppers.—The stock of this variety available for sale being small, business is restricted; there is still, however, quite a fair demand which covers all grades. The price of spot as compared with contracts remains about unchanged.

Brown.—A small business has been done in Good Fair and Good to Fully Good at about the same prices as those paid for similar grades of Uppers. The stock of this variety is practically exhausted.

Crop 1924.—Crop news is unchanged; the plants are progressing well. The supply of irrigation water is ample, but many growers are complaining of the irregularity of the distribution, and it becomes more and more clear that the Civil Services are suffering from the retirement of the English officials. Temperature is rather higher than last week.

LIVERPOOL COTTON REPORT.

Better Inquiry for Egyptian.

Messrs. Reynolds and Gibson report as follows for the week ended July 31 :—

Egyptian Spot.—The inquiry for Egyptian cotton this week has been on an improved scale, and prices have hardened from 150 to 200 points. Although business at the Manchester end appears to be in a state of uncertainty owing to the recent rapid advance (in which manufacturers have little faith), spinners still have orders to fulfil, and those who have not prefer to keep their mills running rather than stop. Hence, in spite of the sharp advance in the price of the raw material, quite a fair business has taken place here, and it is obvious that many spinners are having considerable difficulty in obtaining supplies which will carry them over into the new crop. Stocks here are in a very depleted state, and the purchase of prompt shipment cotton from Alexandria is proving a costly business. Sakellaridis, 300 to 400 on, has been in request, although the high premium at which July has stood has prevented much business in the better class of cotton. Fully good fair (?) at 150 to 200 on has been asked for, and Sakel at pass price to 300 off has commanded an increased attention. The market for these lower qualities is extremely irregular.

There is still a fairly good outlet here for best upper at a price, but there appears to be no supply available. It is rumoured that a considerable business has been done in new crops. Low uppers, fair to good fair, have moved off in small quantities, staple lots being in good request. The improved interest in Sudan cotton, which was noticeable last week, has been well maintained, and there is no doubt that its relative cheapness (we refer to Sudan Sakel), as compared with Sakellaridis, is taking on an increased attraction for spinners. Tokar Sakellaridis finds support at a price. There has been a disposition lately amongst holders of this cotton to take advantage of present values and sell—with the result that the market is somewhat irregular, prices differing as much as a penny per lb. A test tender of Tokar I. was made last Friday, and the cotton, after passing through at 300 on by arbitration, was dropped to 175 on by appeal, which works out at 25.20d.

A fair c.i.f. business appears to have been done for prompt shipment. Forwardings for week ending 25th instant were returned as 7,176 bales. Estimated sales, 2,000 bales Egyptian and about 1,350 bales Sudan. Quotations of brown and

upper are advanced 200 points (fair exceptionally 175 points). Sakellaridis is 150 points higher for fair, 200 higher for good fair, fully good fair, and good, and 175 higher for fine and extra fine. Fully good fair Sakellaridis to-day 26.15d.

COTTON TRADE REVIEW.

Fluctuations in Raw Cotton.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended July 26 states :—

General.—A very uncomfortable week has been experienced. On Monday the American Agricultural Bureau published a mid-monthly report which came as a shock, the condition being given as 68.5 per cent., and the estimated crop 11,934,000 bales, as compared with 71.2 per cent. and 12,144,000 bales on the 25th ult. The consequence was a hurried rush to buy both in New York and Liverpool, and prices on the week are up 1d. to 1½d. per lb. Coming at a time when the majority of people here had convinced themselves that the crop was progressing favourably, and lower prices were almost a certainty, the report created great confusion, and in many quarters is frankly disbelieved. The market, however, has been thoroughly disorganised.

Yarn.—For the reason mentioned above business in this section has been of only modest dimensions. A certain number of orders have been placed, probably by manufacturers who, expecting lower prices, had delayed their purchases, but, in face of the new state of affairs, dared do so no longer.

Cloth.—Business has been possible by manufacturers who are willing to forgo the greater part of the advance in the raw material through being well placed in respect to their yarn purchases, but where full prices have been asked for negotiations have mostly been fruitless. In view of the heavy fluctuations in the raw material, it is only to be expected that merchants will decline to face the risks involved in buying ahead, and will content themselves with covering urgent requirements.

Raw Cotton.—There is nothing to add under this heading to what has already been said. Closing prices yesterday were as follows :—American fully middling, 18.29; Egyptian fully good fair, 25.00.

Last week's report, dated Aug. 2, states :—

General.—The market has again been completely under the influence of heavy fluctuations in raw cotton. As is generally the case under such circumstances, the tendency has been for consumers abroad and merchants here to stand by until a steadier state of affairs prevails.

Yarn.—From the cause referred to in the preceding paragraph business in this section has this week been rendered more difficult than ever. A number of small lots has changed hands, as, of course, is always the case, but few contracts of any importance have been arranged. Nominally, quotations are higher following the rise in the raw material.

Cloth.—A certain amount of business has been done when manufacturers have been willing to accept prices below the cost of reproduction on to-day's basis, but, generally speaking, it has been a poor week. Offers have come forward, and apparently a good business could be done on the basis of prices ruling a fortnight ago, but, of course, these are now mostly impracticable. From India a fair inquiry has been experienced, but China does very little, and the same applies to most other foregn outlets.

Raw Cotton.—As already mentioned, this market continues to be very disturbed. Wide variations in prices, based chiefly on reports regarding the weather in the American cotton-growing area, have been the rule. The quotation on Friday of last week for American fully middling was 18.29; day-by-day fluctuations since have been as follows :—Monday, 75 points rise; Tuesday, 28 points fall; Wednesday, 41 points rise; Thursday. 58 points fall. Commencing yesterday, the new universal standards are being quoted, that for middling American being 18.18d. Egyptian fully good fair Sakellarides was yesterday 26d., against 25d. a week ago.

A quay 1,800 feet in length, consisting of three berths with a depth of water of 35 feet, is to be constructed at Madras.

Reuter's Agency has received the following telegram from a Greek semi-official source in Athens :—"The National Bank of Greece has placed at the disposal of the Commission for the Establishment of Refugees a sum of £1,000,000 sterling as an advance on the future Refugee Loan."

Minerva (Roumania) Oil.—June report: Moreni Plot No. 34, Well 1, total depth 360 metres. Diam. 16 in. Testing water shut off. Plot No. 2, Well 2, drilled 115 metres, total depth 385. Set 16 in. column for water shut-off. Plot No. 30, Well 4, drilled 142 metres. Royalty Plot No. 113, Well 106, has yielded approximately 3,000 tons during the month, and continues to flow. Runcu.—Plot No. 18, Well 4, awaiting release of drilling plant from Plot 1. Plot No. 1, Well 1, drilled 13 metres, total 539. Participation. Trial baling showed 150 metres of pure oil with strong gas. Lowering perforated casing. Well 3, drilled 7 metres, total 510. Participation. Deepening to sands at 520 and 528 metres. Plot No. 17, Well 2, drilled 32 metres, total 322. Participation. Royalty Plot No. 11, Well 3, has yielded approximately 3,700 tons during the month, and continues to flow at a reduced rate. Plot No. 17, Well 12, has yielded approximately 500 tons during the month. The total production for June, including oil derived from Royalty wells, is 647 tons estimated.

Company Meetings.

FURNESS WITHY AND CO.

Sir Frederick Lewis on the Shipping Outlook.

The thirty-third annual general meeting of Furness Withy and Co., Ltd., was held on July 30 at Furness House, Leadenhall Street, E.C. Sir Frederick W. Lewis, Bart., the chairman, presided.

Sir Frederick W. Lewis, Bart., in moving the adoption of the report and accounts, said: I have been looking back over my addresses to you during the past two or three years, and I notice that in 1921 I indicated that a very difficult period lay ahead of the shipping industry; then, in 1922, that the conditions were about as depressing as they could be, and last year I did not feel justified in holding out any very encouraging hopes of substantial improvement during the succeeding twelve months. In fact, as is well known to most of us, there has been no general improvement in trade as a whole, and consequently I think the shareholders will be satisfied to see that our profits for the year show a small increase at £572,442, as compared with £552,510 in 1923. Even so, I am afraid we cannot place this slight improvement to the credit of the shipowning business; and were it not for the fact, as I have pointed out on previous occasions, that we have a great many diversified interests, it would not have been possible to have achieved this result.

Altogether, including the amount brought forward, the profit and loss account shows £774,758 10s. 7d. available for disposal. The directors propose, after providing for the half-yearly preference dividend and for the dividends on the ordinary shares, to make a bonus distribution of 2½ per cent. to the ordinary shareholders, making a total of 7½ per cent., free of tax, and to transfer £200,000 to depreciation, leaving £216,636 17s. 10d. to be carried forward, as shown in the balance-sheet. In regard to the depreciation allocation, this is a prudent policy that I am sure will have your approval, notwithstanding that I am able to assure you that in the aggregate our assets are at present values worth more than the figure at which they stand in the balance-sheet. It would be wearisome if I were to refer in any detail to each of our regular Line services, numbering as they do something like forty different trade routes; and, while some of these services have necessarily had to be curtailed on account of the scarcity of cargo offering, we have nevertheless maintained our full organisation and equipment in readiness for any eventualities.

During the year, in association with other important British groups, we became interested with the Russian authorities in the formation of the Russo-British Grain Export Company, Ltd., and I am glad to be able to state that the export of grain from the Russian Black Sea ports was revived on a considerable scale last season.

When circumstances justify, your company will be in the market for additional ships. It is a problem that has received very anxious and prolonged consideration. We have three alternatives:—(a) To build vessels in this country at uneconomical prices—that is to say, at prices upon which we will not be able to obtain a return equal to or even approaching that which we are receiving on Government securities:; (b) to build abroad at lower prices; or (c) to defer building until we can do so on a basis that is commercially sound. Of these alternatives we have adopted the last.

It may be that we are much nearer a trade revival than the present outlook would justify us in believing, but whether that is so or not, it is still an indisputable fact that on the one hand trade is still considerably short of the volume in 1913, and on the other hand the available tonnage is considerably in excess of requirements, as is evidenced by the fact that at July 1 there were approximately 1,150,000 tons d.w. of shipping laid up in British ports, apart altogether from that laid up in foreign ports, which I have no means of calculating.

A well-known economist has prophesised a great boom in shipping, and recommended adventurous owners to build ships without delay. I sincerely hope he is right, but I cannot disguise from you that the immediate outlook of the freight market is depressing. Whether or not the long-deferred and long-looked-for settlement of Continental difficulties is going to bring about the revival that is desired remains to be seen. I can only hope that circumstances may so adapt themselves before we next meet that I may then be able to give you a more reliable and hopeful forecast than I feel able to do under existing conditions.

The resolution was unanimously adopted.

BANK OF ROUMANIA.

Steadiness of the Exchange.

The annual general meeting of the Bank of Roumania, Ltd., was held on July 30 at Winchester House, Old Broad Street, E.C. General the Hon. Sir Herbert A. Lawrence, K.C.B., presided.

The Secretary (Mr. H. Locke) having read the notice calling the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: As you will see, the balance available, after making provision for bad debts, income-tax, and corporation tax, amounts to £19,006 0s. 9d. The Board recommends the payment of a dividend of 6s. per share, less income-tax, which will absorb £11,531 5s., and that the balance of £7,474 15s. 9d. be transferred to the contingency account. The business of the bank continues to be satisfactory, but the high rate of exchange at which we have to convert our profits on the other side is an adverse factor which has to be borne in mind.

The shortage of money, which commenced to make itself felt at the end of 1922, has increased during 1923, and to a certain extent has impeded the development of industry generally throughout Roumania.

At our last meeting Lord Goschen said that the rate of exchange was then much steadier, and this comparative stability was maintained throughout the year, the rate on December 31, 1923, being 850 as compared with 800 on January 1. This reflects a welcome improvement when compared with the fall from 550 to 800 in 1922.

This steadiness in the exchange has evidently had its effect on trade between Great Britain and Roumania, as according to British Customs returns the exports from this country to Roumania during the year 1923 were £2,759,000 (60,500 tons), the largest item being, as usual, cotton goods to the value of £1,643,000. This total shows a slight advance on the figures for 1922 (£2,633,000), and is quite good when one remembers that large stocks were held over in Roumania from the boom period. Imports into Great Britain from Roumania for 1923 were valued at £2,360,000 (404,800 tons), the largest items being:—Cereals, £350,000; oil, £309,000; timber, £358,000. The total of £2,360,000 shows a pleasing increase on that of 1922—viz., £1,700,000.

The increased and extended taxation is showing good results, and the Budget for the year 1923 was balanced, revenue and expenditure both being about 15,406 million lei. The Government not only refrained from borrowing further sums from the National Bank, but actually reduced its floating liability to that institution by 1,278 million lei, in addition to liquidating some of its internal obligations in other directions.

With regard to the present harvest, the cultivated area is larger than in previous years, but, owing to a severe drought during part of May and June, the earlier expectations of a very good crop will probably not be realised. The latest information from our Bucharest manager shows that in all probability the wheat harvest will be sufficient for the internal needs of the country, and will leave a small surplus for export, which, however, will not easily be effected owing to the high level of internal prices and the incidence of export taxes. The maize crop, which is, of course, the main consideration, promises well.

In the oil industry the production was maintained in 1923 at 4,350 to 4,500 tons per day, while the total production in 1923 was 1,508,000 tons, as against 1,372,000 tons in 1922.

The discovery of new productive oilfields brings hope that the output will be greater in the year 1924, and the effect of the new mining law which has recently been passed will probably mean the retention in Roumania of a greater proportion of the profits arising from the oil business than has hitherto been the case. At the same time, the prospects of greater activity on the part of foreign companies and the introduction of new foreign capital in the industry are not hopeful.

The National Bank of Roumania has again in 1923 afforded considerable help to the commerce and industry of the country through the financial institutions, as is shown by the increase in its holding of bills discounted.

Digitized by Google

which at the end of 1923 was 5,864,110,365 lei, as against 3,808,488,416 lei in 1922. The Crédit Industriel, which was founded in 1923, has also commenced its work of assistance to the industry of the country.

Before resuming my seat I desire to express, on behalf of the Board of Directors, our high appreciation of the valuable services rendered to the bank by our late chairman, the Viscount Goschen, during the twenty-seven years of his association with us, and to wish him every success in his new sphere of activity.

The resolution was unanimously adopted.

TRADE WITH ROUMANIA.

In presenting the sixth annual report of the British-Roumanian Chamber of Commerce to the members on July 30, the Right Hon. Lord Oranmore and Browne, K.P., the chairman, said there had been an improvement in trade with Roumania during 1923. The exports from the United Kingdom into Roumania (including re-exports) were £2,847,903 (an increase of £159,000 compared with 1922), the largest item being, as usual, cotton goods to the value of £1,743,000. The imports from Roumania into the United Kingdom amounted to £2,361,584, which showed an increase of £666,000 on the figures for 1922. With regard to imports from Roumania, the tendency on the part of that country to lift some of the restrictions which had hindered business must also be noted as a favourable factor.

For some months past the Roumanian textile manufacturers had been agitating for an increase in the Customs tariff on textiles, as they claimed that the existing one was insufficient protection for the home trade, and it was quite possible that increases of duty on other goods would also be made. This would tend to decrease their exports to them.

Reviewing the trade of Roumania as a whole during the past twelve months, he was pleased to say that, although there was plenty of room for improvement, they could find satisfaction in considering that in the disorganised state of business with Continental countries, traders here had found it possible to do the amount of business which had been done, and provide a useful outlet for their goods, an outlet which was still, of course, capable of great extension. The uncertainty caused by the difficulties of payment (which were not peculiar to Roumania), due to a depreciated exchange, was referred to in the report of the council.

The country was certainly continuing the work of consolidating its position, and had many difficulties to contend with in its re-organisation, due to the much larger area of which Greater Roumania was now composed. Old channels of trade had been disturbed, and it required time to establish the new channels necessitated by the changes in territory due to the recent upheaval. Certain channels were set up after the Armistice, which would not seem to be of an enduring character, and it was confidently to be expected that the volume of trade would be increased in the near future.

M. Titulesco, Roumanian Minister in London, was unanimously re-elected hon. president of the Chamber.

The League of Nations Commission for the study of the incidence of malaria in Eastern Europe, which has visited Yugoslavia, Macedonia, Bulgaria, Roumania, and Poland, is now in Russia. It will go on to Italy next month

Phra Sarasas has been appointed Siamese Consul-General in Calcutta. He has been Secretary to the Legation in London for several years. He will take up his duties in September.

The Government of the United States has decided to grant Malta a definite quota of 10 immigrants for the ensuing year, instead of classing the island under the heading "Other Europe," as heretofore.

HIDE AND SKIN TRADE OF ADEN.

Immense quantities of raw hides and skins are annually sent to Aden from the near-by Red Sea and African ports, such as Mocha, Hodeidah, Djibouti, Berbera, and Mogadiscio, for sorting, baling, and re-exportation to different parts of the world, principally to the United States, France, and the United Kingdom (says an American Consular report).

The year 1923 in general was favourable to the hide and skin industry. The imports decreased only slightly in quantity and increased in value, while exports increased both in quantity and value. Hides have not yet recovered from the slump which took place after the boom year of 1919-20, although a slight increase in quantity and value was recorded in both imports and exports. The large stocks which have remained in Aden godowns since 1919 are at last showing the effects of a reviving market, and quite probably imports from Abyssinia, the home of the so-called Aden hide, will shortly assume more normal proportions.

The imports of raw skins into Aden from all countries during 1923 decreased to 5,734,000 pieces from 6,188,000 pieces in 1922. Imports from British possessions and Djibouti registered decreases, while the quantity imported from Dunkali coast, Independent Somali ports, Italian East Africa, and Red Sea ports increased. Exports of goatskins amounted to 4,429,000 pieces in 1923, as compared with 3,671,000 pieces in the previous year, this increase being largely due to larger purchases by France and the United States, which amounted to 402,000 and 3.544,000 pieces respectively. Exports of sheepskins amounted to 1,762,000 pieces in 1923, as compared with 1,566,000 pieces in 1922. Exports to the United States and France increased from 376,000 and 100,000 pieces respectively in 1922 to 677,000 and 134,000 respectively. Exports of the miscellaneous type headed "All Other Skins" amounted to 1,285,000 pieces in 1923, as compared with 1,312,000 pieces in the previous year. The total exports of skins, therefore, increased from 6,549,000 pieces in 1922 to 7,476,000 pieces in 1923.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Copper Plates.—Tenders are invited for the supply of 11,500 kgs. of red copper plates of varying dimensions. September 1. (D.O.T.)

Oils.—The general manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of mineral lubricating oils. September 25.

Construction of a Metallic Bridge over the Mahmoudieh Canal at Karmous.—The Municipality of Alexandria invites tenders for the construction of a metallic bridge over the Mahmoudieh Canal at Karmous. September 23. (D.O.T.)

Turkey.

Bell Tents.—A department of the Turkish Government proposes to purchase 1,000 bell tents. (D.O.T.)

Greece.

Construction of Works at Kavalla Harbour.—Tenders are invited by the Kavalla Harbour Committee for the construction of works at Kavalla Harbour according to the specifications drawn up by the engineer, Mr. A. Ghinis. These works are estimated to cost drs. 76,000,000. The adjudication will take place on December 1, 1924, and tenders must be submitted by that date. A guarantee deposit of drs. 600,000 must be made in the Public Treasury, and this deposit will be returned to unsuccessful competitors within three days after the date of adjudication. In the event of two or more competitors tendering at the same price, lots will be drawn. (D.O.T.)

NOTES OF THE WEEK.

Political Respite in Greece.

The new Greek Government under M. Sophoulis has been accorded a vote of confidence by 181 to 141 votes, and the National Assembly has been adjourned until October. In the seven or eight weeks' respite thus accorded him, M. Sophoulis will have opportunity to strengthen his position and to make a start on carrying into effect the programme that he outlined in the Chamber. Whether the change of Government has introduced greater political stability in Greece it is too early to decide, but there can be no doubt that the people as a whole are momentarily tired of politics and are feeling the need of smooth and efficient administration. The downfall of M. Papanastasiou was brought about by the inherent weakness of his Cabinet, which seemed unable to cope effectively with any of the more difficult questions with which it was confronted in its short tenure of office. As a result of the political uncertainty of the last few years, Greece finds herself seriously in arrears with regard to a number of problems of which a State must continually keep abreast, if it is to deserve the name of progressive. M. Sophoulis has laid stress on the need for strict economy in public expenditure, but recognises that the country has considerable leeway to make up in the matter of public works. Road construction and the upkeep of existing highways are prime necessities; Athens is still, after thirty or more years of discussion of the subject, without an adequate water supply; above all, there is the tremendous refugee problem, with which the future welfare of the country is so closely linked. A danger to which Greece is exposed is the possible conviction of a number of loyal citizens that the republic has already been shown to be a mistake, and their belief that the best moment for a change is before the republic has had time to become a habit with the people. Against this view may well be set the popular desire for a quiet life, which will make the majority averse from any change, even one which may be welcomed a few years hence.

The New Order in Yugoslavia.

The establishment of a new Government in Yugoslavia has been followed almost immediately by the departure of M. Raditch, the Croatian leader, from Moscow. He had been forbidden to return to Vienna, but has now been accorded a transit *visa*, and he is credited with the intention of making a few weeks' stay at Baden. In the meantime M. Raditch has given his blessing to M. Davidovitch's Ministry, and has mapped out a programme for the Government which would seem to be based on the idea that M. Raditch's views are to carry the day in Yugoslavia. It will be interesting to watch whether the new Prime Minister, in his desire to restore unity to the country, will consider it necessary to go wholly over into M. Raditch's camp, or will be able to persuade him to forget Moscow and to think only of what is suited to the mentality and traditions of the Yugoslavs.

The Hejaz Treaty.

It is reported from Mecca that King Hussein has not found to his liking the draft of the treaty which has been so long in preparation with the British Government, and that his representative is to bring the much-travelled document back to London in the hope of winning acceptance for some further amendments. No objection will be taken to a fresh expression of King Hussein's views; but if he entertains the idea that he will obtain a formal withdrawal of the Balfour Declaration he is likely to be disappointed. The *raison d'être* for a treaty with the Hejaz is to reduce to a practical form the various promises given to the Arabs during the War. It is common ground that these promises left much to be desired in explicitness, and that they can be shown to clash with other undertakings given by the British Government. No one, however, attempts to prove deliberate guile on the part of Great Britain. The exigencies of the time are an explanation of the mistakes made, even if they cannot be held to justify them. The practical problem at the present time is to make the best of a complicated situation in order that there may be as little interference as possible with the peaceful development of the territories concerned. If King Hussein will lend his influence to this end, he may yet deserve well

Digitized by Google

of the Arab world, and the Hejaz Government will be the more free to deal with such problems as the Mecca pilgrimage, which is exercising increasingly the minds of Moslems throughout the world of Islam. With the steady amelioration of conditions in Moslem countries pilgrims are becoming more and more unwilling to tolerate the hardships imposed upon them during their sacred mission, which they are beginning to realise can be remedied with a little good will and forethought.

The Iraq Government.

When the Ministry of Jaafer Pasha gave place to a Cabinet formed by General Yassin Pasha, who had been prominent in his opposition to the Anglo-Iraqi Treaty, some uncertainty was felt regarding the prospect of the maintenance of satisfactory relations between the two countries. Yassin Pasha, however, has lost no time in making his attitude clear, and proves himself to be one of the world's practical people, who can honourably accept the accomplished fact, after having taken a strong line of opposition while the subject was under discussion. He is pledged to attempt to obtain certain modifications of the Treaty, or, rather, of the supplementary agreements, which, indeed, have been already promised by the British Government. For the rest he claims to have formed a business Government, which promises to carry out some of the more pressing requirements of the new State. Among the items of his programme are reduction in administrative expenditure, development of the country's resources, especially by means of irrigation, the investigation of agrarian problems, the spread of education, and the completion of preparations for defence. In this list it is noticeable that pride of place is given to the views of the Minister of Finance, Sassoon Effendi Heskail, who can be relied upon to keep a strict control of the exchequer so long as he remains in office, while at the end of the long list comes the matter in which General Yassin Pasha is mostly interested. Whether he will be able to give effect to his Finance Minister's policy of retrenchment and at the same time bring the army up to the standard which he himself is known to favour, must remain for the present an open question. Of the importance of a policy of economic development for Iraq there can be no doubt, and it is to be hoped that the inclusion of these two strong men in the same Cabinet will lead to the carrying out of a practical programme which carefully adjusts Iraq's requirements to her capacity. No one will find much fault with the Government if for a time education lags a little behind the promotion of the country's material needs.

The Sikh Reaction.

The most welcome items in the news from India are those recording the progress of the Sikh revolt against the group of politicians who have for so long usurped the right to dictate to the community. Some such reaction was considerably overdue, but until quite recently there have been no signs of its appearance, and it has seemed as if the small number of irreconcilables were to be allowed to continue emitting the clouds of poison-gas which have spread over nearly the whole of the Punjab. Sir Malcolm Hailey, who knows the facts, recently described their propaganda as cruel and dangerous deceit, directed to the subversion of the authority of the State, and apparently his firm declaration that the Government is out to govern has at last given the lead for which the preponderant mass of reasonable opinion has been silently waiting. As everybody knows, there is no lack of courage in the community, but there is a certain slowness of wit, to which the delay in the revolt may fairly be attributed. If this obstacle has now been overcome, and if the new spirit of energy is maintained, India may be in sight of the liquidation of a position which has been an increasing menace to the peace and prosperity of the North.

The Forces of Apathy.

We wish it were possible to point to similar movements of revolt in the other parts of India where public opinion is for the time being dominated by equally vociferous, and almost equally dangerous, cliques, but hitherto we have failed to detect anything of the kind. In Bengal and in the Central Provinces, where the popular side of the new institutions is temporarily in abeyance, we have the depressing spectacle of appeals to the Governor to put matters right, to find places for officials whose salaries have been refused by the Legislature, or to provide schools, or hospitals, or waterworks, or any of the other needs for which the Council has not voted funds; but the reiterated explanations that these are matters for popular control seem to lead to no effective movement for bringing pressure to bear on the representatives of the people. Wits are quicker in these provinces than in the Punjab; but we fear it must be admitted that civic courage is still lacking, even in Calcutta itself, and, so long as that is the case, the prospect for real self-government is not bright. Whatever the explanation, the fact remains that the continued apathy of the classes which should lead in action is now, more than ever, the cause of their own discomfort.

The Indian Small Investor.

We have so often urged the importance of establishing the Indian small investor as an integral part of the national financial structure that we may be pardoned for emphasising Sir Basil Blackett's definite adherence to that policy, as exhibited in a speech he made last month in Calcutta, when he announced that the terms given to buyers of cash certificates would not be reduced. because it would be a pity to disturb the growing popularity of these investments, and because the national benefits they bring outweigh the slightly higher cost to Government. This is good finance, as distinct from meticulous accountancy, to spend a little now in order to secure the permanent establishment of a new resource. We invite Sir Basil to take the next step at once, by declaring that the small investor is to be the main, and eventually the only, source for financing the programme of reproductive State enterprises. Already his existence has reduced the State demands on the commercial market by one-fourth. Sir Basil himself may hope to see that figure rise to one-half; and there is no reason why his successor should not see the half become the whole, leaving the market free to finance agriculture, trade and industry, which collectively can absorb all the money it provides.

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 182 of this issue.

THE WEEK AT HOME.

London, Tuesday Morning.

The Parliamentary Session.

Last week Parliament rose to meet again in seven weeks' time. Labour had been in office since January, and the end of the session appears to have been welcomed by all parties. Neither Labour man, nor Conservative, nor Liberal can look back on it with much delight, for the stock of no party has considerably appreciated. The wisest men still find politics uninteresting.

But there is no denying the fact that the rôle of Labour has created no panic. It is true that the European question is still unsettled, and that strikes still are frequent, but, like that of the general to Wagner, the ordinary man's attitude to Mr. Ramsay MacDonald is now: "I don't like him, but I'm not afraid of him."

The fashion is to praise Labour for its foreign policy and in a rather Olympian manner to deprecate the effect of its domestic proposals; but it is difficult to see the reason of this. Certainly on foreign matters there is little to chide the Government with, but has the ice of international been really cut yet? It is a little early to speak.

With one country only—Russia—has the Government actually proclaimed an agreement. And this agreement, which appears to ignore the material interests of European bondholders, is by no means to the liking of the House of Commons. Whether, in spite of the pother raised in the Press against it, it will be finally approved by the country I cannot guess. If precedent goes for anything, the extraordinary manner in which at the last moment it was rushed through will not tell against it in the short run, but, as in the case of Ireland, will bring trouble in the long run.

In its home policy the Government has, so it seems to me, been fairly successful. Admittedly the new ideas which we were promised (or, from the other point of view, with which we were threatened) have got lost by the wayside, or were thrown overboard to prevent shipwreck, but the great Housing Bill has been passed, and that is something considerable to play with. And I doubt whether the Government has lost much through its inability to check industrial disputes, for they were foolish people who expected the stopping of economic activities by political action. Strikes are a product of our industrial system, and cannot be modified by any form of Government. That the tempers of masters and men have not improved during the régime of a Labour Government is, moreover, a mere coincidence.

Ireland.

Mr. Thomas, the Colonial Secretary, has departed for South Africa, having breathed over this land words of optimism concerning Ireland. It is well that he should be optimistic, for few other people are. If the Labour Government effect a real settlement in Ireland, their deed will be remembered when Jubaland and Soviet Russia and Mosul and all the rest of the objects of their admirable intentions are forgotten.

What the Bill which the Government are introducing next session will contain is uncertain, but it seems that what is called "the coercion of Ulster" will be implied in it. How this country is divided on the question whether those parts of present Ulster which are predominantly Nationalist should be incorporated in the Free State it is not easy to see. Before the War, one thinks, England would have been much readier and keener to support Ulster through thick and thin; but now, it may be, it will support it only through thin. Whether any permanent settlement can be reached through supporting the Free State in its present demands (said on insufficient grounds to have been made because of its waning popularity compared with that of the Republicans) is perhaps doubtful; but the possibility of a permanent settlement through England's whole-hearted support of Ulster does not exist. It is from this angle of expediency, rather than from any principle such as that of loyalty or justice, that Englishmen are in great part now looking anxiously on at this Irish problem.

The Battle of Jutland.

Our Press is a vile Press, but, like beer, some of it worse than the rest. Because a German Admiral publishes his account of the Battle of Jutland some journals must needs print them with the disgusting insinuation—disgusting because ignorant—that Admiral Jellicoe failed dismally to take advantage of his opportunity of shortening the War by two years. One does not, of course, object to criticism of the tactics of the fleet in that battle if that criticism is expert and not designed merely to deprecate one of our sailors at the expense of another, but this jejune journalistic gibberish is nauseating in the extreme. By their attitude towards certain distinguished soldiers and sailors can many of our journals be known.

The Russian Treaty.

Anger blazed and tempers frayed as permission was finally extracted from the House of Commons to sign the Treaty with the representatives of Soviet Russia. The Unionists were against the agreement to a man, and even Mr. Lloyd George poured his scorn, now perhaps a little etiolated, upon it. But Mr. Ramsay MacDonald and Mr. Ponsonby stuck, with respective obstinacy and ignorance, to their exhausted guns, and the agreement will in a few weeks receive the full batteries of the House.

What it is all about I confess I have not yet discovered. So many concessions have been made on both sides that it really seems to be a mutual defeat. It has been described as "an agreement to agree if and when the parties can agree," and no amount of rhetoric upon White Sea fishing and bondholders and Oriental propaganda can improve upon that.

The general view appears to be that the Prime Minister has sacrificed to his pre-office fetish of the recognition of Russia his common-sense, but acceptance or rejection of it must be deferred until the debate in the House upon it.

Coast Erosion.

It is, I believe, a moot question whether the land is gaining over the sea or vice versa, but there is no doubt that in this country, at any rate, coast erosion is causing considerable anxiety. Those who share in this anxiety—and the cost of assuaging it—are endeavouring to make defence from the sea into one of the responsibilities of the Crown. At a meeting convened in London recently a strong resolution was passed, declaring that the cost of sea defence was intolerable for some towns (little towns on the East Anglian and East Riding coasts had already disappeared), and that, therefore, the Government should contribute towards a great scheme of national defence.

There is no question that the matter is urgent. Already some people are foreseeing an isle of Lowestoft. Hitherto the tides have been stemmed either by communal or personal effort, but such effort has become increasingly difficult. I know of one place on the East Coast where the sea already has made its gap in a privately built wall, and any dark night now may be washed out what in the Middle Ages was a flourishing port.

Some towns can afford, others cannot, to protect their frontage, but until there is a connected scheme of protection the sea will always have the last laugh. Alter Ego.

CORRESPONDENCE.

ARAB MUSIC.

To the Editor of The Near East.

Sir,—The account in The Near East of July 17 of the recital of Arab songs at the Wigmore Hall was very interesting. It should be better known that one of the greatest players, if not the greatest, of the "plucked musical instrument," the Arab ut, is Shereef Mohuiddin, son of H.H. the Emir Shereef Ali Haidar.

The Shereef is a skilled player of the violoncello, and a student of classical European music. He is also a composer, and among his later compositions are an Arab "Berceuse" and other pieces of advanced technique. This technical development has greatly interested such artists as Godowski, Kreisler, Mischa Elman, Jascha Heifetz, and others whom he has lately met in New York, and to whom he had the pleasure of playing.

On the advice of Professor Godowsky, Shereef Mohuiddin has played several preliminary pieces for a gramophone company, and it is to be hoped that before long these records may be released, so that musicians interested in Arab music may see the great possibilities that he has opened up.

A short time ago a French work was published on Arab music and the limitations of the ut, which was spoken of as an instrument only adapted for accompaniments. Shereef Mohuiddin's work has so developed this instrument that it suggests the change from the spinet to the pianoforte. One of the artists who heard him said "he had done for the ut what Paganini had done for the violin." He has had a special sounding-board added to one of his uts under the upper wires, which greatly increases the volume of the sound and which enables him to give his compositions in imitation of Bach, Chopin, and Beethoven.

Among other compositions of Shereef Mohuiddin are Arab airs which are wholly Oriental.

I am, etc., Mohammed Emin (Shereef).

Shumliyah, Scutari, Constantinople, July 28.

ALBANIA AND GREECE.

We have received from the Secretary of Chameria Brotherhood in the United States, Rajep Kobury, 78, Madison Street, Worcester, Mass., the following cablegram:—"We have read with much surprise your editorial article of June 26, stating that the League of Nations found that Albania invoked the League's assistance on entirely false grounds when complaint was made against Greece's action in expatriating Albanians as Turkish subjects, and investigation proved that the Greeks were merely carrying out the provisions of the law for partition of large estates irrespectively of the nationality of the owner. If the League really arrived at any such conclusion, it only proves how incompetent the investigations of the League have been and how ably the Greek Government succeeded in confusing two entirely different issues. It is true that a few Mohammedan Albanians misnamed Turks for purposes of propaganda are large landowners in Chameria or Northern Epirus, so-called, but the bulk of the population are not. We Mohammedan Albanians of Chameria who work in American factories are not concerned about big landowners, but about our rights under the Convention of Lausanne, namely, that Albanian Mohammedans living in Greece are not to be considered or handled as Turks. We appeal to your fairness to give prominence to this protest against the alleged findings of the League, which are ludicrous and false."

[It is possible that the incident to which our correspondent refers arose over the wording of the Albanian memorandum in which the matter was submitted to the secretariat of the League. As the application has been withdrawn, the Albanian Government presumably recognises that a mistake was made, and that an appeal to the League must be prepared with the strictest regard to facts. Thus, if Albanians anywhere are being expatriated, it is of no use to approach the League on the ground that they are being expatriated *qua* Turks, when in fact they are being dealt with under a law which is nominally applicable to all nationalities. The law may be wrong, or may be wrongly applied, but if it is the instrument by which expatriation is actually effected reference must be made to it, and the statement that its victims are all alleged to be Turks cannot be expected to satisfy the League, especially when it is unsupported by evidence.—Ed.]

The Lausanne Treaty with Turkey entered into force on August 6, 1924, so far as the British Empire, France, Italy, and Japan are concerned.

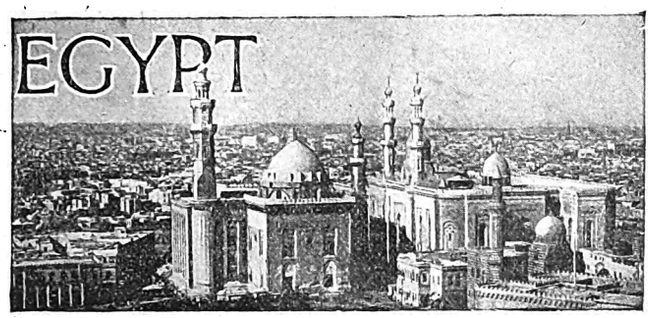
The Near and Middle East.*

From Our Own Correspondents.



Cairo, July 26.

Zaghloul Pasha.

If any doubts existed on the position which Saad Zaghloul Pasha still holds in the minds of the people of Egypt, the events of this past week must have set them definitely at rest. The Premier's journey from Cairo to Alexandria was a veritable triumphal progress. There was obviously nothing organised about the shouts and acclamations that greeted his train as it passed. The manner in which the *fellahin* congregated all along the route at points most distant from the Mudiria capitals—and one could see them from a distance running towards the line in order to join in the ovations—was itself sufficient to indicate how spontaneous was this demonstration of popularity and affection.

Down in Alexandria similar scenes were enacted. Saad Pasha could not stir out of the San Stefano Casino without crowds collecting and acclaiming him until they were hoarse. The farewell tea-party organised by the members of the Senate and of the Chamber of Deputies was a further opportunity for gauging the place he holds in the hearts of the people—incidentally an interesting feature of this entertainment, the significance of which was not lost on the other guests, was the spectacle of Prince Omar Tussoun, the King's representative, and Lord Allenby seated on either side of Zaghloul Pasha as showing what changes the whirligig of time is capable of producing—while his departure for France took place amid scenes which will long live in the memory of all who witnessed them.

His Speech.

The speech which he made at the tea-party was his last public utterance before leaving the country, and it may be of interest to repeat the more important portions. It was purposely made short, in deference to the wish expressed by King Fuad to a Parliamentary deputation, which waited upon him the previous day, that Zaghloul Pasha should not fatigue himself with long speeches. In fact, His Majesty sent his Grand Chamberlain with express orders to see that the Prime Minister delivered only a brief speech.

Saad Pasha warmly thanked foreign personages, the foreign communities, and his fellow-countrymen for the great sympathy that had been extended to him. He said he was leaving the next day, but that he felt that in the countries to which he was going he would be among friends who loved Egypt and had great sympathy for her. He was going to take a cure, and then would return to his country, he hoped, fully restored in health. As regards negotiations, he could but repeat what he had so often said. If he found that by undertaking them Egypt lost and Britain gained no rights, then he would enter upon negotiations, which, with the grace of God and the strength and support of his fellow-countrymen, he hoped to bring to a successful conclusion.

It will be noted that in this his last utterance before leaving he still makes no definite statement with regard to his visit to London. This must not, however, be taken as indicating that the matter of his visit is still unsettled. He has accepted Mr. MacDonald's invitation, and has been informed that the end of September will in all probability be the most convenient time for the British Premier to receive him. For political reasons of purely local importance he has purposely left the matter vague, but, provided his health remains good, he will certainly go to London for what he calls "preliminary conversations." If any agreement is possible, those conversations will eventually turn out to have been the real negotiations, and the official delegation, which, after he has "found the situation favourable," will be appointed to negotiate, will in reality be called upon only to elaborate various heads and draft the final agreement.

The Meeting with Adly Pasha.

The meeting which took place between Adly Pasha and Zaghloul Pasha on the eve of the latter's departure came as a great—and, as far as one can gather, welcome—surprise. When Zaghloul Pasha was taken to hospital after the attempt on his life, one of the first to call and inquire was Adly Pasha, who had been estranged from him since the spring of 1921. On Thursday morning, after the Council of Ministers at Montaza Palace, Zaghloul Pasha called at Adly Pasha's house to return his visit. Later in the day Adly Pasha, who had not been at home, went to San Stefano Casino, and had with Zaghloul Pasha a long conversation, which was characterised on both sides by great cordiality. These visits were not known to the general public until after Zaghloul Pasha's departure, but when the news spread it was received with general satisfaction, for it is recognised that although Adly Pasha is no longer the head of the Constitutional Liberal Party, this resumption of friendly relations may possibly affect in a favourable manner the future course of politics in Egypt,

and in any case cannot fail to strengthen Zaghloul Pasha's hand.

Acting Ministers.

During the absence of Saad Zaghloul Pasha the post of Prime Minister will be held by Mohamed Said Pasha, who will retain the portfolios of Education and Justice; and the Presidents of the Senate and of the Chamber of Deputies, Ziwar Pasha and Mazlum Pasha, have been appointed to act respectively as Ministers of Foreign Affairs and Communications during the absence on leave of Wassef Ghali Pasha, who will in all probability accompany Zaghloul Pasha to London, and of Mustapha Nahass Pasha.

August 2.

Quiet Again.

"The tumult and the shouting dies, the captains and the kings depart." With the sailing of the Lotus all is quiet once more. The crowds which acclaimed Zaghloul Pasha during his stay in Alexandria and on his last drive to the port disappeared as if by magic, and both in Cairo and Alexandria peace reigns again. There will now be a welcome lull for about a month, it is expected, until the time for the MacDonald-Zaghloul meeting approaches, when all manner of rumours will begin to circulate—this is the land of the birth of the canard—and to us will fall the task of finding out whether there is even the shadow of truth in them, and, if so, what the effect on public opinion will be. Already, with Zaghloul Pasha scarcely a day out of Alexandria, we had the first—the statement that possibly a meeting would take place at Vichy itself on the occasion of Mr. MacDonald's visit to Lausanne. As far as can be gathered in official circles, there is at present not the shadow of a foundation for this statement, though it may be that a preliminary interview will take place there.

The Adly-Zaghloul Meeting.

The topic of the hour still seems to be the Adly-Zaghloul meeting. The latter came as a great surprise, though not to those few who knew that when he heard that Adly Pasha had personally called at the hospital and had been hissed by students Zaghloul Pasha had stated that one of his first concerns when he was allowed out would be to return his old friend's visit. For the moment there does not seem to be much prospect of any *rapprochement* between the Constitutional Liberals and the Zaghloulists. The former point out with some justice that so long as they are persecuted there can scarcely be any question of *rapprochement*, and they add that in any event Adly is no longer their leader and his actions do not bind them. Be that as it may, it is a significant fact that the *Siassa*, the organ of the Constitutional Liberals, has markedly trimmed its sails since the meeting. As one ardent Zaghloulist said to me about a leading article published by it this week, "it might really have appeared in *Al Balagh*" (the chief Zaghloulist organ), so favourable to the Zaghloulist cause was its tone—all of which goes a long way towards indicating that those who affirm that Adly Pasha's *rapprochement* with Zaghloul Pasha will have a tempering effect on the situation as between the Constitutional Liberals and the Zaghloulists, may in the end turn out to be right.

The High Commissioner.

Viscount Allenby left this week for England on leave. The King sent his Grand Chamberlain, Said Zulfikar Pasha, to Sidi Gaber station to bid him *bon voyage*. Mr. A. Clark Kerr, Counsellor at the Residency, who has just returned from England, will act as High Commissioner during Lord Allenby's absence.

The Judicial Adviserships.

The contract in virtue of which Sir Maurice Sheldon Amos holds the post of Judicial Adviser expires on November 27 this year, and already there is a good deal of talk with regard to the future of that post and of Sir Maurice himself. The continuation of the Judicial Adviserships, as well as of the Financial Adviserships, it may be remembered, was part of the settlement proposed by the Milner Mission, and in view of the possibility of negotiations taking place this coming autumn in London between Mr. Ramsay MacDonald and Saad Zaghloul Pasha, it is obviously impossible to say at the present moment what arrangement will be made in regard to the Judicial Adviserships, or whether Sir Maurice Amos will continue his connection with the Egyptian Government.

YUGOSLAVIA.

Liubliana, August 3.

The Radical Party.

Although Parliament had been prorogued until October 20 and the National *Bloc* Government—as the Radicals cum Independent Democrats preferred to style their Government—had thereby been enabled to remain in office, it had become more and more obvious that the position was indeed untenable, as the majority in the Skuptshina was definitely opposed to the Pashitch-Pribitchevitch Government. For this reason the Government was no less eager than the Opposition in the search for a satisfactory solution, and during the protracted course of negotiations two possibilities were evolved. The Government, or, more properly speaking, MM. Pashitch and Pribitchevitch, were of the opinion that at the present moment nothing short of a general election would bring forth the desired solution. The Opposition, on the other hand, maintained that the existing Parliament was capable of carrying on, as they, the Opposition, enjoyed a safe majority.

To all appearances, the view held by MM. Pashitch and Pribitchevitch was the only sound one, because in a country with a Parliamentary Government a general election alone offers solution of a position in itself a deadlock. But in Yugoslavia this rule does not altogether hold good at the present moment. In the first place, MM. Pashitch and Pribitchevitch were in favour of a general election solely under the condition that the mandate for it was entrusted into their hands. What that amounts to everybody knows. With the help of the admini-

strative machinery sufficiently strong pressure would be brought to bear on the electorate to ensure a victory for the Government parties. It was obvious that an election on these lines would only increase, instead of allaying, political animosity in the country, and thereby endanger that consolidation of the State which is Yugoslavia's primary necessity.

If, however, the election were conducted correctly it would certainly not bring about any essential change, and a second election would have to follow, which, in its turn, would again fail to provide a solution.

To this consideration must be added another fact which militated definitely against a general election. Inner political relations in Yugoslavia have reached their present acute stage because the country may be said to suffer from too much talk and too little work. Fresh elections would positively cultivate this defect. How to compel her political parties to leave the spheres of oratory for the fields of practical activity and to group themselves for purposes of work instead of quarrelling over theories is Yugoslavia's great problem.

The King's Solution.

The difficulty was brilliantly solved by King Alexander, who declined to entrust the election mandate to any party before it had been conclusively proved that the present Skuptshina was incapable, and therefore he refused to confer the election mandate on M. Pashitch.

Hence the Radicals were left with the alternative of coming to an arrangement with the Opposition or of passing over to the Opposition themselves, forsaking the Government. But M. Pashitch would not hear of an agreement with the Opposition, partly on impersonal grounds and on principle, considering as he did the Opposition as hostile to the State, and partly for personal and political considerations—these, incidentally, the more decisive ones—in view of the fact that the Opposition was demanding the heads of several Radical deputies. So that the onus of action was thrust on the Opposition.

Most of the Opposition parties are opposed to the present Constitution, and their electoral campaign has always been waged under the banner of Revision of the Constitution. Meantime the Opposition was firmly convinced that they could not possibly undertake the formation of a Government unless they first jettisoned Revisionism, and this they could only afford to do if, as an offset, they could show their electorate important successes in other directions. Therefore the Opposition declared that they would sacrifice their Revisionist programme and accept the Vidovdan Constitution, but demanded a guarantee for the cessation of corruption in any form whatsoever, stating that no one previously involved in a case of corruption would be permitted to become a member of the new Government.

From such plain speaking on the part of the Opposition the Radical deputies concerned knew very well that their hour would come with the conclusion of a compromise between their party and the Opposition, so they left no stone unturned to prevent an agreement, and since many of them are men of wealth and influence, their efforts proved successful. Above all, they succeeded in obtaining M. Pashitch himself—not that that was particularly difficult, for Pashitch's own son is himself in the forefront of personages involved in *affaires* of corruption. The sentimental exploitation of paternal feeling was the introduction, and a very good one, too!

But there was a second and a stronger argument. Compromise with the Opposition would inevitably entail curtailment of M. Pashitch's absolute power, and Pashitch had already become accustomed to looking upon Serbia almost as his own domain, and could not face the prospect of sharing his power.

The majority of the Radical deputies, however, think otherwise, realising that in the interests of the State an agreement with the Opposition is imperative, and that their leader was none other than Liuba Yovanovitch, President of the Skuptshina, a man who enjoyed the respect of the Opposition in addition to that of his own party.

The difference between M. Pashitch and M. Yovanovitch increased, and began to be the source of comment in the Radical Press. Things were bound to come to a head, the alternative being a split in the Radical Party, a contingency all factions were most anxious to avoid.

Then M. Pashitch took an unexpected step and summoned the Central Committee of the Radical Party to Belgrade, calling upon it, instead of the Deputies Club, to decide on the situation. In this M. Pashitch counted upon the fact that the Central Committee included men who were not yet deputies, but were anxious to fill that rôle, and would therefore share his desire for fresh elections and generally side with him. The Deputies Club, on the other hand, included men who were not at all sure of being returned at the next election, and might therefore withhold their support. The result showed that Pashitch had calculated correctly. The Central Committee was for him without being precisely against Yovanovitch, though Pashitch's point of view was the more strongly supported. Taking things all round, the Central Committee expressed itself in favour of fresh elections, and as the Radical Party represented the stronger party, Pashitch requested the King for an election mandate.

This request the King definitely refused to frank, and summoned M. Yovanovitch and Marko Giurichitch, the President of the Radical Deputies Club, and, acting on their advice, entrusted the formation of a Cabinet to M. Davidovitch, the leader of the Opposition. Within four hours M. Davidovitch had duly composed his Cabinet and obtained its sanction by the Crown.

The New Government.

On Sunday evening Belgrade received the news that the formation of a Government by the Opposition was a duly constituted fact, the news creating an unexpected sensation.

The new Government is in the hands of the Democrats (the Davidovitch group, of course, all Serbs throughout), the Koroshets party (Slovenes), and the Spahos (Croat Moslems of Bosnia). It is cer-

tain, however, that it will have the party support of the Serbian Zemljoradnici (Agrarians), the Raditch deputies, and the Germans. Its majority in Parliament is therefore assured.

BULGARIA.

Sofia, August 5.

Bolshevists and Macedonians.

It is much to be desired that the real relations between the Macedonians and the Bolshevists should be known. Since Stephan Raditch, the Croatian peasant leader, went to Moscow, there has been much gossip concerning Bolshevist-Macedonian collaboration. The climax was reached last week when *La Fédération Balkanique*, a newspaper appearing at Vienna, contained a manifesto signed by the three Macedonian revolutionary chiefs. This manifesto devoted a great deal of space to abusing the present Bulgarian Government, and it was couched in terms which forcibly suggested that the Macedonians and Bolshevists were working in unison. Local papers reproduced the manifesto, but Macedonians living in Sofia immediately took up the attitude that the whole thing was a hoax and had been issued by the Bolshevists with the intent of driving a wedge between Sofia and the Macedonian Revolutionaries. Up to the time of writing the Macedonian chiefs have remained silent.

At present one must suspend judgment, but if it should turn out to be the case that Macedonians and Bolshevists are allied, then the situation in Bulgaria and the Balkans generally, will become very grave indeed. For not only will Sofia be disturbed at such an alliance; Belgrade and Athens will also find it brings embarrassments.

Bulgaria and Greece.

After a long period of peace and tranquillity, the Bulgarians and the Greeks are once more at each others' throats. The *casus belli* was the massacre of nineteen Bulgarian peasants by (so Bulgaria alleges) Greek officials. As soon as the Mayor of Petritch, the nearest frontier town, reported this occurrence, the Bulgarian Government made an energetic protest to the Greek Legation in Sofia. At the same time the Mixed Emigration Commission, functioning under the auspices of the League of Nations, was requested to proceed to the frontier and make an inquiry on the spot. The Commission left three days ago, but meanwhile the Greek Government has presented its case, which, it is understood, alleges provocation and goes on to recount other outrages committed on Greeks. Locally the affair has made a considerable stir, and it seems indisputable that the nineteen peasants were cruelly put to death. It is a very great pity that such an incident should have occurred, as Bulgaria and Greece can ill afford to quarrel at the present moment. Their interests lie together in combating the common danger, that is to say, Communism. But the unfortunate minorities continue to act as an obstacle to good relations, and it is hard to say how future incidents can be prevented. Doubtless the Athens Government would like to live on good terms with Sofia, but the local authorities come greatly under the influence of the surrounding population, and that is how trouble is engendered. The only hope is that the Mixed Commission by really practical measures will be able to bring about a better atmosphere. But its task is extremely hard, and those that know the Balkans consider its chance of success to be very small.

General News.

M. Romero de Usmet, the Spanish Minister and doyen of the Diplomatic Corps, has been appointed to Belgrade, and will leave Sofia towards the end of August.

The Inter-Allied Military Commission, whose duty it is to delimitate the neutral zone between Turkey and Bulgaria, arrived in Sofia last week. The British representative, Colonel Cornwall, expects to begin his work at the end of this week.

IRAQ.

Baghdad, July 24.

Re-occupation of Sulaimaniyeh.

Some eighteen months or so ago Sheikh Mahmud, Hukumdar of Kurdistan, turned against the Government which had appointed him, and the English had hurriedly to evacuate Kurdistan and its capital, Sulaimaniyeh. Mahmud failed to make good as an independent ruler, but as long as he had any following at all, neither the British nor the Arab Government evinced any desire to reoccupy that difficult and mountainous country. Early in May occurred the outbreak among the Assyrian Levies (Christians), during which some fifty Muslims of Kirkuk were killed. Sheikh Mahmud seized upon this event as a chance to retrieve his wavering fortunes, and by preaching a *jehad* to unite the whole of Kurdistan against the infidel foe. As the dangers of a *jehad* are always great, and as any signal success to Sheikh Mahmud's arms might have encouraged the Turks to cross Iraq's northern frontier, it was decided to take punitive action against him. This took the form, after due warning had been given to the inhabitants, of an intensive aerial bombardment of Sulaimaniyeh and Sheikh Mahmud's headquarters. The result of this effective action was that Mahmud was deprived of what little influence he had left. Still, the British authorities remained chary of reoccupying Kurdistan. But as no better opportunity was ever likely to occur again, as the people of the country prayed for deliverance from Sheikh Mahmud's tyranny, and as failure to set up some form of administration would have resulted in Kurdistan being a continual future source of trouble—more acute even than before—to Iraq, it was eventually decided to reoccupy the country. Cavalry of the Iraq Army, Iraq Levies, Police, armoured cars and other R.A.F. units, all formed part of the column detailed for these operations, which ended in an unopposed entry into Sulaimaniyeh on July 19. Sheikh Mahmud is at present a fugitive. All appears to be quiet in Kurdistan, and a civil administration is being rapidly set up.

The Cabinet.

It was definitely stated that after the Eed the Cabinet would fall. So certain of this was general opinion that the Ministers ceased to attend their ministries, while the expectant Ministers, if they did not actually seat themselves in the vacated offices, visited their future colleagues and held long unofficial discussions. The end of the Eed has come and gone, and the fall of the Cabinet appears to have been postponed for three or four weeks until the King's return from a short holiday in, it is said, Palestine. Some attribute the continued existence of the present Cabinet to His Majesty's indisposition, others to disagreement as to who should take up the various portfolios. There appears to be no doubt that the new Prime Minister will be Yassin Pasha, one of the leaders of the anti-Treaty party. Abdul Muhsin Beg as Sa'dun, who was Premier immediately before Ja'afer Pasha, is expected to take Interior, while Finance will go to Sir Heskail Sassoon, who, except during the time of the present Cabinet, has held that position since the formation of the Arab Government.

PERSIA.

Teheran, July 21.

The Murder of the American Consul.

The "miracle" to which I alluded in my last letter has been the cause of a tragic and most regrettable incident, resulting in the death last Friday of the American Consul, Major Imbrie, and the serious wounding of another American named Seymour. It appears that in the morning Major Imbrie, wishing to take a photograph of the drinking fountain at the side of the street, at which the "miracle" is supposed to have happened, went there with Seymour and a Legation messenger. On arrival at the place, which had been decorated with carpets and ornaments since the miraculous event, they found there the large crowd, including women, which continuously visit the place. They were advised not to take the photographs, and warned that it would be better to leave the spot. Major Imbrie, apparently not grasping what was meant (he had only been here two or three months and did not know the language) did not see why he should not take the photographs, and proceeded to do so, whereupon some of the crowd threw stones at him. The party then got into a cab and drove off, being followed by the crowd, which naturally increased as it proceeded, shouting out the ludicrous accusation, which they had by now trumped up as an excuse, that the *feranghees* had poisoned the water in the fountain and that two women had died after drinking it! The cab had nearly reached the police hospital when some soldiers (an officer among them), who were drinking tea at a shop, saw the crowd following it and heard the accusation, whereupon they stopped the cab and brutally attacked the Americans with their sabres and bayonets, the crowd joining in with sticks, stones, and any other weapon available. After some time the police managed to rescue the party (though it is significant that during all this time not a single shot was fired by them), and took them into the hospital, but no sooner had they started attending to their wounds than the mob broke their way in and continued their brutal attacks on their victims, until the police eventually succeeded in driving them out. By this time both Major Imbrie and Seymour were frightfully cut about and battered, and the former died shortly afterwards, the latter being still alive, and hopes are entertained of his recovery.

I have heard from a doctor, who served in the War, and who saw the victims in the hospital, that although he had seen all kinds of wounds and mutilations on the battlefield he had never come across anything to equal the present case for the number and variety of the wounds inflicted (it is said that Major Imbrie received no less than forty sabre and bayonet wounds in his body and on his head) and the sheer savagery which must have prompted them. The news of the outrage soon spread through the town and naturally caused the greatest consternation among the American and European communities, with whom Major Imbrie was a general favourite, the revolting nature of the murder added to the horror of the crime. The Prime Minister, Sardar Sepah, immediately started to investigate the matter, and did not leave the town for his country residence till late at night, and came down at dawn the next day, during the course of which many arrests were made. These still continue, and I understand that close upon 300 persons have been arrested.

The funeral service took place at the American Presbyterian Mission's chapel at 5 on Saturday afternoon, and seldom have I seen such a crowd there. The street outside the chapel was lined with infantry and cavalry with a band, provided by the Minister of War, who was himself present with his Staff and the Cabinet Ministers in their Court dress of Kashmir robes. The entire *corps diplomatique* also attended in uniform, and the church was literally packed with Persian notables and high dignitaries and members of the American and European communities; in fact, everybody who is anybody in Teheran society was present, and a crowd of people of all nationalities and religions who could not gain admittance waited outside. After the service the Prime Minister followed the coffin on foot to the gate of the church, whence it was taken to the Protestant Cemetery outside the town, though the body has been embalmed and will later be sent to America.

After the service all the diplomatic representatives here assembled and drew up a collective Note to the Persian Government, which they all signed, including the Afghan and Russian Ministers, expressing horror at the outrage, and stating that they could not consider the Persian Government free from blame, pointing out that although the attacks on Major Imbrie lasted three-quarters of an hour the police never fired a single shot, even over the heads of the crowd, which most probably would have dispersed had this been done, nor could the authorities even succeed in keeping the crowd from breaking into the hospital and putting the finishing touches to their murderous attacks, in which the evidence of witnesses proved that several soldiers took part. The Note was delivered to the Persian Government on Sunday evening by the Turkish Ambassador, as senior member of the diplomatic corps, on behalf of his colleagues, and several Cabinet meetings have been held to discuss the Government's reply. The Note impresses on the Government the necessity for taking adequate measures to ensure the future safety and protection of the foreign minority and non-Moslem residents in Persia, and although the reply to the Note has not yet been received it is understood that the Foreign Office has already addressed a circular letter to all the Legations here expressing regret at the outrage and stating that the authorities have taken the necessary steps to prevent a recurrence of such attacks. On Saturday evening, after the funeral, the town was placed under martial law, and everything is quiet. The drinking fountain, which was the cause of all the trouble, has been dismantled of all its decorations. Ever since the tragic event *pourparlers* have been taking place between Dr. Kornfeld and the Prime Minister and Minister for Foreign Affairs, but apparently no reply has yet been received from Washington as to the American Government's demands from the Persian Government and the compensation required for Major Imbrie's widow, with whom the greatest sympathy is naturally felt. All the local papers express their denunciation of the crime, which they say is but the work of a few irresponsible ruffians, and must therefore not be laid at the door of the Persian Government, whom they exhort to do their utmost to bring the perpetrators to justice, and they trust that the outrage may not impair the friendly relations existing between Persia and America.

Ras Taffari, Regent of Abyssinia, will arrive in Athens on the 17th inst.

M. C. Collas, Counsellor at the Greek Legation, has returned to London from Switzerland.

Field-Marshal Viscount Allenby is visiting Viscount and Viscountess Astor at Cliveden.

The Egyptian Prince Yussef Kemal has arrived at Loedingen, Northern Norway, on board his yacht Naz Perwar.

Mahmoud Sabet Bey, First Secretary at the Egyptian Legation, with Mme. Sabet, has left London for Berne.

Mr. Norman Nairn, of the Nairn Transport Service, has returned to London from America, and intends to sail for Beyrout on August 25.

Commander Sir Gerald F. Talbot, formerly Naval Attaché at the British Legation in Athens, returned to London last week from France.

M. Vidosav Anjelkovitch, Secretary at the Legation of the Kingdom of Serbs, Croats, and Slovenes, has left London on leave for Belgrade.

Mirza Seyed Ziaod-Din, formerly Persian Prime Minister, and M. Aminol-Mulk, a former member of the Persian Cabinet, left London last week for Paris.

The Egyptian Minister, Mme. Izzet, and Abdulla Izzet have left London for Zurich. Mohammed Fehmy Hussein Bey, Counsellor, will act as Chargé d'Affaires.

The Crown Princess of Roumania and her sister, Princess Irene of Greece, have left London for Paris. The Crown Prince is prolonging his visit here for several days.

Sir Edward and Lady Boyle have left London for Italy, and will subsequently undertake a tour in the Balkan States. They expect to be back in England at the end of October.

Sir Valentine Chirol, who has been delivering a course of lectures in the University of Chicago on "The Relations between the Occident and the Orient," is due to return to London this week.

Monsieur Stancioff, Bulgarian Minister to the Court of St. James's, was received in farewell audience of the King on August 12. At the close of the audience Monsieur and Madame Stancioff were received by Queen Mary.

The King has given Captain Marcus Winslow Huish, Royal Artillery, authority to wear the insignia of the Fourth Class of the Order of the Nile, conferred on him by the King of Egypt in recognition of valuable services rendered while employed with the Egyptian Army.

Sahibzada Aftab Ahmad Khan, Vice-President of the Secretary of State's Council, is due to complete his seven years' membership of that body in the middle of November, but has retired, and has left for India to devote himself to honorary work in promotion of Moslem education on the lines associated with Sir Syad Ahman Khan.

APPOINTMENTS, PROMOTIONS, ETC.

It is officially announced that the King has approved the transfer to the Madras High Court, in the vacancy created by the promotion of Mr. Justice V. M. Coutts Trotter to be Chief Justice of Madras, of Mr. Justice H. O. C. Beasley, of the Burma High Court.

Our Sofia Correspondent writes (August 5) :—
The newly appointed Bulgarian Minister to London, M. Haji Misheff, is expected to take up his new post about the middle of August. M. Misheff is a former diplomatist, and was in London in 1914. Recently he has been holding an important business appointment, and he is regarded as being one of the ablest Bulgarians who could have been chosen to fill the London vacancy.

THE HOLY PLACES IN PALESTINE.

In virtue of the Palestine (Holy Places) Order in Council, 1924, made on July 25 and published in the *London Gazette* of August 1, no cause or matter in connection with the Holy Places or religious buildings or sites in Palestine or the rights or claims relating to the different religious communities in Palestine shall be heard or determined by any Court in Palestine. This will not affect the jurisdiction of the local Religious Courts.

At a meeting of the Senate of London University on July 23, an offer was accepted with thanks from the Roumanian Government to establish at King's College Lectureships in: (*a*) The History of Roumania and the Near East, and (*b*) Roumanian Language and Literature for a period of three years.

Kemal-ed Din Sami Pasha has been appointed Turkish Ambassador to Berlin.

Lord Goschen, Governor of Madras, has decided to appeal to the Lord Mayor of London to open a fund for the sufferers from floods in Southern India.

The King has approved the appointment of the Maharaja Bahadur of Krishnagarh to be a Member of the Executive Council of the Governor of Bengal in succession to Mr. Bhupendranath Basu, who, owing to ill-health, has asked to be relieved of his duties.

THURSDAY, AUGUST 14, 1924.

THE NEW GOVERNMENT IN YUGOSLAVIA.

Nowhere will the fortunes of the new Government in Yugoslavia be watched with greater sympathy than in Great Britain. There is no desire to take sides in that country's domestic affairs; indeed, the difficulty experienced in understanding them prevents any such tendency. It has been one of the chief disappointments in connection with Near Eastern affairs since the Great War that the close ties of friendship cemented by comradeship in arms have been gradually loosened by the inability of Britons to grasp the trend of Yugoslavia's troubled politics. Fitted by geographical position and resources, as well as by the intelligence and virility of her people, to take a leading part in the Balkans, Yugoslavia seems to have wasted her opportunity owing to a perversity that is far from being national. Her Governments have seemed more concerned to make her feared in the Balkans than liked, regardless of the fact that this policy could not possibly bring her to any profitable goal, but must, on the other hand, prevent her from assuming the position for which she appears to be marked by destiny. The solitary flash of sound judgment which prompted an agreement with Italy served only to throw into bolder relief the failure to play a really leading part in the Peninsula. Although justification for the Little Entente can be urged, its effect has been to distract Yugoslav attention from the better rôle that awaits the country when it can concentrate upon the affairs of South-Eastern Europe to the exclusion of those of Central Europe. All this time it was seen that the Kingdom of the Serbs, Croats, and Slovenes was suffering from an internal malady, and it was as if the only chance of relief came from distractions without. Hence the interest attaching to the present change of Government; for if it should be the case that, with the advent to power of the parties in opposition to M. Pashitch and his Radicals, Yugoslavia attains domestic peace, there would be some ground for hoping that her foreign policy will set more store on the cultivation of friendly relations with her neighbours, with a view to practical co-operation in the sphere of economic reconstruction. Not that lip-homage to the cause of peace has been wanting in the past; but practice lagged a long way behind profession, until Yugoslavia had earned the reputation of being almost the most sabre-rattling country in Europe.

M. Davidovitch's task will not be an easy one. In the first place, he has to make sure of the support of a majority in the Skupshtina, as it is the basis of his understanding with King Alexander that he should carry on the administration of the country for a period without recourse to a general election. Political support in the Balkans is, as a rule, to be had only in return for very definite concessions, and it remains to be seen whether the different parties now in alliance with M. Davidovitch and his Democrats will be content with the participation in the Government that their seats in the Cabinet give them, without seeking for other more direct advantages for their political organisations. If there has been any sincerity in the charges that they have brought against M. Pashitch, they must at least give evidence of a resolve to govern impartially, with no other end in view than the country's good. It will be a novel experience for Serbia to be under a Ministry with a majority of non-Serbs in it; consequently, if M. Davidovitch's Cabinet can set a precedent of strict impartiality as between the various elements of the Triune Kingdom, and achieves nothing else, it will have done much for the future success of Yugoslavia. Among the domestic questions calling for attention, the foremost will be that of a working agreement with the Croats. At a meeting of the Croat Peasant Party in Zagreb it was decided to support the Davidovitch Ministry in the Skupshtina "so long as the Government carries on its work in accordance with the spirit and principles of the *Bloc*," and the Croat Deputies have taken their seats in full strength. At the same time, in recording their approval of what M. Raditch has done in Moscow, by arranging for the formal adhesion of the Croat Peasant Party to the Peasant International, the delegates at Zagreb will have aroused many misgivings in the minds of others now associated politically with them. There would seem, however, to be no desire in Croatia to proselytise in the rest of Yugoslavia, and, provided that the Croatians' ambition to manage their own affairs can be shown to involve no weakening of Yugoslavia in her international position, it should not be difficult to persuade the majority of the Serbs that the attainment of domestic harmony is well worth a compromise on the subject of centralisation.

A problem that will demand a greater measure of statesmanship on the part of the new Ministry when the Croat question has been settled is the amelioration of the lot of national minorities. In recognising the existence of this problem, M. Davidovitch has made a notable advance on the attitude of M. Pashitch and his Foreign Minister, M. Nintchitch, who persisted in maintaining that there was no such thing as a Macedonian or a Montenegrin question in Yugoslavia. To express a desire to discuss their affairs with these minorities does not entail capitulation to their extreme demands. It may well be that these demands have become extreme because they have never been subjected to the cold logic of a friendly conference. Certainly no harm can be done by trying to discover whether a *modus vivendi* cannot be evolved without prejudice to the strength and solidarity of the Yugoslav Kingdom. Balkan Governments have a tendency to be content to live from hand to mouth. No Ministry seems to contemplate a long enough life to make it worth its while to pay serious attention to anything but immediate domestic needs, the meeting of which is expected to react favourably on its tenure of office. Both the question of minorities and that of Yugoslavia's relations with her Balkan neighbours have a far wider bearing than merely on the political fortunes of the Cabinet in power. They affect the well-being of the whole country for many years ahead, and until they are settled satisfactorily no Ministry can have any claim on the lasting gratitude of the Yugoslav people. M. Pashitch is not the only Prime Minister in Europe who has had occasion to learn that no record of service during the War has availed to retrieve mistakes of omission in the more difficult post-War period. He can show that the first necessity of the new State was a Constitution, and his long experience may have satisfied him that only a highly centralised system of government could answer Yugoslavia's special

Digitized by Google

requirements. Unfortunately for him, the tendency of his own people as well as of other nations has been, since the War, to break away from precedent and the old lines of reasoning, in order to experiment with new theories and new methods. He has proved himself without an equal among his countrymen in parliamentary tactics, but has been incapable of adjusting his political ideas to the new lines of thought. It would be rash to conclude that he has necessarily held office for the last time. The outside world, however, has ceased to look to him for any constructive policy which might win merit for Yugoslavia in a distracted Balkan Peninsula, and it waits with considerable interest to see whether the advent to power of the Opposition parties will enable Yugoslavia to do herself more credit. The heavy hand has failed, and the time is ripe for statesmanship. Yugoslav capacity is equal to any demands that can be made upon it; the test of good government is to give effect to that capacity.

KURMANJY AND THE KURDS.

By V. STEPHAN.

Kurmanjy, or the Kurdish language, is derived from an old Persian dialect intermixed with Arabic. In the north-east of Kurdistan this is further diluted with Syriac words, and in the south is modified by a Turanian dialect. Kurmanjy is the language spoken by the Kurds, but it is also used by a large number of people, among whom are the non-Kurdish inhabitants of Kurdistan, Armenia, the eastern districts of Asia Minor, the south-western frontiers of Persia, the Afghan-Persian frontiers, the most northerly outskirts of Syria, and the northern provinces of Mesopotamia down to Mosul and its sub-districts; so that, in all, from six to eight millions speak the language.

In the heart of Kurdistan the Christian Protestant congregations hold their religious services, sing hymns, read the Bible in Kurmanjy. The Yazidees, or devil worshippers, also recite their prayers in Kurmanjy.

Kurdistan, which is a very charming part of Asia, extends on the one hand from Mosul district to the mountain fastnesses of Erzerum, and, on the other, from the Arabian Desert to the Kurds' own mountain ranges in the east. It is about 40,000 square miles, and its population exceeds two millions. It is very rich in antiquarian ruins of the Parthian, Macedonian, and Roman periods, most of which are still unexamined. It has also a wealth of ancient legends and poems. The climate is moderate, and there is no excessive heat. It is a very fertile land, which yields corn, hemp, flax, cotton, fruits of many kinds, and a profusion of flowers. The forests of oaks and fruit-bearing trees clothe a great part of the land. Manna, the sweetmeat mentioned in the Bible, may be gathered from the oak trees and the rocks of Kurdistan.

The Kurds trace their origin back to the Turanian Kurds, or Gutu, who were a powerful people in the time of the Assyrians. Later they merged with the Medes and were Aryanised. The Arab historians consider the Kurds to be of Arabian origin and to belong to the Beni Ma-El-Sama tribe.

The Kurds profess Islam, but in a loose and unorthodox fashion; their women, with the exception of those of the very highest rank, do not wear the veil. They are well practised in the use of arms, being much given to internal strife and brigandage; but, in spite of this, they are hospitable to strangers, faithful to their friends, and have a very strict sense of honour. As they are Moslems, the Turkish Government used to play them off against their Christian subjects, and many thousands of innocent Armenians, Assyrian Christians (Nestorians), Greeks, and even the Yezidees, have fallen, at different times, victims to Turkish treachery at the hands of the Kurds, whom they instigated to carry out every kind of atrocity.

The exterminations in the years 1915 and 1916 of the Armenians and Greeks in Asia Minor and the Assyrian Christians in Kurdistan were carried out, as before, with the help of the Kurds.

The Kurds, although nominally subject to the Turkish and Persian Governments, are intolerant of these masters, and are actually governed by their own chiefs. And since Kurdistan is a mountainous country, it is well adapted to be the home of this rebellious race. Several attempts have been made at different periods to free themselves from the Turks and to found an independent Kurdish Principality, but these attempts have proved unsuccessful.

The Kurds possess a considerable literature, although Kurmanjy has no alphabet of its own. The British and Foreign Bible Society translated and published the New Testament into Kurmanjy in Armenian characters, and parts of the New Testament have been printed in Arabic characters. But the letters of neither language reproduce accurately the sounds of Kurmanjy. The Turks, in order to fill up this gap, in the year 1913 published in Constantinople a monthly review called *Rozhi Kordan*, or "The Times of the Kurds," in which an attempt was made to give the right pronunciation of Kurmanjy by using certain signs to represent the vowels. But this, like many another Turkish plan, proved sterile.

The true object of the *Rozhi Kordan* was to Turkicise the Kurds, and with this end they also opened a school in Constantinople for the sons of the Kurdish chiefs and Aghas. This school had two aims, one apparent and the other real. The Porte wished it to be known that it was greatly concerned with the education of the sons of these chiefs, but the true purpose of this school was to detain the children as hostages for the good behaviour of their fathers toward the Turkish Government. If any chief should dare to revolt, his sons would be at the mercy of the Turks.

On the Turco-Persian frontier of Kurdistan, and more especially in the Hakkary district, the Kurds are the real rulers of the Christians, who pay them an annual tax in grain, clothes, and money, and the like. The Kurd, when addresing a Christian, calls him *Felahi min*, i.e., "My Christian."

The writer of this short account of the Kurmanjy and the Kurds has compiled a Kurdish-English

ASK FOR WHITE HORSE WHISKY BY APPOINTMENT.

dictionary, and that the Kurmanjy is a branch of the Aryan family of languages may be proved by the list of words given below. It will be seen that they are wholly or partly akin in their pronunciation and meaning to their English equivalents:—Egg, *heg;* turtle, *tertol;* chin, *chin;* Jew, *Jehew;* better, *behter;* star, *ster;* here, *her* or *hera;* new, *noo;* gaiter, *geeter;* angry, *aniry;* borax, *borank;* no, *no;* aunt, *ant;* mine, *min;* hush, *hosh;* to pass, *darbass;* shame, *sharm;* leg, *ling;* short, *cort;* cup, *cop.*

CORRESPONDENCE.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

ALBANIA

To the Editor of The Near East.

Sir,—In the issue of The Near East of July 31st, there appeared an interesting article, written by an unsigned correspondent, on the subject of Albania and the recent revolution. Its conclusion is sadly pessimistic. There is, however, another side to the picture, and this, together with certain criticisms, I will try to represent.

First, I think it is unfair to say that Albania is only a nation in name. It is true that national consciousness, apart from local tribal consciousness, is of comparatively recent growth. But to say that it does not exist is a gross overstatement. The same kind of overstatement was common, as numerous documents testify, with regard to Italy in the years immediately following her union; in fact only now, since the World War, after sixty years of national unity, can Italy be said to have developed a really deep national consciousness such as we know it in older nations like England and France. Nevertheless to deny Italian national consciousness at the time of the Risorgimento would be an unwarranted exaggeration. It was a sentiment deeply animating the makers of the revolution, while the people followed the movement breathlessly and hopefully, but as yet only dimly conscious of its meaning. The same may be said of Albania. The traditions in Italy have been preponderantly local and imperial rather than national; and the new Italy possessed the legacy of a long and varied civilisation. If we take away the imperial tradition and this legacy of past civilisations, the case of Albania is strictly parallel. Throughout the length and breadth of the country, quite apart from the politician class and the local chiefs, are to be found innumerable persons, humble persons, school teachers, priests of all denominations, doctors and lawyers, passionately devoted to the idea of a united Albania, ready to make every sacrifice for the idea, and justly confident that this idea interprets a longing, however semi-conscious it may be, stirring the heart of the masses of the people.

In the second place, while your correspondent describes very accurately the origin, constitution, and nature of the "Clique," it is incorrect to say that the recent revolution was engineered by the "Clique." This is easy to prove, for hardly any of the prominent leaders of the revolution belong to it. Bishop Fan Noli, now Prime Minister, and the leader of the revolution, does not belong to the "Clique," and has never belonged to it. The same may be said of Guraquki, the next revolutionary leader in order of importance and influence. Nor are the military leaders of the revolution, Colonel Shala, Colonel Kiafzezi and Major Shefget Kortcha, Commander of the Gendarmerie, members of the "Clique." On the other hand, several prominent members of the "Clique" continued to support Ahmet Zogu to the last. The latter's Minister of War, Colonel Aranita, is a member, and it was his dismissal which the revolutionaries, before resort was made to arms, demanded as the first condition of a compromise. Eshref Frasheri, to give a final example, was the chief leader of the "Clique," and he has always been a loyal friend of Ahmet Zogu, and played the latter's game as President of the Chamber. The truth is that the "Clique" has for some time past counted for nothing. Ahmet Zogu, when he left the "Clique," split it after climbing to power on its shoulders; and having contributed to its destruction as a political force, he had no other alternative than to lean more and more on the big Beys. There was no room for his personal ambition—the ambition of an autocrat—within the ranks of the so-called Democratic Party (Fan Noli and his friends); consequently the Beys became his natural allies, poor enough though they turned out to be, as your correspondent justly points out.

Your correspondent's sketch of Ahmet's character is well enough as far as it goes. Mention of his overweening personal ambition—the key to his character—is, however, a most astounding omission. If Ahmet were a man of culture, and if patriotism were a sentiment with him overruling his craving for power, perhaps it would have been good for Albania to submit to his autocracy. But, unfortunately, he has not these qualities; and, in default of a leader having these qualities, autocracy would be the worst thing for Albania. In the case of Ahmet, whose influence was confined to Central Albania, his success would have inevitably led either to a partition of the country or an Italian occupation.

My conclusion is not so pessimistic as that of your correspondent. The new Government may prove to be a Government of idealogues. That is the danger. But that they are men with better brains, greater patriotism, and a more Western outlook than any former Government of Albania is unquestionable. Surrounded by enemies, it may prove true that Albania cannot survive without external aid. Left to herself, I have no hesitation in saying she would, in the course of a generation, achieve a stable government. It is only to be expected that a new State, before achieving a stable government, should pass through a period of unrest. If only Europe had insisted on giving her her natural eastern frontier, she would have been independent of trouble in the rest of the Balkans: she would have been easier to defend, richer, and less liable to give occasion for attack. Her back would have been put to the Balkans and the process of her deorientalisation and stabilisation would have been easier and swifter. As it is, trouble in Macedonia may involve her. In this Italy is her natural protector. This fact may lead to Italy becoming her master. But I do not think it will lead to her dismemberment, for Italy's interest (and Italy is no longer frightened of the responsi-

bility of safeguarding her interests) lies in maintaining and extending Albanian territory.

In these circumstances, should the present Government fail, probably the best thing for Albania would be an Italian mandate. But will the present Government fail? Bishop Fan Noli is an able man, and has already won the esteem of the League of Nations. I understand that it is his intention to ask the League to help his country somewhat in the same manner as Austria and Hungary have been helped—i.e., by means of a loan and financial control. After all, the creation of Albania was the work of the big Powers, and it is their duty to complete this work by giving the necessary financial assistance. If this is done, and in the proper way, by fully respecting, on the one hand, Albanian sovereignty and, on the other, Italy's paramount interests, I do not think we may be too pessimistic about Albania's future. There is no reason to despair even without this assistance; for although there are some ugly signs in the Balkans, many years may pass without the bursting of a storm, and time with peace is what Albania chiefly requires.

I am, etc.,

NEAR EAST BOOKSHELF.

SOME PALESTINE GUIDE-BOOKS.

"COOK'S TRAVELLER'S HANDBOOK FOR PALESTINE AND SYRIA." New edition, revised by Harry Charles Luke, B.Litt., M.A. With an Appendix by Professor J. Garstang, M.A., B.Litt. (London. Price 15s. net.)

"GUIDE TO THE HOLY LAND." By Father Barnabas Meistermann. Second Edition. (London: Burns, Oates, and Washbourne, Ltd. Price 10s. 6d.)

"BLACK'S GUIDE TO JERUSALEM." By E. A. Reynolds-Ball. (London: A. and C. Clark, Ltd. Third Edition.)

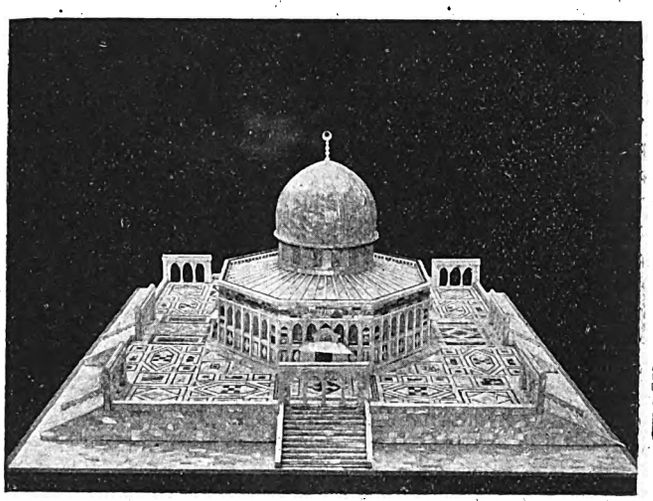
"CALVARY AND THE HOLY SEPULCHRE." By P. Stacy Waddy. (London and Oxford: A. R. Mowbray and Co., Ltd. Price 2s. paper, 3s. cloth).

The practically simultaneous appearance of four guide-books dealing with the Holy Land is a testimony to the altered conditions in Palestine which have rendered a visit to the country a comparatively simple matter. Before the War the visitor who did not fancy a trek by camel across Sinai had to face the journey by sea to Jaffa, with the possibility of finding the weather too bad to allow him to land at that open roadstead. The big tourist steamers, it is true, may still bring their hundreds of passengers to the Palestine coast, but for the majority of travellers, to whom the guide-books appeal, the ordinary route is now by train from Kantara, with a change at Lydda (Ludd) Junction for Jerusalem. The enhanced accessibility of the Holy Land has had a marked influence on the number of travellers visiting it since the War. There has been a slight improvement in the Jerusalem hotels, but much remains to be done before the standard of comfort set, for instance, in Egypt has been approximated in Palestine. What has, perhaps, revolutionised travel in the country more than anything else is the construction of good roads between the main centres of population, rendering motor traffic not only possible, but also tolerably comfortable. Roads suitable for motoring now connect Jaffa-Jerusalem-Jericho, Jerusalem-Bethlehem, Jerusalem-Nablus-Nazareth-Tiberias, Haifa-Tyre-Sidon-Beyrout-Tripoli, and Beyrout-Damascus.

Of the four books before us, Cook's Handbook and Father Meistermann's Guide are comprehensive guides to Palestine and Syria; the other two, as their titles indicate, are mainly concerned with the Holy City, and to this extent supplement the information given by the first regarding Jerusalem. Messrs. Thos. Cook and Son are to be congratulated on having secured Mr. Luke as editor for their volume; the co-operation has produced a volume thoroughly informative, and at the same time with a literary flavour wherever opportunity offers. Everyone contemplating a long stay in Palestine, or wishing to travel extensively over the country and neighbouring territories, will be glad to have such a complete compendium to help him not only to plan his movements to the best advantage, but also to understand and appreciate what is seen. The historical narratives are carefully written, and the scriptural references have not been omitted. The measure of the extent to which it is up to date is indicated by the fact that a description is given of the Desert Motor Route to Baghdad opened up by the Nairn Transport Company; and to this unique service, which brings Iraq within a couple of days of Palestine, we owe the inclusion in the volume of a section devoted to Mesopotamia. Thus, when advantage is taken of this desert route as an alternative method of reaching India, Cook's Handbook will serve as a complete guide to the traveller for the land journey from Port Said via Damascus and Baghdad to Basrah, where the steamer for India will be taken. In subsequent editions it might be well to introduce a few more maps and plans. In response to the editor's request that his attention should be called to any errors, we may mention that the title of the Anglican Bishop (p. 79) is usually given as the Bishop *in* Jerusalem, and that the route to Baghdad on the map facing p. 289 is not the one followed by the Desert Mail, which strikes the Euphrates at Ramadi. On page 25 a reference to the theory which identifies the Khabiri with the Hebrews will be missed by many readers, especially as the historical sections of the book have been so carefully compiled. On p. 100 the Khalif Hakim is credited with a sinister reign lasting 197 years, from 974 to 1171.

Father Meistermann's Guide is written exclusively for Roman Catholics, so much so that Protestant visitors would look in vain in the Index for any reference to the Cathedral of St. George, which is dismissed in a single sentence under the heading "Religious Houses: Eastern Rites." *(sic)*. Twelfth on the list come "Protestant Anglicans," and the words: "Residence of

THE DOME OF THE ROCK.



This replica of the Dome of the Rock, marvellously made of pure mother-of-pearl shell by Messrs. Issa Batarse, of Bethlehem, is to be seen in the Palestine Pavilion of the British Empire Exhibition. It is a beautiful specimen of native handicraft, and is priced at 500 guineas. Messrs. H. and S. King and Sons are the selling agents.

Digitized by Google

the bishop, with church and Anglican college, north of the town." The section dealing with Jerusalem covers very fully for Catholic devotional purposes all the traditions centring in the Holy City. The book is admirably equipped with maps and plans, and in this respect serves as a model of what a guide-book should contain. A bad mistake is made in attributing to Great Britain a mandate over the Hejaz.

The volume published by Messrs. A. and C. Black is a practical guide to Jerusalem and its environs, a term which is extended to include towns as far north as Damascus. It contains plans of the Church of the Holy Sepulchre and the Temple, and has four illustrations in colour by John Fulleylove. It deals succinctly with the major and minor sights of Jerusalem and may be recommended as a handy volume for a short stay.

A subject that invariably engages the attention of every visitor to Jerusalem is the authenticity of the Holy Sites. The reports of collisions between the adherents of the different religious sects, the atmosphere of intolerance that pervades the attitude of these sects to one another, the tendency to commercialise the sites, and the undisguised bias of a guide may all tend to create in the mind of a visitor the idea that he is being asked to acquiesce in a conspiracy of make-belief. To anyone perturbed by such thoughts a perusal of these books may be commended. They agree in accepting the traditional site of the Holy Sepulchre, and set out the reasons which justify this conclusion. Father Meistermann naturally accepts for devotional uses all the traditions of the Latin Church. Canon Waddy approaches the subject in a spirit that was not to be expected in an ordinary guide. His Handbook contains much information that will be found in other books, but it is presented more concisely, and for the benefit of the pilgrim rather than of the tourist. It is intended, in his own words, for the visitor whose main purpose in going to Jerusalem is devotional, and few who read it will fail to come, as the author is at the time of writing, under the spell of the Holy Places.

The controversy over the site of the Holy Sepulchre turns largely on the position of the walls of Jerusalem in the time of our Lord. Calvary was then just outside the walls, and as the city is known to have spread northward, there is nothing improbable in the theory that the wall of that date ran south of the traditional site of the Tomb. The remains of such a wall have been discovered, and this fact inevitably strengthens the tradition which has connected the present site with Christ's Tomb from the days when Hadrian is said to have selected it as the site for a Temple of Venus. The tradition for its substantiation requires that Hadrian should have been correctly informed of the site of the Tomb when he built his Temple, and that Constantine or his mother, Helena, should have correctly located the site of the Temple. It is true that at the time when these three books were published, the weight of evidence seemed to support the tradition. Now, however, in July, 1924, comes a new Jerusalem discovery which identifies a stone found outside the Garden Tomb as part of a shrine of Venus, and the supporters of the theory that Gordon's Calvary is the site of the real Tomb are correspondingly encouraged. Whether the discovery will necessitate the re-writing of the guide-books on Jerusalem remains to be seen. Happy is the visitor to Palestine who can derive from the "atmosphere" of the Holy Land all the moral uplift that he comes to gain. Controversy cannot rob him of that, rage it never so furiously over the authenticity of this or that piece of ground.

THE ARMENIANS IN LONDON.

The Armenian community of London has just fulfilled a duty of gratitude and respect to a noble Englishwoman—Miss Emily J. Robinson, the founder and hon. secretary of the Armenian Red Cross and Refugees' Fund. This fund was started by Miss Robinson, and, like other War funds, was registered under the War Charities Act. Almost single-handed and without any office or secretarial expenses, Miss Robinson carried on her great humanitarian work for nine years, until her health broke down and by her doctor's orders she had to rest. With an exemplary determination and self-sacrifice she raised over thirty thousand pounds for the maintenance of Armenian orphans and refugees, besides relief in kind to nearly the same value.

Miss Robinson is the daughter of the late Sir John Robinson, for many years manager and editor of the *Daily News*.

At a representative gathering at the Langham Hotel, W., which included several English friends, the chairman of the Armenian Community paid a well-merited tribute to this devoted lady, and presented her with a beautiful illuminated Address, conveying the feelings of gratitude of the community and of the Armenian people in general.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Government and Russia.

It might almost be thought from the feverish activity of the Labour Government at the close of the Session that they were anxious to escape from the charge of not having accomplished enough during their period of office. No one would object to a show of energy in innocuous directions, but it would take much more persuading than the Prime Minister is capable of to induce people to believe that the developments in regard to Russia are either desirable or necessary. The negotiations with the Russian delegation, after lasting for a considerable period, came to an inconclusive end for the very good reason that no other outcome was possible. The development of normal relations with Russia is essential in the interests of world commerce; but while the methods of the present rulers are unchanged it is difficult to imagine an understanding that can benefit anyone but Russia. However, the Prime Minister thought otherwise, intervened, and, succeeded in bringing about an agreement which, whatever other claims it may have to distinction, will certainly be remembered as one of the most remarkable documents in history. What verdict Parliament will pass on the agreement is another matter, and it is quite possible, in view of the tone of the strictures passed in the House last week, it will fail to gain acceptance, in which case a curious position will arise.

Yugoslav Railway Extensions.

The importance to Yugoslavia of the development as quickly as possible of railway communications with the Adriatic needs no emphasis, and it is satisfactory to know that there is a prospect of the early carrying out of the scheme that has been drawn up to link up Belgrade with the Adriatic ports. The plan that has been drawn up is for a line from Belgrade to Sabatz, Bjelina, Zavidovitz, Sarajevo, Mostar, Metkovitch, and Split. It is further proposed to construct a line from Mladenovatz to Topola, Kragujevatz, Kraljeva, Rashka, and Mitrovitza. Difficulties in regard to the necessary financial arrangements have hitherto been the stumbling-block to the work, but for some time now the Yugoslav Government has been in negotiation with a leading British firm which may obtain a concession for the construction of one of the lines.

Persia and the Soviet.

A further interesting illustration of Soviet methods arises in regard to Persia, with which country the Soviet has just concluded a commercial treaty. Those who conduct treaties of any kind with the Soviet and expect to obtain adequate advantages under them, would do well to walk warily, and it would seem probable that Persia will have very good reason to rue the day she negotiated the treaty. It is stated that the treaty is in the most ambiguous terms, and its value to Persia would seem to be very dubious. It is true that Persia is accorded the right of transit across Soviet territory, but this right is circumscribed by many amazing restrictions, which go far towards annulling it altogether. Persia is not to be allowed, for instance, to export through Soviet territory goods which the Soviet itself can provide, while if the goods to be exported are needed by the Soviet, they are to have the right to purchase them. On the face of it, it seems a very one-sided arrangement, and one would imagine that one of the principal results of the treaty would be to make Persia begin to have doubts as to the good faith of her northern neighbour.

Motors in the Near and Middle East.

Mr. Goricar, who represents the Ford Motor Company in the Near and Middle East, recently arrived in Baghdad after an extensive tour in Turkey, and, it is understood, is going on to Persia and Afghanistan. He is hopeful as to the opening for motors in Turkey, and he believes that all the countries will become large markets for Ford cars. But if for Fords, why not for other makes? The answer depends entirely on the attitude of the British motor manufacturer to the great markets of the Near and Middle East. It is easily possible for them, by mass-production methods, to produce a car suitable for those countries and at a price at which it can compete with the foreign motors. If they are not prepared to do so at the present time, when trade is so difficult to obtain, it must simply be because they are unconvinced of the value of these markets. If that be so, the sooner they change their view the better, for these markets are great and growing, and will provide a means by which British traders can redress the adverse trade position resulting from the War. It was all very well in pre-War days to take a short-sighted view of the Near and Middle East; to do so to-day in the face of the obvious developments in the countries in that part of the world would be more than futile.

FURTHER BULGARIAN INFLATION IMPROBABLE.

(From Our Own Correspondent.)

Sofia, August 5.

Rumours have been current recently that the Bulgarian Government intends to inflate its currency by another milliard levas. It is learnt, however, that the National Bank has declared itself opposed to this scheme, and that it is extremely unlikely that any inflation will take place. There is, however, a continued lack of money, and trade is very stagnant. This is partly due to the time of year, as August is always a dull month, owing to the greater part of the population being engaged in harvesting. With the coming of autumn, providing political stability is maintained, there should be a gradual improvement in trade and commerce.

TOBACCO MACHINERY IN USE IN GREECE.

The cutting of tobacco in Greece is done by hand-power machines for the most part, but they are gradually giving place to power cutters (says an American Consular report). To some extent, cigarettes are made by hand, but there is a gradual change in favour of mechanical equipment, and the greater part of the cigarette production is now machine-made.

There are about 340 tobacco manufacturers in Greece, using approximately 250 cutting machines, utilising nearly 1,000 horse-power. Factories turning out cigarettes number 167, and employ over 2,500 workers. Cutting machines in use are mostly of English manufacture, with capacities varying between 120 and 300 kilos a day.

A skilful workman can make 2,000 to 3,000 cigarettes a day, against a machine production of about 150,000 for the same length of time. The machines in use are run by electricity with small motors of from 2 to 3 horse-power. Where electricity is not available, power from internal-combustion engines is used, employing either kerosene or gasoline for fuel. Each machine employs a mechanic and two assistants, and, including packers and cutters, may require 20 employees to care for the output; half of the workers are usually women. Among the cigarette-making machines, German makes predominate at present, with a few American machines in use. Although British machinery is used principally for tobacco cutting, there are very few cigarette machines from England.

Indo Burma.—The production for June was 3,790 barrels, being 2,608.7 barrels from Yenanma Field and 1,181.3 barrels from Padaukpin Field.

CONDITIONS IN THE TANGIER ZONE IN 1923.

The following extracts are taken from the report of H.M. Vice-Consul at Tangier, Lt.-Col. G. Mackereth, D.S.O., M.C., on the economic and financial conditions in the zone of Tangier last year:—

Tangier is primarily a centre of distribution, and, being as it is, an enclave in the Spanish zone, its prosperity depends, in no small measure, upon the power of purchase enjoyed by the natives of that zone. The prospect of the completion of the railway between Tangier and Fez (forecasted for 1925) is a source of encouragement to local merchants, who foresee thereby an enlarged radius of distribution.

Imports and Exports.

Cotton Goods.—A slight increase in the total is recorded; French and Italian imports have grown considerably; those from England and Spain have decreased. Piece goods from the Vosges have gained steadily; it has been stated by experts that, although the French goods are produced in a quality very similar to the British article, the finish is inferior.

Tea.—The direct import from Shanghai shows an increase, and Marseilles has captured more of the transhipment trade, to the detriment of London.

Soap (Common). — British participation has diminished, owing to the competition of France and Italy. The figures for the half-year ended June 30, 1923, are:—Great Britain, 18,276 kilos; France, 125,968 kilos; Italy, 40,408 kilos; total, all countries, 182,289 kilos.

Candles.—The imports appear to have increased abnormally. This is due to comparison with the low figures of 1921, but in that year a glut remained from the heavy purchases in 1920. The 1922 figures show a normal and minimum consumption. The advance of the Italian product is remarkable; in 1922, 160,391 kilos were imported, whereas in 1921 only 164 kilos came from Italy.

Motor-Cars.—The import of motor-cars is likely to increase as prosperity returns and roads are improved, but at present the business to be done is very small.

Building Materials.—A falling off in this class of imports is shown, yet when conditions are stabilised a considerable demand will arise.

Exports by sea are of no importance. The increased exports of live stock, hides, and skins is an indication of the return of business with the Anjara and the Gharb, where more peaceful conditions prevail. The fish exports fell in 1922, a result of the bad year experienced by the tunny fishers; happily, 1923 has provided an almost record catch, and fully compensated for the losses of the year previous. The Spanish Army absorbed most of the surplus corn, beans, and chickpeas.

Tangier has no important industries, and agriculture is sadly neglected. The uncertainty of tenure has always been a considerable handicap to successful farming; but, granted security in this direction, there seems little reason why, if modern methods were to be adopted, agriculture should not become a prosperous undertaking. No further developments can be reported under minerals and oil.

The promotion of a Czecho-Slovak bank in Paris has now taken concrete form, and it is announced that the bank will start operations on September 1 next. The capital is 10,000,000 francs, divided into shares of 250 francs each, but only 3,000,000 francs are being issued at the outset. The offices of the bank will be in the Rue Volney.

Near East Markets.

LONDON PRODUCE REPORT.

Sharp Rise in Oilcakes.

(From Our Own Correspondent.)

London, Tuesday morning.

Coffee.—A steady tone has prevailed. Costa Rica is unchanged at 140s., East Indian is the same at 120s., while Santos is unaltered at 98s.

Maize.—The tendency has been for prices to rise during the week. La Plata has been done at 39s. per 480 lb. Roumanian has come to business at 9s. 6d. per cwt.

Oilcakes.—The market has been very firm, and prices have risen practically all along the line. Linseed cake has jumped to 290s., a rise of 45s.; coconut cake at 215s. is 20s up; while cottonseed cake at 170s. is 15s. up.

Oilseeds.—Linseed has been steady, Indian being 22s. 3d., while La Plata has been done at 20s. 3d. Rapeseed has been quiet. Toria has come to business at 21s. 4½d., while real bold Ferozepore is 21s. 3d. Cottonseed has been in demand. Indian is 10s. 10½d., Egyptian black is 12s. 10½d., while Sakellarides is 11s. 7½d.

Seed Oils.—Linseed oil has been rather dull, closing at 41s. Rape oil has been steady, with crude at 49s. Cottonseed oil has been firm, with crude at 41s. and deodorised at 51s.

BULGARIAN IMPORT PROHIBITIONS WITHDRAWN.

A Decree published in the Bulgarian *Official Journal* announces the withdrawal of the prohibition of the importation into Bulgaria of the following goods as from August 11:—Silk bolting cloth; knobs of porcelain, for doors, windows, and stoves; flower seeds; photographic films; goggles for motorists; glaziers' diamonds; headkerchiefs of wool, with or without fringes, for women; spectacle frames and parts thereof, ornamental (*doublé*), also of celluloid; all kinds of penholders of ordinary materials; woollen cloth for brimless hats (*kalpak*); children's farinaceous foods of all kinds in small receptacles; celluloid toecaps for shoes; small celluloid lids; curtain rings of bone, wood, and celluloid; knitting needles and hooks of bone; umbrella handles of celluloid, bone, or horn; cocoa powder, without sugar, in small receptacles; edible cocoanut oil in small receptacles and packets for retail sale; celluloid frames and sheets for ladies' handbags; envelopes and letter paper, packed in small boxes, of usual materials, falling under Tariff No. 294 (1).

"A CENTURY OF SEA TRADING."

Mr. Cope Cornford has lately been engaged in writing the story of the development, during the past hundred years, of coastal shipping between London and other ports of Great Britain and between British and Northern Continental ports. In this work he has made wide and judicious use of the larger historical aspects of the subject. In the preface Lord Inchcape describes Mr. Cornford's book as an eloquent tribute to the genius of our people for sea affairs and as an important contribution to the efforts made during recent years to bring home to the inhabitants of this realm a sense of the vital part that British shipping and foreign trade have in the survival of every British citizen. The book will be published immediately by Messrs. A. & C. Black, Ltd., under the title of "A Century of Sea Trading."

CZECHO-SLOVAK MARKET CONDITIONS.

We have received from a correspondent the following review of conditions in Czecho-Slovakia in July:—

In the iron and steel trade the demand, both home and foreign, shows signs of falling off, and a period of stagnation is anticipated. The drop in prices abroad and the high cost of freight make it difficult to meet competition. The lace industry has made a considerable recovery, and good business is being done both at home and in the export trade. In particular, the cottage lace industry of North Bohemia is profiting largely from the great influx of visitors into the Czecho-Slovak watering places. In the toy trade, which has suffered from depression for the past two years, a welcome improvement is registered.

The musical instrument trade in North Bohemia, which, during the war, and subsequently up to the year 1920, had to pass through a very critical period, has now apparently completely recovered its former position, and numbers of makers are extending their operations. Kraslice, in the Rudohori (Ore Mountains), is the headquarters of the manufacture of wind instruments of both wood and metal, while at Shoenbach string instruments —violins, 'cellos, lutes, guitars, etc.—are turned out in large numbers.

In Slovakia there is a very brisk movement in the building trade, and bricks, cement, and all kinds of material are in good demand. The enamel works in Slovakia are also well employed, and a considerable export trade has developed to Turkey and Africa.

THE BAGHDAD MOTOR ROUTE.

The coming season will see various improvements introduced into the Desert Motor Service between Haifa, Damascus, and Baghdad. The present fleet of cars includes four Cadillacs and eight Buicks. By October two specially constructed Cadillacs, with a long chassis, will be added; they will carry eight passengers, and will provide additional leg room and more comfortable seating. Two baggage-cars will also be added to the service, equipped with water tanks and containers for the preservation of food.

Running in connection with the Nairn Transport Company's service to Baghdad, a weekly service is shortly to be provided between the latter town and Teheran by the Parsons Transport Company. According to the present programme, a start will be made from Baghdad by train at 9 p.m. on Sunday for Khanakin; the motor-car leaves Khanakin at 9 a.m. on Monday, arriving at 6 p.m. at Khermanshah, where the night is spent. Hamadan, the next stopping-place, is reached at 3 p.m. on Tuesday, and Teheran on Wednesday at 6 p.m. A ticket between Baghdad and Teheran costs £25, which includes railway fare and hotel accommodation at Khermanshah and Hamadan.

M. Victor Antonesco, Roumanian Minister to France, has resigned, and has left Paris for Bucharest.

SUDAN GUM ARABIC.

(From a Correspondent.)

The Sudan gum has been given the designation of gum arabic as at the beginning of the Christian era it reached Europe through Arabian ports. Gum arabic was in the Middle Ages termed "Turkey sorts," Turkey then being the supreme ruling power in the eastern Mediterranean.

The best quality of gum arabic is obtained from the acacia verek, known in the Sudan as the "hashab" tree, which mostly grows in the province of Kordofan, and the gum collected therefrom is termed "Kordofan Hashab Gum." Small quantities of hashab trees closely resembling the Kordofan hashab are found in the Gezireh and Gedaref districts, the gum therefrom being termed "Gezireh" and "Gedaref" hashab respectively. Another species of tree, called the acacia seyal, which grows in Sennar district, yields an inferior variety of gum called "Talha," or "Talh."

Grades of Gum Arabic.

(1) Natural gum, when the gum is shipped just as it is brought into the market by the camels, having bits of bark adhering to the lumps.

(2) Cleaned gum, when the gum is supplied after being picked over and bark and straw removed.

(3) Cleaned and sifted, when the gum is both cleaned and passed through sieves so as to remove all the gum dust and any sand that may have found its way among the gum.

(4) Bleached gum, being obtained by exposing the gum for some months to the baking rays of the Sudan sun, when it turns from an amber yellow to a more or less pure white.

(5) Talha is always supplied cleaned, and in some cases cleaned and sifted.

Good quality gum can only be obtained by tapping the trees, viz., separating a small piece of the bark with an axe and then tearing the bark upwards. As a general rule, the trees are tapped three times a year. The first tapping is done towards October. About fifteen days after the first tapping gum begins to exude in a thick, viscous form, which rapidly hardens in the sun, and the native collects the hardened pieces, putting them into his skin-bag or "gurab," as they are locally called. Collection, therefore, of the first tapping is effected within November-December. The second tapping is done towards January on the opposite side of the tree, and collection is effected in January-February. The third tapping is done in March on the side untapped during previous tappings, and it is believed that this third tapping yields the biggest quantity of gum, and collection continues right through to the end of the season.

During the time of high prices many trees are ruined by excessive tapping, and in consequence the gum crop is likely to diminish unless new areas become accessible. Some think that in consequence of native short-sightedness in not trying to conserve the trees the yield of given areas will progressively diminish. The Government are much interested in this question, as the revenue of the country partly depends upon the size of the gum crop, and have laid down regulations with a view to prevent the careless destruction of the gum trees.

Water-Melons and the Gum Crop.

In desert regions like that of Kordofan and Darfur, where no water is to be found for hundreds of miles, the natives depend upon the melons as a substitute for water. When the melon crop is plentiful the natives collect them and keep them in big piles, to be used both as food and water for themselves and their animals. To tap the trees in Northern Darfur the natives must first see that the melons are plentiful. In case of an unsuccessful melon crop the natives of that district move to places where there are wells, and the trees remain untapped and the gum is consequently lost, whilst if the melon crop is good the natives remain and the gum is collected. It is noteworthy that when the trees remain untapped for one year they yield more gum during the coming season, and when a melon crop follows one or two bad crops it is certain that the gum crop is plentiful. The melon crop does not depend upon abundant but regular rains. When there are no rains or when there is too much rain, the melons are destroyed.

The exports of gum arabic from the Sudan during the last twelve years have been as follows (in tons):—1912, 18,300; 1913, 15,050; 1914, 12,335; 1915, 11,300; 1916, 13,025; 1917, 15,735; 1918, 13,690; 1919, 16,490; 1920, 12,250; 1921, 12,215; 1922, 14,569; 1923, 23,000.

A Reuter message from Constantinople states that it is announced that the Government has decided to take over the tobacco monopoly hitherto held by a French concern. The latter will, it is stated, be paid a sum of £T4,000,000, its factories falling to the Government.

Shipping Intelligence.

THE YUGOSLAV ZONE AT SALONIKA.

In an interesting article in the *Economic and Financial Review* of Belgrade M. Milivoj Pilja, of the Ministry of Commerce of Yugoslavia, discusses the importance of Salonika in the commercial life of pre-war Serbia, and points out that owing to the customs war between Serbia and Austria-Hungary, the greater part of Serbia's exports passed through this port from 1906 onwards. The writer continues :—

In order to give some idea of the importance of the Serbian trade through Salonika before the war we give below the figures for the year 1910, the last year of normal trade in the Serbian Kingdom. Serbian exports through Salonika in 1910 amounted to 8,179 truckloads of goods, 50,712 head of cattle, 223 crates of poultry. That is a total of about 11,000 trucks. It should be observed that we are dealing here with the figures for goods coming from the old Serbian Kingdom only, then without Macedonia, while to-day the products of the Vojvodina and of Bosnia must be added to this list. Serbian exports by way of Salonika during this same period were only one-tenth of the exports.

Exports have been relatively weak during the last five years, by reason of the exhausted state in which the country has been left by continuous wars and of the accumulated needs which resulted from these. On the other hand, imports have increased. A certain number of goods imported during this period will not be imported in the future or will be imported only in much smaller amounts (drapery, millinery, salt, sugar, etc.), while it is to be expected that the imports of certain materials and partly manufactured goods will be increased. A decrease is to be observed in the exports of cereals and of pigs, while those of cattle, beans, wood, etc., are on the increase. However, the statistics of our trade through Salonika since the War cannot be taken as the basis for an estimate of the future of that trade since this period was far from normal.

According to information given by the Chamber of Commerce of the S.H.S. Kingdom in Salonika, despite difficulties put in its way, our export trade through Salonika shows a remarkable progress. Thus in 1921, 3,050 truckloads arrived in Salonika from the S.H.S. Kingdom; in 1922, 4,400 trucks; in 1923, 5,300 trucks.

The exports have therefore considerably diminished; compared with the 11,000 trucks exported by the Serbian Kingdom before the War, we have now 4,000 for the whole of the S.H.S. Kingdom. It is, however, clear that the cause of this decrease lies in the abnormal circumstances which have followed the war, and it is certain that our exports will increase. If we examine now the imports before the War, we can say that they reached the figure of, on the average, 3,000 trucks per annum. For 1921 the figures reached were (in million dinars): Cotton and cotton cloths, 97; wool, 7; ironmongery, 10; glassware, 1; sugar, 22; rice, 5: coffee, 5; petrol, 3. Imports have therefore considerably increased when compared with exports.

PROJECTED IMPROVEMENT OF PIRÆUS.

The Public Council of Piræus has approved plans for various civic improvements, and negotiations have been opened up to float foreign loans which will finance the project (says an American Consular report). Among the amounts voted are 16,000,000 drachmæ for waterworks, especially for artesian well machinery and pumps; 16,000,000 drachmæ for road work; and 5,000,000 drachmæ for sprinkling machines, garbage burners, etc. Other schemes being considered are 800,000 drachmæ for a sanitary project, 500,000 drachmæ for enlarging the city hall, a 12,000,000-drachmæ sewerage project, and a 16,000,000-drachmæ project for a building to house all municipal offices.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Brocklebank Line.—S.s. Imani for Port Said, Colombo, Madras, and Calcutta (London, August 23).

Anchor Line.—S.s. Castalia for Bombay (Liverpool, August 25).

British India Line.—S.s. Mulbera for Bombay and Karachi (London, August 8); s.s. Takliwa for Colombo, Madras, and Calcutta (London, August 16).

Clan Line.—S.s. Clan Murdock for Bombay and Persian Gulf (Birkenhead, August 15).

Ellerman "City" Line.—S.s. City of Eastbourne for Calcutta (Birkenhead, September 4).

Ellerman Lines.—S.s. Algerian for Gibraltar, Malta, Patras, Piræus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 16).

Johnston Line.—S.s. Wigmore for Galatz and Braila (Liverpool, August 20); s.s. Quernmore for Piræus, Syra, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 6); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Bourgas, Sulina, Varna, Constantza, Galatz, and Braila (Liverpool, September 20).

P. and O. Line.—S.s. Delta for Bombay (London, August 22); s.s. Novara for Colombo, Madras, and Calcutta (London, September 6).

The Czecho-Slovak Government has agreed in principle to make certain Customs reductions on imported machinery such as is not manufactured in Czecho-Slovakia. The matter will come before the Cabinet in connection with the fixing of a general Customs tariff. About 1,100 types of machines will be affected by the proposed alterations.

Stock and Share Markets.

Generally Cheerful Tone.

(From Our Own Correspondent.)

London, Tuesday morning.

For some months the markets have given little occasion for attention. With the exception of a few groups they have been, like the general trade position, stagnant, though also with very evident signs of coming developments as soon as conditions afford the chance. In the past week or so they have become much more interesting as a result of the favourable view taken of the London Conference and the improving position generally, which finds a reflection in a recovery in the leading exchanges. There is as yet no cause for undue optimism, but shareholders have had a very good indication of the probable trend of the markets once there is a real settlement that will permit the wheels of world trade to revolve smoothly once more.

Trade and the Markets.

No one, of course, expects miracles from a settlement now, though the recovery of Europe may be more rapid than some think; but there can be no real advance, no solid hope for trade development until the Allies have come to a definite understanding with Germany. Of course, for Great Britain a settlement means other things besides the certainty of the gradual development of world purchasing power. It will entail a renewal of German competition under conditions which will render it particularly deadly. It is true that British and German commerce in pre-war days covered to some extent different spheres, but fields of action coincided in many cases, and those who think we shall be adversely affected, at any rate at first, would seem to have solid grounds for their view. What will happen will depend largely on the enterprise which our traders and manufacturers show in meeting a new situation.

The Outlook.

These are a few of the factors which must be taken into consideration in weighing the future course of the markets, and, as will be gathered, the outlook must be somewhat uncertain. A settlement which will mean a further improvement in the exchanges will admittedly be followed by an all-round advance in prices, but ensuing trade competition with results to our detriment will obviously mean a decline in certain markets until matters have readjusted themselves. For certain markets, however, such as Rubber, a settlement can only bring hope. Rubber has been affected by the lack of demand which is reflected to-day in the price of about 1s. per lb., despite a restricted output. Once the world is again in a position to satisfy its demand for this commodity shareholders will be able to regard themselves as fortunate, and it would not be surprising if in a few years' time rubber was one of the brightest features of the markets.

Gilt-Edged Strong.

The gilt-edged group has been favourably affected by the prevailing conditions. Business has been on a fair scale, and prices have advanced practically all along the line. Consols were done up to 57⅛; the Conversion Loan, which has been specially strong, is 77¾; War Loan Fives are 101¼; while Fundings, which have also been notably strong, are 88⅞. Indian stocks have strengthened in sympathy, the Three per Cents. being 56½, the Three and a-Half per Cents. 66⅜, the Four and a-Half per Cents. 86½, the Five and a-Half per Cents. 100⅞, and the Seven per Cents. 113½.

Good Tone in Foreign Market.

The Foreign group has generally made a good showing, with French loans specially strong, the Five per Cents. rising to 25½, while the Four per Cents. improved to 20. German stocks were again a feature, and were the medium of a fair amount of business. The Three per Cents. are now 33s., the Three and a-Half per Cents. are 23s., while the Four per Cents. are 23s. 6d The future of these stocks must remain a little obscure, and it would not be surprising if they reacted for a time to a lower level, though they may, and probably will, go higher first. Belgian Three per Cents. were better at 70, while Italian Rentes are 20½. Russian bonds have generally been weak. Greek loans are about the same, with Monopolies at 43½.

Industrials Firm.

The generally improving outlook has resulted in the development of quite a firm tone in the Industrial group, though business is still on a very moderate scale, with a few lines showing special activity.

Textiles have been a good spot, with Coats at 61s. 9d. and Courtaulds at 53s. Tobaccos were rather dull, Bats being 108s. 9d., while Imperial Tobaccos are 78s. 6d. Iron and Steel descriptions have shown a rather variable tendency. Armstrongs are 14s. 6d., Guest Keens are 36s. 6d., while Vickers are 9s. 6d.

Shipping securities have generally made a better showing. P. & O. Deferred are 287½, Cunards are 17s. 9d., Furness Withys are 32s. 6d., while Khedivial Mails are 1¾.

Banks Steady.

A steady tone has ruled in Banking descriptions. Westminsters are 17 7-16, Lloyds are 59s. 3d., Bank of British West Africas are 3¾ xd, P. & O. Banks are 11, while Imperial of Persia are 7¾.

Egyptian securities have been variable. Aboukirs are 18s. 3d., Beheras are 11¼, Egyptian Markets are 24s. 9d., Gharbieh Lands are 1¾, New Egyptians are 27s., and Union Foncieres are 2 11-16.

Oils Quiet.

A rather quiet tone has ruled in the Oil group, and, generally speaking, business has been on a rather small scale. Anglo-Persian are 2 31-32, while Burmah are 5 1-16. In the Roumanian group Phœnix have been a feature, and are 21s. 6d. Among Egyptians, Anglo-Egyptian Oilfields are 1 1-16.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Irregular.

The Alexandria Commercial Company, in their report for the week ended July 31, state :—

The market since our last report has been somewhat irregular, and fluctuations have been rather large. The net changes on the week are the following :—Sakellaridis, $1.22 up for November, $1.26 up for January; Ashmouni, $0.50 up for August, $1.47 up for October, $1.40 up for December, $1.47 up for February. In spite of a decline on the week in New York, prices here are up about 150 points; our market has shown considerable strength, quite unaided by outside influences. There is no particular reason to which this strength can be attributed; there has been no substantial improvement in the trade demand, and the purchases which have pushed prices up have been mainly speculative, based on the opinion that prices of Egyptian are cheap as compared to American. The volume of business has been larger than last week, and has been spread over both the Sakel and Ashmouni contracts; the straddle between October Ashmouni and November Sakel is maintained steady at about $8½. The week's receipts amount to Crs. 1,180 against exports Crs. 34,330; the stock stands at Crs. 384,092. Spot : Total sales during the week amount to about 4,700 bales, of which we estimate 3,500 bales Sakellaridis, 1,100 bales Uppers, and 100 bales Pilion. The market has shown rather more activity owing to an increased demand from both England and the Continent.

Sakellaridis : The demand has been confined almost entirely to the low and medium grades. Cotton below fair can be picked up fairly cheaply, holders being anxious to liquidate their stocks. Although there still remains on the market a certain amount of cotton round fully fair and good fair, it is becoming daily more difficult to find good style lots in these grades. The price of spot as compared with contracts remains more or less unchanged.

Uppers : The bulk of the business this week has been in the grades fair to fully good fair; prices as compared to contracts are about unchanged from last week, but are very firm. There has been a small inquiry for the high grades, but the stock is very small and firmly held for fancy prices.

Pilion : A small business has been done in fully good fair. The prices for this variety are about equivalent to those of similar grades of Uppers.

Crop 1924 : Crop reports continue to be quite good, and there is nothing calling for special comment. Reports from certain Behera districts indicate that leaf worm damage was rather heavier than normal; this is, however, not general, and will not, we think, have any appreciable effect on the yield. Pink boll worm attack is reported in the Sakellaridis fields of the south and central districts, but the proportion of attacked bolls, so far, is small. Zagora fields, by reason of their more advanced condition, seem to be escaping worm attack. Temperature is slightly higher than normal.

LIVERPOOL COTTON REPORT.

Increasing Demand for Sudan.

Messrs. Reynolds and Gibson report as follows for the week ended August 6 :—

Egyptian Spot.—Although the inquiry for Egyptians has been well maintained, actual business has been somewhat quieter, a state of things to which, no doubt, the August holiday has contributed. There is little change in the general situation, and spot purchases continue to be of only a retail character. Good to fine Sakel has been in fair request at prices ranging from 400 to 600 on August. Good fair Sakel at about 100 on August has found support, and there has been an improved business done in the inferior qualities this week at from 20.00d. to 22.00d. The Upper market continues very erratic, and holders of the small stocks still available are showing a disposition to close out when tested. This attitude is suiting very well a number of spinners who are short of cotton. No best uppers are available, and the result of an inquiry for good to fine Sakel produced a most meagre selection. A small intermittent inquiry still continues for brown cotton, and a little business occasionally trickles through at fairly good prices.

The inquiry for Sudan Sakellaridis continues to grow in extent, and it is surprising that more actual business has not developed from it during the past week. Indications point to a large business being done in this cotton before the end of the season, provided that no untoward event occurs in the meanwhile. The basis for this cotton has become somewhat easier this week. Tokar Sakel at a price (the last sale we have heard of took place at under 26.00d.) continues to find favour, and there is no doubt that at this price the cotton is attractive, compared with what is offering in the ordinary Sakel variety. C.i.f. business is reported officially as being "quiet," but there has been a good undercurrent of inquiry about, and considerable anxiety has been shown by a number of spinners to obtain cotton for delivery here before October. Forwardings for the week ending the 1st inst. were re-

OAKEY'S WELLINGTON KNIFE POLISH

WELLINGTON MILLS, WESTMINSTER BRIDGE ROAD, LONDON, S.E.1.

Digitized by Google

turned as 9,329 bales. Estimated sales, 1,100 bales Egyptian, and about 200 bales Sudan. Quotations of brown and upper show a decline of 65 points on the week; those of Sakel are 40 points lower. Fully good fair Sakellaridis to-day, 25.75d.

Egyptian Futures.—With the exit of the July position the market steadied somewhat. The effect of the heavy last-day tender of 54,700 bales American cotton and 1,850 bales Egyptian had been largely discounted in advance, and the cotton was readily taken up.

No feature of special importance has appeared since last we wrote. United States weather reports continue to sway both markets here, and a seasonal stream of crop estimates from the same source has also exercised its varying effect in a lesser degree.

Roughly speaking, the market opened the week with rather a poor tone, and although a decline of some 25 points induced a certain amount of trade "calling," the offtake was insufficient to maintain prices for any length of time, with the result that in face of a poor New York market, and some scattered selling which resulted therefrom, prices further fell away until a decline of 40 to 45 points had been registered.

Considerable fluctuations have since occurred in sympathy with the American market, the only really noticeable feature being the trade "calling" which came in on every decline.

The market closes this evening 5 points higher on the week for the near months, and unchanged for distant, with a better tone prevailing. We cannot, at the moment, see any marked weakening in the near positions, owing to the small local stock, which now stands at 54,000 bales (including Sudan), and a large proportion of which is probably untenderable.

Crop reports from Egypt continue to be very favourable on the whole, and an early picking is expected.

COTTON TRADE REVIEW.

Unsettled Conditions.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended August 9 states:—

General.—The position of this market during the past week has been a difficult one. A further report from the American Agricultural Bureau on the condition of the crop as at August 1 was to be published last evening, and with buyers abroad and merchants here holding expectations of a substantial crop and lower prices, the tendency has been, naturally, to await developments.

The report proved, from one aspect, to be better than the last. It gave the condition of the crop as 67.4 per cent. only, as compared with 68.5 per cent. on July 15, and 71.2 per cent. on June 25; but, on the other hand, there was an estimated increase of 5 lb. in the yield per acre, as compared with the last report, so that the total crop is now given as 12,351,000 bales, as compared with 11,934,000 in the middle of June, and 12,144,000 at June 25. Following the receipt of this news late yesterday afternoon, prices in Liverpool did not move much, but there was a subsequent fall of 80 points in New York.

Yarn.—Conditions in this section have been unsettled, and in the coarser counts in particular the demand has been very poor. There has been a moderate inquiry for medium and fine counts, and Egyptian spinnings are fairly well taken at steady prices. The Federation of Master Cotton Spinners yesterday decided that the limitation of the working week to 26½ hours in the American using section should be continued until the end of the year.

Cloth.—As so often recently, there has been a good inquiry, though at prices which are too low. Naturally, a certain amount of hesitation has been shown about increasing limits owing to the erratic movements in raw cotton rates, and also in anticipation of the publication of the Bureau report already referred to. Nevertheless, it is felt that the inquiry shows the possibility of considerable business being done if prices could be stabilised at a little below present levels. An encouraging feature of the week has been the improved trade with Egypt.

Raw Cotton.—Little need be added to what has already been said in this connection. The tendency during the week has been towards lower values, following fairly satisfactory weather reports from the United States. Closing prices yesterday were as follows:—American middling, 17.38; Egyptian fully good fair, 25.80.

PAINT PRODUCTION IN GREECE.

There were 17 factories, employing 296 men, listed as manufacturers of paint in Greece, according to the Greek Industrial Census for 1920. These factories import dry paint and prepare it for use locally by mixing with oil or water. The industry is an outgrowth of the present Greek tariff, which makes the importation of ready-mixed paints prohibitive (says an American Consular report).

It is estimated that about 800 tons of dry paints are imported each year for local mixing. Red lead is received from France, and the present quotation is reported as about £32 per ton c.i.f. Piræus. White lead is quoted at about £36. Linseed oil comes principally from England, but is also manufactured in Greece.

The quality of paints mixed and sold locally is poor. Prepared marine paints for the hulls of Greek merchant ships and for the Greek Navy are usually imported from abroad and, inasmuch as these are admitted free of duty, their cost is not excessive. One local foreign concern imports its own paint to keep its works in proper painting repair. Walls in houses are usually calcimined. Local paint is used for ordinary construction work; for painting houses, tanks, and floors; and by coastwise shipping concerns. The most popular colours are grey, black, white, and blue.

Inasmuch as the industry is dependent on the present tariff—and continuous protection is uncertain—it is not believed that it will advance conspicuously in the immediate future. Manufacturers seem content at present to import dry paint and mix it locally, and there is no indication that the industry will be able to manufacture the dry paint itself.

The production of the Steaua Romana Company for July was 24,920 tons, as compared with 22,000 tons for the previous month.

The exhibits at the Liberec (Reichenberg) Fair, which was opened on August 9, are arranged in ten different buildings, four of which are devoted to the textile industry alone. The fair represents perhaps the largest textile market on the Continent.

DEATH OF MAHARAJA OF TRAVANCORE.

We regret to announce the death, which occurred on August 7, of H.H. Sir Rama Varma, G.C.S.I., G.C.I.E., Maharaja of Travancore, at the age of 66. His Highness succeeded in 1885, and during his long rule distinguished himself by the way in which he devoted himself to the development of the State. As a result of his efforts, Travancore now stands first among the Indian States as regards literacy, over two-thirds of the population being literate. His reign has seen the establishment of a Legislative Council and of a Popular Assembly, the construction of important railways, and the development of agriculture. The advance that has been made by the State in the economic sphere can be gauged from the admirable display at Wembley (which, it may be pointed out, was the subject of a lengthy review in THE NEAR EAST of July 31). The Maharaja was a devoted ally of Great Britain, and during the Great War offered the resources of his State.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Iron Bars.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of iron bars, different dimensions, for the workshops and trade schools of the Ministry during the school-year 1924-1925. August 30.

Copper Plates.—Tenders are invited for the supply of 11,500 kgs. of red copper plates of varying dimensions. September 1. (D.O.T.)

Oils.—The general manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of mineral lubricating oils. September 25.

Construction of a Metallic Bridge over the Mahmoudieh Canal at Karmous.—The Municipality of Alexandria invites tenders for the construction of a metallic bridge over the Mahmoudieh Canal at Karmous. September 23. (D.O.T.)

Leather.—The British Commercial Secretary at Cairo reports that a local merchant desires to be placed in touch with United Kingdom manufacturers of leather. He is especially interested in box-calf, kid and patent leathers. (D.O.T.).

Turkey

Bell Tents.—A department of the Turkish Government proposes to purchase 1,000 bell tents. (D.O.T.)

Greece.

Construction of Works at Kavalla Harbour.—Tenders are invited by the Kavalla Harbour Committee for the construction of works at Kavalla Harbour according to the specifications drawn up by the engineer, Mr. A. Ghinis. These works are estimated to cost drs. 76,000,000. The adjudication will take place on December 1, 1924, and tenders must be submitted by that date. A guarantee deposit of drs. 600,000 must be made in the Public Treasury, and this deposit will be returned to unsuccessful competitors within three days after the date of adjudication. In the event of two or more competitors tendering at the same price, lots will be drawn. (D.O.T.)

India.

Wagons.—The South Indian Railway Co. invite tenders for the supply of 109 wagons. October 10.

Dredgers.—The India Store Department invite tenders for the supply of two self-propelling suction dredgers, with radial heads and pumps having 20 in. suction and delivery, also floating discharge pipes, terminal pontoons, anchor lifting pontoons, and floating high-pressure hydraulic pumping plants.

BASRAH DATE CROP PROSPECTS.

The following extracts are taken from a report received by the Imperial Ottoman Bank from Basrah, dated July 12:—

The market is still very dull. The reports as to the date crop still continue favourable up to the present. The hot spell referred to last week has given way to more normal conditions. Unless unfavourable conditions set in it is anticipated that the crop of Hallawees will be three times as large as that of last season. On the other hand Khadrawi and Sayers are 50 per cent. under last year's crop. Further purchases of grain are reported, but no shipments have taken place.

NEWS FROM ALL SOURCES.

The Vienna Autumn Fair will be held from September 7 to 14.

The production of the Dacia Romano Company for July was 660 tons.

The Greek Moratorium Law has been further extended to August 31.

Representatives of European Chambers of Commerce are to visit Hull on August 25 and 26.

The establishment of a Ford factory in Egypt is understood to be contemplated.

It is reported that the output of Baku oil for the month ended July 1 amounted to 21,656 poods.

Strumnitza, Southern Yugoslavia, has been largely destroyed by fire, says a Reuter message.

An Italian commercial fair is planned to be held at Alexandria from April 15 to June 15, 1925.

The traffic receipts of the Smyrna-Aidin Railway for the week ended August 2 amounted to £5,096, making the aggregate £24,879.

It is reported that the Bulgarian National Bank is to place an order abroad for the printing of new bank notes in denominations of 500, 1,000 and 5,000 levas.

The traffic receipts of the Suez Canal from July 26 to August 1 amounted to 2,840,000 francs, as against 3,150,000 francs for the corresponding period of last year.

The application of the Suez Canal Company to subdivide each share of 500 francs into two shares of 250 francs each has been granted by the Egyptian Government.

The directors of the African and Eastern Trade Corporation recommend a final dividend of 4 per cent., making 8 per cent., less tax. The meeting will be held on August 29.

The progress reports of Phœnix Oil and Transport Co. and allied companies for July show that the total crude oil production for the month was 19,700 tons and the throughput of the refineries 18,700 tons.

Anglo-Egyptian Oilfields output.—Gemsah, production for week ended August 1, 19 tons (last week 15 tons); Hurghada, production for week ended August 1, 3,354 tons (last week 3,181 tons).

Mr. J. C. Drake, a Deputy Secretary of the Industries Department of the Government of India, has been appointed Secretary to the Indian High Commissioner in London in place of Mr. Cook, who has resigned.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 20 amounted to £E6,189, making the total from April £E76,808. The corresponding figures for the previous year were £E6,912 and £E70,971.

Statement showing the form in which the balance of the Indian Gold Standard Reserve was held on July 31: In India, nil; in England, cash at the Bank of England, £2,628; British Government securities (value as on March 31, 1924), £16,479,501; British Government securities since purchased (cost price), £23,683,322; total, £40,165,451.

According to information issued by the International Institute of Agriculture at Rome, the area under sugar beet this season has increased in Belgium, France, Italy, the Netherlands, Poland, and Czecho-Slovakia, the aggregate increase in these six countries being about 20 per cent. compared with last year. There has been an extension of the area under sugar beet in Russia of about 40 per cent.

IONIAN BANK, Ltd.

LONDON, GREECE, EGYPT.

The only British Bank or Financial House in Greece originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has agencies throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

In Turkey the Bank has a branch at Constantinople.

NOTES OF THE WEEK.

The Sudan Riots.

The rioting that has taken place at Atbara and Port Sudan, and the demonstrations in Khartoum and Omdurman are not in themselves very serious affairs. In so far as they constitute breaches of military discipline they are serious offences for the perpetrators, but in their political bearing they reveal nothing beyond what was already known. An outbreak on the part of Egyptian soldiers does not appear to be of much use as a political argument in a discussion on the future status of the Sudan. On the other hand, the fact that the punishment inflicted on the rioters at Atbara was meted out to them by a Sudanese mounted corps, acting apparently without orders, goes a long way towards shattering part of the Egyptian claim to the Sudan. At Port Sudan a conflict was avoided by detaining against their will the Sudanese police within barracks; the rioters, finding that their scheme had miscarried, dispersed of their own accord. A considerable amount of damage was done to the railway workshops at Atbara junction by men of the Egyptian Railway Battalion, and order was not restored before a number of them had been killed and many more wounded. A military court has been appointed to inquire into the circumstances attending the shooting, and another court, presided over by an Egyptian officer, will investigate the causes of the outbreak. The demonstration at Khartoum was made by cadets of the Military School, and in common with the other incidents was evidently intended to be part of a prearranged movement designed to further Egyptian propaganda in connection with pending negotiations regarding the Sudan.

The Egyptian Government's Attitude.

Although the rioting in itself may have been unimportant, it may well have far-reaching consequences. Great Britain and Egypt have, nominally, been hitherto jointly responsible for the good government of the Sudan. If it can be proved that deliberate incitement to disorder has emanated from Egypt, the condominium becomes a farce: for to tamper with the loyalty and discipline of armed forces responsible for the preservation of order is the negation of good government. On receipt of the first news of the disturbances it was naturally supposed in Great Britain that Egyptian responsibility, if any existed, would be confined to agents hostile to Zaghloul Pasha's Ministry, who aimed at prejudicing or preventing negotiations between Great Britain and Egypt. A very sinister complexion, however, has been put upon the whole subject by a *communiqué* issued by the Egyptian Government. In view of the fact that the condominium is still in force, it would have been expected that the Egyptian Government would at once have indentified itself with the British authorities in discountenancing disorder, while possibly, in furtherance of its claims to the Sudan, showing an excess of zeal in the cause of law and firm government. The determining factor in Egypt's case for independence is her claim that she can govern herself; on the same analogy her case for the annexation of the Sudan has all the ground cut away from under it if it is shown that she cannot apply to the Sudan the rudimentary principles of government. Confronted with the incidents at Atbara, Port Sudan, and Khartoum, the Egyptian Government has issued a *communiqué*, which can be described only as a direct encouragement to the forces of disorder in the Sudan. For the demonstration of the cadets of the Khartoum Military School something in the nature of an apology is offered—they paraded in good order; resistance ceased, and they laid down their arms; "the demonstration is said to be a protest against the system of granting brevets to Sudanese cadets." The reference to the outbreaks at Atbara and Port Sudan suppresses the information that the Railway Battalion concerned is Egyptian, and that the soldiers who fired on them were Sudanese Arabs, and makes "British troops" responsible for quelling the disorders with bloodshed. The official statement then proceeds to enumerate the steps taken by the Egyptian Government, which include the transmission to the British Government of "a protest against the proceedings in Sudan," and concludes with the announcement that the Egyptian Government entirely shares the nation's sentiments, and is closely watching over the situation, in order to preserve the country's dignity and safeguard its rights.

Digitized by Google

A Lost Opportunity.

Unless the Egyptian *communiqué* is repudiated by the Prime Minister, Saad Pasha Zaghloul, who is absent from the country, the British Government will be compelled to infer that it can look for no support from the Egyptian Government in dealing with the new developments in the Sudan. Before Cairo had made any move, military courts had been appointed to inquire into the disturbances, and one of these is to be presided over by an Egyptian officer. If, however, the Egyptian Government is so lacking in moral courage and so subservient to popular clamour that it dare not state in its *communiqué* that the Atbara rioters were an Egyptian battalion, there would seem to be little chance that a single Egyptian officer will take upon himself the responsibility of disclosing the facts of the case. If he does, it will be a tribute to the Army's sense of honour, and will throw into yet stronger relief the cowardice or lack of honesty of a body of men responsible in Zaghloul Pasha's absence for the administration of the country. A military outbreak calls for the immediate restoration of military discipline, and thereafter it is incumbent upon a Government to inquire into the causes of the outbreak. It would have been a simple thing for the Egyptian Ministry to do, and at the same time its obvious course, to denounce in unequivocal terms the concerted disorders in the Sudan, and then to call upon the British Government to hold a joint inquiry into the outbreaks. By seeking almost to excuse the riots, and to identify them, as it were, with Egypt's case for the Sudan, the Cairo Ministry will have irretrievably damaged itself in the eyes of the civilised world. Outside Egypt it would cause no surprise if Great Britain were to decide that any friendly settlement with Egypt over the Sudan is now out of the question. The British Government could not be blamed if it resolved that, in view of the Egyptian attitude, it must now assume sole responsibility for the Sudan, and must call for the withdrawal of the Egyptian troops from the Army in the Sudan and the resignation of Egyptians from the Sudan service. A first step has been taken in the decision to send back to Egypt the mutinous Railway Battalion. The British wish has been all along that there should be no open rupture, that the *status quo* should be maintained with such technical modifications as the new order in Egypt might necessitate, and that the relations between the three countries should be of the friendliest. Egyptian opinion, unfortunately, has resolutely opposed this solution, and in the face of the grave lack of personal courage in all Egyptian politicians, it is now seen to be quite hopeless to expect that any one will agree to come to terms on the Sudan question.

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 208 of this issue.

Bringing Matters to a Head.

In all the circumstances of the case, therefore, Great Britain may have to decide that on the subject of the Sudan a swift and complete breach with Egypt is the kindest course in the long run. Intrigue and possibly outbreaks might follow, but the first signs of these would necessitate a more effective closing of the frontier between the two countries. Although actual hostilities would not have to be feared, the position of British residents in Egypt might be uncomfortable, and even exposed to danger. The more elaborate the precautions taken in regard to this possibility the quicker the return to normal conditions. At the same time, the fullest satisfaction would have to be given to all Egypt's financial claims in regard to the Sudan, so that any possibility of a legitimate grievance in this respect should be eliminated. It is to be expected that Egypt would at once bring to bear upon the Sudan all the economic pressure of which she is capable. This would certainly embarrass the Khartoum Government, and the results would have to be faced by Great Britain. There is no reason to suppose, however, that the Sudan could not quite well shoulder its own financial burdens after a few years, and the British taxpayer would be called upon merely to allow the country to pay off its debt in its own time, unhampered by an impossible responsibility in the years when it was engaged in making good. Before very long, we believe, a new spirit would arise in Egypt; with it would come the re-establishment of friendly relations and economic co-operation.

Croat and Serb.

M. Raditch has returned to Zagreb without carrying out his alleged intention of taking a rest-cure on the way from Moscow. There would seem to be nothing in the speech attributed to him shortly after his arrival to which serious exception can be taken. He sought to represent British "diplomatists" as taking an active part in Yugoslavia's domestic politics; but on this point his countrymen will probably reflect that the Croatian leader is apt to give his narratives the colour that happens to suit him at the moment. The most important part in the speech, as reported, was the passage in which he promised, with every appearance of sincerity, his support to M. Davidovitch. He does not expect the Prime Minister to endorse the Croat Peasant Party's programme; but he holds that Croatia can become a republic and yet remain an integral part of a Yugoslav monarchy. In view of the present position in Yugoslavia, he is reported to have said, a revolution is not necessary. King Alexander has been very wise in trusting the formation of a Government to the Davidovitch majority. "We remain republican," adds M. Raditch, "but for the moment accept the monarchy." Here, at least, there is ground for friendly discussion between the Croats and the Serbs, and those who have not lost faith in Yugoslavia's star will renew their hope that the country will yet be able to find the path to domestic peace and unity. As the tenour of this speech is so completely at variance with the subsequent report that M. Raditch has refused to support the Davidovitch Ministry, we must wait to see which policy will ultimately be adopted by the Croat leader.

Fighting in Transjordan.

As far as is known at present, no importance need be attached to the Wahabi raid into Transjordan. Sultan Ibn Saoud experiences considerable difficulty in keeping effective control over all the tribes that owe him allegiance, and every now and then one or other of those more remote from the capital goes out on the warpath. His, how-

Digitized by Google

ever, is the responsibility for maintaining order in his dominions, and he should be called upon to deal with the offending tribe. Fortunately, the best deterrent against the too-frequent repetition of these raids has been supplied in this instance by the victims, the Beni Sakhr tribe in Transjordan, who, with the help of the Royal Air Force, rallied after the first attack and pursued the raiders with such good effect that these are supposed to have lost a third of their fighting strength. It is well that the Royal Air Force should have come to the immediate support of the tribe attacked; Transjordan is included in the Palestine Mandate, and Ibn Saoud's tribesmen ought to know better by now than to invade that territory, even if their raiding propensities still have to be indulged in occasionally. To check this tendency is believed to be one of Ibn Saoud's chief preoccupations. He is understood to be anxious to keep the peace with his neighbours in Iraq and Amman, and can sometimes be brought to acknowledge the advantage of maintaining correct relations with his old enemy, the King of the Hejaz. His peaceful inclinations need to be encouraged and reinforced in every possible way, if only because this part of the world is now becoming an important link in the chain of British communications. At present the mail and passenger motor service between Palestine and Iraq follows the northern route from Damascus to Rutba Wells, the half-way stage in the desert between the two countries; but it is conceivable that circumstances might cause preference to be given to the more southerly route from Amman along the track followed by the Air Mail. The success and safety of the service presuppose the good behaviour of the tribes, who have hitherto shown scrupulous friendliness to the British flag. If they call down upon themselves chastisement for attacking Britain's protégés, they may forget that there is no quarrel between themselves and the British.

THE WEEK AT HOME.

London, Tuesday Morning.

The London Conference.

The London Conference is now over, the various delegates are dispersed, and Mr. Ramsay MacDonald is back at Lossiemouth in deserved and thankful rest. After a very worrying month, he has achieved what he set out to do: he has found a formula for future action on which victors and vanquished in the War are agreed. It is something to be very proud of.

But, as the Premier has already recognised, this is but the first step on the road to the reconstruction of Europe. The feet of the pioneers will almost certainly, as he himself suggested, be clogged by the "soulless international combines"—and, it is not impertinent to add, Mr. MacDonald knows something of international bodies.

Bankers and financial men generally appear to be rejoicing over this German Treaty, which still needs ratification by the Parliaments of the countries concerned; they are almost beginning to feel themselves back on the familiar ground of stable exchanges and a strong Germany. But even they, however necessary to existence may be the realisation of their plans, will not prevent the world from watching the increasing solvency and industrial strength of Germany with keen and unforgetful eyes.

It is, perhaps, not advantageous now to discuss the wisdom of past French policy, but no one can reasonably deny that such terms could not have been extracted from the Germans had not the Ruhr been occupied. The pro-Germans of this country were last week saying that the Conference might be wrecked because of M. Herriot's inability to "sell a liability"—viz., the occupation of the Ruhr. Happily, a saner view than this of facts and potentialities obtained, and the compromise reached is, as far as one can see, a credit to all concerned.

One must wait now for the reception of the Treaty by the French, Belgian, and German peoples.

Politics and the Judiciary.

An ugly thing happened last week which has caused in many and diverse quarters much misgiving upon the integrity, or, at least, upon the soundness of the moral bases of the Government. A certain Communist editor of a weekly newspaper had been summoned before the Courts on the ground of sedition—inciting the Army to revolt. As the case—"very serious," it was termed by the prosecution—was being proceeded with, it was suddenly decided that the editor's words counselling soldiers "to turn their weapons against their oppressors" was not advice, but merely comment!

What had happened was, according to the paper in question, the *Workers' Weekly*, that pressure had been brought by various "conscientious" Labour Members of Parliament to get the charge withdrawn, and that pressure on men with such a War record as Messrs. MacDonald and Snowden had the effect of the nullifying of the preferred charge. This transaction has appeared to most men as the interference of political authority with the judiciary.

It is an extremely grave position. Defenders of the Government's reputed action may point to the conduct of the Unionists in regard to Ulster just before the War, but, even if one admits some resemblance of principle involved, two blacks do not make a white. There is only one conceivable rule for the soldier—unquestioning obedience to superior command. And anything that tends to undermine that rule tends to undermine society, of whatsoever form it be.

More will be heard of this case, for it will take much to explain it away.

Ireland.

Although England is officially to do nothing for Ireland until the end of next month, events in that country are being closely watched here. Undue attention, perhaps, has been given to utterances of Mr. De Valera, who, in his blindest old way refuses to recognise the existence of two Irelands. This view, though more moderately expressed, of course, is really held by the President of the Free State, but it will be long before it is widely held. Great Britain knows well enough that there are two Irelands, and it does not want a Yugoslavia at its front door. It does not wish to perpetuate the differences between Ulster and the rest, but it will need all the tact of the Labour Government, when it presents its Bill for the delimitation of the Free State's boundaries, to avoid further accentuation of the existing bitterness.

Sir Alfred Mond.

In many quarters governed by practical men, whose fear of "Socialism," as they call it, is equal to their inability to describe it, the return to the House of Commons of Sir Alfred Mond, in the by-election of Carmarthen, has been greeted with satisfaction. It was no particular "Welsh" qualification, such as that of fluency in speaking the Welsh language, or keenness on Association football or on choral singing, that enabled Sir Alfred to get ahead of his Labour and Conservative opponents; but the fact that he is what is called a

Digitized by Google

"sound" man, and one who has done much for Liberal reunion, told on the impressionable Welsh. Despite his disagreement with Liberals on the Housing question, he will, if only for his skill in debate, be warmly welcomed by Liberals in the House.

The Sudan.

It is no part of my business to write on the inner side of the question of the Sudan, but to attempt to make a record of the past week without commenting upon the remarkable unanimity of opinion which has been formed upon the Government's action in regard to the risings in that country would be an extreme omission. The Press at home is absolutely united in asserting that the Egyptians' claim to the Sudan cannot be realised, and it appears as if, war-weary and hard-up as it is, the country would stomach a small campaign for the sake of a cause in which it has no misgivings whatever.

The St. Paul's Bridge.

The Fine Arts Commission, the institution of which, as I believe I suggested at the time, would probably rank as one of the finest achievements of Mr. Baldwin's Administration, has issued its first report—upon the proposed building of the St. Paul's Bridge. It is a splendid body of men, this Commission, of diverse interests and qualifications, and it is, therefore, gratifying to find them quite decisively unanimous in opposition to the building of the bridge. Such a construction would, they assert, seriously endanger the Cathedral of St. Paul. When one thinks that but for the War the City of London would already have built such a bridge, it makes one shudder. If it had been extensively used, the foundations and the fabric of the Cathedral would have been threatened—the first because the water under the "pot earth" on which the Cathedral stands would have been drained off by the underground work for the bridge, and the second because of the shaking by traffic.

Women Police.

The Report of the Committee which was appointed four months ago to review the position and potentialities of women police has now been issued. It will be remembered that under the Geddes axe the number of women constables for the whole country was reduced to 110. The wisdom of this step has been revised, and it is now considered advisable to have 200 for London alone But all amateur and unofficial organisations should, the Report thinks, be suppressed—a direct hit at the innumerable "welfare" societies and other institutions whose fetishes are interference and moral "uplift." The Report recognises no "hard and fast line between welfare work and the policeman's duty to prevent crime," but it is leaving it to each local authority to decide whether or not there is work for women police in its particular area.

English Forests.

It is being realised with something of alarm that the Empire's supply of timber is giving out, that forests are growing smaller, indeed, throughout the world, from Canada to the Sudan. But steps are being taken. In England alone, although we draw 95 per cent. of our timber supplies from abroad, a far-reaching scheme is being launched. There are in this country large tracts of land which can serve no agricultural purpose, and it is proposed to plant these tracts with trees. At Rendlesham, in Suffolk, the problem is already being grappled with, and over 2,000 acres on which nothing but rabbits formerly grew, you may now see 15,000,000 trees—pines, firs, poplars, larches, beeches, and oaks, all grown from seed.

Government and Party.

How much the Labour Party has yet to learn of English tradition, particularly how it has to unlearn the supposed fact that we are a democratic people, is to be seen from the resolutions, just published, which it is to discuss at its annual conference next October. Labour organisations are actually asking that the Government of the country should be put under the control of the Executive Committee, which is annually elected by the Party Conference. Nobody believes now that *vox populi* is *vox dei*, and, even if they did, Englishmen, at least, would not consent to the substitution of delegation for representation. It is, perhaps, not to be wondered at that such a crudity should emanate from so young a party, but it is just as well to know all about our rulers and their ideas.

Roman Britain.

The days are gone, perhaps for ever, when we shall boast of our Anglo-Saxon forbears, their freedom, and all the other virtues which the Victorians supposed them to possess. With more intimate knowledge, and certainly with a larger sense of the oneness of Western civilisation, we have now made it the fashion to claim real relationship with the Roman conquerors of Britain. How real our debt was to them is made very manifest by a map of Roman Britain just issued by the Ordnance Survey Department—a very worthy State Department by the way. The whole grand history of the Roman conquest is in this map. You can find in the roads and civil communities and military posts (on the map, lines and circles and squares) the story of that conquest. You can see how first the Romans made the road from Richborough (which, after many years, became in the Great War once more a port) to London, and then how they struck out the great roads through Silchester, St. Albans, and Colchester. And in the West, in the Midlands, and in the North, their history can be similarly traced. The Ordnance Department is to be congratulated on this fascinating work.

The Decrease in Crime.

It is proof of the influence, and, too, of the degeneration of the newspapers, that no remark is more common at the present time than that crime is on the increase. Explanation of this belief is easy, but it is a mistaken belief nevertheless. For crime is certainly on the decrease. Even in the case of juveniles, who, as adults love to assert, have been so sadly corrupted by the kinema, the number of crimes committed since the War bears, as the recently published Report of the Home Office on the subject shows, no comparison with that of pre-War years. Further, the cases of neglect of or cruelty to children are far fewer than they were before the War, and Heaven knows that in this servile State inspection is on the increase. So that this perpetual grouse at the ills of our time is but the reappearance in us of the phenomenon so familiar to our forefathers.

Alter Ego.

M. Davidovitch's Cabinet obtained a vote of confidence in the Yugoslav Skupshtina, on August 13, by a majority of 55 (169 votes to 114), and the House adjourned until later in the month.

His Holiness the Khalifa-ul-Massih, Bashir-ed-Din Mahmud Ahmad, the head of the Ahmadia movement in Islam, arrived in London this week to attend the Conference of Living Religions in the Empire at Wembley.

Prominent Indian ladies are drafting representations to be made to the Reforms Inquiry Committee urging the introduction of woman suffrage and the right of women to stand for election. They state that owing to social conditions the grant of such a right to Indian women is needed more in India than in Western countries.

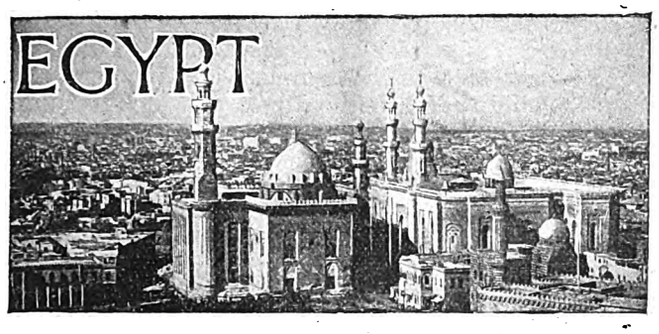
The Near and Middle East.*

From Our Own Correspondents.



Cairo, August 9.

The Mecca Caravan.

The Egyptian caravan returned this week from Mecca, and on Thursday the ceremony of receiving back the Mahmal was performed on the Square below the Citadel in the presence of Mohamed Said Pasha, the Acting Premier, who represented King Fuad. After the ceremony the Ministers held a long meeting, when they discussed the report presented by the Emir El Hej. According to information that has leaked out, the treatment accorded to the Egyptian caravan by the Hejaz authorities was most unsatisfactory. In fact, so outrageously did the latter behave that it is quite possible that the Egyptian Government will refrain from sending another caravan to the Holy Places until it receives satisfactory assurances with regard to its reception and treatment. There appear, indeed, to be all the makings of another dispute between the Hejaz and Egypt similar to the one that occurred last year.

The Abyssinians and the Egyptian Copts.

Another interesting dispute is the one that has existed for some time between the Abyssinians and the Coptic Church with regard to Deir Sultan, the latter's monastery in Jerusalem, which was brought to a head by Ras Taffari during his recent visit to Cairo. Deir Sultan belongs to the Coptic community, which has allowed the Abyssinians, who are adherents to the Coptic Church, and have no hospices of their own in the Holy City, to use part of the Deir for their own purposes.

The Abyssinians feel the position very keenly, especially as every other religious community has a place of its own in or on the borders of the Holy precincts, and for many years they have tried to induce the Coptic community to cede to them against payment a certain portion of Deir Sultan. This, so far, the Coptic community has declined to do; but it has now intimated its willingness to discuss the question with representatives of the Abyssinian Government, and there is reason to believe that some settlement satisfactory to the latter will be arrived at, since the Coptic community have no desire to lose the adherence of the Abyssinian Church, which Ras Taffari plainly hinted would take place if satisfaction were not given them.

War Anniversary.

The tenth anniversary of Great Britain's entrance into the War was celebrated on Monday last at the British military cemetery at Hadra. On this occasion, the French colony again placed a wreath on the memorial cross, and speeches were made by the French Consul, M. Arvengas, and by Lieut.-Col. J. Haskard, Officer Commanding the 1st Battalion East Yorkshires. In addition to members of the British community, a large number of the French residents and officials were present.

Alleged Egyptian Shortcomings.

The recent article publised in *The Times* with regard to the shortcomings of the Irrigation Service and of the railways has aroused widespread comment here. Officially and *officieusement*, the facts therein reported are flatly contradicted, and the vernacular Press has been full of protests addressed to it from all parts of the country by members of the Irrigation Service and by landowners. But as at the same time these papers publish protests from the same parts of the country at the lack of water from which many districts are suffering, it may be taken that the state of affairs as reported by the London newspaper is not so very far from the truth.

As regards the railways, it is only fair to the very able Egyptian who is now General Manager to say that the present state of affairs already existed before he took office. It is a notorious fact that the two British General Managers who preceded him were each compelled to resign because the Under-Secretary of State for Communications—the railways depend from the Ministry of Communications—persistently rejected every proposal which they made for the improvement and maintenance of the railways, and insisted on administering the railways from the Ministry, instead of leaving those at the head of the former the liberty of action without which no great enterprise can be run.

Warning after warning was given by these General Managers of the precarious state into which the railways were degenerating as a result of this policy, but the Egyptian Under-Secretary declined to pay any attention, and, being given full powers by the Cabinet, gradually made the position untenable for these Englishmen.

It was only after they had left that the Cabinet realised how injurious had been the policy followed, and that, the responsible Egyptian Under-Secretary having declined himself to take on the post, and, in consequence, having been made to resign, Abdul Hamid Pasha Suliman courageously accepted what for some time must inevitably be

the thankless job of general manager. The responsibility for the very serious state of the Egyptian railways must be laid entirely at the door of the Cabinet, which allowed the Egyptian Under-Secretary to overrule the advice of its British technical advisers, and Abdul Hamid Suliman Pasha is deserving of all sympathy and support in his efforts to re-establish a service the efficiency of which in the past was always very high.

IRAQ.

Baghdad, July 24.

Fatal Flying Accident.

A British pilot and a Kurdish chieftain lost their lives in a flying accident near Mosul on July 22. Sergeant C. A. Dicks, piloting an aeroplane of No. 55 Squadron, was leaving for Baghdad, taking as his passenger Mohammed Agha, Deputy for Zakho and sheikh of the Silfani tribe, when the machine suddenly dived and crashed to the ground, bursting into flames. In spite of great efforts on the part of a number of mechanics, the pilot could not be extricated, but Mohammed Agha was dragged clear of the wreckage and taken to the hospital, where he died a few hours later.

July 30.

Political Tranquillity.

As far as the political world is concerned there is little to report. The Constituent Assembly still continues to meet to pass the Electoral Law, though the interest taken is lethargic, and on some days so few deputies put in an appearance that no discussion can take place for want of a quorum. The tottering Cabinet has not yet fallen; it appears that some difficulty is still being experienced in filling up the less important Ministries.

The King has recovered from his recent indisposition, but has not yet taken his proposed holiday. The difficulty of choosing a suitable retreat emphasises once again Iraq's lack of any hill station where relief from the blazing heat of the plains may be obtained. The recent opening up of the desert motor route has made the Lebanon hills available, but King Faisal is, naturally, not desirous of visiting Syria. Places as far apart as Simla and Mount Carmel have been suggested, but the opinion current at present is that His Majesty will pay a brief visit to the hills in the north of Iraq—perhaps to the Kurdish mountains, which have once again come under the administration of this country.

Britain and Iraq.

Some stir was created in Baghdad political circles by Mr. J. H. Thomas's reply in the House of Commons, to the effect that the rider attached to the acceptance of the Anglo-Iraq Treaty by the Constituent Assembly of Iraq, in which it was declared that the Treaty should be null and void if the British Government failed to safeguard the rights of Iraq in Mosul, could not affect the validity of the Treaty when it was ratified, nor, in the opinion of the British Government, did it impose any responsibility on that Government.

To allay any possible misunderstanding, the Acting High Commissioner issued a *communiqué* in which he explained that he had obtained the authority of the British Government to announce that "the statement was designed merely to make it clear that the Assembly's resolution did not in itself impose any fresh responsibility. The British Government does not contemplate any modification whatever in regard to their policy, which is well known, with regard to the northern frontier of Iraq, and has no intention whatever of abandoning their support to the frontier claim put forward at Constantinople on behalf of Iraq."

Baghdad City.

Probably few cities which boast of being capitals have been as little touched by the reforming hand of modern civilisation as the capital of Iraq. Baghdad possesses only one main street, a thoroughfare driven straight through the city during the War by the Turkish military authorities. The people whose homes were thus ruthlessly destroyed are still, it may be noted, clamouring for compensation. The surface of this road is abominable; during the winter rains it becomes a bog, while in summer the multitudinous ridges and pot-holes make it little better for transport. The Municipality, being on the verge of bankruptcy, can do little or nothing to improve matters.

In the same way, Baghdad's water supply is a disgrace to any capital with pretensions to civilisation. The supply is scanty and precarious, full of river sediment, and at times so heavily chlorinated (with a view to sterilisation) as to be almost undrinkable. The fault lies with the original installation, put down by the Turks. The mains, for example, were made up of a heterogeneous collection of pipes of every shape and size, an 8 in. pipe feeding a 1 in., and so on. All were joined together with mud, grease and rags, with consequent leakage on the one hand and silting up of the pipes on the other. The Baghdad water supply has now been taken out of the hands of the Municipality, and handed over to a Water Board under the presidency of a British official. Arrangements are in hand for a loan of four lakhs, and it is hoped that by next summer the capital will be assured of a sufficient supply of pure drinking water.

Fatalities in the R.A.F.

The Royal Air Force has been unfortunate in having a series of accidents, all ending fatally. Last week, as already recorded, a pilot and his passenger were burnt to death. News has now been received that Flight-Lieut. Day, M.C., and Pilot Officer D. R. Stewart, of 84 Squadron, were obliged to make a forced landing in the desert not far from Nasiriyah. The machine was located the same evening, but the officers had left their aeroplane, presumably to walk to the railway line, some twelve miles distant. Search has been made for these officers both by aeroplane and by armoured car, but no trace could be found of them. They have accordingly been officially reported as missing.

The second fatality occurred at the aerodrome at

COLONIAL OUTFITS A SPECIALITE

Digitized by Google

Kirkuk. Flying Officer M. B. F. Walsin, of No. 1 (Fighter) Squadron, while about to land with a Scout machine, crashed from a height of 100 feet and was killed. No cause for the accident has yet been definitely established, though it is thought that the pilot suddenly became ill while in the air.

August 6.

Dissolution of the Constituent Assembly.

After sitting for a little over four months, the Constituent Assembly, having completed the last of its three tasks—the new electoral law—was dissolved on August 2. On the whole, it may be said that, though a lamentable lack of decision was shown in connection with the Anglo-Iraq Treaty and perhaps too little interest taken in the framing of the Constitution and the electoral law, the Assembly has acquitted itself very creditably. The President (Abdul Mohsin Beg as Sa'adun) was too unwell to attend the last meeting, but his speech was read out amid repeated applause. He laid stress on the fact that the country had now, for the first time, a proper Parliamentary system, and, thus equipped, should begin to make headway. He also thanked the British for the valuable assistance they had given in establishing in Iraq a form of government such as was desired by the people.

Fall of the Cabinet.

At the last meeting of the Constituent Assembly Ja'afar Pasha informed the Deputies that his Cabinet had resigned. This announcement caused no surprise, as the Cabinet had been expected to fall for some time past, and probably would have done had it not been for King Faisal's indisposition. His Majesty's health is much improved, though he has not yet taken the short leave, as was at one time stated to be his intention.

The new Premier is Yassin Pasha al Hashimi, who is reputed to be one of the most talented men in Iraq, though somewhat unstable in character. He has had a varied career, being at one time commander of the Turkish forces in Cilicia during the Great War, and later Prime Minister of the newly created and short-lived Arab State in Syria. He was Minister of Communications and Works in the Cabinet immediately preceding the one which has just fallen, and has lately been very much in the public eye as one of the chief leaders of those opposed to the ratification of the Anglo-Iraq Treaty.

The Ministry of the Interior has been offered to, and accepted by, Abdul Muhsin Beg as Sa'adun—a former Prime Minister and, until its dissolution, the President of the Constituent Assembly. No better choice could have been made, as Abdul Muhsin's sound common sense and honesty of purpose will be of far greater value than mere brilliance in tackling the many difficult problems which confront his Ministry. His previous work as Premier, during which time he also filled the post of Minister of Interior, has earned for him a well-deserved reputation, and he has done much to establish the new State on a firm foundation.

Sir Haskail Sassoon, K.B.E., returns as Minister of Finance, which post, except for a short break under the last Cabinet, he has held in successive Cabinets since the formation of the Arab Government in 1920. He is one of the ablest financiers in the country, and acquired considerable administrative experience during his official career in Constantinople before the War.

These three men are the leading personalities in the new Cabinet, though the other Ministries have also been filled by capable men. The new Cabinet shows every promise of being a strong and successful one, and is likely to be less subservient to the Palace than its predecessor. The other Ministries have been filled as follows:—

Justice, Saiyid Rashid Ali Al Gilani; Communications and Works, Muzahim Beg Al Pachachi; Auqaf, Ibrahim Beg Al Haidari; Defence, Prime Minister; Education, Sheikh Muhammad Ridha Al Shabibi.

Another World Flyer.

Yet another world flyer in the person of Major Zanni, the Argentine aviator, has passed through Baghdad. His arrival was unheralded, and he landed on a deserted aerodrome. He received, however, a cordial welcome from the R.A.F. officers as soon as they knew of his presence on their landing ground.

Major Zanni left Aleppo in the early morning of the day on which he arrived here with the intention of reaching Bushire the same evening. He was, however, delayed by fog, and though he proceeded with his flight after only a short rest in Baghdad, he did not get further than Basra, having covered in one day the creditable distance of about 800 miles.

General.

Major Forbes Leith arrived in Baghdad on August 2 in his 14 h.p. Colonial Model Wolseley car, which he has driven across Europe and Asia Minor. After a few days in Baghdad he proposes to proceed to Quetta, thereby completing the first overland journey to India. He is accompanied by Mr. Allan Wroe, the diarist of the expedition, and Mr. Redknap (of Pathé Frères), who has already exposed some hundreds of feet of film in the picturesque (to the newcomer) city of Baghdad. The roads, as was to be expected, were in some cases practically non-existent, and at times not more than thirty miles were covered in a fifteen hour day. On more than one occasion the car was hopelessly bogged, and it speaks well for British products that no mechanical trouble has been experienced since leaving England, while the Rapson tyres have been punctured once only.

A new bridge is shortly to be constructed across the Tigris just north of Baghdad, linking the two municipalities of Mu'Adhdham and Kazimain. This bridge is to replace one which existed in Turkish times, but was destroyed during the War. Both the above towns are important places of pilgrimage, and the new boat bridge—the funds for which have been found by pooling the resources of the two municipalities—will be of great benefit not only to the pilgrims, but to the general public.

PERSIA.

Teheran, July 21.

The Russio-Persian Commercial Agreement.

The terms of the above agreement, recently signed here, have now been published, but apart from the fact that the advantages seem to be all on the side of the Russians, these call for no especial comment, and they do not seem to have aroused much interest in Persian commercial circles.

Another World-Cyclist.

Another Indian, Scouter Davar, who started from Bombay last January to "girdle the globe," as he calls it, on a cycle, bearing an autograph letter from the Viceroy, who received him at Simla, to the Secretary of State for India, arrived here a short time ago. He has spent part of his time here in climbing to the top of Mount Demavend, whose almost perfect cone, snow-covered all the year round, rises to the not inconsiderable height of nearly 19,000 feet. Although the ascent is not difficult the mountain has not often been scaled, especially by Europeans. Scouter Davar leaves here in a few days to continue his tour; unlike his compatriots, who, as I mentioned in a previous letter, are attempting the same feat *via* Mesopotamia and Palestine, he has chosen the shorter but probably much more difficult route through Russia.

CYPRUS.

Nicosia, undated.

Cyprus for Tourists.

There is at last some talk of a serious effort to bring about the development of a tourist trade. Hitherto it has been entirely neglected (except as regards the advertising of a few hotels), although it has been pointed out on various occasions, and, indeed, in the columns of The Near East, what a loss the island suffers by neglecting what could be made a source of some wealth. A leading Nicosia paper now asks, "How is it that Egypt attracts visitors?" It is, of course, due not only to the great attractions of the country, but also to the well organised campaign of advertisement which is carried on systematically year by year. It is quite clear that advertising is necessary, as carried out with success in so many countries. It rests with the Cypriots themselves to bring about the desired results. A syndicate should be formed, and the island properly boomed. There can be little doubt that Messrs. Cook and Sons would do their part in promoting winter tours in Cyprus if it were realised that local efforts were leading to a measure of success, without which no great Agency would, of course, take risks. If the movement now talked of is properly supported, there is no reason why Cyprus should not be included in the itineraries of visitors to the Levant, and an annual stream of winter tourists would acquaint themselves and others with the many attractions, including climatic, of the island.

The Turkish Community.

The Ottoman element has suffered from the general depression, and takes a rather gloomy view of the outlook. About 700 Turks have left Cyprus during the last few months, and families continue to leave in considerable numbers, many being in search of work in different parts of Turkey. There is trouble in connection with education. Hitherto the Director of the Higher School (called *Idádi*) in Nicosia has been appointed from Constantinople, but the authorities there announce that they intend to discontinue doing so. The Turks of Nicosia are much disturbed, and are protesting. Should the decision be adhered to, there would be great difficulty in filling the post, as there is no one, it is said, qualified to take it among island residents. There was very little inducement for pilgrimages to Mecca this year, partly in view of recent unfavourable experiences of pilgrims in the Hejaz.

General News.

Mr. Breton, of the firm of Messrs. Henckell, du Buisson and Co., of London, left for England, and the outcome of his careful investigations regarding silk in the island will be awaited with the greatest interest. Samples of silk reeled by the Agricultural Department have been sent to the Imperial Institute, and pronouncements from there are also awaited with interest.

The gathering of caroubs (locust beans) begins on August 18 in most districts, and great hopes are, as usual, entertained regarding prices of the new crop. Tithe cereals in large quantities are now offered for sale by the Government at their different grain stores. As regards sales of smaller quantities now sanctioned by Government to needy peasants, it is complained that the Government increases the prices as market prices rise, and that there is therefore very little benefit for purchasers. It is, they say, a gift which is no gift (δῶρον ἄδωρον). The market price of wheat in Nicosia at present is 6s. and upwards a bushel, according to quality.

Professor Simos Meuardos, of Athens University, who for some years held the chair of Modern Greek at Oxford, is now at Nicosia. He is preparing a new work on Cyprus.

NEW BISHOP OF TRAVANCORE AND COCHIN.

The Archbishop of Canterbury has appointed the Rev. Edward Alfred Livingstone Moore to succeed Dr. Hope Gill as Bishop of Travancore and Cochin. Mr. Moore, after holding a curacy at Aston, Birmingham, became a missionary of the Church Missionary Society, and for the last 28 years has done valued and varied service in three dioceses in South India. His first term of work in India was spent in the Madras Divinity College; he became vice-principal of the C.M.S. College, Kottayam, in the diocese of Travancore, in 1902; and later returned for another period of work to the Madras Divinity College. In 1915 Mr. Moore became a superintending missionary in the diocese of Tinnevelly, where he has taken a very active part in developing the Indian Church.

The Agent of the Hejaz Government has requested the Egyptian Government to intervene and suppress the newspaper attacks against King Hussein.

YUGOSLAV POLICY.

[The following article is composed of extracts, relating to the Home and Foreign policy of Yugoslavia, from a statement of M. Liubomir Davidovitch, Prime Minister of the Kingdom of the Serbs, Croats and Slovenes, made before the National Assembly, Belgrade, on August 6, 1924.—Ed.]

The Government of which I have the honour to be the head regarded it as its first duty to appear before the National Assembly to lay before it its working programme and to solicit its approval of its policy. For this reason, therefore, as soon as the Government was formed, its first step was to submit to His Majesty the King (in accordance with Article 52 of the Constitution) the proposal to convoke the National Assembly in an extraordinary session. In addressing this first meeting of the extraordinary session in the name of the Royal Government for the purpose of expounding the policy which the Government intends to pursue, and in submitting this policy to your objective and competent judgment, I am giving a further indication of the Government's determination to take its stand firmly and inflexibly on parliamentary ground and to remain within the limits set by parliamentary practice.

The new Government takes the helm of the State with a firm determination to give, resolutely and with due deliberation, such a direction to the policy of our country as will lead most rapidly and most advantageously to a final and happy consolidation of our internal relations. We are fully aware of all the enormous difficulties which must necessarily be encountered in connection with all problems relating to internal organisation in a country so extensive as ours, and consisting of provinces which until recently had been separated by the centuries and by destiny. But we are convinced that all these difficulties, however great they may be, can be overcome, and can be overcome rapidly, provided that our State policy is directed in such a manner as will arouse and strengthen the fraternal sentiments which unite us, and that those who are responsible to the King and to the people, to history and to posterity, and to you for the affairs of State, honestly and with all sincerity endeavour—while avoiding irreconcilable formulas—to probe the depth and grasp the spirit of each problem, bringing to its solution that breadth of mind without which nothing durable and useful can be accomplished in our country in these days; and provided, above all, that all our responsible politicians are profoundly convinced that our common House must be set in order by the united efforts of all working in harmony, and that its foundations must rest on unshakable concord and true and cordial understanding between the Serbs, Croats, and Slovenes. We have nothing to take from one another; it is our duty to trust in one another—sincerely, loyally, unreservedly, and without ulterior motive—with all the fraternal affection by which, in spite of everything, we are united.

This is the basis upon which the present Government has established its policy. Its entire programme, which I have the honour of submitting to you, has been logically developed from these fundamental facts.

In its foreign policy the Government, by its conduct, by all its activities, and by its attitude towards each and all, will endeavour to emphasise and clearly indicate the international importance of this national State of ours. It is a State of which the nation ought to be proud, and of which it ought to know that it has reason to be proud. While giving unremitting attention to the care and development of the defensive forces of the State, we shall preserve and foster with the greatest care the important relations and the valuable goodwill which our nation has already won. It shall be our endeavour to render the allied relations which united us, and still unite us, with France, England, and America, a permanent and unchangeable factor in the foreign policy of these countries, even as it is the principal factor in our foreign policy. We shall seek to maintain the alliance concluded with the Kingdom of Italy, in the hope that both countries will derive from it advantages which will compensate them for the heavy sacrifices made in order to bring about this alliance in the mutual interests of both our countries and in the interests of peace. We shall endeavour with all our strength to maintain and render more intimate the alliance which unites our State with the brotherly State of Czecho-Slovakia and the Kingdom of Roumania, being convinced that it is the chief and irreplaceable factor for peace and peaceful progress in Central and South-Eastern Europe.

Taking as the basis of its policy respect for the international treaties concluded, and taking its stand on the principle of unconditional respect, on the part of each and all, for the order of things created by the Treaty of Peace to which our State was also a signatory, and for its fulfilment in so far as it has not yet been fulfilled, the Royal Government will endeavour to maintain and foster with all the other States also—and especially with the neighbouring States—correct and amicable relations. Taking as its principle "the Balkans for the Balkan nations," the Royal Government will devote special attention to the relations with our neighbours in the Balkans. The Government hopes that the profound community of interests which unites all the Balkan peoples, and the knowledge that the liberty and independence of no one of them can be jeopardised without at the same time jeopardising the security of all the others, will contribute to the realisation of its desire for the establishment and strengthening of friendly relations with these States. The Government will endeavour, in any event, to maintain the friendly ties which already exist between our State and Greece.

Finally, the Government hopes also to be able to re-establish within the shortest possible time normal relations with those States with which official relations have not yet been renewed. It will, of course, zealously protect from the slightest injury our dignity as a State and as a nation, as well as our interests.

As a European and democratic State we ought to remain intimately associated with the great democracies of the West; but the Government hopes to find means of reconciling the two points of view, at present contradictory, with regard to international relations and obligations, which has hitherto been the chief obstacle to the renewal of relations with the brotherly Russian people.

In the name of our country, whose eyes have always been fixed on a high ideal of peace and international liberty, the Royal Government will do everything possible to strengthen and develop that young international organism, the League of Nations, which ought to lead us towards this ideal.

A tour in Czechoslovakia arranged by the Czech Society of Great Britain, which was postponed last June, will start on Monday, September 1. Any persons who wish to join the tour may apply to Mrs. B. Tufnell, Room 289, Kensington Palace Mansions, W.

THE ORDER OF ST. JOHN.

"THE GRAND PRIORY OF THE ORDER OF THE HOSPITAL OF ST. JOHN OF JERUSALEM IN ENGLAND." A Short History by Colonel E. J. King, C.M.G., F.S.A., Knight of Grace of the Order. K.C.B., A.D.C., F.S.A., Sub-Prior of the Order. (London: St. With a Foreword by Major-Gen. The Earl of Scarbrough, G.B.E., John's Gate, .1924.)

The Hospitaller Order has inspired a wealth of literature. Within my memory as a member of and worker for the Order covering a period of twenty-seven years, the names of Bedford and Holbeche, Tenison and Kingsley, Tuker and Fincham, irrespective of countless articles in journals and periodicals of the day and of pamphlets and lectures, are familiar as authors of books which have kept before the public eye the great history of the Order in the past and its notable ambulance and first-aid work in the present. The Press of Rome in 1885 published a quarto volume of over 300 pages which purports to be the bibliography of the Order up to that date. Since that date much has been written and much has been done in the name and in the service of that Order, and, I almost venture to think, by no nation more steadily and strenuously than by the British. From the literary point of view British publications can hardly be held to rival the French works which bear the names of Thuasue, Maunier, and Le Roulx; but, on the other hand, British authors have concentrated on the history and work of the Grand Priory of England, and among them none more effectively and with greater proof of independent research than Colonel King. We are indebted to him for unearthing from the University Library of Ghent the illustration given at page 52. It is that of the execution of Sir John Langstrother in the presence of Edward IV. after the battle of Tewkesbury. Few English Knights of the Order had so distinguished a career as Langstrother, he having been not only Grand Prior but also Lord High Treasurer of England. He had also been Grand Commander of Cyprus, and Colonel King very reasonably adds (p. 53): "It is more than probable that, had it not been for the tragic fate which was soon to befall him in England, he might have crowned his career on the death of Orsini by being the only English Grand Master of Rhodes." The seat of Langstrother's government as Grand Commander of Cyprus was the castle of Kolossi, near Limassol. Recently, the Grand Priory of England has been instrumental in securing that castle from the depredations of the peasantry of the neighbourhood. The castle has been declared an "ancient monument," and, as such, placed under Governmental protection. It is probable that the Grand Priory of England, although it enjoys at present no recognition from the headquarters of the Order at Rome, has in the last half-century done more than any other Grand Priory to keep up the connection between Europe and the mediæval centres of the Hospitaller Power. It is Britain, again, which won back, after a lapse of some seven centuries, Jerusalem and the Holy Land from the Turk, and if a happy thought has suggested that Field-Marshal Lord Allenby should assume a title once honoured in the English "langue" (Col. King prefers "tongue"), viz., that of Turcopolier or Commander of the Light Cavalry of the Order, it may at least honourably rest as an ideal inspiration.

If the most excellent book which Colonel King has brought out, the result of untiring study and research, has at once stirred our pride and roused our keenest interest in the past history of the Order, it has none the less, or even more, won our admiration for the part which the Order has played during the past half-century as a great national and imperial educator and worker. It has educated and worked in peace time, and that very education and work have prepared it for its magnificent work in war. The Cross of St. John is a little liable to be swamped in war-time by the world-pervading and international badge of the Red Cross, but it none the less has kept, and keeps, its head proudly and efficiently above water. It carried its work into our Overseas Dominions very soon after it had been established in Great Britain, and up to the commencement of the Great War the St. John Ambulance Association alone was responsible for creating and maintaining the ambulance and hospital resources which India then placed at the disposal of her armies.

The appearance of Colonel King's book has most happily coincided with the Imperial British Exhibition at Wembley and with the Investiture at Buckingham Palace on St. John the Baptist's Day of 1924, at which ceremony were present members of the Order from all parts of the British Empire.

The sphere of war and work of the Order of St. John of Jerusalem from the tenth century to the present day has been the Near East, and be it Jerusalem, Cyprus, Rhodes, or Malta, on each its mark is indelibly fixed. The entire story is admirably summarised in Colonel King's book.

It should be added that Colonel King has selected most judiciously his illustrations, which recall at once great mediæval events and indicate the forces which inspire and control the work of to-day. The "Foreword" contributed by Lord Scarbrough sums up well the scope and purport of this very ably written book.

It is to be regretted that Mr. Cecil Torr, the "Small-Talker of Wreyland," resurrecting a controversy thirty-five years old, has endeavoured to throw discredit on this book.

Sir Valentine Chirol has returned to London from the United States and Canada.

The Albanian Minister returned to London last Saturday from The Hague.

Lord Clonmore has left London for Sofia, and will be absent for about a month.

The Maharaja of Kapurthala arrived last week at the Ritz Hotel, Paris, from Venice.

Sir Dhunjibhoy and Lady Bomanji arrived last week at the Carlton Hotel, St. Moritz.

M. C. Collas, Counsellor at the Greek Legation, has been promoted to the rank of Minister.

A son was born to Prince and Princess Paul of Serbia on August 13 at White Lodge, Richmond.

Mr. U. Grant Smith, the United States Minister to Albania, left London on August 17 for Tirana.

The Counsellor at the Persian Legation and Princess Mirza Arasteh have returned to London from Belgium.

Major the Hon. William Ormsby-Gore left Southampton on August 15 in the R.M.S. Kildonan Castle for Cape Town.

Dr. S. B. Rohold, President of the Biblical School at Haifa, Palestine, has arrived in London from Cairo on a short visit.

M. Smodlaka, Secretary at the Legation of the Kingdom of Serbs, Croats, and Slovenes, returned to London on August 12 from Belgrade.

Viscount Erleigh, son of the Earl of Reading, and Viscountess Erleigh arrived in Bombay last Friday. They will return to England on September 27.

The Maharaja and Maharanee of Jind were among the passengers in the White Star liner Majestic, which left New York on August 16 for Cherbourg and Southampton.

On August 15, at Portsmouth, Admiral Sir Henry F. Oliver hoisted his flag in the battleship Revenge as Commander-in-Chief of the Atlantic Fleet, in succession to Admiral Sir John de Robeck, whose flag was struck in the Queen Elizabeth. The King has conferred the G.C.V.O. on Admiral de Robeck.

The Crown Prince of Roumania entertained at luncheon last Friday King George of Greece, Prince Paul of Greece, the Roumanian Minister, and Lord Thomson, Secretary for Air. The Prime Minister, Mr. Ramsay MacDonald, was unable to be present. The Crown Prince left London for Bucharest last Monday afternoon.

The Hon. W. P. Barton, Mrs. Annie Besant, and the Maharaja of Mayurbhanj left London last Thursday by the Peninsular and Oriental special train to join the Macedonia at Marseilles for Bombay. Among other passengers embarking in the Macedonia at Marseilles on August 15 were General Sir Ronald and Lady Storrs, for Port Said, and the Maharaja of Rajpipla, the Begum Saheba of Manavadar, and the Maharaja and Maharani of Dharampur and suite, for Bombay.

NEWS IN BRIEF.

Smyrna has been visited recently by a Roumanian gunboat flotilla.

Prince Taffari, Regent of Abyssinia, left Marseilles last Thursday *en route* for home via Greece.

Lord Beatty visited the graves in Gallipoli last week. He arrived at Constantinople on August 17.

Admiral Vassif Pasha has been appointed president of the Straits (Dardanelles) Commission.

The Rev. C. Neill is resigning the vicarage of Great Baddow, Essex, to take up medical mission work in India.

The Hungarian Government has closed the Roumanian frontier owing to an outbreak of cattle disease in Transylvania.

The American cruiser Trenton passed through the Suez Canal on August 14, bound for Bushire, Persia, in order to bring home the body of Major Imbrie, the murdered American Consul

Signor Francesco Taliani, Counsellor of the Italian Embassy, who has been transferred from London to Constantinople, left Rome last Thursday for Turkey to take up his new post.

M. Raditch, the Croatian peasant leader, who fled to Moscow during the rule of the late Yugoslav Government, has, according to a Reuter message, returned to Yugoslavia.

At a plenary sitting of the Croat Peasant Party held at Zagreb, a vote of confidence was adopted in M. Raditch, the leader.

The Roumanian Cabinet has decided that the negotiations for a concordat with the Holy See shall be suspended until after the passing in the autumn of a Bill dealing with the organisation of public worship.

Count Robert de Caix, the Secretary-General of the French Government in Syria, has arrived in Jerusalem to discuss joint action against the brigands who are raiding on the marches between Syria and Transjordan.

THE POLITICAL SITUATION IN INDIA.

A survey of the present position in India appears to justify the view we expressed at the beginning of the year that the political situation, while it was complex, and perhaps awkward, was by no means destitute of promise. It will be remembered that the elections of last autumn resulted in the practical elimination of the Liberals, who for three years had dominated the legislatures, and the return of a large number of extremists, pledged, so far as election pledges count, to wreck the Constitution from within. That result has not followed. The Constitution continues to work, though in two provinces the progress of nation building is for the moment retarded by the refusal of the councils to vote funds, and the wreckage now floating on the surface consists rather of the fragments of the extremist *bloc*, a craft which has quickly proved to be unseaworthy. It has, in fact, become clear that many of the self-styled wreckers are really penitents in process of rallying to the Constitution. They do not say so in India just yet, for faces have first to be saved, and pledges have to be obliterated by the kindly hand of time, but, judging from actions rather than words, the rallying movement has made considerable headway, and some important sections are definitely on the path which leads to constitutional opposition. For the Liberals, at the moment we see less hope. They are all leaders now, for they lost their party by neglecting the constituencies. Men of greater political experience would now be at work on the scene of that loss, but they appear to think it more important to devote their energies to extracting materials for a new programme from the authorities at Whitehall. Whatever success they may possibly achieve in that direction, the fact remains that the power to exploit it must be obtained from the electorate in India, and it is certainly to be regretted that they are doing so little to take advantage of the present reaction against extremist ideas. The most that can be hoped is that they may realise the need for work in time to make a more effective display when the next general election comes round; in the meantime, we fear their influence must remain much less than is due to their position in the country.

Outside the limited code of practical politicians, there are signs of movement which may mean genuine growth. The Indian Moslems are, as our readers know, very far from homogeneous. For a time they were welded into a semblance of unity by the false and malicious cry that their religion was in danger from the British Government, and their enlarged political influence was mortgaged to the extremists by their self-constituted leaders. A complete change in the situation was wrought by the decision of Turkey to abolish the Khalifate, and now there are signs that Indian Moslems are trying to think matters out afresh, are recognising that, if their religion is in danger, it is not from the British Administration, and are recoiling from the spectre of a purely indigenous Government, under which, in their view, Hindu ideals would necessarily be supreme. The momentary results of this train of thought, as it operates among the masses, are undoubtedly deplorable, for to it must be attributed some part of the increased communal tension which prevails throughout Northern India, but among intelligent and educated Moslems its effect will be salutary in the long run in so far as it teaches them that in politics realities are what count, that men of like views must work together to secure their common objects, and that, so long as religion overrides all secular considerations, an indigenous Government is their greatest danger.

Under the existing system of representation, Indian Moslems have greater political power than their numbers alone would warrant, and their position thus stands in marked contrast to that of the Hindu and Animist lower classes, who at present have no political power at all. To our mind, the most significant fact in the India of to-day is that these classes are just beginning to lift their heads after uncounted centuries of oppression. Their voice is still feeble, but it is beginning to be heard, and from North and South alike comes the cry for help. To tanners and sweepers, as well as to Moslems, the greatest danger is an indigenous Government dominated by Hindu ideas, and the men who have suffered most from those ideas in the past are begging for protection against their predominance in the future. They are begging for protection to-day, but such movements grow quickly, and they will be demanding power to-morrow. Their claims are well founded in history and experience, and the authorities will be wise to meet them before they become irresistible. A wide democratic franchise is the only final solution, but it must come by degrees, and these classes, through no fault of their own, are at the bottom of the scale, nor must the fact be overlooked that there is in India at the present time a certain amount of feeling that the very narrow franchise now existing is still too wide. The case seems to be one where some special machinery is called for during the transition stage to protect the lower classes against the vagaries of a one per cent. electorate. Various suggestions on this point have reached us from time to time, among others the interesting idea of a Tribunate, through which the unenfranchised classes could exercise a final veto on actions of councils or departments prejudicial to their interests. The detailed discussion of these suggestions would carry us too far, and we must content outselves with recording the opinion that it is time for the discussion to be taken up in earnest. The essential fact in the situation is that democracy cannot wait indefinitely for a literate population. Things have been carried too far for that, and some means must be found by which the different sections can express themselves within the Constitution, and can be assured that their views receive adequate consideration. We do not complain of the discussion of powers and methods of procedure which holds the field in Simla just now: what we urge is that it should be supplemented by investigations of more fundamental importance. The Constitutional edifice, imperfect as it is, has but little to fear from the gas-attacks now being directed against it by disappointed politicians. The real danger lies rather in the possibility of some subterranean convulsion, which, by demolishing the superstructure, may expose too late the inadequacy of its foundations.

THE PRESS IN EGYPT.

By LADY DRUMMOND HAY.

Ninety-eight per cent. of the population illiterate . . . yet the influence of the Press all along has played a rôle of paramount importance in the history of the Egyptian Nationalist movement, and this in spite of the very strict censorship exercised from 1914 to 1922, or rather since 1909, when the law of 1881 for the control of the Press was vigorously enforced at the instigation of Sir Eldon Gorst, after being allowed to lapse under Lord Cromer, who considered such liberty as a safety valve for public opinion.

In spite of the multiplicity of its organs and the variety of languages in which they are published, the circulation of the most widely read newspaper does not exceed 40,000 copies—this, of course, owing to the general illiteracy still prevailing in Egypt. It would be a mistake, however, to imagine that the masses are thereby debarred from taking part in public affairs; it is no uncommon sight to see a group of some fifteen or twenty persons listening intently to one of their number reading aloud from a newspaper, the matter of which serves subsequently as food for thought and argument for many a long day, receiving deeper and more concentrated attention than in circles where the morning and evening newspapers are discarded after hasty perusal. Read by a member of the community respected for his superior knowledge, the printed words take on a special significance, and fall from his lips as inspired truth. In these circumstances the supreme importance of the Press as a medium for propaganda is self-evident.

About ninety periodicals are published regularly in Egypt, of which about fifty-seven are in Arabic, twelve in French, four in English, four in Italian, eight in Greek, three in Armenian, one in Maltese, and one in Hebrew. Of these, the most important are the daily newspapers, the Arabic publications naturally occupying the first place on account of their appeal to a larger public, with consequently a wider circulation, as well as greater authenticity and abundance of news. Before the War the circulation of an Arabic newspaper rarely exceeded 20,000 copies, but now 40,000 is the figure reached by the most popular daily.

Amongst the European papers the average is 3,000, with a maximum of 6,000 copies. In nearly every case they depend upon and garner news from the columns of their Arabic contemporaries, which are read, not only in Egypt, but throughout Islam.

Telegraphic news is supplied by one of four services—Reuter, Havas, Italo-Oriental, and Hellénique, *Al-Ahram* being the only paper possessing a special telegraph service of its own.

At the present moment Zaghloul Pasha is vigorously supported by practically all the Arabic papers of importance, regardless of their previous leanings or formerly expressed views. The principal are *Al-Ahram*, consistently supporting the Nationalist movement; *Al-Mokattam*, until 1914 Anglophil and hostile to the Nationalist movement, but now running with the majority; *Al-Balagh*, inspired by the Wafd and policy of Zaghloul Pasha; *Wadinnil*, resolutely but moderately Zaghloulist; *Al-Mahroussa*, having changed its politics as often as its editors, is now also Zaghloulist; and *Al-Akhbar*, though systematically opposing all and every Government, favours the Egyptian Nationalist movement.

The great exception is *Al-Siassa*, the organ of the Liberal-Constitutional Party, and violently anti-Zaghloulist.

The European periodicals are of comparatively little political importance, generally confining themselves to expressing the ideas, and studying the needs of their particular colonies. *La Liberté*, supporting the Wafd and Zaghloul Pasha, and *La Bourse Egyptienne*, Anglophil and generally opposing the Nationalist movement, alone have any noteworthy political "colour."

Of the two English dailies, the *Egyptian Gazette* displays Imperialistic tendencies, while the *Egyptian Mail* more generally reflects local British opinions.

But, whatever their party politics or private differences, the organs of the Egyptian Press are unanimous in their expressions of loyalty to and confidence in King Fuad, whose popularity has remained unshaken throughout the most serious and acute crises.

IN SCUTARI.

By E. C. DAVIES.

The road to the coast winds and twists between the mountain crests, past grey rocks of curious formation and groups of gnarled and crooked pines that give an oddly Japanese appearance to this part of the ancient Sanjak of Novi-Bazar; and in the far distance, gleaming like the sun itself out of the greyness lies the lake of Scutari, with the strange old town at its southern end, as much a part of the Orient as Colombo or Port Said.

The peasants of this part of the borderland between Albania and Montenegro are hardworking; the little pockets of earth that seem to outcrop from the rocks are carefully cultivated, and banked up almost in Arab fashion. The houses are picturesque: lacking the grimness of the purely Albanian towns they have an almost Italian look with their painted balconies, but the dampness of the climate detracts from the charm of the buildings, and the rivers are green and full of aquatic plants that hold the watery vapours.

Magnificent mountains sweep right down to the waters of Lake Scutari, and close to the margin willow trees with a myriad roots like a mangrove swamp lead an almost aqueous existence. Behind Scutari the old Venetian fortress bears witness of the stormy past of this curious town, with great Tarabosch mountain looming threateningly up behind.

There is nothing of the West about Scutari; the little shops open to the street, with their silver filagree jewellery, weapons of all kinds, the fruit and meat booths with their square lanterns overhead; the long streets with their great doors, in the vista a high blank wall shutting off the domestic life of the people from the gaze of the curious; the latticed windows of the Mohammedan quarter; the glimpses of inner gardens when for an instant the blankness of the street is broken by the opening of one of the entrances; the strange medley of costumes; the wandering coffee-sellers, the tailors sitting cross-legged in their windows—all is of the East.

The national costume of the men is delightful; baggy dark blue knee-breeches sloping off cunningly into tight folds strapped over the ankle, a red-gold-embroidered waistcoat and pale green long-skirted coat. Albanians wear the white breeches and coat worked in black braid, the fez in place of the Bosnian or Montenegrin cap, but the tribesmen of the north and south are not alike in costume any more than in character. For the women a long pale blue coat, reaching down to the ankles, is the invariable dress of ceremony, full baggy trousers of shining black stuff, which have tight-fitting gold-embroidered straps round the ankles, so

Digitized by Google

that the feet must be placed wide apart in walking, so stiff is the tube-like anklet. A graceful long white lace veil and a necklace of a hundred gold coins complete a costume which is invariably worn with grace and natural dignity by the better-class women.

The Scutari bazaar is like an Arabian Nights' Dream, for peasants in a score of varying costumes come down from the mountains with rugs and white woven stuffs, honey and cheese, poultry and pigs, sitting on the ground beside their wares in the market-place in the blazing sun while the rest of North Albania comes to bargain with them. Veiled women—the Christian portion of the population with a cotton shawl held tightly across the mouth, almost as fearful of observation by the stranger as the Moslem women, who veil their faces with thick black chiffon folds—come to chaffer in the bazaar, but the click of a camera draws an ominous frown on the faces of the people. The little shops do a busy trade in brightly striped gauzes and embroidered zouaves, heavy leather belts adorned with great buckles of embossed silver, red and yellow pottery.

The crowd is a motley one: here a Montenegrin in flat cap and long green coat, there an Albanian in black and white, or a Mirdite woman, one of the mountain tribe of that name, of long pedigree and immense pride, her short-cropped hair dyed black, her embroidered zouave worn over a coarse white chemise, two brilliantly woven aprons back and front over a short white skirt and striped trousers, her stockings knitted in great diagonal patterns. There is a babel of tongues, loudest before the barber's shop, where customers waiting for their turn sip coffee brought to them on copper trays, a tiny fire on each tray to keep the coffee hot. But Moslem looks askance at Christian, and the Albanian has no love for either Montenegrin or Serb, and the future of Scutari is as uncertain as her past has been chequered.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE MONTENEGRIN ELECTIONS.

To the Editor of THE NEAR EAST.

Sir,—I desire to make one remark in reference to your Correspondent's communication from Yugoslavia published in your last issue. He remarks: "MM. Pashitch and Pribitchevitch were in favour of a general election solely under the condition that the mandate for it was entrusted into their hands. What that amounts to everybody knows."

If this is true of Belgrade itself, what is likely to be the truth of the so-called free elections that were held in Montenegro that sealed the fate of that unfortunate country—a solution gladly accepted by all the Powers; by France because of her financial interest in the new State, and by England because she did not want to offend France.

Does not this statement justify the friends of Montenegro who have always said that the elections in that country, by which the Serbians made out that Montenegro was eager to be engulfed, were from beginning to end bogus, and in no way representing the will of the people?—I am, etc.,

ALEX DEVINE.

Northwood Park, Winchester, August 14.

THE DEPARTURE OF M. STANCIOFF.

Last Sunday afternoon M. Stancioff, who has just vacated the post of Bulgarian Minister to the Court of St. James, and has retired from the Bulgarian Diplomatic Service, left London for Varna, accompanied by Mme. Stancioff and Mdlle. Stancioff. Among those present at Victoria Station were the Italian Ambassador and Marchesa della Torretta, the Belgian Ambassador, the Hungarian Minister and Countess Szapary, Lady Muir and Mme. Felix Guépin (*nées* Stancioff), M. Ivan Stancioff, the Italian Counsellor and Donna Elena Preziosi, the Italian Military Attaché and Mme. Riggi, the Belgian Military Attaché and Mme. Maton, M. Felix Guépin, and many Russian friends, including Mme. Wolkoff, Baron Schilling, Princess Galitzine, and Mlle. Wolkoff. The Minister, who was deeply affected, expressed his regret at leaving London, and his hope of returning next winter, and thanked his British friends for their kindness to him and to his family during his stay in London.

END OF THE WAR WITH TURKEY.

An Order in Council published in the *London Gazette* of August 12 provides that August 6, 1924, shall be treated as the date of the termination of the war between Great Britain and Turkey.

August 31, 1921, by a previous Order, is the official date of the termination of the war, excepting in regard to Turkey.

The Government of Malta, having been defeated on the second reading of the Ministerial Salaries Bill, has settled the crisis by the allocation of two seats to the National Democrats.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the river Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Conference.

Judging by the case of the London Conference it would seem that fortune smiles on negotiations when the limelight is absent and there is as a whole no universal interest in the proceedings. Certain it is that of all the conferences since the Armistice there has been none that has attracted so little attention, not that the vital importance of a settlement that really is a settlement is unappreciated; on the contrary, there has been a full realisation of the significance of the Conference, that it, in fact, stood between us and the continuance of impossible conditions in Europe, the effect of which in this country would probably be the extension of unemployment. But when so many conferences have come and gone, each in turn heralded with such high hopes, and each doomed to yield small results, it is not surprising that expectations regarding the late Conference should have been restrained. Happily, as in the books of the dull Victorian era, this time there was a happy ending, which, if it does not bring us within sight of the golden valleys hidden by the mountain peaks that we were promised in one of those pungent similes born in the turmoil of war, at any rate promises an early end of conditions which have hopelessly handicapped British trade and commerce.

The Immediate Outlook.

The success of the Conference, eminently satisfactory as it is, unfortunately does not mean that a solution of all the problems that have been vexing a war-wearied Europe lies before us. Far from it. But it represents an enormous step forward that an agreement should have been arrived at over the question of reparations, which of all the problems with which we have been confronted is from some points of view easily the worst. One can only wonder that the Allies did not years ago agree on the application of some such scheme as that contained in the Dawes Report which constitutes the basis of the present agreement. It is now nearly six years since the Armistice, be it remembered, and each year that has passed has made the Reparations question less easy to solve. One can only hope now that the Dawes scheme will work as readily as it promises to do, and that this legacy of the War will cause no further trouble. Whatever the issue in this respect, however, the end of the Conference has come leaving us with the satisfactory knowledge that there are no longer differences between the Allies, and that the United States will henceforward be unofficially represented in the working out of the economic salvation of Europe.

Prospects for British Trade.

So much for the broader aspects of the Conference. For this country the agreement has its own special significance. If with the exception of the brief "boom" British commerce has since 1918 remained at a relatively low ebb, it has been largely because of the absence of a European settlement. With the promise of the early removal of that obstruction to trade there should be a general commercial revival in Europe (which may be more rapid than is anticipated if, as is believed in some quarters, the recovery of Europe may be a comparatively speedy process), the influence of which should be felt throughout the world. In this revival British trade is bound correspondingly to benefit. There is not a market abroad to-day that is not starved for goods and that is not waiting for the propitious moment to buy. In the ill-timed "boom" to which I have just referred, many markets, especially in the Near East, were speedily overstocked with very detrimental effects to some exporters when the inevitable slump came. Since that time buying has been largely on a hand-to-mouth principle, but if the fulfilment of the settlement is in accordance with its promise, we are very near the replacement of that state of things by buying on the pre-War scale. Some observers even go so far as to expect a "boom" which will be long-lived and will have no disastrous after-effects. Without going so far as to endorse that view, I am fully of the opinion that once it is seen how things are going to work out, there will be a great commercial expansion.

The Question of German Competition.

The one fly in the ointment as far as this country is concerned is the ever-present spectre of prospective German competition. Unfortunately, we cannot have it both ways. Under present conditions Germany is not in a position seriously to threaten British trade except in certain markets, but, on the other hand, the situation in Europe has so affected trade that it is quite impossible in existing circumstances to develop commerce on a sufficient scale to solve the unemployment problem. What will be the ultimate outcome with Germany again a competitor in the world's markets must be doubtful, and it is this uncertain issue that causes many to doubt the advisability of assisting in raising a loan to set our chief rival on her feet again. It is, indeed, a strange option which lies before us, and yet there is in reality no choice, for it is only with a Europe reconstructed that there can be any hope for the expansion of British commerce, and that pre-supposes a restored Germany. In the immediate revival of trade that will follow a settlement in Europe, we are not likely to suffer, if the indications go for anything, for there should be trade for all—for a time—but very

shortly it is easy to foresee the growth of the cut-throat competition of the pre-War period, in which we shall be at a grave disadvantage because of the labour position in this country. It is not a pleasant outlook, and if I have written gravely upon it, it is because the solution is not easy to see, for it is not as if it were only Germany with which we have to deal. One consequence of the War has been, as we already know to our cost, the development of manufacturing activities by countries who were formerly content to take the articles from us that they now make themselves, and there are other handicaps under which British commerce labours abroad on which it is unnecessary for me to dwell here. Whatever be the solution, it would seem obvious that the time is not far distant when it will be essential to give adequate protection to the home market, while at the same time doing everything possible to develop trade within the Empire and also with those markets, such as the Near East, which were very largely neglected by us before the War.

The Position at Smyrna.

A most encouraging report has reached me from a Smyrna correspondent regarding the general position in that region. In view of what has happened there, it would not have been surprising if recovery had proved to be a comparatively long process, and some sidelights that have been forthcoming of Turkish methods in other directions have certainly not conduced to any overwhelming confidence in their administration. In the Smyrna region, however, it appears that real progress has been made in reconstruction, and during the past year the correspondent states that there has been a very marked improvement. "Apart from the agricultural development that is taking place," says the writer, "to which the efforts of the Government have largely contributed, and which augurs well for an eventual return to the prosperous conditions of 1914 and previous years, the authorities are closely co-operating with the Chamber of Commerce and the commercial community, carefully examining into all grievances, extending facilities for the movement and shipment of merchandise, and removing many obstacles which trade had to contend with in the past season or two. The various Government departments are easily accessible to the public, and business is carried through with greater despatch. To facilitate communications a telephone exchange has been temporarily installed in the offices of the Ottoman Chamber of Commerce. Apart from the Grain Exchange, premises have been leased by the fruit trade, and operations, hitherto carried on in the streets and corners, are now concentrated in this Exchange, where sellers and buyers meet and business can be conducted far more suitably and expeditiously. Confidence in the future is reviving, and it is admitted that it is only a matter of time for Smyrna to regain the important position it formerly occupied in the trade movement of Turkey." That is quite the mose hopeful report that has come from Turkey for a long time, and if Smyrna be taken as an index of the country as a whole, it would seem obvious that before long the Turkish market will again be an important factor in British trade.

The Egyptian Season.

Very favourable reports have so far been forthcoming as to the prospects of the coming Egyptian season, which is particularly satisfactory when it is borne in mind that Egypt has to meet increased competition in these days from Morocco and other more accessible regions which are offering increasing attractions to the tourist community. It appears, indeed, that those who have already signified their intention of visiting Egypt this winter show an increase on the total of last season's tourists, so that, provided conditions are favourable, it is probable that Egypt has a record season before her. And that, of course, will have its due effect on Egyptian market conditions.

The Position in India.

Elsewhere in this issue will be found a survey of the agricultural position in India. The monsoon has been unusually late this year, and uneven in its incidence, and the situation in some parts of India has given rise to anxiety. The latest reports are that the position has improved in some regions where it was unsatisfactory, notably in Bombay Presidency, and, broadly speaking, the economic prospects are now regarded as fair.

ADEN COFFEE TRADE IN 1923-24.

Imports and exports of coffee in the Aden district increased considerably both in quantity and value during the year ended March 31, 1924, owing to the increased demand for coffee from all parts of the world. The imports alone amounted to 15,785,872 lb., which is a large increase over imports during the previous year and exceeds the average import for the pre-war, war, and post-war periods. The most interesting points in the coffee import trade in Aden in 1923-24 (says an American Consular report) were the increased quantity of Arabian Mocha coffee coming from Red Sea ports and from the interior of Arabia, and the increase in the coffee of Abyssinian origin. Imports of Mombasa coffee from the Zanzibar and Pemba districts also increased during the year ended March, 1924; this, however, is usual during periods of activity in the coffee business. Owing to diminished stocks of Mocha during the last three months of 1923 and the unusual general demand, Abyssinian coffee rose in price until it practically equalled the price of Mocha.

Exports of coffee during 1923-24 amounted to 15,187,872 lb., which is higher than the average export for the war and post-war periods, but is lower than the pre-war average. The export trade showed a decrease in the amounts shipped to Egypt and France, and a marked increase in the shipments to the United States and to the Scandinavian countries. Shipments of coffee from Aden to the United States for the year ended March, 1924, amounted to 4,474,182 lb., compared with 2,774,658 lb. in the period ended March, 1923. Of the 1923-24 exports to the United States, 2,663,032 lb. were Mocha coffee and 1,811,150 lb. were Abyssinian and Harrar coffee.

BANKING IN YUGOSLAVIA.

An Important Amalgamation.

(By Our Liubliana Correspondent.)

A recent development in the banking world of Yugoslavia bids fair to have a far-reaching effect on the country's economic life. On May 11 the Jadransko-Podunavska (Adriatic-Danubian) Bank was constituted by the amalgamation of the Adriatic Bank (Jadranska Banka) with the Podunska Trgovsko d.d. (Danube Commercial Co.). The fusion of these two banks means a concentration of the forces of Yugoslav native capital, which, under present conditions, and especially for this country, is considered unusually large, as M. Lj. Kosier points out in a paper on the subject published by Bankarstvo, Zagreb.

By the size of its share capital (80,000,000 dinars) the Jadransko-Podunavska Bank is second to the Hrvatska Eskomptna Banka only among Yugoslav banks, while, judged by available assets, it ranks third to the Hrvatska Eskomptna Bank and the Prva Hrvabska Stedionica. The Jadransko-Podunavska Banka represents to-day the strongest grouping of native Yugoslav capital, while, as shown by the affiliated Frank Sakser State Bank in New York City and the Banco Jugoslavo de Chile, it represents the economic interests of Yugoslavs outside the country.

The events which led up to the formation of the Jadransko-Podunavska Bank may be briefly traced. The Adriatic Bank was founded in 1905 with its head office in Trieste and a share capital of 8,000.000 Austrian crowns, and from its foundation its progress was rapid, but the Great War went far to destroy what had been built up in times of peace. On account of the close proximity of Trieste to the Italian front, the bank was compelled to move its head office in part to its branch office in Vienna.

The cessation of hostilities found the bank in a very difficult position. The head office in Trieste and the branch office in Abbayia were then in Italian territory, the Vienna branch office was in German-Austria, and the greater number of the branch offices were within Yugoslav borders. June 29, 1921, saw the foundation in Belgrade of the independent Yugoslav Adriatic Bank, Ltd., while the Trieste office was Italianised under the name of the Banca Adriatica, the Adriatic Bank, Belgrade, stipulating for one-third of the share capital —i.e., 5,000,000 lira. After the fall of Austria the Vienna branch, too, found itself in a very unfortunate position, and the Adriatic Bank of Belgrade and the Banca Adriatica of Trieste came to an agreement for the conversion of the Vienna branch into an independent bank, and, with the approval of the Austrian Government, the Adriatische Bank A.G. was duly founded on October 10, 1922.

Thus the purely native Yugoslav Jadranska Banka (the Adriatic Bank) in Belgrade became completely independent. Owing to a steady improvement of business interests, it soon became necessary to increase the share capital. In 1921 there were two new issues of shares whereby the share capital of seven and a-half million dinars was increased to thirty millions, and in 1922 the share capital was increased from thirty millions to sixty million dinars.

The year 1920 was a critical one in the history of the Adriatic Bank, for it had to face political opposition, and the result of a newspaper campaign was that confidence in the bank was to some extent undermined, with the natural consequence that there was an increasingly frequent demand for the withdrawal of deposits. Fortunately, the bank was in a specially favourable position, owing to its exceptional ability to command ready money, and it was able to meet all the demands made upon it without incurring obligations abroad, and without outside help. The management, however, finally came to the conclusion that a reconstruction with the help of native capital was desirable, and thus was brought about the amalgamation with the Podunavsko Trgovasko Drustro (Danube Commercial Company).

The Danube Commercial Company was founded in Belgrade on October 6, 1911, and, though styled a trading company, was in reality a banking concern. From the first the company was well received on the Belgrade money market, and soon enjoyed the reputation of being a sound, flourishing, and strictly national business. During the war the company's movable property and books were carried off by the Bulgars from Nish, and, not even with the signing of peace did the company succeed in recovering them, thus necessitating an entirely fresh start. The Danube Commercial Company was the first Serbian bank to commence operating on the Belgrade markets after the war, turning its attention to import and export trade first of all, which was only natural during the years of reconstruction, as Serbia had been completely laid waste by the war.

Up to the beginning of 1922 the company dealt mainly in commerce, but altered circumstances and the instability of the import duties caused them to devote their energies to banking operations. The Belgrade office was especially prosperous, the entire working capital being invested in the Belgrade market. At the company's seventh general meeting on May 11, 1924, the board of directors proposed amalgamation with the Jadranska Banka Belgrade, a proposal which was adopted, and with the amalgamation the company's individual history was brought to a close.

The Leipzig Autumn Fair will be held from August 31 to September 6.

The quantity of gold extracted from the mines in India during May amounted to 37,551 oz., valued at Rs. 23,03,071.

ROUMANIAN FINANCES.

A new Roumanian law has been promulgated authorising the opening of an extraordinary credit at the Ministry of Finance for the sum of 1,516,000,000 lei. This sum is stated to be the equivalent of 7,580,000 dollars, the amount which the Syndicate of Roumanian Refiners is to advance to the Roumanian Government up to May 14, 1925.

The law authorises the Ministry of Finance to make an agreement with the Banca Nationala upon the basis of which the Banca Nationala is to put the whole sum which the State has to receive from this sale at the disposal of the Ministry of Finance gradually according to necessity. This money, the law goes on to say, is to be used by the Ministry of Finance, working in accord with the Banca Nationala for the purpose of covering the floating debts remaining from previous fiscal periods.

The law thus makes provision for gradually paying off 1,516,000,000 lei of the present floating debts of the Government; but even so it will be, according to popular estimates, something less than half of the Government's total floating debts. These estimates variously fix the sum thus due between 3,500 and 4,000 million lei, being as to the greater part amounts due to contractors and industrialists in Roumania who have furnished supplies to the various departments of the Roumanian Government, such as the railroads.

The advance thus made to the Government by the Banca Nationala of 1,516,000,000 lei will not, it is expected, increase the amount of currency in circulation to any appreciable extent, as it will be used in great measure for the cancellation of loans previously made by the banks to firms and others to whom payments are due from the Government.

£435,000

has been expended by the Union Government on irrigating the fertile lands comprised in the

Kendrew Directed Closer Settlement

where free training with a free option to acquire land after training is offered to suitable settlers commanding £1,500 capital (less required if in receipt of pension or income). The

HIGH COMMISSIONER for the UNION OF SOUTH AFRICA

will be pleased to answer enquiries regarding soil, irrigation and training.

THE AGRICULTURAL POSITION IN INDIA.

The following is a summary of the agricultural situation in India at the end of July. The monsoon was generally late except in Madras, Eastern and Northern Bengal, and parts of Burma and Bombay, where subsequent breaks are causing anxiety. Rainfall was unevenly distributed, being heavy and, on the whole, above the average in Madras, but defective in Circars and Deccan, moderate to heavy in Northern Bengal, parts of United Provinces, and Bihar and Orissa, and sufficient in the Punjab, Lower Burma, Assam and Central India. Excessive rain in Western Ghats, in Madras, caused unprecedented floods resulting in serious damage to houses, roads, bridges, and crops. Damage to property was great, but crops, being young, may revive with the cessation of the rains, except where washed away. Some damage was caused to crops by the excessive rain and floods in parts of Bengal, United Provinces, and Assam. More rain is wanted in Western Bengal, parts of the United Provinces, Central Provinces, Rajputana, North-West Frontier Province, and dry zones of Upper Burma, where the situation is serious and requires watching. Owing to the drought at sowing time and continuous heavy rain in South-Eastern Bengal, the area under jute has slightly decreased as compared with last year. Prices of jute, rice, and other food grain are higher than last year, except in parts of Bombay, Central Provinces, Baluchistan, Rajputana, and Central India, where they are normal. Food-grain is sufficient except in parts of Burma. The condition of cattle is generally good except in Rajputana. The fodder supply is insufficient in parts of Rajputana and famine-affected districts of Madras, where the situation is being relieved by importation by rail at concession rates and grant of other concessions. General economic conditions and prospects are fair except in parts of Madras and the dry zones of Upper Burma.

COMPANY NOTES AND REPORTS.

Anchor Line.

The report of the Anchor Line (Henderson Bros., Ltd.) for the year ended April 30, 1924, states that the sailings on the various services operated by the company have been well maintained. The financial results, however, have been disappointing, whilst the present outlook is not encouraging. It is not anticipated that there will be any general betterment in trade in the immediate future. The volume of business in the Indian trade, though not unsatisfactory for the first six months of the year under review, showed considerable diminution latterly, and freight rates also developed pronounced weakness. The profits for the year, after providing for depreciation and other contingencies, amounted to £21,261, which, with the balance brought forward, makes a total of £154,389. Out of this there has been paid the dividend on the preference shares, absorbing £13,884. The directors recommend a dividend on the ordinary shares at the rate of 5 per cent., free of tax, leaving £128,005 to be carried forward.

The Royal Roumanian Government announces that in carrying out the operation of the sinking fund of its various external loans, drawings of bonds have taken place during the current year. Lists of the numbers of the bonds drawn may be seen at the counting-house of Messrs. J. Henry Schröder and Co., 145, Leadenhall Street, E.C.3, between the hours of eleven and two o'clock.

Near East Markets.

LONDON PRODUCE REPORT.

Dried Fruit in Good Request.

(From Our Own Correspondent.)

London, Tuesday morning.

Coffee.—A steady tone has prevailed. Costa Rica is unchanged at 140s., East Indian is 10s. up at 130s., Santos is unaltered at 98s., while Harrar has been done at 120s.

Sugar.—Home refined has been in steady demand at the latst rates. West Indian crystallised has been done at 35s. 9d., White Mauritius has come to business at 34s. 6d., while White Java stands at 35s. Futures are quiet. Quotations are:—September, 22s. 4½d.; October, 21s. 6d.; November, 20s. 3d.

Maize.—Prices are slightly harder on the week, though business has been on a restricted scale. La Plata has been done at 39s. 3d., while Bessarabian has realised 38s. August-September sold at 36s. 10½d., September-October at 37s. 9d., October-November at 38s. 4½d., and November-December at 38s. 10½d.

Almonds.—There is little change to report. Future quotations are generally harder.

Currants.—A very firm tendency has been in evidence, and prices have advanced. Cleaned Amalias and Pyrgos have been in special request.

Figs.—The market shows a rising tendency. Quotations for Smyrnas are very firm.

Oilcakes.—The past week has seen a universal decline in prices. Linseed cake is 10s. lower at 280s., coconut cake is also 10s. down at 205s., while cottonseed cake at 167s. 6d. is 2s. 6d. lower.

Oilseeds.—Linseed has been firm, Indian being 3d. up at 22s. 6d., while La Plata is unchanged at 20s. 3d. Rapeseed has been steady. Toria is unaltered at 21s. 4½d., while real bold Ferozepore is 3d. lower at 21s. Cottonseed has been quiet. Indian is unchanged at 10s. 10½d., Egyptian black is 1½d. up at 13s., while Sakellaridis, at 12s. 6d., is 10½d. up.

Seed Oils.—Linseed oil has firmed up, closing at 42s., an advance of 1s. Rape oil has been weak with crude at 47s. 6d., a decline of 1s. 6d., and technical refined at 50s. 6d. Cottonseed oil has been steady. Refined common edible is 49s., Bombay crude is 41s. 6d., Egyptian crude is 44s., technical is 46s., while deodorised is 51s.

Barley.—The demand for parcels has been good and prices have advanced. Karachi parcels have sold up to 40s. 6d. for London and outports, and Aug.-Sept. has made up to 40s. 9d. to Hull and 41s. 9d. to Glasgow. Indian advices show an easier tendency, and a part cargo of Karachi for shipment is offered at 41s. Persian for Sept.-Oct. shipment to London sold at 36s. 3d. Morocco afloat to Hull sold at 38s.

Beans.—There has been fair activity. Chinas have fluctuated between £10 15s. and £10 8s. 9d. to Glasgow. In Sicilian there are sellers at £11, and bids of £10 15s. are asked for.

Dari.—Values have risen sharply owing to the small supplies. Morocco would meet with a very good demand if good quality parcels could be offered for prompt shipment.

Fenugreek.—The demand is practically nil. The value of new crop Morocco for shipment would be about £19.

Canary Seed.—Mazagan is quoted at 29s. 6d. c.i.f., but there are no buyers.

Coriander Seed.—The old crop has been sold at 25s., and new crop sellers are asking 26s. 6d.

Beeswax.—The market is stagnant, the nominal value being £6 10s. ex store.

Gum arabic has been done at 85s. to 87s. 6d. ex store. A fall is probable if large shipments are made.

SMYRNA MARKET CONDITIONS.

We have received from Messrs. C. J. Giraud and Co. the following report on conditions in the Smyrna region, dated July 31:—

In the market report we published last April we referred to the improving conditions of agriculture, the reorganisation of the agricultural banks, and the efforts being made by the Government to foster development in every way possible. We are pleased to say that the sanguine views we then expressed are likely to be justified by results in the approaching autumn.

The country is steadily settling down; farmers are better stocked with cattle, agricultural implements, etc.; labour is more abundant and cheaper than last year; transport is being better organised both on the railways and on the countryside, and, so far as the port of Smyrna is concerned, apart from the scarcity of warehousing accommodation, conditions are always tending to improve.

Weather conditions during the past three months have been very favourable, and the outlook of the ripening crops generally is satisfactory.

Sultanas.—The vineyards are carrying an abundant yield of grapes. The gathering and drying is commencing in the lowland districts. The flow of arrivals is likely to set in a week to ten days earlier than last year, owing to the more advanced stage of maturity of the fruit. Weather remains cool and dry. Estimates of the production vary between 38,000 tons to 45,000 tons.

Supplementing the statistics we gave in our previous report, we have since obtained the gross weight of shipments made to the United Kingdom during the past four seasons taken from the manifests of the various shipping companies engaged in the carrying trade. We reproduce these figures for the purpose of record:—1920-1: London, 4,550 tons; Liverpool, 3,618 tons—total, 8,810 gross tons. 1921-2: London, 8,054; Liverpool, 5,972—total, 15,456. 1922-3: London, 7,179; Liverpool, 2,559—total, 10,325. 1923-4: London, 9,576; Liverpool, 8,975—total, 20,821. As in the case of shipments of figs, given hereafter, 10 per cent. allowance for the tare of packages should be made to arrive at the net weight of fruit exported.

Digitized by Google

Figs.—Advices from the Meander Valley are to the effect that, although the weight of the production may not prove quite equal to that of last season, the quality generally will be superior, the fruit being very sound and healthy and of excellent development.

Shipments to the United Kingdom during the past four years have been as follows:—1920-1: London, 5,092 tons: Liverpool, 2,698 tons—total, 8,242 gross tons. 1921-2; London, 4,268; Liverpool, 2,613—total, 7,525. 1922-3: London, 3,701; Liverpool, 801—total, 4,641. 1923-4: London, 6,788; Liverpool, 4,169—total 11,640.

Red Raisins.—The yield in the Vourla district is short. In the Carabournou district it is estimated at slightly over last season.

Cotton.—Weather has been very favourable for the plantations, and the outlook remains the same as reported last April.

Olive Oil.—The trees are in good condition and carrying a heavy weight of olives. Exports of olive oil should be possible on an interesting scale in the coming winter if the mills are put into working order.

Cereals.—Shipments of barley will be limited, but a fair quantity of beans will be available for export. The country has not yet reached the stage of production in excess of home requirements, but the area of cultivation is annually increasing, and it is only a matter of time for cereal exports to become an important factor in the export trade of the country.

PALESTINE CROP PROSPECTS.

The Director of Agriculture and Forests in Palestine, in a report for July, states:—

Final returns of winter crops are not yet available, but preliminary statements reflect considerable reductions on last year's figures from several districts. The total production of the Acre area is about 30 per cent., and that of Galilee approximately 20 per cent., less than in the previous season. Legumes make the poorest showing with a decrease of 35 per cent. in the former district. Samaria, on the other hand, has had, if anything, slightly better winter crops, on the whole, than in 1923. No modification of last month's statement with reference to the southern districts is necessitated by later information.

Durrah is already ripening in the Haifa and Tulkarem District. Both durrah and sesame are very uneven in character. Thus, durrah is good and sesame poor in Acre, Tiberias and Safad areas; in the neighbourhood of Nazareth both crops are poor, but fair to good round Baisan and Nablus, and excellent throughout the Tulkarem sub-district. Similarly, in the south durrah is very good in the Jaffa plain and foot-hills, but only fair in the Gaza plain and in the mountains. Sesame is much below normal in the last-named areas, but fair in the Jaffa plain and foot-hills.

Tobacco.

Picking is in full swing throughout the country. Late plantings have ripened prematurely without reaching full growth. Better methods of curing are in vogue as a result of the efforts and assistance of the travelling instructors. Much interest was displayed by a large assembly at the Nablus Agricultural Show, in model tobacco-frames, baling-presses, etc., exhibited by the Department of Agriculture. Earlier fears of a slump in tobacco-prices seem to have been allayed by further forward buying and greater competition. A million and a half tobacco seedlings were distributed from departmental nurseries in the northern districts to private planters.

Orange-groves are reported to be setting a heavy crop of fruit everywhere. A recent heat-wave was, however, responsible for a shedding of some 10 per cent. to 15 per cent. of fruit at some centres. The almond-harvest is commencing. The yield is estimated to be from 30 per cent. to 40 per cent. below normal. Early grapes are being marketed. The total yield will be slightly below average. Early figs and apples are on the market. The yield is less than normal, as is also that of pomegranates, which have been attacked by fruit fly. A good yield of bananas is reported from Jericho. Olives promise well throughout the country.

EGYPTIAN CROPS.

The official report on the crops in Egypt in July states:—

Cotton.—Hot winds which prevailed during the second week of the month brought about a certain amount of damage, causing some shedding of bolls and flowers, especially where the water supply was insufficient. Flowering is general, and bolls are forming in early sown fields. There were numerous complaints regarding shortage of water, especially at tails of canals. Such complaints were duly taken into consideration by the Ministries of Agriculture and Public Works, and compensations given in most of the canals where water supply was short of requirements. The cotton-worm attack, especially in the northern districts of Lower Egypt, was more widely spread than in the past few years. The attack was particularly severe in Behera Province. All efforts were made to combat the pest.

Sugar-cane.—Weather continued to be favourable to growth of plants. Hoeing, manuring, and watering were still going on. Very slight attacks of stem-borer were reported from Dakahliya, Menufiya, and Beni-Suef provinces.

Rice (Séfi).—Growth is satisfactory in early sown fields, where ears are appearing. In late-sown fields, weeding and transplanting are in progress. Some crops have suffered from excessive heat and shortage of water.

Millet (Séfi).—Growth is satisfactory, and early crops are maturing.

Earthnuts.—Growth is normal and flowering has become general. Podding is progressing in early sown fields.

Maize (Nili).—Irrigation of sharaki lands and preparation of fields are progressing. A few fields have already been sown.

SMYRNA MARKET REPORT.

Messrs. C. J. Giraud and Co. report as follows for the week ending August 9:—

The arrivals of sultanas are estimated as 420 tons, and the sales are put at 400 tons. Closing prices per cwt. c.i.f. London are: Type 12 47s., 13 50s., 14 53s., 15 56s., 16 60s. The market has been unsettled during the past week owing to unfavourable weather conditions. An improvement in the weather should quickly bring about a lower level of values.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Irregular.

The Alexandria Commercial Company in their report for the week ended August 7 state :—

Since our report of a week ago the market has been irregular and nervous. The net changes on the week are the following :—Sakellaridis $0.70 down for November, $0.70 down for January; Ashmouni, $0.30 up for August, $1.15 down for October, $1.15 down for December, $1.15 down for February. Prices more or less followed the fluctuations of New York during the early part of the week, but to-day they have suffered a decline which has narrowed the difference with American. The sole reason of to-day's weakness has been the report of rain in Texas, and the quick response of our markets to reports which tend to indicate an improvement in American crop conditions shows clearly the extent of the speculative interest in this market. The volume of business has been about the same as during last week, but purchases by commercial houses have been rather larger. The week's receipts amount to 445 krs., against exports 45,410 krs.; the stock stands at 339,127 krs.

Spot.—Total sales during the week amount to about 2,500 bales, of which we estimate 2,100 bales Sakellaridis and 400 bales Uppers.

Sakellaridis.—Some interest has been shown during the past week in the higher grades, and one or two lots of Good and Good to Fully Good have changed hands at fairly high premiums; very little of this cotton remains in the stock, and holders will only part with it if they are given a really attractive price. With regard to the medium grades the demand has somewhat slackened, and the price of spot as compared with contracts is, if anything, slightly easier. A small business has been done in low cotton at fairly cheap prices, holders being anxious to dispose of their stocks.

Uppers.—The rather meagre demand for this variety has been confined to Fully Good Fair and below; the price of spot as compared with contracts is rather dearer for these grades.

Crop 1924.—The crop is maturing well, and few complaints are heard. Damp and excessive heat have caused some shedding. Pink boll worm attack does not up to the present show any great increase, but it is, of course, much too early to say what effect the ravages of this pest are likely to have on the growing crop. Temperature has been somewhat irregular and slightly lower than normal.

The report of the Ministry of Agriculture for the month of July reads :—Lower Egypt : Condition 96; Middle Egypt, 97; Upper Egypt, 103; average whole Egypt, 97. Lower Egypt : Forecast yield, 3.38 krs. per feddan; Middle Egypt, 3.76 krs.; Upper Egypt, 5.04 krs.; average whole Egypt, 3.53 krs. per feddan.

Temperature was very high. Hot winds which prevailed during the second week of the month brought about a certain amount of damage, having caused some shedding of bolls and flowers, especially where the water supply was insufficient. Flowering is general, and bolls are forming in early sown fields. There were numerous complaints regarding shortage of water, especially at tails of canals. Such complaints were duly taken into consideration by the Ministries of Agriculture and Public Works, and compensations given in most of the canals where water supply was short of requirements. The cotton-worm attack, especially in the northern districts of Lower Egypt, was more widely spread than in the past few years. The attack was particularly severe in Behera Province. All efforts were made to combat the pest.

The irrigation report of the Ministry of Public Works, June 21 to July 20, reads :—

Lower Egypt.—Difficulties were experienced in the distribution of water throughout the month in the whole Delta owing to the relatively large cotton areas and authorised rice zones, also to the large unauthorised areas which were put under rice outside these zones. The impression is that no damage has been caused to the crops owing to adequate measures taken during the distribution of water and to the compensations given where irrigation could not be completed during the rotations.

Upper Egypt.—The water supply has improved since last month, but owing to the rush of cultivators to water sharaqui lands and séfi crops—which occupy a larger area than last year—certain difficulties were experienced in carrying water to the tails of canals.

The report of the Alexandria General Produce Association for the month of July reads :—

Lower Egypt : The temperature during the month of July has been favourable to the plants. In some districts a few cool and misty mornings were reported which have had a slight effect on the flowers. The plants are stronger and more developed than at this time last year. Flowering is more abundant and from 15 to 20 days earlier than last year. The bolls are also more numerous. Generally speaking, leaf worm has only caused slight damage. Pink worm has been found everywhere; the number of bolls attacked varies from 5 per cent. to 25 per cent., according to the district. Water for irrigation has been barely sufficient.

Upper Egypt and Fayoum.—The temperature has been favourable. In the districts south of Minieh some days of damp and heat caused some young bolls to fall. The appearance of the plants is satisfactory. Flowering is general and earlier than last year. Pink worm has been found in some districts, but the number of bolls attacked is insignificant. Water for irrigation has been barely sufficient.

LIVERPOOL COTTON REPORT.

Position Practically Unchanged.

Messrs. Reynolds and Gibson report as follows under date August 13 :—

Egyptian Spot.—There is little change to report on the spot situation since last week. The scarcity of spinnable cotton here is attracting a certain amount of cotton from various sources. Egypt and the Continent have supplied a small quantity, and even spinners have disposed of parcels here and there when the prices suited. The constant fluctuations in futures have proved detrimental to business, both here and in Manchester, and only those spinners who have allowed their stocks to run to zero have entered the market. On the whole, the inquiry has been smaller than during the past few weeks, but has run on much the same lines. Sakel at from 300 to 400 points on August has been in request, and the appearance on the market of a few hundred bales of docket cotton has proved rather a boon to seekers after this quality. Holders of the so-called extra fine cotton are finding it impossible to obtain the somewhat fantastic prices which they have been asking, and the official quotation for this style of cotton has been reduced 30 points on the week.

Good fair to strict good fair Sakel of fair staple has changed hands in small quantities at about 100 points on the current month, and buyers generally have asked for more. The "off" cotton continues to attract a little more attention, but purchases have been of only a very retail character so far. Spinners are fighting hard to bridge over the gap that still remains before the early shipments can arrive from Egypt. In uppers, the basis has continued to ease, and only a small hand-to-hand business exists. The better qualities are non-existent, but rather more of the lower grades has recently come into sight. The large inquiry for Sudan Sakel, to which we have recently drawn attention, continues, and a fairly good business has resulted at prices ranging from 25.50d. to 26.50d. Tokar Sakel has only attracted buyers when offered at very cheap rates. Other growths have been neglected.

C.i.f. business has been quiet. The crop accounts recently received from Egypt continue to speak highly of the prospects of this year's yield, but there has also been a tendency to emphasise, more than has hitherto been the case, the damage done by various insect pests, and a shortage of water in certain districts has been hinted at. The present month, which is the most vital one of the year, generally decides the fate of the crop. Forwardings to spinners for the week ending 8th inst. were returned as 4,582 bales (including Sudan). Estimated sales 1,300 Egypt and 1,050 Sudan. Quotations of upper and brown are reduced 50 points; those of Sakellaridis are advanced 25 points for fair, 60 points for good fair to fine, but extra fine has been exceptionally reduced 30 points on the week. F.G.F. Sakellaridis to-day, 26.35d.

Egyptian Futures.—Trading in this department has been of a quieter and somewhat less exciting character than the previous week; fluctuations also have been on a narrower scale, but the tone throughout has been surprisingly steady, and at times a noticeable scarcity of contracts has been apparent. We attribute this latter feature to the strength shown by the current position, owing to the lack of tenderable cotton in stock here at the moment, and also in greater measure to the absence of new crop hedging. In recent weeks we have followed the movements in the American market fairly closely, but during the past few days we have acted in a more independent fashion, with the result that a marked widening in the two markets has taken place. Rumours of damage to the Sakel crop through heat and lack of water have been in circulation, and no doubt these have neutralised to a great extent the reactionary tendency in the American market. At the same time we must state that so far we have not been able to get confirmation of the above-mentioned adverse reports from authoritative sources.

The Alexandria market has shown considerable strength throughout the week, and it would appear as if a fairly large speculative "Bull" account in new crop options is being built up there. So far, those who have bought have had the encouragement of rising markets, but with more promising American crop advices to hand, and a weakening in that market, it is not impossible that freer new crop hedging will be induced from now onwards. Local trade reports do not reveal any pronounced activity, and spinners continue to cut down their commitments to the lowest possible margin. New crop discounts are still the bar to any decided improvement in the yarn offtake, but there seems little doubt that a good business is awaiting a more reasonable and settled level of values. This afternoon, prices have reacted sharply in sympathy with a pronounced decline in values in the American markets on better Texas prospects. Whilst we are rather of the opinion that further recessions will be witnessed, operations on the "Bear" side should be of a conservative character, as, owing to the small carry-over, the market is particularly apprehensive of any detrimental crop rumours, and we are just entering the period when the plant is most vulnerable to climatic and insect damage.

TEXTILES.

If you wish to obtain your Textile goods from England at the lowest possible prices, communicate with K. JEBARA, 25, Princess Street, Manchester. (Established 1887.)

SALT PRODUCTION IN GREECE.

Salt production in Greece in 1923 amounted to 70,000 tons, compared with 67,000 tons in 1922 and 29,717 tons in 1914. This increased production within recent years is due to constant improvement in methods of production and to the installation of modern appliances (says an American Consular report). On account of extensive improvements in the salt mines of Macedonia and Lesbos during the past year, it is estimated that the production in 1924 will reach about 95,000 tons. Local consumption is approximately 60,000 tons. The prospects for export are good, as the Balkan States afford a ready market.

AIRCRAFT FOR ROUMANIA.

The Crown Prince of Roumania, who is the head of the Air Department of his country, flew to Croydon last week from Holland, where he has been inspecting the Fokker works, with a view to placing orders for the Roumanian Government. The flight to England occupied four hours, instead of the usual two and a-half hours, owing to the strong wind. Recently the Roumanian Government has placed orders for over 500 aeroplanes in England and France.

Stock and Share Markets.

IMPROVED TONE GENERALLY.

Activity in Industrials.

(From Our Own Correspondent.)

London, Tuesday Morning.

The satisfactory conclusion of the London Conference has had a good effect on the markets as a whole, which now make a very firm showing. The issue had, however, been largely discounted as regards prices as a result of the favourable view taken of the outlook in the last week or so, and while the termination of the Conference has certainly given an upward trend to prices, there has been no suggestion of an advance such as would undoubtedly have been the case had the issue been in doubt to the end. To say that there is general relief on the Stock Exchange at the outcome is to put it very mildly. The European impasse has been the chief barrier to trade expansion, and, of course, to the recovery of prices that would follow the development of trade. Time after time a settlement has seemed to be within reach, only for disappointment to come in the end. Now at long last there is a real settlement which opens out possibilities and brings appreciably nearer the return of normal conditions. It is small wonder that profound satisfaction should be felt.

The Outlook.

No one, of course, looks for miracles to follow the conclusion of the Conference. It is realised that at first, at any rate, improvement must be slow, though it is possible that greater progress will be made than is generally looked for. But whether that be the case or not, a totally different tone will henceforward pervade commercial activities. The general atmosphere, in short, will be one of optimism, borne of the knowledge that the affairs of a war-troubled world are at last definitely on the mend, and so we can now look to a period of gradually advancing prices in the majority of the markets, and more especially in such markets as Industrials and Rubber, which have suffered owing to the lack of demand. It would not be surprising, indeed, if the two groups I have specified were during the next few years two of the brightest features on the Exchange.

New Issues.

The sequel to the Conference that may be looked for in the near future is a considerable development in the number of new issues. There has not been much doing in this direction lately, but there are many new issues on the tapis, including some for the Near East, and it will not be long now before they begin to make their appearance.

Gilt-Edged Harder.

A very firm tone has ruled in gilt-edged descriptions, and where price changes have taken place they have in nearly all cases been in the upward direction. As in the previous week, however, business has continued to be on a relatively small scale. Consols at 57¼ show a gain of ⅛, the Conversion Loan, which has again been a particularly firm feature, is ½ up at 78¼, War Loan Fives at 101½ are ¼ up, while Fundings, which have also made a very good showing, are ⅝ up at 89½. Indian Loans closed yesterday on rather a dull note, but even so are about the same as last week. The Three per Cents. are unchanged at 56½, the Three and a-Half per Cents. are ¼ up at 66⅝, the Four and a-Half per Cents. at 86½ are the same as before, the Five and a-Half per Cents. at 101 show a gain of ⅛, while the Seven per Cents. are ½ down at 113.

Foreign Stocks Steady.

The foreign market showed no notable change following the conclusion of the Conference. Here, too, business has been on a small scale, and price changes have not been of any great importance. French stocks have continued to make a very good showing, the Five per Cents. being 25¾ x.d., while the Four per Cents. at 20¾ are ¾ up. German bonds have been a prominent feature, but the tone was rather uncertain yesterday, early gains being subsequently followed by declines. The Three per Cents at 24s. are 1s. up on the week, the Three and a-Half per Cents. are 9d. lower at 22s. 3d. after being up to 24s., while the Four per Cents. are 6d. up at 24s. I have nothing to add to what I said last week with regard to these bonds. The future course of their prices is at the moment a matter of extreme doubt. Belgian Three per Cents. are unchanged at 70, while Italian Rentes are unaltered at 20½. Russian bonds have been neglected. The Four per Cents. are 7, the Four and a-Half per Cents. are 6½, while the Five per Cents. are 8. Turkish Unified has advanced a fraction to 16. Greek stocks have been notably firm, with Monopolies 3 up at 46½.

Industrials Firmer.

A much better tone has ruled in the Industrial group. This market, in fact, has responded more noticeably to the conclusion of the Conference than any other. For months business has been on a small scale, but there has been quite a development of buying, and yesterday the market displayed considerable activity.

The upward movement of prices has been more or less general. Textiles have been a very firm spot, with Coats 9d. up at 62s. 6d., and Courtaulds unchanged at 53s. Tobaccos have been firm. Bats are 3d. up at 109s., while Imperial Tobaccos are unaltered at 78s. 6d. Iron and Steel descriptions have made a fairly good showing. Vickers are 3d. up at 9s. 9d., Armstrongs are unchanged at 14s. 6d., while Guest Keens are the same as before at 36s. 6d. Motor shares have been notably firm.

Shipping securities have generally made a firm showing. P. and O. Deferred at 289 are 1½ up, Cunards have gained 3d. at 18s., Furness Withys at 31s. 9d. are 9d. lower, while Khedivial Mails are unchanged at 1¾.

Banks Firm.

A very firm tone has ruled in Banking descriptions. Westminsters are 1-16 up at 17½, Lloyds are unchanged at 59s. 3d., Bank of British West Africas are unaltered at 3¾x.d., P. and O. Banks are 10¾, while Imperial of Persias are ⅛ lower at 7⅝.

A rather dull tone has ruled in Egyptian securities. Aboukirs at 17s. 9d. are 6d. lower, Beheras at 10⅞ are ⅜ down, Egyptian Markets have shed 3d. at 24s. 6d., Gharbieh Lands are unchanged at 1¾, New Egyptians are 9d. lower at 26s. 3d., while Union Foncières are unchanged at 2 11-16.

Oils Variable.

A rather uncertain tone has been in evidence in the Oil market. Business has been on a very restricted scale, and, with the exception of a few features, notably Phœnix, the market has made a poor showing. Anglo-Persian ordinary at 2 31-32 are the same as last week, while Burmahs at 5 1-32 are 1-32 lower. In the Roumanian group Phœnix have been a strong spot, and at 22s. 3d. are 9d. up, Steaua Romanas are 8s. 3d., while Hamilton's Concessions are 1s. 6d. Among Egyptians, Anglo-Egyptian Oilfields are 1 1-32, at which they are 1-32 down.

Shipping Intelligence.

SHIPBUILDING BY VICKERS, LTD.

Launch of New Cargo Steamer.

The launch took place on August 19 at the shipbuilding yard of Vickers, Ltd., at Barrow-in-Furness, of the s.s. Geraldine Mary, a single-screw cargo steamer, which has been built for the Anglo-Newfoundland Development Co. The vessel has been specially designed for the carriage of paper in rolls, and the depth of holds and 'tween decks arranged to give a minimum waste space. The principal dimensions are:—Length between perpendiculars, 422 ft.; breadth moulded, 56 ft.; depth moulded to upper deck, 38 ft. 6 in.; 'tween deck heights, 7 ft. 6 in.; boat deck height, 8 ft.; load draft, 26 ft. 6 in.; deadweight, about 9,000 tons; I.H.P., about 3,000; speed (on service), 11 knots. The vessel is built to Lloyd's highest requirements and to their special survey, also specially strengthened and constructed for encountering ice.

The fore end of the vessel is specially formed for ice-breaking purposes, and the ice bow cut away from about the load water-line to the after end of No. 1 hold. The framing at the forward end is closed to 15 inches apart and the shell increased to 1 inch in thickness, also the bottom forward has been strengthened to resist pounding when the vessel is running in ballast. The shell of the vessel fore and aft from the deep load line to about 15 feet below is increased in thickness $\frac{1}{8}$ inch above classification requirements. The stern frame and rudder are also specially strengthened for coming astern in ice.

The double bottom is arranged for carrying oil fuel under the boiler room under No. 2 hold and in a tank aft of the engine room. Tanks, one forward of boiler room and one aft of engine room, are arranged for water ballast or cargo. Between the engine and boiler rooms, bunkers are built for carrying either coal or oil, and on the second 'tween deck, over the machinery, spaces are arranged for the carriage of coal. Bunker capacity is allowed for about 550 tons of coal, or alternatively about 1,000 tons of oil fuel may be carried, including the double-bottom tanks.

The vessel has three continuous steel decks, and the 'tween decks and holds are arranged for the stowage, with the minimum of waste space, of rolls of paper measuring 2 ft. 9 in. in diameter and 6 ft. long. These rolls are stowed on end and placed in position under the beams. The cargo hatches are arranged as large as possible for the quick handling of the cargo, and are made flush with the deck on 2nd and 3rd decks to provide uninterrupted stowage for the rolls over the hatch covers. The total cubic capacity of cargo spaces amounts to about 492,000 cubic feet for bales.

Particular care has been paid to the question of rapid working of cargo, the winches, derricks, and hatches being on a very liberal scale. Eighteen derricks and winches are provided. The derricks to masts are capable of handling 5 tons, and on derrick posts for 3-ton lifts. The steam winches are supplied by Messrs. Waddington and Co., Barrow-in-Furness. The steam windlass is of Clarke, Chapman's manufacture. The steam steering gear is in a house aft on the upper deck, and is of the Wilson Pirrie type supplied by Messrs. Caldwell and Co., Glasgow.

The officers' quarters are situated in a steel deck-house amidships on upper deck, with the captain's rooms above on the boat deck. Adjacent to the captain's quarters is a combined lounge and smoke room. The saloon, pantries, etc., are in the upper deck-house, where state-rooms for the accommodation of the company's staff are arranged. The vessel has complete electrical installation to light efficiently the whole vessel, also steam heating in all living rooms and saloons.

The propelling machinery consists of triple expansion steam engines on the direct acting, inverted cylinder principle, working three cranks set at angles of 120 degrees. The cylinders are of 26½ in., 44 in., and 74 in. diameter, with a stroke of 54 in. In addition to the usual auxiliaries there is also fitted an evaporator and auxiliary condenser. There are four single-ended boilers, each 16 ft. diameter and 11 ft. 6 in. long, arranged for and fitted with Howden's forced draught. There are three furnaces to each boiler, with furnace fronts of Howden's latest type suitable for burning oil fuel or coal. The boilers are arranged for a working pressure of 200 lb. per square inch, and are to Lloyd's and B.O.T. requirements.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Liverpool, September 4): s.s. Malia for Port Said, Colombo, Madras, and Calcutta (London, September 6).

Anchor Line.—S.s. Castalia for Bombay (Liverpool, August 25); s.s. Elysia for Bombay (Liverpool, September 8).

British India Line.—S.s. Mantola for Colombo, Madras, and Calcutta (London, August 30); s.s. Morvada for Bombay and Karachi (London, September 12); s.s. Mandala for Colombo, Madras, and Calcutta (London, September 13).

Clan Line.—S.s. Clan Colquhoun for Bombay and Persian Gulf (Birkenhead, September 3).

Ellerman "City" Line.—S.s. City of Eastbourne for Calcutta (Birkenhead, September 4); s.s. City of Exeter for Calcutta (Birkenhead, September 15).

Ellerman Lines.—S.s. Egyptian for Gibraltar, Malta, and Alexandria (Liverpool, August 26).

Johnston Line.—S.s. Quernmore for Piræus, Syra, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 6); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Bourgas, Sulina, Varna, Constantza, Galatz, and Braila (Liverpool, September 20).

P. and O. Line.—S.s. China for Bombay (London, September 5); s.s. Novara for Colombo, Madras, and Calcuttta (London, September 6); s.s. Caledonia for Bombay (London, September 19).

Ellerman's Westcott and Laurance Line.—S.s. Polo for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (London, September 6).

The directors of Lloyds Bank announce that Mr. R. C. Chapple Gill has been elected to a seat on the Board.

An order has been placed by the Anchor Line (Henderson Brothers), Ltd., for a cargo and passenger steamer of approximately 9,500 tons deadweight, with Messrs. Alex. Stephen and Sons, Ltd., Linthouse. The vessel, which is to be employed in the company's Indian service, will have accommodation for 150 first-class passengers.

INDIA'S TRADE IN JUNE.

Slight Increase in Exports.

The trade returns of India for June showed, as compared with the preceding month, a small increase in the values of exports, coupled with decreases in imports and re-exports. The imports of private merchandise totalled Rs. 18,82 lakhs, and showed a decrease of Rs. 1,78 lakhs, and re-exports also decreased by Rs. 7 lakhs to Rs. 1,25 lakhs. The value of the exports of Indian produce and manufactures rose from Rs. 27,73 lakhs in May to Rs. 28,36 lakhs.

Measured by the statistics of merchandise, treasure, council bills, purchases of sterling and other Government remittances to the United Kingdom, enfaced rupee paper, etc., the visible balance of trade was in favour of India to the extent of Rs. 3,67 lakhs in June, as compared with a credit balance of Rs. 2,50 lakhs in May, and of Rs. 6,79 lakhs a year ago. During the three months ending June, there was a favourable balance amounting to Rs. 4,32 lakhs, as against Rs. 15,93 lakhs in the corresponding period of the preceding year.

As compared with June, 1923, the imports of food, drink, and tobacco increased by Rs. 5 lakhs to Rs. 1,53 lakhs, raw materials by Rs. 67 lakhs to Rs. 2,27 lakhs, and manufactured articles by Rs. 11 lakhs to Rs. 14,77 lakhs. Under food, drink, and tobacco, sugar 16 D.S. and above, including beet sugar, showed an increase of 3,000 tons in quantity and Rs. 7 lakhs in value. Imports of salt also accounted for an increase of 36,000 tons in quantity and Rs. 10 lakhs in value. Under raw materials, kerosene oil and raw cotton showed increases of Rs. 40 lakhs and Rs. 24 lakhs respectively. Of manufactured articles, the imports of cotton yarn and piece goods showed a considerable increase. Grey goods rose in quantity from 48 million yards to 66 million yards, and in value by Rs. 69 lakhs to Rs. 2,22 lakhs. White and coloured goods also rose by 6 and 2 million yards in quantity and by Rs. 27 and Rs. 22½ lakhs in value. There were, however, noticeable decreases under machinery, including belting (Rs. 74 lakhs), railway plant and rolling stock (Rs. 50 lakhs), and electrical instruments (Rs. 14 lakhs).

As regards exports of Indian merchandise, food, drink, and tobacco, as compared with June, 1923, increased by Rs. 18 lakhs to Rs. 7,73 lakhs, due to an increase in the exports of foodgrains (Rs. 1,05 lakhs), which was partly set off by a decrease of Rs. 96 lakhs in tea. Raw materials and produce exported decreased by Rs. 1,71 lakhs to Rs. 13,48 lakhs. Under this group, oilseeds decreased by Rs. 1,10 lakhs, raw hides and skins by Rs. 49 lakhs, lac by Rs. 30 lakhs, and raw jute by Rs. 15 lakhs, while raw cotton showed an increase of Rs. 15 lakhs, notwithstanding a decrease of 10,000 tons in quantity. Of the total shipment of 45,000 tons of raw cotton, Japan took 15,900 tons, or 35 per cent.; China and Italy 9,000 tons, or 20 per cent. each; Belgium 3,500 tons; France 2,600 tons; and the United Kingdom 1,800 tons. Exports of raw jute decreased in quantity from 21,200 tons to 18,700 tons, and in value from Rs. 78 to Rs. 63 lakhs. Manufactured goods rose by Rs. 1,10 lakhs to Rs. 6,85 lakhs. The shipments of gunny bags fell from 28 millions, valued at Rs. 1,30 lakhs, to 23 millions, valued at Rs. 1,21 lakhs. The yardage of gunny cloth exported rose from 89 millions, valued at Rs. 2,01 lakhs, to 141 millions, valued at Rs. 2,45 lakhs. Other noticeable increases were under cotton yarns and manufactures (Rs. 18 lakhs), tanned skins (Rs. 19 lakhs), and iron and steel (Rs. 14 lakhs).

The share of the United Kingdom in imports fell from 61.3 per cent. in June, 1923, to 56.5 per cent., and in exports from 27.8 to 19.4 per cent. The shares of Germany, Japan, and the United States were, respectively, 6, 7, and 9 per cent. under imports and 4, 17, and 9 per cent. under exports.

The tonnage of vessels entered into British India and cleared outwards with cargoes from and to foreign countries and British Possessions during June amounted respectively to 517,000 and 683,000, as against 581,000 and 752,000 in May and 533,000 and 692,000 a year ago. The tonnage entered into and cleared from British India during the three months April to June was 1,701,000 and 2,118,000 respectively, as compared with 1,636,000 and 2,076,000 in the same period last year.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Iron Bars.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of iron bars, different dimensions, for the workshops and trade schools of the Ministry during the school-year 1924-1925. August 30.

Electrical Motors.—The Superintendent, Government Press, Bulaq, invites tenders for the supply of electrical motors and accessories.—September 11.

Copper Plates.—Tenders are invited for the supply of 11,500 kgs. of red copper plates of varying dimensions. September 1. (D.O.T.)

Paper.—The Superintendent, Government Press, Bulaq, invites tenders for the supply of watermarked paper.—September 20.

Oils.—The general manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of mineral lubricating oils. September 25.

Construction of a Metallic Bridge over the Mahmoudieh Canal at Karmous.—The Municipality of Alexandria invites tenders for the construction of a metallic bridge over the Mahmoudieh Canal at Karmous. September 23. (D.O.T.)

Leather.—The British Commercial Secretary at Cairo reports that a local merchant desires to be placed in touch with United Kingdom manufacturers of leather. He is especially interested in box-calf, kid and patent leathers. (D.O.T.).

Turkey

Bell Tents.—A department of the Turkish Government proposes to purchase 1,000 bell tents. (D.O.T.)

Greece.

Construction of Works at Kavalla Harbour.—Tenders are invited by the Kavalla Harbour Committee for the construction of works at Kavalla Harbour according to the specifications drawn up by the engineer, Mr. A. Ghinis. These works are estimated to cost drs. 76,000,000. The adjudication will take place on December 1, 1924, and tenders must be submitted by that date. A guarantee deposit of drs. 600,000 must be made in the Public Treasury, and this deposit will be returned to unsuccessful competitors within three days after the date of adjudication. In the event of two or more competitors tendering at the same price, lots will be drawn. (D.O.T.)

India.

Wagons.—The South Indian Railway Co. invite tenders for the supply of 109 wagons. October 10.

Dredgers.—The India Store Department invite tenders for the supply of two self-propelling suction dredgers, with radial heads and pumps having 20 in. suction and delivery, also floating discharge pipes, terminal pontoons, anchor lifting pontoons, and floating high-pressure hydraulic pumping plants.

Fencing Materials.—The directors of the Madras and Southern Mahratta Railway Company, Ltd., invite tenders for fencing materials, comprising 2,600 galvanised iron eye bolts, 400 steel posts, 3,000 w.i. or steel standards, 400 steel wedges, and 26 tons (approx.) galvanised strand wire. September 2.

Bulgaria.

Locomotives, etc.—The Bulgarian State Railways invite tenders for locomotives, goods trucks, and passenger coaches.—September 10 (D.O.T.).

NOTES OF THE WEEK.

Indiscipline in Greece.

What threatened to be a further and much more serious crisis in the Greek Navy than the recent resignation of the majority of the officers has happily been averted at the eleventh hour. By the terms of the proposed Decree reinstating in the service the officers whose resignation, among other causes, led to the fall of M. Papanastasiou's Cabinet, these officers were to lose no seniority as a result of their action, but were to pass automatically over the heads of any of their former juniors who had been promoted in the meantime. The chief reason for the resignations was dissatisfaction over the manner in which promotions were being given by Captain Hadjikyriakos, then Minister of Marine, and in particular over the appointment of a certain Captain Kolialexis to the command of a squadron. The officers who had not resigned resented the proposed settlement, and a protest was sent to the Prime Minister by Captain Kolialexis on behalf of the officers of the cruiser Averoff under his command. M. Sophoulis replied by replacing Captain Kolialexis in the command of the Averoff and by ordering him to undergo two months' imprisonment. For a short time it seemed probable that Captain Kolialexis and the Averoff would defy the Government; but as a result of the intervention of Captain Hadjikyriakos, he agreed to place his ship at the Government's disposal. The Fleet will now be disarmed and the crews temporarily disbanded. As the officers who had resigned showed no eagerness to accept the Government's settlement of the crisis, it may well be that the Government is wisely advised to give the Navy a breathing space in order to find a solution that will prevent it from being split into hostile groups.

Serbs and Croats.

M. Davidovitch can hardly be blamed for taking a little time to find his bearings before he commits himself to a hard-and-fast programme. His statement of domestic and foreign policy—of which a summary was published in THE NEAR EAST last week—was too vague to satisfy those who are looking to him to inaugurate a new era in Yugoslavia, and will not prevent his political enemies from attributing to him any intentions that they imagine will injure him in the eyes of the electorate. In these circumstances it will be well if he can at an early opportunity indicate more clearly the lines on which he proposes to aim at a settlement of Yugoslavia's chief stumbling-block at the present time—the relations between Serbs and Croats. In view of the fact that the Radicals do not command a majority in the Skupshtina, it would be expected that M. Pashitch, if he really believed in the danger that he represents M. Raditch and his Croats to be to the State, would endeavour to win M. Davidovitch to a sound policy instead of driving him into the arms of the Republicans. There are, however, no signs of any such action on the part of the Radical leader. M. Davidovitch, therefore, may feel obliged to wait until M. Raditch has decided upon a political course for the Croat Party before showing his own hand too clearly. It is evident that something more than merely administrative measures, however excellent in scope, will be required if M. Davidovitch's Government is to mark a turning-point in Yugoslav history.

Egypt and Britain.

The liquidation of the Sudan trouble proceeds slowly. With the exception of a belated demonstration at Kosti, which points to a failure to adhere to the original time-table, there has been no further incident in the Sudan. Reinforcements have arrived in Khartoum, and the mutinous Railway Battalion has been repatriated to Egypt. The Egyptian Ministry has sent a reply to the British Note, but if the version of this reply supplied by the official Wafd organ in Cairo be correct, the communication cannot be regarded as likely to hasten the return of good relations between the two countries. By far the most satisfactory feature in the situation is the evidence of a growing appreciation in Egyptian circles that mistakes have been made. Intrigue in the Sudan has had a boomerang effect not at all to the liking of its originators, and it need not be expected that the repatriated battalion will be accorded a popular or an official reception. More serious still, the Egyptian Government, in the absence of Zaghloul Pasha, has not handled the situation with much

Digitized by Google

adroitness; instead of associating itself with the British authorities in dealing with insubordination —the natural enemy of all Governments—it has taken up a line which leaves no course open to it now but a few ineffective protests, while Great Britain proceeds to restore confidence in the Sudan by herself.

Shaping the End.

The event may well prove that the Sudan trouble was all for the best. It will have given rise to much more reflection in Egypt than if Zaghloul Pasha had merely come to London, announced the failure of the negotiations, and left the country to vent its disappointment in the approved style. The more thoughtful Egyptians will now realise what a long way the chain of mistakes stretches. One of the earliest links in that chain is the idea that the rôle of agitator can ever be exchanged successfully for that of administrator, and, going back yet another stage, some may begin to question the ultimate advantage of agitation. Again, it may be brought home to those who claim to have more insight into affairs and greater intelligence than a Cairo mob or a group of half-baked students that it is a mistake to leave the country's destinies and policies entirely in the hands of such folk. If the *intelligentsia* had tried to exert its influence, Egypt might have played a more dignified part in the final settlement of the Sudan. A more experienced Cabinet would not have felt the necessity of assuring the nation in an official *communiqué* that it was safeguarding the national rights; the statement suggests a timid appeal to a man with a gun not to shoot because the suppliant is doing his best. Fortunately for Egypt, the incident occurs, so to speak, within the family circle. No advantage will be taken of the Cabinet's inexperience; the solution of the Sudan problem will be the same, although Egypt's part in it may be less flattering to Egyptian *amour propre*. Great Britain derives no satisfaction from the mistakes made, because the wiser and more experienced the Egyptian Government the better for the interests of the two countries.

Trouble in Afghanistan.

The situation in Afghanistan would seem to lie midway between the reticence of the Government of India and the headlines of the *Daily Telegraph*. As a result of the one extreme, the Soviet Government was able to represent Great Britain as actively supporting Abdul Karim, who is the figurehead of the rebellion against the Ameer, and the other extreme encouraged the belief that the present Afghan dynasty was nearing its last days. Both offenders have hastened to mend their ways. A semi-official announcement in India calls Abdul Karim a baseborn wastrel; but a far better answer to Bolshevist propaganda is the sale to the Ameer Amanullah of two British aeroplanes which have been flown to Kabul, where the officer pilots have handed them over to a German personnel. There can be no doubt that the rebellion is causing the Afghan authorities considerable uneasiness. Its centre is inconveniently close to the capital, and a mountain pass leading from Kabul to the headquarters of the acting Commander-in-Chief appears to be still in the hands of the rebels. In the most favourable circumstances it is expected that the suppression of the insurrection will take some time. The reforming zeal of the Ameer has long outstripped the inclinations and the intelligence of his subjects, and the rebels have been able to make a wide appeal to the prejudices of stubbornly unprogressive tribes. British sympathies, it is hardly necessary to point out, are in a case of this sort entirely on the side of constituted authority, and the only possible cause for regret is that the Ameer should have carried his desire for a new régime in Afghanistan so far as to believe that his interests lay in cultivating relations with a number of other foreign Powers to the neglect of the close co-operation which had previously existed between his country and Great Britain.

Dyarchy Under the Microscope.

The minute inquiry into the working of the Indian Constitution has served, at any rate, to enliven the dull season of politics. There is undoubtedly something ludicrous in the procession of disillusioned and perhaps disgruntled ex-Ministers, explaining precisely how and why they failed, but, to our mind, the pathos of the situation is more prominent than the humour. They were, on the whole, good men, living in a mist of phrases; they were called rather suddenly to take an active part in the government of the country; they found that phrases made but indifferent tools; they failed, most of them, to procure more serviceable instruments; and now they blame the system which has exposed so ruthlessly the inadequacy of their equipment. We may perhaps agree with those critics who hold that the working of dyarchy was unnecessarily complicated by the decision to pretend that the double government was single, and we should not be greatly surprised if in future more care is taken to emphasise the responsibility of Ministers for their own work while differentiating them from the other side of the Administration, but, so far as the published evidence goes, nobody can help drawing the conclusion that dyarchy has not yet had a fair trial as a system.

Systems of Representation.

Apart from the idiosyncrasies of ex-Ministers, the most interesting portions of the evidence are those which indicate the hardening of opinion on the subject of the representative system. Hindu politicians of the higher castes intensely dislike the existing plan of reserving a certain proportion of seats for particular communities. Moslems, on the other hand, insist on it as their only safeguard. Representatives of the middle castes ask for its extension in their own interests. The lowest castes of all ask for protection in some form or other from the oppression of upper classes and middle classes alike. To our mind, this question of representation is fundamental, and we think the Indian Government would be well advised to facilitate its study by issuing a statement showing clearly the strength of each caste and community in the existing electorate, compared with its strength in the population as a whole. Is it the case that, in some provinces, the electorate is predominantly aristocratic? Do the classes who ask for protection really possess power which they have not yet learned to use? Definite answers to such ques-

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 234 of this issue.

Digitized by Google

tions as these would at any rate enable the public to understand the situation and appreciate the rival claims in a way which is impossible at present.

The Muharram Riots.

The belated news of the desperate outbreak at Gulbarga, in the Hyderabad State, arrived just when observers in this country were rejoicing at the fact that the Muharram celebrations had passed with nothing worse than a few riots, efficiently handled and therefore small, in some of the less important northern towns. Apart from the length of the roll of casualties and the extent of the injury to property, the Gulbarga outbreak is significant as marking the continued southward extension of religious bitterness, an ugly fact which our recent Indian visitors were at such pains to belittle. We have been told that the bitterness was purely a local affair, which persons of wide outlook could safely ignore, but, pricking off recent disturbances on the map, it is obvious that, for the time being, trouble may break out in almost any part of India. Sometimes, too, we have been told that such riots were the fault of the British Administration, but there are no British administrators in Gulbarga. How the normally efficient Hyderabad Government was on this occasion taken unawares is a question on which the cables have thrown no light as yet, and on which it is unnecessary to speculate. We need only express the hope that the Ministers of His Exalted Highness will succeed in securing a speedy appeasement.

THE WEEK AT HOME.

London, Tuesday Morning.

Rifts in the Lute.

After all, it was bound to come. It was not reasonably to be expected that all the staunch pacifists of the Cabinet could by the London Conference have been suddenly turned into the staunchest patriots, and we now, after the Protocol has been signed by the Prime Minister, have Mr. Snowden, Chancellor of the Exchequer, explaining how iniquitous the permission is to grant to the French one year more in the Ruhr.

It is true that Mr. Snowden based his argument on fear of the effect of the proposals of the London Conference on British industry. But that does not so much matter. The important thing is that he differs fundamentally on this issue from the Prime Minister.

Mr. Snowden, seeing how all the potential critics of the Government have seized on his statements in high glee. has been at pains to point out that no split in the Cabinet is involved. And here, curiously enough, he may be quite right. For a set of men who before they assumed office were the rigidest of doctrinaires, the present Cabinet has the most surprisingly elastic conscience one has ever heard of. The fact that such old catchwords as "the collective responsibility of the Cabinet" mean now nothing at all bothers it not in the least.

It is possible that we may at any time hear that the Chancellor of the Exchequer disapproves profoundly of the proposed loan to Russia, but—*il n'y a pas de quoi*. It will fill the papers for a day, and then nothing more will be heard of it. The explanation appears to be that the present Government is the most subtly disguised of all autocracies: it is a one-man show performing before an audience too fatigued to demand new turns or even a new beauty-chorus.

Mr. Winston Churchill.

The fact that Mr. Winston Churchill is announced to speak next month on the same platform as Sir Robert Horne seems to have been interpreted as meaning his final going over to the Conservative Party. He has, at any rate, had the complacency to call the great party of his ambitions "not unprogressive," and in view of his ability to discern in the Conservatives' camp what the ordinary eye cannot see, the odds are certainly in favour of his being at the next General Election against both the Labour and the Liberal Parties.

When that election will be is still very doubtful. Some observers appear to think that the Government will provoke a crisis with its Irish Boundary Bill; others imagine that both Conservatives and Liberals are too afraid of the verdict of the country in the present year to do much else than acquiesce in the Government's plans. At the moment there is no movement discernible in the sails of any of the three political craft; it is all "as idle as a painted ship upon a painted ocean."

The Weather.

There never has been such a time. Lightning and thunder without sultriness, hail without mercy, and not a day without rain. Some good fellow, whose memory must be well above the average, has worked out that during August there have been six rainless days, but one has to suppose that his calculations were based not on the motive of comforting his fellows, but merely on the desire to be different from everyone else.

The efforts of the politicians to cheer us up with news of the London Conference, of the Coliseum management to show us how lawn tennis is not a game but an entertainment, and of the journalists to pretend that there is anything else in the world that matters other than the weather, are all quite dismally unavailing. "Holiday-makers rush for shelter"; "Empire Pageant again Ruined"; and, unkindest of all, "Game Abandoned: Game Abandoned," we continually do read. And the only consolation is that Woolley can make runs on any kind of wicket!

Wheat Harvest.

This is the week of the wheat harvest, and one is rather anxious to know to what extent the crops will have been spoiled by the rains and winds. Those which I have seen could only be dealt with by the cutters and binders drawing in one direction, but one hopes that it is not everywhere so bad as that. What will happen if this monstrous weather proves to have wrecked the crops it is too melancholy to contemplate. Already the fields

under wheat are 11 per cent. smaller than they were last year, and the tendency is to grow less and less wheat. How the Government is viewing this increasing dependence on outside sources for our staple food I do not know; it is quite possible that it will after this harvest formulate some big scheme. Incidentally, there need be no surprise if some protective measures are found to be advocated by the Government.

The Covent Garden Strike.

One would think, if one were to have believed the papers of the last few days, that the strike of the workmen at Covent Garden were a more important topic to Londoners than is the weather. Both sides in this dispute have had a good deal of publicity, but it is only the newspapers themselves who seem to know on which side the balance of discredit lies.

The most hopeful product of the strike has been the easy way in which dealers have decentralised their traffic; produce has often been transmitted direct from growers to retailers. This is an excellent sign, for the supposed need for our time was more and more centralisation. It even seems possible that as an outcome of this strike the indispensability of Covent Garden as a centre of distribution may be decreasingly realised.

Mars.

Of all the frothy imbecilities in which the newspapers, even in August, indulged, that of getting into touch with Mars by means of wireless—an incredible amount of space has been wasted upon it—was quite the most pathetic. Certain sublime mechanicians, all cock-a-hoop in possession of knowledge ungranted to the old astronomers, assert that they have received messages during the last week from Mars. It is almost surprising that they have not yet been able to decipher these messages.

For all our science and "progress," it is patent that we are as credulous as ever the Middle Ages were, the difference being that whereas formerly there was no limit to the power of Religion, there is now no limit to the power of Science. Let us hope that the Olympians were asleep last week when we brought out the cause of all the bad weather—our 24-valve sets, and Heaven knows what. Mars in the hands of H. G. Wells is far safer than with our wireless experts, who for their antics in the last few days may have called down eternal derision on our age.

A CYPRUS MESSAGE.

We have received the following telegram from the Greek Press Bureau at Limassol:—"The National Council assembled under the presidency of the Archbishop, and considered the Government's total rejection of the claims of Cyprus and the lamentable condition of the country. It was unanimously decided to appeal directly to the Houses (of Parliament) and claim their assistance."

PRINCE TAFFARI'S GIFT.

Following his visit to the International Labour Office of the League of Nations, Prince Taffari, the Regent of Abyssinia, has sent as a gift to be placed in the new building a magnificent rhinoceros horn mounted in silver by workmen of Abyssinia, forming a stand for a signed portrait of Prince Taffari in a silver frame.

NEWS IN BRIEF.

A motor-car carrying forty passengers overturned on August 19, between Mazagan and Safi. Six persons were killed.

Mr. Henry Morgenthau, President of the Refugees' Settlement Commission, left Athens on August 23 for Geneva.

It is reported from Teheran that the Persian Ministers have tendered their resignation to the Premier, who has accepted it.

Mr Wilfred Elias Waite, 57, a first-class passenger on the Indian mail steamer China, died during the homeward voyage and was buried in the Red Sea.

A Blue Book (No. 115) containing the "Budget of the Governor-General of India in Council for 1924-25" has been published at the price of 6s. by H.M. Stationery Office.

King Hussein's newspaper, the *Kibla*, announces that the Hejaz has agreed to exchange diplomatic representatives with the Moscow Soviet, and has already designated Hakim Khan, Minister at Mecca.

The agreement between the Turkish and Greek Governments, regulating the expropriation of property belonging to Turkish and Greek nationals respectively in Turkey and Greece, was signed on August 18.

The Egyptian Press announces that the dispute with King Hussein, provoked by the removal of the Egyptian King's name from the Holy Carpet, is on the point of settlement, upon King Hussein's apologising and restoring the name.

Prince Taffari and his suite left Athens last week for Port Said by the Hesperia, placed at their disposal by the Greek Government. The Prince arrived at Alexandria on August 23. He arranged to sail yesterday from Ismailia for Jibouti.

Proceedings are threatened by the Turkish Government against the Constantinople newspaper *Vatan*, of which Ahmed Emin Bey is editor, for having published news about the Turco-Greek Agreement considered likely to cause popular agitation.

Admiral of the Fleet Earl Beatty left Constantinople on August 23 for Galatz, on his way to Bucharest, where he will be the guest of the King and Queen of Roumania. After staying a week in Bucharest Lord Beatty will return to England by way of Constantinople.

The Greek Princesses Marguerite and Theodora have arrived at Stockholm to visit the Swedish Crown Prince and family, whom they will accompany to their residence, Ulriksdal, outside Stockholm, at the beginning of September. They will remain there for some time.

The Polish War Ministry has issued an order to the effect that applications for Palestinian nationality made by Jewish male citizens of military age will be considered favourably. Many Jews, wishing to escape military service, are seizing the occasion to emigrate to Palestine.

According to the *Pioneer's* Meshed correspondent, an earthquake, which occurred recently in the Ferghana district of Soviet Turkestan, completely destroyed three villages in the vicinity of Osh, killing forty-one persons and wrecking 4,000 buildings. Nearly 9,000 people are homeless and destitute.

Brigadier-General Arthur Edward Aitken, of Sion Hill Place, Bath, who commanded the Tanga Expeditionary Force to East Africa in the early days of the War, and who also saw service in the Sudan Expedition, and who died in Rome on March 29, aged 62, left unsettled property of the gross value of £2,403, with net personalty £2,257.

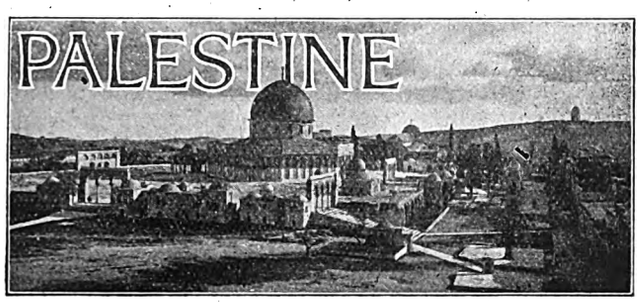
The Near and Middle East.*

From Our Own Correspondents.



Jerusalem, August 16.

Affairs in Transjordan.

It had been growing increasingly apparent during the past fortnight that all was not well with Transjordan. With the rise of Ali Rida Pasha er-Rikabi as Prime Minister of Transjordan there seemed to be a prospect of some degree of reform in the administrative departments, especially in that of public security, and that the country would, at last, justify its measure of independence. But a very great deal seems to have been going on under the surface, and now, all the way from Damascus to Cairo, the air is full of gossip about Abdullah's chief Minister's efforts to undermine Abdullah's influence and prestige at home and abroad; the more inveterate gossips even go to the length of suggesting that Ali Rida Pasha's methods are inspired from higher sources. The Emir Abdullah is, however, immediately expected back from Mecca, and if there is anything at all in this gossip we shall soon know.

On the French frontier of Transjordan a large body of brigands—variously reported as hailing from the Transjordanian or the Syrian side—have been active for the past fortnight; and not till two days ago does any serious attempt seem to have been made (except by the French) to cope with the outbreak. At last, however, the Palestine Department of Public Security, in consequence of the pressing representations of the French, have sent off a detachment of British Gendarmerie to operate from er-Remtha, Irbid district, and help to suppress the lawlessness. So far the outbreaks have been mainly in French territory, with the Emir Abdullah's domain as an easy and safe retreat. According to news coming from Syria, the French authorities are inclined to hold Ali Rida Pasha in a high degree responsible, and on the death of a certain French officer at the hands of these alleged Transjordanian brigands there was talk of confiscating Ali Rida's property in Damascus to compensate the family of the French victim.

The most recent of Transjordan's troubles does not seem to have any direct bearing on the country's internal unsettlement. Two days ago the Wahhabis suddenly came into prominence (after staying within their own confines for more than a year), and arrived within ten miles of Amman two thousand strong. Unfortunately for them, the other side was quickly able to bring aeroplanes and armoured cars into action, and the Wahhabis retired east, having lost five hundred killed and wounded. Naturally, this gave the Transjordanian authorities somewhat of a shock, and a detachment of the 9th Lancers (the only British regiment now left in Palestine) stationed at Sarafand was despatched to Amman the same day in the interests of public security.

Indian Moslems and King Hussein.

In the local Arab political arena there is nothing fresh to report. The Seventh Arab Congress still remains unsummoned, and more "Peasant Parties" have sprung up—there are said now to be ten of them, all utterly opposed to the Arab Executive. The presence in Palestine during the past few days of certain Moslem notables from India has brought into prominence the topic of Indian Moslem views on Palestine, and also on Hussein's Khalifate. The Indian Moslems would seem to have had instilled into them the notions of the earlier and cruder anti-Zionist propaganda—Jewish intentions of taking over the Dome of the Rock and the Mosque of Aksa, and flying the Zionist flag over the Sacred Area, and that, generally, Zionism was tantamount to Jewish domination over the Moslem Holy Places. Once these fears were removed from the minds of the Indian visitors their interest in Palestinian politics dwindled considerably, and they declared themselves quite content with the future possibility of a Christian-Moslem-Jewish harmony in Palestine. They had, however, nothing but dislike for Hussein's assumption of the Khalifate and the pretensions of the Hashimite family as a whole; the Khalif must, they held, be one approved by the coming general Moslem Conference to be held next year. It is locally asserted that Hussein has been compelled by pressure from Indian Moslem leaders to refuse to sign the Anglo-Hejazi treaty on the grounds that it removes Palestine from Arab or Moslem control—Palestine to the Indian Moslem being, apparently, identified solely with the Moslem Holy Places. How true such statements are it is not possible to judge; they seem to be created only for local consumption.

The "Garden Tomb."

Most people who are interested in the subject at all have quite fixed and final views on the "Garden Tomb," the Protestant rival site to the Church of the Holy Sepulchre. *The Times* a few weeks ago gave unwise prominence to some new evidence supposed to go far towards proving the genuineness of the "Garden Tomb" site. This evidence has now been very badly manhandled. Professor Brandenberg, a well-known student of Mediterranean rock architecture, on whose autho-

rity the model of a "columbarium" (the dove-cot arrangement used by the Romans for depositing the urns containing the ashes of the dead), the small object recently discovered, was identified as having something to do with the Temple of Venus known to have been set up in the second century over the site of the actual burial-place of Jesus—as soon as *The Times* article came to his notice Professor Brandenberg came forward with a very indignant denial that he had ever said anything remotely justifying the conclusions arrived at in the course of the article. A still more learned Palestinian archæologist and one-time Danish Consul in Jerusalem has come forward with the probably true explanation of the origin of the "columbarium"—that it was one of many archæological models which the pre-War caretaker of the "Garden Tomb," a Dane, Carl Beckholdt, was in the habit of carving with a penknife out of soft kakuli stone, in order to sell them to visitors. He instanced models of "Absalom's Tomb," two of which were now in his, Professor Dalman's, possession. Finally, the doyen of Palestinian archæologists, Canon J. E. Hanauer, identifies the newly-found kakuli limestone object as a slightly idealised attempt at making a model of the "columbarium" still to be seen on the northern slope of the traditional "Mount of Offence" at Silwan. While as for "the distinct traces of a large building" and "the springs of two arches cut into the rock," which *The Times* article leads one to suppose are relics of that old "Temple of Venus," Canon Hanauer shows them to be work of crusading times and fragments of the stable ("Asnarie," the old name of the site occupied by the "Garden Tomb," means "donkey-stall") for the beasts belonging to pilgrims waiting for permission to enter the Holy City.

PERSIA.

Teheran, August 5.

Reply to the Collective Note.

The Persian Government's reply to the collective Note from the foreign Legations here was delivered to the Turkish Ambassador on July 23 by the Minister for Foreign Affairs. It commences by expressing the Government's regret at the murder of the American Consul, as shown by the circular letter already addressed to the Legations, and points out, in reply to the statement in the Note, that the measures taken by the police and military were totally inadequate, that the police had received standing instructions not to fire on a religious holiday (as Friday was), if this could possibly be avoided, and if they had used their rifles this would undoubtedly have further infuriated the mob, and the fact that several policemen and soldiers themselves received injuries at the hands of the mob went to prove that they did their duty and tried their best to restrain the crowd. The Note goes on to say that most of those persons who had forced their way into the hospital had been arrested, and that, although the unfortunate incident was due to a certain extent to the indiscretion of the American Consul and his companion, the authorities are doing their best to get to the bottom of the affair and trace the authors of the outrage (to which the Government attaches much importance). The Note concludes by laying stress on the absolute freedom of religion in Persia and the security which has always been afforded to the non-Moslem minority. This reply was discussed by the foreign representatives, and although obviously non-committal and, therefore, hardly satisfactory, it was decided that no further concerted action was called for.

As was only to be expected, the usual scandalous accusations were heard in town imputing the responsibility for the occurrence to British intrigues, and this called forth a notice issued in the Press by the Prime Minister informing the public that the Government look upon such false rumours imputing the crime to foreigners with disgust, and as their utterance tends to create discord and cause trouble between Persia and friendly nations, anyone publishing or otherwise spreading such mischievous rumours will be severely punished.

The American Demands.

The American Government's demands, which were eagerly awaited here, were embodied in a Note which was handed to the Government last week by Dr. Kornfeld, the American Minister. The Note, which is in a friendly strain, urges on the Persian Government the necessity of bringing to justice the actual perpetrators of the murder and those responsible for its instigation, and reminds the Persian Government of its promise to provide adequate compensation for Mrs. Imbrie, the amount of which is not mentioned, but is to be fixed later. The American Government states that it will send a warship (all expenses in connection with which to be borne by the Persian Government) to Bushire, on the Persian Gulf, to take home Major Imbrie's body, the coffin being escorted through Persian territory by a suitable guard of honour and embarked at the port with full military honours. The Note demands additional security for American officials and residents here by the supply of increased guards at the Consulate and Legation, if this is considered necessary by the latter, and concludes that the continuance of these officials in the country will depend on the goodwill shown by the Persian Government, as will be evidenced by the immediate steps taken by them to comply with the above terms and to give effect to the American Government's demands.

The Persian Government hastened to accept the demands, and with regard to the despatch of an American warship, expressed its regret that it had no warship of its own on which to send home Major Imbrie's remains.

Although numerous arrests have been made, no sentences appear to have been passed or executed yet, with the exception of the expulsion from Teheran of two of the chief mullah agitators. One of these is the notorious anti-British agitator Khalessizadeh, son of the Shiah priest whose deportation by the Iraq Government caused such intense feeling against the British here last year. Khalessizadeh was himself expelled from Mesopotamia, and has now shared the same fate at the hands of the Persian Government. He has had a hand in nearly every political agitation during the last two years, and never lost an opportunity of railing and casting abuse at British policy in the Middle East, both from the pulpit or at public demonstrations.

A very painful impression was caused a few days after Major Imbrie's murder by a deplorable and despicable attack on his widow in the streets of the town, when, I am told, some ruffians in the crowd threw stones at the car in which she was

driving, and, far from showing respect for her widow's weeds, jumped on to the running-board of the car and attempted to tear Mrs. Imbrie's veil off. Such a dastardly assault on a lady whose husband has been brutally done to death by a Persian crowd is not calculated to show any penitence at the crime, on the part of the man in the street at least, and can but intensify the concern felt by the American Government as to the treatment of its citizens here. It is only fair to add, however, that the crime has caused nothing but disgust and abhorrence among all decent-minded Persians, and one of its outcomes has been that the Cabinet, at the demand of the Minority Party in the Mejliss, who are dissatisfied with the Government's foreign and home policy, has been summoned to appear at the House to give explanations.

General News.

It is a strange coincidence that Major Imbrie's murder should have occurred just at the time when the Northern Oil Concession (granted to the American Sinclair Company) was being discussed by the Mejliss, and just how far there is any connection between the two is, of course, purely a matter of conjecture. Half the clauses of the concession have been passed by the Parliament, and so it is not improbable that the remaining clauses will soon be ratified, but it seems that, after the recent incident, the loan of ten million dollars dependent on the ratification of the concession is out of the question, for it is difficult to see how any American concern would invest money in a country where their interests are apparently so insecure as at the present moment.

There have been reports recently of disagreements between Dr. Millspaugh, the Administrator-General of the Finances, and the Ministry of Finance, and these appear to have been well-founded by the announcement in the local Press that, through the intervention of the Prime Minister, these differences have now been settled.

H.H. the Agha Khan's mother, Lady Ali Shah, arrived here a short time ago, and is proceeding on a pilgrimage to the shrines at Koom and Meshed.

We are once again in the month of mourning, Muharram, the month of processions, breast-beating, and head-cutting, culminating next Tuesday, the tenth day, in the "Ashoora," when large crowds throng the streets to witness the rather alarming processions of men in bloodstained white smocks cutting their heads with blunt swords, and others beating their naked breasts with chains. All business is at a standstill for a whole week throughout the country, during which all Government offices and European institutions are closed, and the staffs take the opportunity of enjoying the holiday in the delightful valleys and villages in the mountains to the north of the town.

BULGARIA.

Sofia, August 19.

Seizure of Arms.

For some time the Bulgarian authorities had suspected that Russian Bolshevists were smuggling arms and munitions into Bulgaria by way of the Black Sea coast. A few days ago at Cape Emine, near Varna, a sailing boat loaded with rifles, ammunition, automatic pistols, and other munitions of war was caught in the act of running its cargo. Out of 120 cases on board, two-thirds were seized, the remainder being thrown overboard by the crew. A number of arrests were made, and it was discovered that a regular organisation existed for the reception and distribution of the arms. The senders are Russians and Bulgarians at Sebastopol, and the destinees are the Bulgarian Communists, who use the arms for their bands. In order that there should be no doubt regarding the veracity of the matter, the Bulgarian authorities invited the Foreign Consuls stationed at Varna to visit the scene of the seizure and see for themselves. This was done, and the Consuls have reported to their Legations in Sofia. This seizure proves that the reports which have been spreading concerning Bolshevist activities in Bulgaria have not been at all exaggerated, and it also proves that the Bulgarian forces of law and order are on the alert. It is, however, to be feared that many other cargoes have successfully evaded the vigilance of the coastguards, and, although fresh measures have just been taken to prevent further smuggling of arms, the limited forces which the Bulgarian Government possesses are a serious deterrent to the avoidance of similar incidents.

The Greek Massacres.

In THE NEAR EAST of August 14 mention was made of the alleged massacre by Greek officials of nineteen Bulgarian peasants. The League of Nations Mixed Emigration Commission, which was asked by the Bulgarian Government to make an inquiry into the matter, has just issued its report, which is signed by the four delegates, Colonel Corfe (British), Commandant de Roover (Belgian), and the Greek and Bulgarian representatives. After remarking that Tarlis, the scene of the massacre, is a little village inhabited by 750 Bulgarian and 50 Greek families, the Commission goes on to say that the district has been perfectly quiet for the last two years. On the evening of July 26, Greek officers and Bulgarian and Greek civilians were gathered together in the village place when a few rifle shots and bomb detonations were heard close by. An alarm ensued, and the Greek Commandant, attributing the shots to Bulgarian *komitajis*, arrested sixty or seventy Bulgarian peasants. Nobody had been hurt by the rifle shots or by the bombs. On the following morning the Commandant sent twenty-seven of the arrested peasants to a neighbouring village under the escort of ten militia, commanded by a certain Lieutenant Doxakis, who was at one time a leader of a *komitaji* band. The peasants were tied together and forced to march over a mountainous and difficult road. Some five or six hours later Lieutenant Doxakis returned saying that his escort had been attacked by Bulgarian *komitajis*, and that as his captives tried to escape, he had shot seventeen, the other ten either escaping or being wounded Meanwhile, there had been no casualties amongst either the escort or the supposed *komitajis*. The Mixed Commission, which spent approximately a

fortnight on the spot carrying out a thorough inquiry, then proceeds to draw seven conclusions. First, that neither the rifle shots nor the bombs were in the nature of a serious attack, although the spectators might have believed in the seriousness of it. Secondly, the Commission did not find any proofs or any serious indications that the rifle shots or bombs were the work of Bulgarians or *komitajis*, nor that they were the work of Greek provocative agents. Thirdly, the Commission considers that it is established that the escort were not subjected to any attack whatsoever, and that the fire which Lieutenant Doxakis opened constitutes a massacre without justification or provocation. Fourthly, that thirteen peasants were killed, one died of wounds, and the other thirteen are now imprisoned or have escaped. Fifthly, that, independently of the massacre, the Commission considers the local authorities were guilty of grave negligence in not attending to the wounded and not making any proper inquiry. Sixthly, that the result of the above events is that the Bulgarian minorities find themselves under a terror which they, the Commission, are powerless entirely to calm, whilst there has arisen a desire for mass and immediate emigration. Seventhly, and lastly, the Commission absolves the Greek Government from any blame, saying that it agreed to the inquiry, gave all necessary facilities, and previously gave an assurance that the culprits would receive exemplary punishment.

The above speaks for itself, and the Commission are to be congratulated on having ably carried out a difficult and delicate task. It is now to be hoped that less will be heard of the reports, accorded a certain measure of publicity in the European Press, concerning Bulgarian misdeeds along the Greek frontier.

Macedonians and Bolshevists.

The Macedonian Revolutionary Organisation has now definitely declared that it has no alliance with the Soviet, and that the manifesto which recently appeared in the Viennese newspaper, *La Fédération Balkanique*, was a forgery, and was the handiwork of exalted Communists.

NEW BULGARIAN MINISTER.

M. Pantcho Haji Misheff, the newly appointed Bulgarian Minister to the Court of St. James, arrived in London last Friday from Sofia. M. Misheff has represented Bulgaria as Minister at Athens, The Hague, Paris, and Rome. M. Misheff visited the Foreign Office the following day, when he was received by Sir William Tyrrell.

OBITUARY.

The death occurred on August 20 of Sir Francis William Stronge, at his residence, Kilbroney House, Rostrevor, County Down. Sir Francis, who was born in 1856, served in various diplomatic capacities, among others at Athens, Budapest, and Constantinople.

NEAR EAST BOOKSHELF.

EARLY SANSKRIT LITERATURE.

"CLASSIFIED SANSKRIT LITERATURE." By A. Berriedale Keith. D.C.L., D.Lit. London. (Oxford University Press, 1923. Price, 2s. 6d.)

"THE RELIGIOUS MYSTICISM OF THE UPANISHADS." By R. Gordon Milburn. (London: Theosophical Publishing House, Ltd., 1924. Price 3s. 6d.)

The Heritage of India Series has been enriched by two valuable contributions in Dr. Keith's accounts of the genesis of Sanskrit literature and Mr. Milburn's study of the philosophy of the Upanishads. Dr. Keith reminds us that Sanskrit developed in three directions. For centuries after the Aryan invasion priests enjoyed a monopoly of culture; and the earliest Vedic hymns are couched in a "Hieratic" tongue, which, like the ritual of the Orthodox Greek Church, was quite unintelligible to laymen. As civilisation advanced an "Aristocratic" literature took shape in the Courts of Indian Princes; it was more flexible, though less precise than the Hieratic diction. India's great epic poems, the "Mahábhárata" and the "Ramáyána," are rooted in Classical Sanskrit, and represent Indo-Aryan literature at its apogee. Meanwhile the vernacular speech, known as Prakrit, gained in the power of expressing abstruse ideas, and its influence is seen in the phraseology of the later classics. "The world knows nothing of its greatest men," wrote Sir Henry Taylor in his "Philip van Artavelde," and this dictum applies to the brightest star in the firmament of Sanskrit letters. Kálidása's career is wrapped in mystery; and all that Dr. Keith can tell us is that he probably flourished in the last half of the fourth century B.C. His drama, "Sakuntalá," has given delight to many generations, but its author was equally great in the realms of epic and lyric poetry. Although his works overflow with pathos and breathe the tenderest affection, he stood firmly on ancient ways, and offered no solution of life's problems. A passage in one of his epics denounces a Sudra who had set at naught the Brahmin's exclusive privilege of practising penance. With Kálidása sentiment is the soul of poetry; he was fond of similes, but never allowed them to stifle the main idea, which runs like a golden thread through his exquisite lyrics. Dr. Keith finds a parallel between Kálidása and our Tennyson; both, he thinks, "were poets not so much of inspiration and genius as of perfect accomplishment based on a high degree of talent." This judgment may apply to the great Victorian's later works, but genius alone could have inspired the author of "In Memoriam."

Albeit that Kálidása was capable of describing love unalloyed by earthly dross, his poetry often assumes a strongly erotic colouring. This tendency appears in his countless imitators, especially in Dandin, whose prose romances appeared in the seventh century of our era; and it indicates a profound divergence between Eastern and Western thought. European civilisation has been largely moulded by Pauline Christianity, which regards sexual relations as tabu; while pious

Hindus exalt them as the supreme manifestation of the Creator's omnipotence. A British official, while touring in Southern India, was shocked beyond measure by certain licentious bas reliefs on a riverside temple, which had evidently been repainted in anticipation of his visit. On remonstrating with the local mayor, he found him quite unable to understand that anything objectionable had been done. "Sir," was his reply, "we like to think that our women-folk's eyes should light upon these pleasing and religious emblems."

Many variants of stories which delighted our childhood are to be found in Sanskrit. A collection of fables dating back to the third or fourth century of the Christian era tells how a Brahmin in hot haste slew a faithful mongoose which had saved his infant son's life by destroying a poisonous snake. In another fable a Brahmin indulges in day-dreams of wealth untold to be gained by a judicious use of a few groats which he had obtained by begging; but a sad awakening comes with the upsetting of an earthenware pot containing his modest capital.

Is there anything whereof it can be said, "See, this is new"? asked the preacher in Ecclesiastes i. 10, and curious parallels can be traced in the wise saws of antiquity. "The destruction of the poor is their poverty" (Proverbs x. 15) is echoed by Bhartrhari's aphorism, which runs:—

The poor man feels shame; overcome by shame, he loses pride; despised, he becomes depressed; depression leads to sorrow; sorrow dims the intelligence. Ah! poverty is the root of misfortune.

Pope warns that "a little learning is a dangerous thing," and the same thought is found in Bhartrhari:—

It is easy to satisfy one who is ignorant; even easier to satisfy a connoisseur; but not the Creator Himself can please the man who has just a morsel of knowledge.

The following tirade has a strangely modern flavour:—

To hell with caste, and even lower still let all the virtues go. But let wealth be ours, wealth without which all these things are but as a blade of grass.

Dr. Keith's erudite treatise is caviare to the general public who know not Sanskrit, but Mr. Milburn's booklet will appeal to a far wider circle. He tells us that the Upanishads were a series of Sanskrit works which set forth the doctrine of the Universal Self, and the means whereby man may attain salvation; but his analysis of their teachings is confined to the twelve oldest Upanishads, which were written in the tenth century B.C. They originated in the ritual of sacrifice, which was strongly tinged by magic, and, as is the case with all organised religion, they eventually developed a mystical side, which inculcated persistent effort to realise the soul's oneness with God. The body of theology thus evolved is known as Vedanta, and its message is:—

Seek freedom; by faith, by knowledge, by self-discipline, try to break free from bondage even here. The breaking of the bonds brings peace now and the hope of immortality hereafter. Man is chained to the earth by deeds and desires. Rise above such desires; cease to act under their impulses. Make yourself familiar with the Real and the Eternal even here, and at death you will pass away to the Beyond, to the Brahma world, to partake of the transcendent life of God.

Vedanta, however, concerned itself only with the priestly caste, and its teachings never broadened out into a national or racial religion. Three centuries rolled by ere the Buddha, build-on these narrow foundations, elaborated a world-embracing creed. Mr. Milburn's preface contains an admirable set of rules for the translator's guidance, and his renderings of selected passages from the Upanishads show consummate mastery of an art which has never received due recognition. They also prove that the human intellect is a "constant," and responds in the same manner to external stimuli from age to age. F. H. S.

A TREASURY OF INDIAN FOLK-LORE.

"THE OCEAN OF STORY." Being C. H. Tawney's Translation of Somádeca's Katha Sarit Sagara. Now Edited with Introduction and Notes by M. M. Penzer. With a Foreword by Sir Richard Carnac Temple, Bart. In Ten Volumes. Vol. I. (London: Privately printed for subscribers only by C. V. Sawyer, Ltd., Grafton House, W.1.)

Over forty years ago the Asiatic Society of Bengal published a translation of "The Ocean of Story," by Mr. Tawney, the greatly loved and learned Principal of the Presidency College, Calcutta, and later Librarian of the India Office. This book has long been out of print, and the progress of knowledge has made the author's notes out of date. Mr. Penzer has reprinted Tawney's translation with revisions and addition of matter omitted, and has made a new book of it by the provision of numerous notes based on the latest researches in folk-lore. He has, the publishers tell us, produced a book roughly eight times as large as the original edition.

Only the first volume has so far appeared, but nine additional volumes are promised in quick succession. If, as no doubt will be the case, all the volumes keep up the exceedingly high standard set by the first, the work will be one of the very highest importance. Not only is Tawney's translation delightfully readable, but Mr. Penzer's notes are highly interesting, full of learning, and written in a manner worthy of the friend of Burton. The work, when complete, will be something very like an encyclopædia of folk-lore science.

We would, however, not wish our readers to believe that the book is remarkable only on account of the learning so modestly displayed by Mr. Penzer. The text is in itself of the highest interest. It was written in Kashmir about the time of the Norman Conquest of England, and represents the earliest-known collection of Indian tales, of which so many later collections are known. The tales are very numerous, and dovetail into one another in the well-known manner. All are not equally good, but most of them are not only excellent in themselves but are skilfully put together by their author of eight-and-a-half centuries back. Even to the veriest tyro in the realms of folk-lore they are interesting. Our space is, unfortunately, too limited to allow of quotation.

We must, however, add that the production of the work keeps pace with its other excellences. Paper, print, *format*, and binding are all worthy of the best reputation of modern book producers in this country, and the price at which it is offered is relatively low. A full index of Sanskrit words and proper names is followed by an equally full general index.

Altogether, a very beautiful, human, and scholarly work.

C. S.-W.

CORRECTION.

We regret that in our review in our issue of August 14 of "Cook's Handbook to Palestine and Syria," the price of the book was wrongly given. It should have been 10s. 6d.

The Roumanian Minister, M. Titulesco, has left London for St. Moritz.

Sir Lucas Ralli has arrived at Claridge's Hotel, London, from Eastbourne.

The Counsellor at the Yugoslav Legation and Madame Fotitch left London last week for Belgrade.

Lord Islington, accompanied by Colonel John Dodge, has left London for a stay of a month in Turkey.

Sir L. and Lady Alexander left London last Friday by the P. and O. steamship Delta for Casablanca.

The Albanian Minister left London on August 24 for Geneva and Tirana. He will be away for two months.

The Maharaja of Kutch left the Carlton Hotel, London, last week for the country, and will be away for about three weeks.

Princess Marie of Greece and Admiral Ioannides returned to London on August 22 from Paris. They are leaving for Harrogate this week.

Colonel Antonesco, Military Attaché at the Roumanian Legation in London, will represent Roumania at the League of Nations Assembly.

The Maharaja and Maharani of Jind were among the passengers arriving in England last Friday from New York by the White Star liner Majestic.

Sir Ali and Lady Imam, Mr. Safder Imam, and Sir Krishna Gupta left London last Thursday to join the P. and O. s.s. Morea at Marseilles for Bombay.

Colonel C. Douglas Capitaneano, formerly Military Attaché at the Roumanian Legation, who has arrived in London from Bucharest, is staying at 43, Clarges Street.

Mr. Norman Nairn, of the Nairn Transport Company, Beyrout, left London for Syria last Monday, joining the Messageries Maritimes s. Cordellière at Marseilles on August 27.

Viscount and Viscountess Erleigh, who have arrived in India on a visit to the Viceroy and the Countess of Reading, at their hot-weather camp, will be back in London on October 11.

The engagement is announced of Roy Vickers Bardsley, Sudan Political Service, only son of the late Mr. A. Bardsley and Mrs. Bardsley, of The Coppice, Buxton, to Helen, only daughter of Major-General Sir Lee and Lady Stack, of The Palace, Khartoum.

Mr. Peter Augustus Jay, United States Minister in Roumania, who arrived in London on August 20 from Bucharest, sailed from Southampton last Saturday in the President Harding for New York.

Prince Nicholas of Roumania, who for the past year has been undergoing naval training in His Majesty's ship Benbow, has arrived in London from the Mediterranean, on leave. He is staying at the Roumanian Minister's residence in Grosvenor Street.

Lord Haig and the British Legion are giving a dinner at the Hotel Victoria on September 15 to meet the "Fidac" delegates from America, Belgium, Czecho-Slovakia, France, Italy, Poland, Roumania, and Yugoslavia. "Fidac" signifies the Fédération Interallié des Anciens Combattants.

APPOINTMENTS, PROMOTIONS, ETC.

Mr. Andrew Ryan, who has been Chief Dragoman at Constantinople since January, 1921, has been appointed Consul-General at Rabat, in French Morocco.

The King has granted authority to Mr. Walter James Ablitt, Assistant Commandant of Police at Alexandria, to wear the insignia of the Order of the Nile, Fourth Class.

The War Office announces the appointment of Lieutenant-General Sir Richard Cyril Byrne Haking, G.B.E., K.C.B., K.C.M.G., to be Colonel of the Hampshire Regiment, in succession to Major-General Sir Charles Benjamin Knowles, K.C.B., deceased. General Haking last year succeeded Sir Walter Congreve as G.O.C. in Egypt.

The following promotions and transfers in the Colonial Service have been made by the Secretary of State for the Colonies:—Mr. T. F. Garvin, K.C., Solicitor-General, Ceylon, to Puisne Judge, Ceylon. Mr. J. C. Howard, President of the District Court, Nicosia, Cyprus, to Kings Advocate, Cyprus. Dr. J. F. E. Bridger, Sanitary Commissioner, Ceylon, to Principal Civil Medical Officer, Ceylon.

The Times Jerusalem correspondent reports that Mgr. Godric Kean has been appointed Auxiliary Bishop to Mgr. Barlassina, the Latin Patriarch of Jerusalem. This is the first occasion that such an appointment has been given to an Englishman. Mgr. Kean, who was rector of St. Mary's Mission at Oldham, resigned at the beginning of the War and served as Chaplain to the Forces in France, Belgium, Egypt, and Palestine. In 1922 he returned to Lancashire, but last year was appointed Chaplain at Mount Carmel in Palestine.

THE BALKAN HOUSE OF GLASS.

Yet another instance of the fact that the home of the Balkan nations is built of glass and that it is dangerous for any member of the family to indulge in the habit of throwing stones is afforded by the report of a mixed Commission of the League of Nations charged to investigate the killing of a number of Bulgarian peasants in Greece at the end of July. The report is signed by all the four members of the Commission—a Greek, a Bulgarian, a Briton and a Belgian—and has, therefore, more significance than if it had been the work of delegates entirely foreign to the Balkans. It establishes the following facts:—A small village called Tarlis on the Greek-Bulgarian frontier is inhabited by a number of Bulgarian and Greek families, who had contrived to live without incident for the last two years. On the evening of July 26, Greek officers and Bulgarian and Greek civilians were gathered together in the market place when several rifle shots and detonations of bombs took place near by. Nobody was hurt. The Greek commandant attributed the event to Bulgarian *komitajis*, and arrested between sixty and seventy Bulgarian peasants. Twenty-seven of these were sent the next morning under the charge of Lieutenant Doxakis, formerly the chief of a *komitaji* band, to a neighbouring village. The peasants were tied together and forced to traverse a difficult mountain road. Five or six hours afterwards Lieutenant Doxakis returned, stating that his escort, which consisted of ten militiamen, had been attacked by Bulgarian *komitajis*, that the captives had tried to escape, and that he had fired on them, killing seventeen. The others escaped, but some were wounded. After an inquiry conducted on the spot, the Commission came to the following conclusions:—(1) that the shots and bombs were not of the nature of a serious attack; (2) that there was no proof or any serious indication that the shots and bombs were the work of Bulgarians, or *komitajis*, or Greek *agents provocateurs;* (3) that the escort was not attacked, and that the fire that Lieutenant Doxakis opened constitutes a massacre without justification or provocation; (4) that the local authorities were guilty of grave negligence in not attending to the wounded, not informing relatives, not identifying the dead, and not properly burying the same, and in not making any serious inquiry, whilst, in addition, subjecting another group of Bulgarians unnecessarily to cruel treatment. A rider is added to the effect that the Commission considers that the Greek Government, which agreed to the holding of the inquiry, is not involved.

The first thing to be borne in mind in connection with this incident is that there is nothing at all unfamiliar to the Balkans in the conditions and incidents reported upon by the Commission. It so happens that in this particular instance the victims were Bulgarians and the perpetrators of the "massacre" Greek; but exactly the same thing could happen, and no doubt has often happened, not only with the nationalities in the two rôles reversed, but also with all the possible changes rung in regard to the nationality of the peoples concerned on each of half a dozen or more Balkan frontiers. Neither the lieutenant nor the local authorities would be conscious of having exceeded or fallen short of their duties. The shots near the village would be regarded as a convenient opportunity for disciplinary action; an officer, especially an ex-*komitaji*, would not have to be told what was expected of him when ordered to conduct a band of prisoners to another place, and no one would be surprised when he returned after a short interval with the report that he had been attacked and that some of the prisoners had been shot in attempting to escape. The last thing that would occur to the local authorities in such circumstances would be to adopt any one of the courses referred to by the Commission when it suggests that they failed in their duty in not attending to the wounded, and so on. In its fifth "conclusion" the Commission states that, as a result of the events recorded, the local minorities find themselves terror-stricken, and that there is a desire for immediate mass emigration. Whether the emigration takes place or not, there can be little doubt of the bad blood now engendered in a village where the two nationalities had lived at peace with one another for two years. Sooner or later vengeance will demand its own; somewhere along that same frontier Greek lives will pay the penalty for the seventeen victims at Tarlis, and so the curse of racial hatred runs its course.

The Tarlis episode, however, is noticeable for one unusual development. It marks in all probability the first occasion when the Government primarily concerned has not only facilitated the holding of an inquiry, but has also undertaken to punish the culprits "with exemplary severity." If the Government of M. Sophoulis carries out this undertaking to the letter, there is some reason to hope that its action may eventually lead to a new era in the Balkans. There will be no desire on the part of anyone acquainted with conditions on the Balkan frontiers to attach special blame to the authorities of one particular district because an incident in which they are involved has achieved wide notoriety. If they are not aware of a grave dereliction of duty in connection with an episode of this nature, it is because their conscience has become blunted by frontier traditions, which hold life of little account and are entirely divorced from the morality of latter-day civilisation. Not only is their conscience blunted, but public opinion in that part of the nation which has nothing to do with frontier life has also been so indifferent to the national honour that in the past it has refused to believe or to inquire into excesses attributed to its own countrymen, while readily crediting and exaggerating the alleged excesses of others. It will call for considerable courage on the part of the Sophoulis Cabinet to make an example of everyone implicated in the Tarlis "massacre"; but unless it does, no Greek Government in the future can hope to impress the European public when it complains of outrages of which its nationals have been the victims on any of Greece's frontiers. On the other hand, if it can show that its own hands are clean in this matter, it will be able to appeal with irresistible force to all the other Governments in the Balkans to join it in a resolve to put an end to a condition of things that has long been a disgrace to the Peninsula. From this will follow the elimination of *komitaji* bands, and the ground will then be clear for the close co-operation of the Balkan States, which all the peoples genuinely desire, but which no Government hitherto has been willing to take practical steps to secure.

THE LAW OF MODERN EGYPT.*

BY SIR MALCOLM McILWRAITH, K.C.M.G., K.C.

Some irreverent person once described the Common Law of England as an "ungodly jumble." If one had to find a phrase of two words in which to describe the complicated legal and judicial system of Egypt, as it has hitherto existed—moulded, as it has been, by the legislative disabilities and international restraints of various kinds which the circumstances of this cosmopolitan country have imposed upon it—one would be inclined to call it a "judicial Babel." All that one can hope to do therefore, within the brief limits of an hour's discourse, is to thread one's way rapidly through this legal labyrinth and endeavour to point out *en route* its most salient features.

The law of modern Egypt may, for practical purposes, be divided into two main branches, viz., (1) the law applicable to foreigners, either among themselves or in their relations with the natives, and (2) the law applicable to natives only.

And though the total number of the foreign population of Egypt does not exceed some 200,000 inhabitants, the importance of these "foreign colonies," as they are called, by reason of their wealth, intelligence, and political influence, is such that they have always loomed very large on the local horizon. Moreover, since it is their affairs which primarily interest a European audience, I shall deal first with this branch of the law, and, secondly, with the law applicable to natives only.

Now, the whole of the law applicable to foreigners in Egypt, as it has hitherto existed, hinges primarily on what is comprehensively known as the "Capitulations"—that is to say, the body of rights, privileges, and immunities of a legal and fiscal character, hitherto enjoyed by the subjects of foreign nations in the Ottoman Empire and in other countries of the East. I shall make no attempt to describe in detail that system here, for it would manifestly occupy one or several lectures by itself. Briefly, it simply means that foreigners in general are not subject to the local law or the local law courts, and cannot be taxed by the local Government. As a result of this system, the law applicable to foreigners in Egypt, both in civil and criminal affairs, was for centuries their own national law, administered to them by their own Consuls in their own Consular Courts. The principle was that in civil (including commercial) affairs every plaintiff had to sue the defendant in the latter's Consular Court, in accordance with the maxim "*actor sequitur forum rei.*" The legal and judicial chaos to which this system ultimately gave rise in Egypt has been eloquently described in many of the treatises above referred to, and more especially in the Reports of the French Government Commission of Paris of 1867; the International Commission of Cairo of 1870; and the Constantinople Commission of 1873, which led to the establishment of the present Mixed Tribunals in 1875. When these Courts were set up, there was enacted a common body of legislation, applicable to all foreigners in their relations with each other, or in their relations with natives. Thenceforward the law was as follows:—In all disputes between foreigners of different nationality or between foreigners and natives, as well as in all disputes relating to land (even between foreigners of the same nationality), the law applicable was this new body of legislation, introduced in 1875, at the time of what is still called "La Réforme Judiciaire." But in all disputes between foreigners of the same nationality—unless it related to land—as well as in all crimes committed by foreigners, and in all matters of personal statute (such as marriage, succession, guardianship, and the like), the law applicable to foreigners continued to be their national law, administered to them by their Consuls. And that is, broadly speaking, the situation down to the present time.

This new body of legislation for foreigners of different nationality, litigating with each other or with natives in ordinary civil and commercial affairs, consists of four main classes, viz.: First, these "Mixed Codes" of 1875; secondly, the supplementary legislation, promulgated by the Egyptian Government with the approval of the Treaty Powers (*i.e.*, those which were parties to the judicial reforms of 1875); thirdly, legislation of a minor character which the Egyptian Government has been empowered to enact with the assistance of the Mixed Court of Appeal; and, fourthly, of a somewhat more important type of legislation, which, under a comparatively recent statute, the Government has been authorised to issue, with the aid of a special organism to be described hereafter. Some explanation is required as to each of these different classes of legislation.

A. *As regards the Codes*, they were in the main copies of the French Napoleonic Codes of 1804 and following years, but they differ from the latter in some important respects. Thus the Mixed Civil Code contains none of the family law which forms so important a part of its great prototype, since all such matters of personal statute are, as I have said, still reserved to be dealt with by the Consulates. On the other hand, the Egyptian Code contains certain provisions which have been inserted to meet the special necessities of Egypt, such as those for the protection of foreign creditors, which are not to be found in the French Code (see, *e.g.*, Articles 107, 176, and 197 of the Mixed Civil Code). Generally, it must be said that these codes, which were very hastily put together, are in many respects defective. There are numerous omissions and *lacunæ* of various kinds, as well as some inconsistencies, and it is often difficult to understand why certain divergences were made from the French original. They therefore require more or less complete revision, and this, up to the present, it has never been practicable to undertake by reason of the immense difficulty of legislating for foreigners under a system which required the consent of nearly all the European Governments to which such foreigners are subject.

B. As regards legislation with the approval of the Powers, this was usually effected by means of

(*) Being part of an address delivered at Cambridge University on August 11 last.

International Commissions sitting in Egypt. The ordinary method was for the Egyptian Government to present to the foreign Governments a programme of the reforms it desired, whereupon these foreign Governments appointed their diplomatic representative in Egypt as their Commissioner for the purpose. The local Diplomatic Corps then resolved itself into an "International Commission," and each diplomatic representative was assisted by a technical delegate (without a vote), who was almost invariably the judge of that Power in the Mixed Court of Appeal, or in one of the Tribunals. I had the honour to sit in many of these Commissions as the legal assistant of the late Lord Cromer and of his successor, the late Sir Eldon Gorst, and I was the only technical delegate who was not a judge. I had thus abundant opportunity to observe, impartially, the defects of this institution, although, eventually, many important measures were safely piloted through it. The system was unpractical, its main defects being that, on the one hand, the diplomatic representatives were, as a rule, quite unversed in the abstruse legal problems they were called upon to solve; and, on the other hand, the technical delegates—who resolved themselves into a Sub-Commission, and really did all the work—were both too little acquainted with the general conditions and requirements of the country to make competent legislators, and too fully occupied with their judicial functions to have the requisite time to devote to legislative duties. The result was that many of these Commissions dragged on for years, to the great detriment of the country's interests and to the annoyance of suitors in the Courts, whose cases were frequently postponed by reason of the judges' constant occupations elsewhere.

C. The third class of legislation was, like so many other institutions in Egypt, a compromise between the practical necessities of the country and the jealousy of the Powers. Certain small matters of police legislation, sanitary affairs, and petty administration generally were delegated to the Court of Appeal, under a decree of 1889, the Court being empowered to approve such legislation on behalf of the foreign Governments. In these matters, however, no higher penalties were permitted than a week's imprisonment or a fine of £1. Such penalties were manifestly insufficiently deterrent in serious affairs where severe repression was essential, and many of the abuses aimed at continued to flourish in defiance of such regulations.

D. The fourth and last class of this legislation is that which is effected by means of what is known as the "Article 12 Assembly." This organism was established by a law of 1911, modifying Article 12 of the Mixed Civil Code, from which it has thus taken its name. It consisted in a still further recourse to the judges as legislators—a bad system, in Egypt at any rate, as has been pointed out, but the only alternative which the Powers would accept to the intolerably cumbersome Commissions. Under this system the Mixed Court of Appeal, supplemented by the senior judge of each Power not represented in that Court, was empowered to make "additions and amendments" to mixed legislation (notably the Codes) not confined, as under the 1889 Decree, to matters of Police and petty administration, but not permitted to affect any matters of fundamental principle laid down in the Organic Statute. This innovation has proved a very useful measure, and has entirely superseded in practice the former Commissions. By means of it the Egyptian Government has been enabled to pass certain laws which were of too controversial a nature to have had any chance of getting through an International Commission. I may mention, as the most notable of these, the famous "Five Feddan Law" of 1912, which establishes the immunity from seizure and sale for debt of the homestead in small agricultural holdings not exceeding five feddans, or roughly five acres in extent. This measure was due entirely to Lord Kitchener, whose great solicitude for the welfare of the *fellaheen*, or peasant, population was the most marked feature of his Egyptian administration. It was aimed at the exploitation by the village usurers of the large and defenceless class of peasant proprietors, and was based on the Punjab Land Alienation Act of 1900, with which Lord Kitchener had become acquainted in India.* Concerning this measure, which roused much controversy in Egypt at the time, I may observe that the legal advisers of the Government were very sceptical as to its wisdom or practicability. I remember that an eminent Greek financier told me at the time that he had offered to bet Lord Kitchener anything he pleased that within three months of its promulgation the Greek usurers—against whom the measure was chiefly aimed—would have discovered at least three different ways of successfully evading its provisions. These doubts have proved fully justified by the event. The *fellah* has been the chief victim of the law designed for his protection. Being unable by means of a mortgage on a property of less than five feddans to obtain advances from the banks—notably the Agricultural Bank, which had been founded by Lord Cromer and Sir Ernest Cassel for the precise purpose of delivering him from the clutches of the local moneylenders—he has once more had recourse to these sharks, to whom he has been compelled to hand over his land, in pledge, as a security for the loan. This the law does not forbid. It is true that the creditor holding the pledge (*créancier gagiste*) is forbidden by the law to sell the land; but as he has a right of retention until he is paid, and as he usually fails to render a strict account of the profits, he is, in fact, in as privileged a situation as if he held a mortgage. And the debtor consequently finds himself, in practice, no better off than if he had been legally expropriated. Another common device of these village usurers is to require the borrower to purchase a fraction more land, sufficient to make up his holding to five and an-eighth feddans, the purchase-money being included in the loan. This is sufficient to take the case out of the statute. There are various other equally effective means of eluding this famous law.

We have now dealt with the *civil* legislation affecting foreigners. As regards criminal law, these matters, as previously observed, are still in the main reserved to the Consulates of the foreign Powers, which apply their own criminal law. Certain matters are, however, dealt with by the local law. Thus practically all police offences committed by foreigners are punished by the Mixed Penal Code or by decrees of the Government which have received the assent either of the Powers or of the local judges, under the statutes referred to.

* Also the Homestead Exemption laws in the United States of America, which have been copied by the French, in their law of July 12, 1909, instituting the *bien de famille insaisissable*.

Again, jurisdiction in bankruptcy misdemeanours has been conferred by the Powers on the Mixed Tribunals, because such matters can manifestly best be dealt with by the Court which conducts or supervises liquidations in bankruptcy. These Courts have, therefore, been empowered to inflict imprisonment up to five years for such offences.

Finally, certain crimes and misdemeanours committed by or against the judges and personnel of the Mixed Tribunals themselves are within the criminal jurisdiction of these Courts. Practically the only forms of these offences met with in practice are libels and Press offences against the judges and officials of the Courts.

2. Passing now to legislation applicable to Natives only, this may be roughly divided into two classes, viz., civil and criminal on the one hand, and personal or family law on the other. The first class consists of the legislation promulgated by the Egyptian Government under the general powers of autonomy conferred upon it by the *firmans* of the Porte. Such legislation can bind natives only or such foreigners as are not protected by the Capitulations.

The second class consists of religious law, by which, in Eastern communities, family relations and similar questions of personal statute are ordinarily regulated. The source of such religious law is the Koran and Mohammedan law generally in the case of Moslems, and the different types of Canon law as regards the various sects and denominations of Native Christians.

The legislation passed by the Egyptian Government consists of the Native Codes and the vast mass of laws and decrees by which such codes have been supplemented since 1883, when they were first issued.

Reference has already been made to the chaos and confusion which led to the establishment of the Mixed Tribunals. The situation which necessitated the reorganisation of the Native Courts and the revision of the legislation they administered was at least as grave—in a sense far graver, for the number of persons affected was infinitely larger. The most authoritative account of such situation, in a few words, is to be found in Lord Dufferin's Report of 1883 (Egypt, No. 6, 1883), in which he said: "The chief requirement of Egypt is justice. A pure, cheap, and simple system will prove more beneficial to the country than the largest constitutional privileges. At this moment there is no real justice in the country. What passes under the name is a mockery, both as regards the Tribunals themselves and the 'corpus juris' they pretend to administer. Since the time of Mehemet Ali a hybrid sort of civil justice has been gradually established. The *cadis*, or religious judges, have indeed preserved their jurisdiction in questions relating to marriage, the descent of property, the guardianship of minors, etc.; but all other matters, whether civil or commercial, are now brought before the Tribunals which have superseded them."

After explaining this organisation, Lord Dufferin proceeds:—"But this organisation, though presenting a fair appearance on paper, is of little value as a justiciary. In the first place, none of the occupants of the Bench in any of these Courts have had a legal training, having been promiscuously selected from the general public, without reference either to their character or qualifications, and, in the next place, there are no real laws in existence to guide their proceedings. At one time the French Codes are invoked, at another the regulations formerly in force before the old Mixed Tribunals, and at another the precepts of the Mohammedan religion. The misery and confusion entailed by such a state of things has long since attracted the attention of the Egyptian Government."

A complete recasting, therefore, of the organisation of justice for natives was essential, and the new Courts and the new Codes were launched by a Decree of June 14, 1883.

These Codes were largely a reproduction of those promulgated for the Mixed Tribunals eight years earlier. Unfortunately they are in some respects even more defective and inadequate than their prototypes, and they have been considerably amended from time to time. Notably the Penal and Criminal Procedure Codes were drastically revised and repromulgated in 1904, the work having occupied five years. As observed, all these Codes have been supplemented constantly by laws and decrees of the Government, with the assistance of the former Legislative Council; and the collection of these laws and decrees now fill some thirty-five volumes, one having been published every year. Together they constitute Egyptian law as applicable to natives.

In most important matters it has long been the practice, where a new law was issued, to promulgate it simultaneously for natives and Europeans alike by securing, in the latter case, the assent of the Powers or other requisite local authority.

As regards personal or family law, it is sufficient to say that, so far as Moslems are concerned, it is to be found in the Koran and its authoritative commentaries. But Mohammedan law, as administered in Egypt, has long been defective in certain respects, and it was earnestly desired to effect improvements in it. Any attempt of this kind, however, always met with determined opposition under the régime of the ex-Khedive, and it has only been since the accession of the late enlightened Sultan and his successor, King Fuad, that it has been possible to undertake certain reforms. The basis of such reforms is not, of course, any fundamental modification of principles, since, as is well known, the sacred law is fixed and unalterable. It consists, therefore, merely in the importation into the official Hanafite rite of more equitable solutions derived from the other rites. There is nothing revolutionary in such a proceeding, for there were formerly in Egypt cadis or judges of all the four orthodox rites, and in the event of a dispute between parties belonging to different sects, it was the rite of the defendant which prevailed. It was only at the commencement of the nineteenth century that the Hanafite rite was adopted as the general one for the solution of all disputes, whatever might be the denomination of the parties in the cause. A strong and representative committee of Moslem doctors has therefore been formed in Egypt, whose object it is to revise and harmonise the various solutions

permitted by Mohammedan law as a whole, and to apply the most equitable principle to cases which, under the Hanafite rite, have given rise to special difficulty and complaints. The labours of this committee have already met with considerable success, and are of excellent augury for the future of Mohammedan law in Egypt.

Finally, it is to be observed that in all these matters of religious law it remains to be seen what will be the effect, in Egypt, of recent events in Turkey, which have produced a grave crisis for Islam. As is well known, the Khalifate has been abolished by the Turks, justice has been secularised, and the law has been ordered to be revised in this sense. So profound and revolutionary a break with the theocratic traditions of the Moslem polity is difficult to grasp, and its effects will naturally be watched with the keenest interest by ourselves, who are the greatest Mohammedan Power in the world. So far as it is possible to judge at present, it does not seem at all likely that the Turkish lead will be followed in Egypt, where the great Mohammedan University of El Azhar is the most reactionary and conservative stronghold in the world of the principles and practice of Islam. A more probable result of these events is that the hegemony of Islam may pass from Turkey to Egypt, and Cairo may become in the future the centre of the Mohammedan faith. At present, however, the *Ulema* of Egypt appear to be quarrelling amongst themselves on the whole subject, and may very possibly never be able to agree upon a Khalif.

(To be continued.)

BAGHDAD'S WATER SUPPLY.

To the Editor of The Near East.

Sir,—I fear that your Iraq letter of July 30 (p. 188 of your issue of August 21) does rather less than justice to the quality of Baghdad's water supply. It can scarcely be described as "heavily chlorinated," the dosage of chlorine at the main pumps being practically identical with that of London water, and at the other stations only fractionally greater. Complaints of taste are rare, and the majority of Baghdadis, like the majority of Londoners, are unaware that their supply is chemically treated. The treatment has been carried on for seven years with highly satisfactory results, the frequent routine tests of the Pathological Laboratory showing a bacteriological improvement of approximately 99 per cent. Incidentally, the bacteriological standard shown by these tests is higher than that of pre-War London water.

The apparatus is under the control of local personnel, with British supervision. An occasional faulty adjustment may lead to temporary overchlorination with production of slight taste, but not to an undrinkable water. The system has undoubtedly saved an enormous expenditure on water-works and a large amount of water-borne disease.

The excess of sediment to which your Correspondent refers is unavoidable during the flood season of the Tigris until suitable reservoirs and flumes can be installed, and this is purely a question of money. The distribution of a water free from sediment is certainly very desirable, and some further bacteriological improvement will undoubtedly follow from it, but this improvement cannot be very great. As regards the problems of distribution, it may be remarked that among the special difficulties are the rapid corrosion of pipes in a soil impregnated with gypsum and salt, and the numerous subsidences and fractures of mains resulting from the underground cavities, cellars and "serdarbs" which abound in the city.

As soon as funds are available, a more ample supply will be secured, but there is no cause for alarm as regards the purity of the present supply or its safety from a health standpoint.—Yours, etc.,

F. L. Bassett,
Government Chemist, Iraq.

Shipley, Sussex, August 23.

THE AHMADIA MOVEMENT.

His Holiness the Khalifa-tul-masih, Alhaj the Mirza Bashirud in Mahmud Ahmad, the head of the Ahmadia movement in Islam, who is to represent Islam at the forthcoming conference of religions of the Empire at Wembley, arrived at Victoria Station, London, on August 22. Owing to a misunderstanding, the Khalifa arrived at a time when half of those who were to have assembled to welcome him were absent. Those present, however, joined him in saying prayer, and, the baggage having been put in charge of one member of the party, they moved off to Ludgate Hill, and thence to St. Paul's Churchyard. This was done to fulfil a tradition with Mohammedans which says that after coming from Damascus the Mahadi will pray at the "Bab-el-Lud," i.e., Ludgate. The Khalifa called at Damascus on his way to England. From Ludgate his Holiness went to Chesham Place, where he is staying during his visit to London. He also proposes to visit Brighton to see the memorial erected there to Mohammedan soldiers who fell during the War.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Trade Outlook.

The period that has elapsed since the conclusion of the London Conference has served to bring into clearer relief the perilous position in which our trade may be placed as a result of a resuscitated Germany, and it is not too much to say that there is now widespread anxiety as to the outlook, which has not been lessened by the knowledge that it is evidently fully shared in official circles. The warning of the Chancellor of the Exchequer as to the danger of the proposed Franco-German commercial agreement, followed by the decision of the Government to appoint an Advisory Committee to watch trade developments on the Continent have served to crystallise attention on the situation. It has, of course, been foreseen for years that a European settlement would bring us face to face with the present problem, but, as I pointed out last week, there could be no hope for the expansion of British commerce while the Continent was still in a state of unrest. If, however, we are to profit to any extent by the trade revival, which may now be expected to ensue, the situation will very evidently need most careful handling, and it may be that the solution will have to be sought in a direction against which the majority of the electorate has hitherto resolutely set its face. But the times are obviously such that it would be foolish to insist on adherence to any economic theory, if there is at least a possibility that its modification or temporary abandonment may provide the remedy for conditions which would appear at the moment to threaten an increase rather than a reduction of unemployment.

Back to Pre-War Competition.

There are, shortly, two new factors that have to be envisaged—the development of German competition and the proposed agreement to which I have referred. For reasons which are obvious, Germany has been unable since 1918 to make any great progress in foreign trade, though signs have not been wanting, especially in the Near East, that she has been doing everything possible to prepare the way for future commercial development on the aggressive lines that marked her pre-War trade policy. The result of the Conference is to bring within sight the time when Germany will be enabled to resume her pre-War competition. If the respective conditions in Great Britain and Germany were the same as before the War, it would be possible for us to view the outcome with comparative equanimity, but they are manifestly unfavourable from our point of view, both as regards hours of labour and the exchanges, and it is very evident that Germany will be in a position, as things are at present, to undersell British goods in foreign markets. The problem is one which affects other countries besides ourselves—in particular, the United States, but the fact that we are not isolated in the matter is a small consolation, for to us more than to any other country the development of overseas trade is a paramount necessity. As I have suggested before, we are not now in a position blindly to follow any economic theory oblivious of the consequences, and it will be a strange outcome of the situation if external pressure should result in the adoption in some measure of a protective tariff. It is, indeed, difficult to see by what other way British trade interests can be adequately safeguarded.

Sudan Trade Expansion.

The trade statistics of the Sudan for the first five months of the current year make a wonderfully good showing. The value of the imports is £E2,271,766, as compared with £E1,761,082 for the corresponding period of 1923, while the value of the exports has risen from £E1,310,270 to £E1,932,430, while the re-exports stand at £E86,391, as against £E42,308. There is an increase in the volume of trade of no less than £E1,170,678, while it is significant that there is a marked decrease in the adverse balance of trade. Great Britain is easily first among the Sudan's customers, with 66.5 per cent. of the exports, and is also first in the list of countries from whom the Sudan draws its supplies, but in this case the percentage is only 34.8. Cotton was, of course, responsible for the development of the export trade; 124,152 kantars were exported during the five months, as compared with 53,983 for 1923, the respective values being £E981,100 and £E203,879.

The Palestine Trade Position.

I have just received a copy of a report submitted by the Haifa Chamber of Commerce to the Palestine Government drawing attention to the adverse economic position of the country. It is emphasised that commerce began to be affected as soon as Customs barriers were established on the Syrian frontier, the effect of which was that trade was diverted to Beyrout. The report also draws attention to the proposed imposition of a 25 per cent. increase on freight rates on the El-Hamme-Damascus line, which, it is maintained, is designed by the French authorities further to divert trade to the above-mentioned port. It is suggested that the consequence will be that Palestine will be obliged to export its products to the hinterland viâ Beyrout, and that, *inter alia*, much less traffic will be carried on the Haifa-Semakh line.

THE LIUBLIANA SAMPLES FAIR.

(From Our Liubliana Correspondent.)

Liubliana, August 21.

This year's Liubliana Fair is, in the main, a replica of its predecessors. The wisdom of the Fair Committee in deciding to hold it in August instead of September has been justified by better luck as regards the weather, and visitors to the fair, besides transacting business, are making the most of their opportunity of seeing something of the beauties of Alpine Slovenia.

There are a few new features, the most interesting of which is the pavilion taken by the Slovene Alpine and Hunters' Societies for the purpose of advertising Slovenia's possibilities as regards sport and mountain climbing. There is a great display of antlers and chamois horns, and there are fine specimens of blackcock and capercailzie and the various fur-bearing animals in the country.

The Slovene Alps are rich in chamois, and the writer, quite recently, while going for a quiet ramble over the Kamnik Alps, surprised a herd of some thirty head of these graceful wild goats at quite close quarters. The rare steinbock, too, may be seen occasionally, but he is strictly protected.

A very interesting exhibit in the pavilion is the collection of specimens of birds protected by law, and of flowers to be gathered sparingly. Among the birds are to be noticed the larger and finer birds of prey—the golden eagle conspicuous among them—beautiful creatures, whose usefulness far outweighs any damage they may do. The Slovenes are justly proud of the natural beauties of their country, and as a further step towards safeguarding its rarer fauna and flora, the finest of the Triglav valleys—the Valley of the Seven Lakes—has recently been set apart for enclosure as a national park.

Another novel feature is the stall occupied by the Blighty Industries Association, where Scotch tweeds, homespuns, and tartan rugs are, for the first time, being exhibited in this country. The stall is quite one of the best arranged in the fair, and the whole exhibit is attracting much favourable attention. Apart from this, British goods are just a little more in evidence than on former occasions. There is a British motor-car (Salmonson) on view; there are several B.S.A. and Humber ordinary and motor bicycles, and Messrs. A. A. Baker (spirits and tea) occupy their own stand.

The fair as a whole provides further evidence of progress in most branches of native industries.

THE PRAGUE SAMPLES FAIR.

A correspondent writes:—The metal and engineering section of the Prague Autumn Fair (September 21-28) is the largest of the twenty-two branches of exhibits which will be represented there. Machinery and plant for the various industries will be exhibited by 101 firms; agricultural machinery and implements by 36; motor-cars, motor-cycles, and accessories by 39; instruments and tools for industries by 20; safes, scales, weighing machines, locks, etc., by 68; and lamps, cutlery, and household utensils by 53. The firms exhibiting electrical instruments, apparatus, plant, and accessories number 62. Visitors to the fair, on production of their fair tickets, are granted reductions of fares on the Czecho-Slovak, the Yugoslav, and Roumanian Railways.

British Consular Reports.

VI.—YUGOSLAVIA.

The following extracts are taken from the report of the Commercial Secretary to H.M. Legation, Belgrade (Captain E. Murray Harvey, O.B.E., M.C.), on the economic and industrial conditions in Yugoslavia in 1923 :—

In reviewing the economic development of the Serb-Croat-Slovene Kingdom during the year 1923, the two outstanding features are the policy of deflation inaugurated by the present Minister of Finance and the monetary stringency which has been experienced and has now reached an acute stage. This latter symptom is attributed by some to the refusal of the Minister of Finance and the governors of the National Bank to increase the note circulation.

As a result of the above-mentioned deflation policy the dinar very soon recovered from the unsettling effect of the cessation at the end of 1922 of "pegging" operations; it has maintained its foreign exchange value throughout the year, and has shown a tendency to appreciate in terms of foreign currencies.

In spite of repeated appeals from banking and industrial interests, the Minister of Finance has refused to print more notes. A proposal was put forward by a conference of the Zagreb and Liubliana banks that, "in order to take full advantage of the harvest, and in the absence of any hope of immediate assistance from foreign credits, the note circulation should be increased by 500,000,000 dinars on the basis of bills given by the merchants, liquidation to be guaranteed by the National Bank by the spring of 1924." This was similarly resisted. Other contributory causes of the monetary shortage frequently referred to are the hoarding of notes by the peasants, the large sums being spent on building, and the restriction of seasonal (exporting) and general credits granted by the National Bank.

Abnormally high rates of interest are demanded and obtained in respect of loans required for urgent needs, such as the completion of partly finished buildings, and in extreme cases 30, 40, and even 50 per cent. has been paid for financial accommodation. There are now signs that the rates of interest exacted by financial institutions are being decreased. This is probably due to the deflation policy and the resultant "stabilisation" of the national currency; for while high rates of interest are a natural concomitant of loans granted in a depreciating currency, the converse is also true, and after appreciation reduction in rates of interest is to be expected.

Agriculture.

The optimistic forecasts for the harvest of 1923 were in many respects fulfilled. A conference of Chambers of Commerce and Exporters' Associations was held at Belgrade in August, at which experts from all parts of the country assisted, and an attempt was made to form an estimate of the yield of the year's crops and of the exportable surplus. According to the experts' reports, based upon the state of the crops, the following quantities of produce would be exported during the year commencing September 1, 1923: 35,000 wagons of wheat (value 1,200,000 dinars), 30,000 wagons of maize, 3,000 of oats, barley, and rye, and 2,000 of beans. The total value of these was estimated at 2,095,000,000 dinars. The first export statistics have not, however, confirmed these estimates. From the commencement of the export season—that is, from September 1 to October 31—only 2,500 tons of wheat were exported and 800 tons of other cereals. But naturally the export for the whole year cannot be judged by these figures. It happened that the price of wheat fell very heavily at this time (by 35 per cent.), and it was to be expected that the exports would wait for a rise in prices.

The Minister of Finance's estimate of the production of 1923, which is confirmed by the still incomplete statistics of the Ministry of Agriculture, is probably fairly accurate. It is as follows (in quintals): Wheat, 16,844,701; barley, 3,119,304; rye, 1,501,844; oats, 2,809,167; meslin, 308,610; bearded wheat, 129,918; maize, 20,181,243.

In order to improve the quality of cereals in 1923, the Ministry of Agriculture issued regulations concerning the establishment and maintenance of stations for the cleaning and sorting of wheat for sale and the preparation of seed corn, to be established near the markets. One hundred and forty of these have already been installed.

An inquiry was held by the Ministry of Agriculture with a view to collecting data on the use of artificial manures, it being thought that fertilisers are not utilised in sufficient quantity. In 1923, 3,164 wagons of artificial manure were used, and in 1922 only 1,453. Superphosphate is chiefly used (in 1923, 2,752 wagons, and in 1922, 1,920); then nitrates (in 1923, 207 wagons, and in 1922, 108) and other fertilisers (in 1923, 176 wagons, and in 1922, 38). The use of artificial fertilisers is greatest in the Vojvodina (in 1922, 854 wagons) and least in Serbia (8 wagons in 1922). Croatia and Slavonia used 262, and Slovenia 120 wagons.

The inquiry led to the conclusion that more technical education and much propaganda are necessary. District agricultural stations should be established to examine local conditions, and fertilisers

£435,000

has been expended by the Union Government on irrigating the fertile lands comprised in the

Kendrew Directed Closer Settlement

where free training with a free option to acquire land after training is offered to suitable settlers commanding £1,500 capital (less required if in receipt of pension or income). The

HIGH COMMISSIONER for the UNION OF SOUTH AFRICA

will be pleased to answer enquiries regarding soil, irrigation and training.

Illustrated Brochure from

Digitized by Google

should be distributed through agricultural associations. Commerce in artificial fertilisers should be regulated, and prices and quality controlled. The importation of artificial fertilisers is free from Customs dues. Mineral superphosphates may be freed from duty on the consent of the Minister of Commerce and Industry. It is thought that the Government should give assistance by reducing tariffs for the transport of raw materials, by the prohibition of the exportation of raw materials, by endeavouring to obtain the reduction of shipping tariffs for the transport of phosphates and the application of special railway freight rates for fertilisers.

Fruit.

It is claimed that the 1923 plum harvest was greater than that of any of the years since the War, and that the quality was better. The Congress of Chambers of Commerce and Exporters' Associations anticipated a surplus for export of 5,500 wagons of a value of 198,000,000 dinars. This will probably be realised. In a single month, from September 15 to October 15, 2,000 wagons of prunes were exported. It is now considered that about 6,500 wagons of prunes will be available for export. Although the prunes are not of the largest, prices have risen, partly owing to the great demand in Poland. The Government has subsidised the erection of good drying ovens for prunes.

Although plums are the most important of the fruits cultivated, large quantities of apples, pears, olives, walnuts, and chestnuts are also produced for export. The total value of fruits exported in 1923 is estimated at over 250,000,000 dinars; 850 wagons of apples, 50 wagons of walnuts, and 50 of chestnuts are included in the estimate.

Wine

The wine trade situation has not improved, there still being enormous quantities of wine in the country for which no market can be found. The commercial treaty with Poland is likely to assist matters in this respect, but its results will not be felt for some time. On account of the surplus of wine it has been decided not to encourage the planting of vineyards in districts where other crops can be successfully cultivated, in order that the purely wine-growing districts, where the best wines are produced, may have greater encouragement.

Viticulture stations are to be established for chemical analysis and bacteriology of wines and examination of the diseases of vines. Special courses of instruction in viticulture will be held. Wine-growers' co-operative societies are being instituted, which will receive Government subsidy and certain privileges in the matter of transport, etc. An order has been made in accordance with which the poorer qualities of vines are to be eliminated and replaced by good ones within a period of five years.

Industry.

The general monetary stringency experienced in Yugoslavia during 1923 weighed heavily upon the country's industries. Credits, as already stated, were extremely difficult to obtain, and abnormal rates of interest were demanded. The effect of the "dumping" of Czech, German, and Italian goods was also felt. For the first time since the War unemployment has appeared, although not yet to any serious extent.

In spite, however, of these difficulties a number of new industrial enterprises, mostly on a small scale, were established, such as tanneries, sawmills, flour-mills, wagon works, etc. Most of the industrial enterprises, with the exception of sawmills, flour-mills and meat-preserving factories, work almost exclusively for the home trade.

The capital invested in industries established previously to the war is still to a considerable extent Austrian and Hungarian; a proportion of the capital invested in manufacturing undertakings since the Armistice has been found in Czecho-Slovakia. Hitherto most of the skilled work in Yugoslav factories has been performed by foreigners; efforts are now being made to replace these workers by S.C.S. nationals, and manufacturers have been officially approached with the request to train as many as possible of the Yugoslavs with a view to eliminating the foreign element. Endeavours are being made to raise a foreign loan for the financial needs of the Yugoslav industries; but these have so far been unsuccessful.

Production of Beet Sugar.

A great deal is being done to encourage the cultivation of sugar beet in Yugoslavia, and the area sown with this crop has shown a steady increase since 1920, when it amounted to 15,000 hectares, while in 1923 24,000 hectares were planted. About 30,000 tons of sugar were manufactured in 1923. The capacity of the Yugoslav sugar factories is about 100,000 to 120,000 tons per annum. Home consumption absorbing 60,000 tons, it would be possible, working at full capacity, to export 50,000 to 60,000 tons yearly. Conferences have been held at which measures to be taken in order to increase the production of sugar beet were discussed, and the following resolution was made:—"That a consultative commission of representatives of the growers and manufacturers should be appointed at the Ministry of Agriculture and Waters which would control culture, manufacture, and prices. It was decided to encourage, by privileges given to the agricultural co-operatives, the growing of beet by the peasants. As concerns large estates, the view was that the proprietors should undertake to cultivate beet on that part of their land left to them above the maximum allowed by the Agrarian Reform Law." The conference demanded the increase of the Customs duty on sugar by two dinars per kilogramme; the granting of a delay of three months to the factories for the payment of the consumption tax; and the construction of special lines for bringing the beetroot to the factories.

Near East Markets.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended August 16 :—

The arrivals of sultanas on the Smyrna market are estimated at 1,600 tons, and the sales to date are put at 1,575 tons. The market all this week has been jumpy, fluctuating up and down under the influence of unsettled weather. Buyers have been inclined to rush their purchases, and the market has been cleared daily of all arrivals coming forward. The next fifteen days are a very critical period, as the bulk of the crop will be then exposed on the drying sheds. Rain would cause damage to quality, but would not reduce the extent of the yield.

ADVERSE CONDITIONS IN PERSIA.

The following extracts are taken from a report received by the Imperial Ottoman Bank from Teheran dated June 28 :—

Crops have been particularly heavy this year throughout the north and west of Persia. The supply exceeds the local demand in the country districts, and, owing to the prohibitive cost of transport and the greatly reduced value of grain, it is impracticable to bring grain into the towns except from the immediate neighbourhood. The price in the larger towns is controlled by Government. The export of grain is forbidden, as the Government are always fearful of a famine, of which they have had unhappy experience in the past. The consequence of this state of affairs is that the landowner finds his revenues largely decreased, whilst the peasant, after disposing of his crops, has only sufficient money for the bare necessities of life, and has nothing left to spend on imported goods. The result is stagnation of trade in the bazaars, and consequent lack of ready money.

SUDAN PRODUCE.

The report of the Central Economic Board of the Sudan Government for June gives the following particulars :—

Gum.

The exports in June viâ Port Sudan were as follows (the values being given in parentheses) :—bleached 43 tons (£E3,134) ; hashab 1,708 tons (£E73,052) ; talh 352 tons (£E8,513).

Kassala Province.—Gum hashab reached 715 m/ms. in Gedaref and 550 m/ms. in Mefaza. Talh reached 306 m/ms. in Gedaref and 366 m/ms. in Mefaza. From the middle of June no more gum has been brought into the market.

Kordofan Province.—20,126 kantars were sold in El Obeid market during June, as against 25,333 kantars during the same month last year. The average price was £E1,005 m/ms. per kantar. The arrivals at El Obeid from Nahud during the month were 9,876 kantars, as against 5,792 kantars during the same month last year. The amount sold at Nahud during the month was 18,037 kantars, as against 6,846 kantars during the same month last year. The average price being 855 m/ms. per kantar. 1,152 kantars were sold at Um Ruaba at an average price of 947 m/ms. per kantar, as against 822 kantars during the same month last year. At Rahad 60 kantars were sold at an average price of 898 m/ms., as against 66 kantars during the same month last year.

Cotton.

Mongalla Province.—A considerable amount of cotton seed has been issued to the people of Moru, Latuka, Rejaf and Yei Districts. It is believed that cotton can be successfully grown anywhere in the Province away from the river.

Kassala Province.—The total crop for the 1923-1924 season is 10,157 kantars of 315 rottles, and the total area approximately 9,000 feddans.

Berber Province.—Mikeilab, May : 27 kantars of 315 rottles of cotton were brought in during the month, the total to end of May being 850 kantars, of which 15 kantars were zakia cotton. The average yield up to the end of May is 3.6 kantars. Bouga, June : final figures show that the cotton crop for the season was 3,226 kantars of 315 rottles, or an average yield of 4.30 kantars per feddan. Gendettu, June : the final cotton yield for the season is 2,581 kantars of 315 rottles, or an average of 3.89 kantars per feddan.

Red Sea Province.—Tokar : the cotton market opened on March 16 and closed on June 16. Buyers were plentiful, and competition brisk. Good prices were obtained from the beginning, P.T. 774 per kantar of 315 rottles seed cotton having been paid on the opening day for T.C.I. cotton. Prices steadily rose to the maximum of P.T. 918 per kantar by the middle of May. The average price throughout the market for all classes of cotton was P.T. 817 per kantar. The total crop of 65,803 kantars of 315 rottles was classified as follows :—1st class, 51,239, or 77.86 per cent. ; 2nd class, 12,355, or 18.78 per cent. ; 3rd class, 1,976, or 3.01 per cent. ; 4th class, 233, or .35 per cent. The total value of the crop was £E537,390.571 m/ms.

Dunlop Cord Balloon Tyres.

Although it is generally known that the Dunlop Rubber Company is no whit behind its competitors, British and foreign, in the production of balloon tyres, some surprise has not unnaturally been expressed at the apparent delay in making public the company's full intention. Actually whilst the tyres have been in production for quite a considerable length of time, the demands of the chassis manufacturers have so far more than absorbed the output. Rather than occasion disappointment to those motorists anxious to convert their tyre and wheel equipment, the company has thought it wise not to advertise the balloon tyre at a time when reasonable deliveries could not be guaranteed. This position, it may be remarked, exists to-day, but every effort has been, and is being, exerted to cope with the demand, with the result that the company is now within sight of meeting all demands.

Again, too, the Dunlop Company felt that in the position occupied by them in the industry, it would be inadvisable to go too far or too fast in the production of tyres differing so widely in principle from accepted standards until the merits of every type had been thoroughly investigated. That this policy was amply justified is demonstrated by one or two significant facts. For instance, the original balloon tyres as produced abroad were of an exaggerated character, and the Dunlop Company, which has had practical tests in process since 1917, formed the opinion that considerable modifications in size would be necessary before final adoption. This has actually proved to be the case.

Then, again, they had to choose between the beaded edge and wired-on types of tyre. Then chassis manufacturers, the bulk of whom standardise Dunlop productions, had to be consulted and their techical requirements fully provided for. Finally, a decision was arrived at based on the unanswerable argument that a tyre designed to be run at extremely low pressures should be independent of the inflation pressure for its retention upon the rim. This theory was exhaustively tested and has completely proved its inherent soundness in practice. Hence the Dunlop balloon tyre is of the wired type, and, unlike beaded edge tyres, which are essentially inflation held, is retained on the rim by virtue of its inextensible wire edges being smaller in circumference than the lips of the rim.

Now, in this respect it is identical with the straight side type of tyre, the adoption of which in this country has been delayed, chiefly because of its higher initial cost. In balloon tyre practice, however, this difficulty can be removed, and a tyre constructed on straight side principles offered for the first time at a price no higher than that of a beaded edge tyre of the same nominal size and capacity. The Dunlop balloon tyre, it should be remarked, is used in conjunction with a well base rim made in a single piece, in which the necessary strength can be provided by a much lighter construction, and which provides an extremely simple means of fitting and detaching the tyre. The construction also permits the tyre valve to come through the side of the rim—a feature which will be much appreciated when it is remembered that the actual diameter of the wheel is very small, and that there is an increasing tendency towards the adoption of larger brake drums and front wheel brakes.

The following sizes, which are recommended S.M.M.T. practice, have been adopted by the Dunlop Company :—27 x 4.40, 28 x 4.95, 29 x 4.95, 30 x 5.25, 32 x 5.25, 32 x 6.20, 34 x 7.30. It should be added that the essential dimensions of this well base rim are so arranged that Dunlop balloon tyres are interchangeable on American balloon tyre rims —an important consideration in dealing with international requirements. The tyre itself is, of course, made upon much the same principles as the famous Dunlop cord of normal sections, and in its construction is used the most perfect cord material yet made, produced at the company's own cotton mills. The quality of the rubber used is identical with standard Dunlop practice, and the tread provided is essentially of the same thickness and width as that of the normal tyre displaced. This latter is an important point, inasmuch as the area of contact with the ground is increased by lengthening rather than widening. A long and comparatively narrow contact area is favourable to the prevention of skidding. The tubes provided for Dunlop balloon tyres are moulded to shape and fit the covers so exactly that all parts of the tube walls are equally stretched in use.

One of the most vitally important points with regard to balloon tyres is the inflation. With low pressure tyres the margin of error possible without adversely affecting the performance of both car and tyres is very small, so that for best results the makers' recommended pressures for the applied loads must be adopted and maintained. With balloon tyres it is just as important to avoid too high inflation pressures as it is to guard against too low pressures. High pressures in these large tyres impose tremendous strains on the cords, and may result in early failure. Besides, at high pressures balloon tyres have far less cushioning than the smaller high pressure tyres. The ordinary tester being insufficiently sensitive, the Dunlop Company has produced a new type which registers extremely low pressures with accuracy. It is provided with a neat dashboard fitting to ensure that it is readily accessible at any time. Other Dunlop accessories specially designed for use with Dunlop balloon tyres are a simple lever—the only tool necessary for the operations of fitting and removing—a unique twin-stroke foot pump, and a new jack. The fact should not be lost sight of that jacks provided for use with normal tyres are seldom suitable for balloon equipment. What is required is something that is smaller when closed, owing to the greater "drop" of the tyre and capable of lifting higher.

It should be added that whilst providing a comprehensive range of its balloon tyres in the wired type, the Dunlop Company is, in addition, producing a 31 x 4.40 in. beaded edge balloon tyre, intended to displace the 30 x 3½ in. tyre without alteration to rims.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

An Irregular Tone.

The Alexandria Commercial Company, in their report for the week ended August 14, state :—

The market during the past week has been very irregular. The net changes since our last report are :—Sakellaridis : $1.28 up for November, $1.06 up for January. Ashmouni : $0.20 down for August, $0.35 down for October, $0.25 down for December, $0.30 down for February. The volume of business has been fairly large, but, as has been the case for some time past, the greater part of the operations has been for speculators' account. Vague reports of Sakel crop damage have induced new speculative purchases; no definite information as to the damage is available, and the increase of the speculative interest on such a frail foundation constitutes an element of danger, and should the reported crop damage not materialise, or should we get a break in American prices, a serious decline might easily be provoked here. For the time being, however, prices are quite firm. The week's receipts amount to 2,270 krs., against exports 40,042 krs.; the stock stands at 301,355 krs. The consumption figures of cotton in the U.S.A. for the month of July are B/s 347,000, against B/s 350,000 the previous month and B/s 462,000 a year ago. The total since August 1, 1923, is B/s 5,672,000, against B/s 6,664,000 the previous season.

Spot.—Total sales during the week amount to about 3,400 B/s, of which we estimate 2,700 B/s Sakel and 700 B/s uppers, 147 B/s being new crop cotton.

Sakellaridis : The demand has been concentrated on good fair, good fair to fully good fair, and fully good fair. The grades G.F. to F.G.F. and F.G.F. have now become very scarce; in fact, it is practically impossible to find such cotton in the market, and, consequently, when a lot does appear, there is big competition to obtain it. Very little business has been done in the higher grades, but prices, as compared with contracts, are somewhat dearer. There has been a small demand for cotton below good fair; the prices for these grades are somewhat stiffer.

Uppers.—The first arrivals of new crop cotton appeared on the market on Wednesday, and were immediately snapped up at fantastic prices. With regard to old crop, all grades from fair to fully good fair have been dealt in, although, as shown by the total turnover, the business has been of a retail character. The price of spot as compared with contracts is unchanged.

Crop 1924.—In spite of market rumours, there is very little of actual importance to say on the growing crop. The uppers crop is maturing very well, and will probably fulfil the early promise of a record crop. The crops in the Delta are progressing quite weli. There has been some shedding and withering of bolls, due to damp followed by excessive heat, but not to any serious extent. Pink boll worm attack is, in certain districts, somewhat heavier than last year, and it is noticeable that many of the Zagora fields in Menoufia and the southern districts of Gharbieh and Dakahlieh have now been attacked equally with the less matured Sakel. August and September are the critical months of the pink boll worm attack, and one must not lose sight of the fact that a heavy attack would affect the Sakel position considerably in view of the already reduced prospective supply for next season; for the time being, however, the attack is not heavy. Temperature has been variable.

COTTON TRADE REVIEW.

Improvement in Business.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended August 23 states :—

A more cheerful atmosphere has prevailed during the week than for a considerable time past. Not only has the volume of inquiry continued to extend, but the actual business transacted has shown a decided increase. This is in a large measure the result of a growing belief that lower cotton prices have come to stay, a condition of things which can hardly fail to result in an all-round expansion of business.

Yarn.—The demand for both American and Egyptian qualities has broadened, particularly as regards the former. The position of spinners has been strengthened to no small extent by the check given to the accumulation of stocks owing to the holiday stoppages. Better orders are reported, in particular for India and the Near East. Speaking generally, the reduction in the price of yarns during the week is about $\frac{3}{8}$d. per lb. This is considerably less than the relative reduction in raw cotton values.

Cloth.—The turnover in the cloth section has been distinctly encouraging, and not for many weeks past have manufacturers booked so many orders. As regards individual overseas markets, the chief has undoubtedly been India, with Calcutta and Madras prominent buyers. China has been active, and a fair volume of orders has been put through for Egypt and the Levant. Central and South America have not been idle, but transactions there have been on a somewhat smaller scale. It is too soon yet to say whether the improvement has come to stop, but manufacturers are adopting a stiffer attitude, and evidence continues to be forthcoming that markets abroad are badly in need of goods.

Raw Cotton.—Renewed reports of good weather in the American cotton-growing centres have resulted in further reductions in quotations. A total yield of 14,000,000 bales, including linters, is freely talked about. This, coupled with the absence of the usual reports about damage by boll-weevil, is thought to indicate still lower prices. Closing quotations yesterday were as follows :—American Middling, 16.08; Egyptian Fully Good Fair, 25.55.

LIVERPOOL COTTON REPORT.

Conditions Practically Unchanged.

Messrs. Reynolds and Gibson report as follows for the week ended August 20 :—

Egyptian Spot.—Conditions remain practically unchanged in our market since last we wrote. Spinners are buying as little as they possibly can, consistent with keeping their mills running. At the moment the opinion that lower prices are inevitable appears to be gaining ground in most quarters, although it is realised that fluctuations of considerable magnitude are bound to occur before the actual size and quality of the various crops can be finally estimated. Hence, sellers are anxious to take advantage of ruling prices, and the basis all round has continued to ease, particularly in the case of Uppers, spot, prompt, and new crop. A really first-class crop of Upper Egyptian appears almost a certainty, and many shippers have already accepted this view and have sold for Early September shipment at prices with which their more conservative competitors are quite unable to compete. The low qualities have been practically exhausted here.

In Sakellaridis the usual inquiry has continued. Cotton from 20d. to 21d. has been freely inquired for, and a good supply still appears to be available. The next range in order of popularity has been 24d. to 24½d., followed by 250 to 325 on August. Interest in Sudan Sakel and Tokar Sakel has been well maintained, and a steady business has resulted. Holders of Tokar Sakel are inclined to meet buyers, and TIC cotton has changed hands this week at prices ranging from 27d. to 26d. White Sudan and Brown cotton have been neglected. C.i.f. business for prompt shipment has been quiet, but a fair amount of activity—not always resulting in business—has been evident in new crops. Forwardings to spinners for the week ending August 15 were returned as 6,608 bales. Estimated sales, 1,600 Egypts and 1,550 Sudan. Quotations of Sakellaridis are reduced 55 points on the week; those of Upper and Brown are 100 points lower. F.G.F. Sakel to-day 25.40d.

PROTEST AGAINST LOAN TO RUSSIA.

The Council of the London Chamber of Commerce, at its meeting on August 21, unanimously adopted the following resolution :—

"That the Council of the London Chamber of Commerce records its strong disapprobation of the proposed Treaty between His Majesty's Government and the Union of Soviet Republics in Russia. It desires to reiterate the view it has expressed on many occasions—that no agreement with Soviet Russia can be satisfactory to this country which does not provide for a settlement of the trade debts due by Russian nationals to British subjects, and that the claims of the Governments against one another should be kept separate and distinct from the claims of the nationals of the two countries.

"That this Council particularly disapproves of the proposal that the British Government should be in any way responsible for a loan to Russia."

COMPANY NOTES AND REPORTS.

African and Eastern.

The report of the African and Eastern Trade Corporation, Ltd., for 1923 shows a profit of £442,353, after the usual provision for depreciation, and adding the balance of £242,394 brought forward the total available is £684,746. The preference dividend absorbs £133,798, and after allocating £25,000 to the depreciation fund, £25,000 to income-tax reserve, £7,500 to the superannuation fund, and £2,500 for depreciation of office fittings, there remains a disposable balance of £490,947. The directors recommend a final dividend of 4 per cent., less tax, payable October 1, making 8 per cent., leaving to be carried forward £271,985.

National Bank of Egypt.

Position at June 30, 1924, published in conformity with Article 8 of the Statutes. Banking Department. Liabilities.—Share capital (300,000 fully paid shares of £10 each), £E2,925,000; Reserve Fund: statutory reserve, £E1,462,500; special reserve, £E804,375; current, deposit, and other accounts, £E13,168,344; Egyptian Government, £E12,902,948; Sudan Government, £E647,996; Mixed Tribunals, £E1,445,338; bankers accounts, £E267,338; cheques and bills payable, £E255,258; sundry other accounts, £E697,631—£E34,576,728. Assets.—Government securities and securities guaranteed by the Egyptian Government, £E22,041,537; sundry securities, £E255,621; advances on merchandise, £E601,682; advances on securities, £E1,960,083; advances otherwise secured, £E322,206; sundry other advances, £E409,545; bills of exchange, £2,132,316; local bills discounted, £E347,613; buildings and furniture, £E274,241; money at call and at short notice, £E848,250; bankers accounts, £E3,400,380; sundry other accounts, £E164,887. Cash: Notes, £E1,144,562; gold, £E22,416; silver, nickel, etc., £E651,389—£E1,818,367—£E34,576,728. Issue Department.—Notes issued, £E29,200,000. Gold, £E3,339,576; *British Treasury Bills, £E11,260,424—£E14,600,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E420,576; British Treasury Bills and National War Bonds, £E14,179,424—£E14,600,000—£E29,200,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Motor Boats.—The Coastguards and Fisheries Service, Governorate Buildings, Alexandria, invites tenders for the construction of two coastal motor boats. September 15.

Telephones.—The General Manager, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 500 wall telephones. October 1.

Turkey.

Wire.—The Direction Générale, des Postes et Telegraphes, Stamboul, invites tenders for the supply of 25 tons of galvanised wire. (D.O.T.)

Czecho-Slovakia.

Locomotives, etc.—A new scheme is being undertaken by the Czecho-Slovak Government for the electrification of the State Railways, and tenders are invited by the Czecho-Slovak, Ministry of Railways for locomotives and materials in connection with the project. October 21. (D.O.T.)

BRATISLAVA TRADE FAIR.

(From a Correspondent.)

The fourth International Danube Fair was opened at Bratislava on August 23, and continues until September 2. In addition to the ordinary sections, this fair includes a number of special exhibitions—for example, a timber exhibition, covering a space of 2,000 sq. metres; a railway exhibition (3,000 sq. metres); a postal exhibition; an aircraft exhibition; a public works exhibition; an exhibition arranged by the French Consulate; and a fruit and dairy show arranged by the Slovak Agricultural Council. Among the ordinary exhibits a special place is taken by agricultural machinery, which is an important item of Czecho-Slovak export trade viâ Bratislava to the South-eastern and Balkan countries. Simultaneously with the fair several congresses are being held at Bratislava, notably a Water Power Congress.

Bratislava, as one of the leading Danube ports, and as perhaps the most favourably situated to be the centre of trade between the agricultural East and the industrial West, has already attracted European and even overseas attention by its three previous fairs. The port itself is rapidly increasing its volume of trade, and that of the first seven months of the current year surpassed the figures for the whole of 1923. Western merchants in particular, whether buyers or sellers, would find in many respects a new and lucrative field for their activities by a visit to Bratislava. It has now been decided to hold a fair every year on the same date.

EGYPTIAN DYESTUFFS MARKET.

Increasing German Competition.

Egypt is essentially conservative in all its industrial processes, and its dyeing industry is no exception to the rule. There are, nevertheless, more than 23,000 dye works scattered throughout the country, and the distribution of dyestuffs is comparatively highly developed (says an American Consular report). The actual dyeing process, however, is still carried on in a very primitive manner, with a surprising lack of centralisation. In fact, every Egyptian village of any importance can boast of its own establishments, where cotton goods are coloured to the taste of the fellaheen.

The Egyptian taste for bright colours is highly developed, but is confined to clothes of men and children only. Black alone is prescribed for women. Varieties of black, according to estimates, constitute about 65 per cent. of the colours consumed in Egypt, with blue a good second, as the larger proportion of the fellaheen wear blue cotton gallabieh. Synthetic indigo, according to the official import statistics, accounts for at least 50 per cent. of the valuation of Egypt's dyestuffs consumption.

In 1913 dyestuffs to the value of £E68,381 were imported, Germany being the only source. The total imports in 1920 amounted to £E123,068, of which Great Britain supplied £E20,314; Germany, £E85,335; and Switzerland, £E17,101. German dyes replaced the British product in the Egyptian market during 1921 and 1922, and the Swiss imports fell off markedly. During 1923, however, over 2,000 kilos of British indigo were brought into the market, and Switzerland, in furnishing 121,228 kilos, supplied almost half the total requirements. Imports from Germany amounted to but 104,571 kilos, or much less than half the business of the previous year. German activities have developed greatly during recent years, and it is generally thought that but for the economic and political difficulties under which German firms have been working since the Ruhr occupation they would have completely recaptured the market.

The total value of the Egyptian imports of indigo in 1923 amounted to £E65,362, and of other coal-tar dyes to £E34,548.

German business terms are strictly cash, and the more important German manufacturers have their own technical agents in the market to assist local importers who carry spot stocks. As a matter of fact, only in the past few months has Germany been showing its firm intention of dominating the Egyptian dyestuffs market once more. Consequently, the market bears very close watching now and in the immediate future.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Liverpool, September 4); s.s. Malia for Port Said, Colombo, Madras, and Calcutta (London, September 6).

Anchor Line.—S.s. Elysia for Bombay (Liverpool, September 8).

British India Line.—S.s. Mantola for Colombo, Madras, and Calcutta (London, August 30); s.s. Morvada for Bombay and Karachi (London, September 12); s.s. Mandala for Colombo, Madras, and Calcutta (London, September 13).

Clan Line.—S.s. Clan Colquhoun for Bombay and Persian Gulf (Birkenhead, September 3).

Ellerman "City" Line.—S.s. City of Eastbourne for Calcutta (Birkenhead, September 4); s.s. City of Exeter for Calcutta (Birkenhead, September 15).

Johnston Line.—S.s. Quernmore for Piræus, Syra, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 6); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Bourgas, Sulina, Varna, Constantza, Galatz, and Braila (Liverpool, September 20).

P. and O. Line.—S.s. China for Bombay (London, September 5); s.s. Novara for Colombo, Madras, and Calcuttta (London, September 6); s.s. Caledonia for Bombay (London, September 19).

Ellerman's Westcott and Laurance Line.—S.s. Polo for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (London, September 6).

IONIAN BANK, Ltd.

LONDON, GREECE, EGYPT.

The only British Bank or Financial House in Greece originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia and the Islands recently rejoined to Greece ; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria ; but it also has agencies throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

In Turkey the Bank has a branch at Constantinople.

NOTES OF THE WEEK.

The Situation in the Sudan.

Too many forces have been at work in the Sudan to allow the trouble that flared up simultaneously in three different places to die down with equal rapidity everywhere. An agitation carried out by Egyptians in the Sudan has been recognised to be a mistake, and such efforts as are being made now to keep it alive are given a Sudanese flavour. Thus a society of young Sudanese in Cairo has been responsible for an inflammatory circular sent to native residents in the Sudan, and a meeting of notables in Khartoum is reported to have expressed sympathy with Egyptian claims. In the meantime a court-martial composed of Egyptian and Sudanese officers has passed sentences on the ringleaders in the outbreak of the Egyptian Railway Battalion at Atbara, and another court is dealing with the cadets of the Military School responsible for the demonstration in Khartoum. A notification to Provincial Governors from the Acting Governor-General, calling attention to "the continued want of discipline and grave dereliction of duty among certain officials, especially in the younger and lowest grades," conveys some idea of the extent to which the agitation has been carried. Now that there is no chance of any settlement of the Sudan question by agreement with Egypt, it is right that the British authorities should be prepared for all eventualities. As a preliminary step it will be noted that most of the Sudan officials at present on leave are being recalled to their posts.

The Egyptian Attitude.

A satisfactory development during the past week in regard to the Sudan trouble has been the difference in the tone of a certain number of the more important Egyptian newspapers, which have abandoned mere abuse of Great Britain for expressions of regret over the attitude of the British Press. It is notoriously difficult to see the opponent's side in a dispute; but on this point there would seem to be a confusion of cause and effect. The Sudan question was discussed in an unnecessarily offensive form by the Egyptian Press long before any notice was taken in Great Britain of the organised campaign. When the subject was dealt with, the Egyptian claims were examined from every point of view, and were refuted on historical, ethnological, and moral grounds. If there has been any departure from a strictly dispassionate narrative, it was in a readiness to take for granted that Egyptian Administration must necessarily be as bad to-day as it was forty or fifty years ago. Unfortunate or regrettable as this attitude may be, it can only be regarded as a mild retort to the Egyptian abuse of Britain and lack of appreciation of her work in the Nile Valley. In any case, it was almost inevitable in the absence of definite proof of administrative progress on the part of the Egyptians, and for this reason the Egyptian Cabinet had been urged in its own interests to avoid raising the Sudan question until it could demonstrate its capacity for governing in Egypt in support of a claim to govern the Sudanese. It was only when the overwhelming logic of the British case made the vapid assertions of the Egyptian Press look so foolish that an attempt was made in Egypt to give the claim an historical basis. This move has brought Sir Ernest Wallis Budge into the field, and in the course of two columns in *The Times* he sets out to establish "the most obvious facts—namely, that for the last 6,000 years Egypt and the Sudan have been two countries, entirely separate and distinct, and inhabited by peoples of different races, with different religions and manners and customs, and, until the rise of Islam, speaking entirely different languages." It will be of interest to see whether any Egyptian historian or archæologist will undertake a serious refutation of his scholarly article. When, however, it is realised in Egypt that there is no chance of the Egyptians having their own way in regard to the Sudan, academic discussion, it is to be feared, will yield place to more violent expressions of dissatisfaction.

Government in Egypt.

The Sudan episode seems to throw a lurid light on the conception of government in independent Egypt. We must infer that it was an unofficial element and not the Cabinet that first brought the subject of the future status of the Sudan to the fore. Whether the Cabinet welcomed the agitation is not so easy to determine, but it may at least be given the benefit of the doubt. If independent Egypt is thus to suffer from the too many

Digitized by Google

cooks who will sooner or later spoil the administrative broth, it will be owing to the "besetting sin" of Egyptian officials, as Lord Cromer, in his report of 1903, characterised "the almost universal tendency to shirk responsibility." No one in Egypt is likely to dispute to-day that it would have been very much better from the Egyptian point of view to have left the Sudan question in the hands of Zaghloul Pasha and the capable Egyptian Minister in London without the embittered Press campaign, which caused it to be raised in the Legislative Assembly and forced it on the notice of the British Government and public. But even when the opportunity offered, the Prime Minister refused to say the word which would have stopped the agitation. Only a few years ago Egyptian hatred of Great Britain availed nothing and did nothing until Zaghloul Pasha made himself its mouthpiece. To-day he is the head of the Egyptian Government, but the real power in the land reposes elsewhere, in the very small section of public opinion which is articulate, or at least with the Wafd, the central committee of the Zaghloulist party. So much encouragement has been given to mob clamour in order to spread responsibility over as many shoulders as possible that the seed of grave trouble in the future may well have been sown for the Egyptian Government. One cannot look for students of political affairs in a country where every schoolboy is taught to regard himself as a professor of politics; but if there were such students in Egypt they would find an interesting field of study in trying to discover whether the fellaheen's aptitude for clamouring for an independence that they did not want does not betray a determination to brook no man's domination, not even that of their own countrymen. If it does, disillusionment is in store for Egypt.

Turkey and the League.

The controversy between Great Britain and Turkey in regard to the northern boundary of Iraq entered upon another stage on August 29, when the question came before the Council of the League of Nations. A letter had been received from the Turkish Government notifying its agreement to bring the question before the League in accordance with the terms of the Treaty of Lausanne, but adding that, in view of the fact that official information of the deposition of the ratifications of the Treaty in Paris had not yet been received and that twenty days' consideration would be required after the receipt of such information, a delay would occur in the arrival of the Turkish representative to the League. To this communication the Council replied by telegram to the effect that discussion of the subject would be deferred until the Turkish representative arrived, and the hope was expressed that his departure might be expedited. It is curious how ignorant the Turkish authorities remain in regard to European psychology. Its deliberate procrastination may possibly conform with desert etiquette in negotiations between two sheikhs, but is entirely out of place with any Government claiming to be civilised, and must further prejudice Turkey in the eyes of the League. It would be thought that by now the Angora Government had realised the advantage of trying to live up to the standard which is claimed for the Turkish republic. On the very first occasion, however, when Turkey makes her appearance before the Areopagus of the nations she proclaims herself still shackled by the handicaps of her Central Asian origin.

The Significance of Angora.

It is in its seeming remoteness from the realities of modern life, as exemplified by the Turkish Government's letter to the Council of the League of Nations, that Angora as the capital of the Republic will make it difficult for Turkey to do justice to herself. The desire to be rid of the associations connected with Constantinople can be understood, but to bury the Turkish Government in the wilds of Anatolia was not the only alternative policy. For the present, however, the Turks are committed to this wholly unsuitable town, and it is a matter for satisfaction that the British Government has decided to construct a building there for the purpose of a Legation. Germany's portable bungalow may be a shrewder move from a strictly business point of view, and more in keeping with the meteoric nature of her relations with the Turkish authorities; but Great Britain is well advised to take the Turks as seriously as they take themselves. The material disabilities of Angora can be overcome in time; already it is said to be becoming a transformed town, with buildings fit for a capital and with some attention paid to street-planning and sanitation. Improved railway communication, moreover, may make it more accessible to the outside world; but so long as it remains in the eyes of educated Turks the headquarters of ignorance and mediævalism, it will fail to appeal to that section of the people which alone can make a lasting success of the Republic.

The Serbian Patriarchate.

The restoration, on August 28, of the Serbian Patriarchate at Ipek, its ancient seat, is an event well calculated to rouse the enthusiasm of the Serbian people. Ecclesiastical autonomy was won by Serbia in 1219, and in 1346 the Serbian Archbishopric was proclaimed a Patriarchate. Under Turkish domination, when everything else that was Serbian had been overthrown, the Church remained as the one beacon of light for the oppressed nation. In 1766 the Patriarchate was abolished by the Turks at the instance of the Phanariots at Constantinople. The rule of the latter came to an end in 1831, when a Serbian Bishop once more became head of the Church, and now, with the enthronement of the Patriarch Dimitri, who has been Metropolitan since 1905, the complete independence of the Serbian Church is rounded off. Closely identified in the past with the stormy chapter of the nation's history, the Serbian Church in the future, it is to be hoped, will be able to associate itself with all that makes for peace and progress in the life of the Yugoslav people.

The Position in Bengal.

The Bengal Legislative Council has refused to take advantage of the *locus penitentiæ* offered by the recent amendment in the rules which govern its business, and, having decided not to vote salaries for Ministers, has been prorogued for an indefinite period. The narrowness of majorities which has characterised the recent proceedings was maintained to the end, the final difference being one of two votes, and, since charges of bribery and intimidation have been freely brought by both sides, we

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 260 of this issue.

Digitized by Google

may conclude at least that local opinion regards such practices as natural. We regret the suspension of the Bengal debates, which have made much better reading than those of most other provinces, but perhaps the flood of witty rhetoric has not been altogether healthy, and its subsidence may give the electorate time to think matters out, a process which seems as yet to have been neglected. Up to the present time we must admit that the province has made little progress towards democracy: the brightest boy has failed to learn his lesson, and has been sent down to join the duffers at the bottom of the class; but such little tragedies are not unknown in the world of education, and the lost position can be regained if wits are set to work in earnest.

Where Dyarchy Works.

After the commination of Dyarchy by the procession of ex-Ministers to which we referred last week, it is refreshing to find a live Minister asking for further powers on the ground that Dyarchy, though not perfect, has been a practical success. Naturally, this contention comes from Madras, which is well ahead of all other provinces just now, and seems really to have got a grip of essentials while politicians elsewhere have been groping in the mist. We take it that Englishmen at least will listen to Sir Parsurma Patro's exposition of the weak parts of the constitution with much more respect than has been accorded to the Jeremiahs, and, though they may not go all the way with him, will agree that he has chosen the right way to obtain extended powers. One step, at any rate, might be taken at once, to disavow the theory of a uniform advance throughout India, which underlies so many of the constitutional provisions, though, to our mind, it is inconsistent with the often-quoted preamble. It would be absurd to promote Bengal because of the merits of Madras, but it would be altogether wrong to keep Madras back because Bengal has not yet earned promotion.

Responsibility and Finance.

Sir P. Patro's strongest point seems to us to be his contention that Ministerial responsibility cannot be developed effectively under the "joint-purse" arrangement, under which the revenue of the province is raised by the Government as a whole, and Ministers are responsible only for spending the share they can secure, by negotiations with the executive council, or by raiding the police budget, as the case may be. The test of effective responsibility is that a Minister should be in a position to persuade the Legislature, and through it the electorate, to find the money which his policy requires, and this involves, to our mind, a clean cut in the matter of finance. We know, of course, that there are practical difficulties in the way, and we suspect Ministers would be much more uncomfortable under such a system than they are now: but practical difficulties are there to be faced, and Ministerial comfort is, unfortunately, no part of democracy. If anything is to be done just now to facilitate the working of the existing constitution, the changes should be directed to making the facts plain to all concerned, whether Ministers, legislators, or electors, and the institution of "separate purses" would do more than anything else to make ordinary people understand what democracy really means.

THE NEAR EAST INDEX.

The Index to Volume XXV. of "The Near East" (January 3—June 26, 1924) is now ready, and copies will be sent to subscribers gratis on application to the Manager, "The Near East," 167, Strand, London, W.C.2.

THE WEEK AT HOME.

London, Tuesday Morning.

The London Agreement.

It is far too soon, of course, to forecast the effect of the London Agreement, which was signed at the Foreign Office on Saturday. Without question there will be a good deal of opposition to it. In this country alone there are far more people, both employers and employed, who fear the effect of a German recovery, and who, though they grumbled at the state of Europe when Germany was not a possible customer, are genuinely afraid of Germany as a competitor-customer.

From the domestic point of view, the chief interest lies in the possibility of a renascence of Protection. One should not build too much on this, however; for any step by the "workers" in this direction is being magnified out of due proportion. But there is certainly a chance, if Germany is allowed to deposit her cheap wares here, of home industries suffering badly.

Razing the Higher Universities.

One rather likes Mr. Maxton, the Scottish Labour M.P. Unlike so many of his fellows, he does not, on contact with reality, allow his convictions to be grossly tarnished, and of a hundred M.P.'s who, before they assumed office, were ready to raze to the ground such obsolete and "capitalist" institutions as the Universities of Oxford and Cambridge, he remains alone. He boldly challenges these seats of learning to produce such statesmen as Messrs. MacDonald, Snowden, and Wheatley, and, finding no one to answer him, breathes out destruction on the courts and the quads.

Of course, in so delightful a pastime as University baiting truth does not matter in the least. Who are we to point out that both Universities have produced only too abundantly the MacDonald and Snowden type, or, even more disastrously irrelevant, that politicians are not the sole product of the older Universities?

Approaching the Superman.

It is extraordinary with what degree of solemnity the statistics that relate to the national health, deaths, and so on, are studied. So many people appear to forget that statistics almost always can bear more than one interpretation. But nothing is too fantastic for the optimists, and a recent statement by a medical officer of health that the new generations will be bigger, handsomer, and more intelligent has been eagerly devoured. As a matter of fact, it is the permanence of the human type much more than change in it which makes the fascinating study. Changes there, of course, are, but they seem to be merely reactions to new environments. The English race, for instance, is not quite so tall as it used to be, and scientists affirm that we are steadily becoming hatchet-faced. To suppose, therefore, that we are gradually approaching the superman is nonsense.

Rights on the Broads.

A dispute is fiercely raging at the moment over rights on the Norfolk Broads, the "public" being very bitter at the attempt of certain private owners to preserve their property for the use of sportsmen only. The Press, of course, takes the side of the public in this affair, taking the attitude that such places as the Broads should be "of the greatest good to the greatest number." But this is an ignorant and foolish view. The habit of spending holidays on the Broads has increased enormously of late years, the increase consisting (as is plain for anyone to see) mostly of the gramophone-loving and Anzora creased type.

By true Broadsmen the advent of these appalling

Digitized by Google

people has been looked upon with resentful dismay, and if the Courts uphold the owners' decision to close certain waters to the public they will be gleeful. Sportsmen will always be able to get where they want on the Broads, whose personality has for scores of years been like that of no other waters in England. And if democracy gets to them, they will, as everything else does, lose that personality.

Stonehenge.

One had at first supposed that the tremendous fuss which the papers have been making over the permission given by the Government to a body of men known as the Druid Universalists to scatter the ashes of their dead members over Stonehenge was all part of that nervous disorder, "the silly season." But the incredible appears to be true. The quiet impudence by which any men should have supposed themselves to have any connection with or rights over Stonehenge is amusing, but thus to have persuaded a Government is indeed a feat. Perhaps Mr. George Robey will soon be starting a Society of Cavemen?

The Cricket Championship.

Perhaps the most disappointing, although certainly not the most important, aspect of this disappointing cricket season has been the fight for the cricket championship, which has been won at last by Yorkshire. I do not refer so much to the system of percentages in reckoning the championship—for there are counties which can at will find ways round that sport-killing device—but to the reputation which the Yorkshire eleven has this year earned for bad sportsmanship.

It is true that the mere Southerner, who plays his game for the love of the thing and drinks no more beer over winning than over losing, has little idea of the tenseness and importance with which county games in the North are wrapped. Lancashire, for instance, an enormously strong side, has failed to win many matches against quite weak opponents, merely because it would not go for the runs. And for unenterprising sides the weather this year has brought swift retribution. But, apart from this, the Yorkshire eleven has become almost a by-word among cricketers, and although older men put it down to the lack of authority in the exercise of captaincy, most men are agreed that there are in the champion county to-day one or two men who are simply unfit to play under any captain.

The Protracted Harvest.

Early reports of the country's harvest are very discouraging, for everywhere the crops have been badly damaged by rain. Owing to the weather, the harvests all over the country have just dragged on, and in the South of England much of the cereal harvest is still uncarted. This long exposure of the crops means, of course, very serious depreciation, applying specially to barley, wheat, and oats. In Kent this is supposed to be about the worst harvest on record, and, although we must make allowances for such statements—farmers are very plentiful with their "worsts on record"—there is no doubt that agriculturists' experiences this year throughout the United Kingdom have been extremely unhappy.

London Invaded.

For weeks past London has been full of the provincials, particularly from Lancashire, Yorkshire, and Wales; but now the trippers are thicker than ever before. It takes even longer, they say, to walk through the swarms up the Strand than to ride the same distance by bus; certainly you cannot get on a bus but you will hear some bright "lass" from the North of England ask for some place in the opposite direction to that in which the bus is moving.

The more facile and superior of Londoners are putting it down to the British Empire Exhibition, but the authorities at Wembley are by no means in agreement. From the figures that have been published it is obvious that many of these visitors to London have contrived to avoid Wembley, preferring, if they have not long to stay, the Houses of Parliament, the Tower, the Zoo, and other more permanent institutions. It is, apparently, now quite the thing to charabanc down from Yorkshire and Lancashire to London for the week-end. Well, well, they must like it. . . . .

The British Empire Exhibition.

There are those who state that although the British Empire Exhibition at Wembley has not paid its way, it has nevertheless been a success; but there are always people who find consolation in anything. The fact is that from the point, at any rate, of the majority of the Dominions and Colonies, the Exhibition has been a financial failure, and there is great coming and going now behind the scenes to see whether next year some new scheme cannot be devised. No one knows yet whether Wembley will be open next year; at the moment all efforts are being concentrated on attracting people to it during September and October.

The authorities appear to be blaming the failure on to the Londoners, who, they say, are the only Britons not to have done their share. The Londoner's answer generally seems to be that Wembley is too far away for him.

A Great Journalist.

There seem few people disposed to deny that Mr. H. W. Massingham, who has just died, was a great journalist, for even those whose memories do not go back to the *Star* of the 'nineties can remember the *Daily Chronicle* under Massingham's editorship, and, in a later day, the *Nation*. Personally, I feel unhappy in writing of such a man as this. All his friends are passionate in their affirmation of his burning sincerity, and the fiery expression of his "convictions" is yet the talk of Fleet Street. To me his mind shone with but hodiernal clarity; the scene and the actors were changed too often for any sense of permanence to be left by his writings. It is amazing that a man so impatient of the practical should so many times have succeeded, but as a nation we are much more tolerant of such men as he was in peace than in war.

Alter Ego.

THE DOME OF THE ROCK.

Reuter reports from Jerusalem that the Emir Abdulla and Sir Gilbert Clayton, the Chief Secretary, attended by the Grand Mufti, members of the Moslem Supreme Council, sheikhs, and other Jerusalem notables, on August 27, laid the foundation-stone in connection with the restoration work on the dome of the famous El Aksa, or Omar, Mosque, which an examination carried out at the beginning of the year showed to be in a state of grave deterioration. The Emir Abdulla, who brought with him £25,000 in gold from King Hussein for the necessary repairs to the Mosque of Omar, afterwards left for Amman.

THE DORSET YEAR-BOOK.

Dorset men in the Near and Middle East may like to be reminded of the Dorset Year-Book, now in its twentieth year, of which Mr. Stanley I. Galpin is Honorary Editor (40-43, Fleet Sreet, London, E.C.4). The 1924 issue, which is copiously illustrated, is calculated to raise many a thrill among County men as they goo toddlen down along th' cobbly road o' life in all vower quarters o' th' worold, and fortunately for other folk, this interesting and attractive publication is not all written in the Dorset "langwidge."

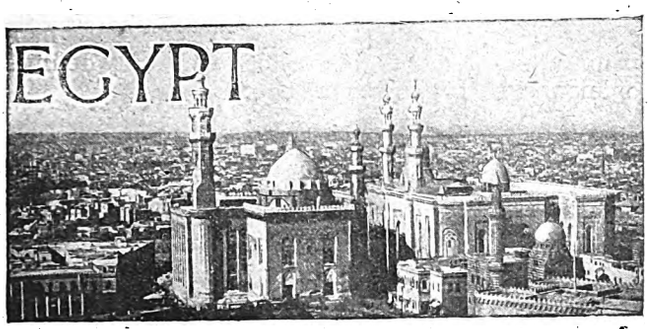
The Near and Middle East.*

From Our Own Correspondents.



Cairo, August 17.

The Sudan.

Everything has been put into the shade by the events in the Sudan and their developments down here. It is a curious fact, but fully in keeping with the local temperament, that while the attempted assassination of Saad Zaghloul Pasha was soon eclipsed by the inquiry into the so-called Khedivist plot and the latter was in its turn overshadowed by the alleged discovery of a conspiracy to overthrow the present régime, all these have been completely driven into the background by the Sudan.

The gradual arrival of news of trouble in the Sudan aroused the local Press very much, and the controversy that had reigned during the debates in the Egyptian Parliament broke out afresh, only with renewed vigour and venom, owing to the assertions that it was British troops who had taken the main hand in repressing disorders, particularly in firing on the Railway Battalion at Atbara. In spite of the *communiqués* issued by the Residency, which made it perfectly clear that at the time of the firing at Atbara no British troops had been present, and that, in fact, the firing had been done by Arab troops, the violence of the anti-British campaign in the Press increased, and it attained limits never before experienced in all the controversies that have raged in Egypt of late years. What clearly added fuel to the fire, or at any rate encouraged the Press in its outburst, was the delay which the Egyptian Government incurred in issuing a *communiqué* on the subject.

When at length that *communiqué* was published, it turned out to be a most unfortunately worded document. In the most glaring manner no mention was made of the presence of Arab troops; in fact, it actually made it appear as if the only troops present had been British, and that it was the latter who had fired on the mutineers.

While this *communiqué* had the effect of maintaining the excited state of public feeling, it made the worst of impressions on the minds of the European as well as the British communities. The Council of Ministers had had the fullest information on the subject, exactly the same reports as had formed the basis for those issued by the Residency; it knew that public feeling had been much exercised over this very point of the use of British troops against the mutineers; and it was aware that the extremist members of the vernacular Press had all along urged their readers not to put any faith in what reached them from British sources. Yet, with all this knowledge, the Council issued a document which was not merely a misrepresentation of the facts, but a contradiction of the statements issued by the Residency. And when Mr. Clark Kerr, the Acting High Commissioner, made his perfectly justifiable protest the Council, instead of expressing regret for the inaccurate impression conveyed by its *communiqué* and issuing a correction, merely announced that it proposed to publish *in extenso* all the reports that had reached it, so as to confirm the perfect honesty of its intentions and avoid all possible misunderstandings.

It may be, as has been intimated to me, that the desire to publish a concise recital of what had happened accounted for this unfortunate misrepresentation of facts—in which case someone has clearly been guilty of gross negligence, since in the peculiar circumstances scrupulous care should have been taken to ensure that an absolutely correct version was given. It is true, also, that the reports will speak for themselves and reveal the mistake that has been made. But the fact that the Egyptian Government has declined to make any direct admission of that mistake is being severely criticised, even in Egyptian circles, and various motives, not altogether to its credit, are being assigned for this extraordinary attitude.

I now learn that the British Government has sent a Note to the Egyptian Government intimating in terms that admit of no ambiguity that it regards the administration of the Sudan as solely the concern of the Governor-General and not that of the Egyptian Government, that it intends to afford him the fullest support in any measures that he may consider necessary to take, and that it has been decided to send back to Egypt at an early date the Railway Battalion and all Egyptians whose presence in the Sudan is regarded as harmful to the maintenance of law and order there. So far no notice has been taken of this warning, nor has any publicity been given to it by the Egyptian Government.

Cairo, August 23.

The Sudan Episode.

The political atmosphere has much improved, and the great outburst which marked the previous week-end has now almost completely subsided. That the tension is relieved is indicated by the fact that the Council no longer sits for such long hours and that the Ministers are now able to give more time to the affairs of their own administrations.

Government based its *communiqué* regarding the events in the Sudan, showed that it had had in its possession the fullest information with regard to what had happened and that the protest of the Acting High Commissioner at the misleading nature of that document was fully justified. The Opposition seized upon this publication as an opportunity to attack the Government for "giving satisfaction to the British"—a sadly foolish attitude to adopt, seeing that the Government was in a position where, for its own credit, it had to publish either a correction of its *communiqué* or all the documents it had received.

A further onslaught took place when the news was received that the Labour Battalion, that had caused all the trouble at Atbara and Port Sudan, was being repatriated; and the Government was attacked for acquiescing without any protest in this execution of Great Britain's threat. Here, again, the Opposition was on very weak ground, for the simple reason that the return of this battalion meets a demand put forward by the Egyptian Parliament last June. It seems to be forgotten—the Government organs now remind their opponents thereof—that at that time the question of this very battalion was raised in the Senate, where complaint was made at its employment on railway work. The Minister of War explained at the time how it had come about that it had been so employed ever since the reconquest and undertook that part of it should be immediately demobilised and the remainder repatriated within as short a time as possible. In the circumstances, the Egyptian Government could not very well object to the return of this battalion.

The Passing of the Crisis.

There is, however, no need to dwell to-day on the events of the past, for it is to be hoped that another and much-to-be-regretted episode in Anglo-Egyptian relations has now been closed, and that matters will henceforward proceed on more tranquil and amicable lines. Certainly it looks as if counsels of prudence are prevailing. On all sides one hears pleas for calm and national union in order that the Government may not be hampered in its actions. It has been in this spirit that the demonstrations organised by the Labour Syndicate have been called off and that the proposal for an urgent summoning of the Chambers has been rejected.

No useful purpose could indeed have been served by a special Parliamentary session at the present juncture. On the contrary, there is every reason to fear that the situation would have been further aggravated and the Government considerably impeded thereby. It is an indisputable fact that the debates in the Chamber of Deputies were entirely responsible for the whole Sudan controversy that ensued in June last, and that the pressure then put on the Government, not only by the Opposition, but also by some of its own supporters, rendered Zaghloul Pasha's position very much more difficult in regard to negotiations. In view of the risk that the less moderate and more vociferous element would raise issues which would have further complicated the already very complicated situation—there is good reason to believe that this was the object of the Opposition—the decision to leave matters as regards Parliament to follow their normal course was an exceedingly wise one.

The great question that is exercising the minds of most people out here at present is whether negotiations will take place at all this summer. There seems to be a general idea that Zaghloul Pasha will not make his projected visit to London, but that, if any meeting takes place between him and Mr. MacDonald, it will be on the Continent either before or after the latter's visit to Geneva. There is a widespread feeling that the recent events in connection with the Sudan have made it scarcely possible for any result satisfactory to Egypt to come from any discussion between the two Prime Ministers; but the Anglo-Egyptian atmosphere undergoes such kaleidoscopic changes and the unexpected is so repeatedly happening that it is quite impossible to give any definite opinion in this connection.

The Abyssinian Church.

The controversy between the Abyssinian Church and the Coptic Patriarch with regard to Deir Sultan, the Coptic Monastery in Jerusalem, bids fair to reach its climax this coming week. Ras Taffari has returned to Cairo, on his way back to Addis Abeba from his European tour, for the express purpose of discussing the question with the Coptic community. The Prince is evidently very determined that this dispute shall be settled one way or the other, and if no decision is come to before he sails this week, he will leave behind him two of his suite to continue negotiations.

Jerusalem, August 23.

The Wahhabi Raid.

The great topic of interest is still the Wahhabi raid into Transjordan. This was referred to briefly in these columns last week. At the time of writing there were no details available beyond the dry official communication. There is now, however, an excess of information from both public and private sources. Official accounts seem, on the whole, to minimise the scale of the raid and its seriousness; private accounts and the accounts reproduced in the local Press go to the other extreme. The truth is most likely to be found nearer the "minimum" than the "maximum" version. The official account published yesterday makes no attempt to gauge the Wahhabi forces—which are said to have numbered anything between 1,200 and 12,000, and to have fought along a front of eighty kilometres. The Wahhabis—however many they may have been—appeared very suddenly and disappeared very suddenly. They undertook a very long desert night journey, and made their appearance at Kastal, some ten miles south of Amman, on the Hejaz Railway, at six o'clock on the morning of August 14, when they were reported to be fighting with local tribesmen. Later in the morning three successive parties of airmen flew over the raiders with bombs and machine-guns; about 11 o'clock armoured cars came into action, and against them the Wahhabis proved quite helpless: early in the afternoon the raiders were sighted forty miles east of Amman, and later air reconnaisances failed to locate any trace of them. Fears that the fugitives might reassemble and try again have not been justified. A *Reuter* cable from Jeddah, reporting further raids on the following Monday at the same place as before, proves to be only a garbled version of the original attack. Vague rumours have been current more recently of

Digitized by Google

attacks in the Jebel Druze, but these also seem to be baseless.

We are left to guess whether the Wahhabis were merely on a looting expedition, or whether they were seriously hoping to get a footing in Transjordan. Though it is obvious that the British military help speedily beat off the raid with comparatively light losses to the Transjordan troops and Bedouin tribes, it is not certain that the latter might not—though only with serious loss—have succeeded in defeating the Wahhabis. Some elements in the local Arab Press are quite certain that the British intervention was superfluous, and that the occasion simply served as a pretext to justify the Palestine Government in assuming military—and final and complete—control of Abdullah's independent emirate, and so withdraw that first hardly gained instalment of Arab independence!

Arabs and Agriculture.

Some notice should be taken of certain small beginnings among the Palestinian Arabs towards catching up with modern agricultural methods. In pre-War days the more up-to-date methods of the Jewish colonies made no impression on the Arab cultivators; they still held to their ancestral implements and habits. Now they are no longer indifferent. At Tul-Keram a small agricultural school is in existence, following the lines of the old Jewish agricultural school of Mikveh-Israel, near Jaffa. Every new "Peasant Party" which springs up puts modern agricultural study as one of its primary objects, and—in itself an unusual example of Arab public-spiritedness—the President of the Hebron Peasant Party has given a large plot of ground for the establishing of an agricultural school near Hebron. The allotment of the "Kadoorie Bequest" has been made with extraordinary shrewdness. This bequest, it will be remembered, was put at the disposal of the British Government for educational purposes in Palestine. It was at first proposed to do the obvious thing and create with the fund more and ordinary secondary education facilities for both Arab and Jew. Now, however, it is decided to devote half the money to an agricultural school for the Arabs in Tul-Keram, the other half to go to the Hebrew Secondary School in Jerusalem. Thus a very substantial Jewish gift is put in the hands of the Arabs to be devoted to precisely that work which will best help them to face Jewish competition where it is most pressing. This grant towards agricultural education has not aroused a single syllable of comment in the Arab Press.

The Hebrew University.

Some slight progress is announced from the Hebrew University. In addition to the existing departments of Biochemistry and Microbiology, there is now created the department of Jewish Studies. A heavy endowment recently came from an American Jew towards the faculty of Arts and Letters, and a few weeks ago a committee of Jewish leaders and scholars met in London to decide upon the best mode of beginning work in such a direction. It must be admitted that they decided well. There was a strong party, representing the local Hebrew learned world of Palestine, which was for creating outright Chairs of Philosophy, History, Mathematics, Sociology, Greek, and the rest of the more august features which go to make up a fully fledged university; but the saner of the committee realised that this would mean inferior professors and a University no better than, say, something to be found in some uppish district in the middle-west of the States. The committee wisely restricted itself, first, to subjects of study exclusively Jewish (since these, naturally, should be found at their best in the Hebrew University), and, secondly, to creating only such sub-departments for which first-class men could be found as professors, and avoiding any imposing paper scheme of lines of research in subjects for which a first-class Jewish professor was not available. This is a very small but eminently wise beginning—only it has proved a bitter disappointment to the local body of scholars.

CYPRUS.

Nicosia, August 19.

Egypt and Cyprus.

Affairs in Egypt and the Sudan are watched with great interest and some uneasiness, especially those of Egypt. The connection with Cyprus is close. The Cypriot Colony is a large one—many years ago it was over 30,000—and the "Cypriot Brotherhood" has done, and does, much in aid of schools and institutions in the island. Many Cypriots in Egypt have bequeathed large sums for education and other purposes. One of the reasons why so little has been done officially for Cyprus is held to be that when, in 1882, we came to occupy Egypt as the dominant Power, Cyprus was in consequence largely affected. All idea of making it a naval base was abandoned; and when, under Mr. Joseph Chamberlain, as Colonial Secretary, a loan of £60,000 was sanctioned, the lesser of two schemes for a harbour at Famagusta was carried out. The larger, which would have provided a harbour that could shelter the whole Mediterranean Squadron, was put aside. Whatever our future policy in Egypt, Palestine, Transjordan, and Cyprus may be, the close proximity of the island must always be a factor of the greatest importance. [Napoleon and others always regarded Cyprus as a stepping-stone to Egypt.] The importance of its geographical position may now again be said to be of peculiar interest to us. For the Cypriot, especially the mercantile classes, there may well be considerable anxiety as to any development of native administration and diminution of European control or influence in Alexandria and Egypt generally, as this, they apprehend, may bring loss or disaster to many Greeks.

The Present Outlook.

The present situation is one of suspense. Most families are away in the hills for the hot season.

The general opinion is that on the return of the High Commissioner, Sir Malcolm Stevenson, the Legislative Council will be dissolved and fresh elections held; but this is mere rumour. The Greek leaders regard the present non-Moslem members of Council—two Maronite priests and villagers of the agricultural class—as unfit to represent the Greek community. However this may be, the situation was brought about entirely by the refusal of their own ex-members to sit in the Chamber, which they must now recognise to have been an unwise step. Leading articles in the Greek Press—there is no Turkish paper—continue to dwell almost exclusively on political subjects and aims. It is, however, commonly understood that the Greek leaders, ex-members, and town candidates for the next election have resolved to co-operate with the Government for progress in the island—a new rôle. It remains to be seen how far the resolution will be carried out. It would be the height of folly on their part not to recognise how much harm they have done to island interests, and, indeed, probably to their own cause, by their past tactics; how much more might have been accomplished had they worked whole-heartedly for material prosperity instead of for political dreams, which they should know cannot be realised for a multiplicity of reasons, and how much they can still do if they proceed along a new and less deviating path. The papers still talk as if nothing had been done for the island under British administration, whereas—while candidly admitting that the pace has been slow—Cyprus has been wonderfully transformed since the days of Turkish rule. In the towns especially one can find an entirely different people. The younger generations have lived only under British administration. They have no idea what the island was like before they were born or went to school. They have only known a period of security for property, which has enabled many Cypriots to make fortunes, during years in which many have learned to qualify in law, medicine, and other professions. The change in dress and social life generally has been remarkable. A totally new atmosphere has been created, in most respects for the better. A Press has grown up which would have been impossible under Ottoman rule, and which, unfortunately—and often rather ungratefully—has allowed its anti-Government sentiments to stray beyond the limits of reason and liberty. Writers still fail to see how retrograde would be a transfer to rule from Athens in present circumstances. Should matters now proceed harmoniously, it is quite possible that some further concessions might in due course be made towards "self-rule." But, up to the present, circumstances have clearly shown how entirely right have been the decisions of successive British Governments. The Duke of Devonshire having, as Colonial Secretary, stated emphatically that the question of "union" must now be considered as closed, only palpable weakness or indifference would allow it to be re-opened.

Mustapha Kemal, accompanied by Ministers and Deputies, left Constantinople last Friday for Angora, in order to lay the foundation stone of a memorial to an unknown soldier on the Tonlu Bunar heights.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

NEWS IN BRIEF.

A serious railway accident occurred last Friday at Montgomery, 60 miles from Lahore. Two passenger trains came into collision, resulting in ninety-five deaths and over a hundred injured.

The Hejaz Minister to Great Britain has left the Hejaz for England, bringing with him a redraft of the proposed Anglo-Hejaz Treaty.

Monsignor Dolci, the Papal Nuncio at Bucharest, arrived at Constantinople on August 26 in order to settle the dispute over the re-opening of the Congregational schools between Turkey, France, and Italy.

An explosion occurred on August 28 at the military powder magazine near Piræus. Practically two tons of obsolete ammunition were exploded, causing the death of two soldiers. The magazine was destroyed.

The Burmah Legislative Council has adopted the Nationalist party leaders' resolution in favour of a further grant of constitutional reforms and the placing under provincial control of all subjects except foreign relations and defence.

The Times' Rangoon correspondent says that the appeal of Mr. A. V. Joseph against a sentence of nine months' imprisonment with hard labour, and a 5,000 rupee (£330) fine for having defrauded the Bengal-Nagpur Railway, has been successful.

The Egyptian Ministry of Education is arranging for the establishment of 110 elementary schools throughout the country for boys and girls under the newly-instituted compulsory education scheme, for which £100,000 was budgeted this year.

The Government of India announces that Khan Sahib Shah Ali Akbar, Political Naib and Tahsildar, was murdered on August 25 on the Sarwekai-Wana road. He is believed to have been killed by Taji Khel Wazirs, some of whom were actually in his escort.

The Maharaja Jam Sahib of Nawanagar, better known as Ranjitsinhji, has bought from Messrs. Thornycrofts a 70-ft. sailing motor yacht, which he launched recently from their Hampton yard. The boat is most luxuriously appointed, and His Highness intends to use her primarily for pleasure and State reception purposes. In November next, on the occasion of the Viceroy's State visit, she will be used for a trip along the coast.

The Khalifa-ul-Massih Bashir-ed-Din Mahmud Ahmad, head of the Ahmadia movement in Islam, attended by a suite of fifteen persons, visited Brighton last Friday and inspected the *chattri* erected on the Downs near Patcham as a tribute to Indian soldiers who died in the War, and the memorial gateway at the Royal Pavilion, which was given by the people of India to Brighton, in grateful recognition of the town's grant of the historic building as a hospital for wounded Indian soldiers.

Admiral Earl Beatty, who was accompanied by Lady Beatty and the Duke and Duchess of Sutherland, arrived at Bucharest on August 25 from Constanza, and was received at the station by the authorities. A luncheon in honour of the Admiral was given at the Military Club, the guests including members of the Government, the Staff of the British Legation, and a number of high military officers. In the evening, Lord Beatty was entertained at a banquet at the Ministry for Foreign Affairs. Later, Lord Beatty, with M. Bratiano, the Premier, the British Military Attaché, and a large party, left for an excursion on the Danube to the Iron Gates.

Concessions obtained by a Greek, M. Mavromatis, in 1914, from the Turkish Government, for the construction in Palestine of tramways, irrigation works, and electric light systems, were the subject of a judgment delivered on August 29 by the Permanent Court of International Justice, at The Hague, to which the matter had been submitted by the Greek Government. Some of M. Mavromatis's plans had been used by the British authorities during the war, and he had claimed compensation from the Zionist Organisation. The finding of the Court upheld, in respect of the concessions at Jaffa, the British contention that it was not competent to give judgment, but rejected the plea in regard to the concessions at Jerusalem, and reserved these latter concessions for further inquiry.

The Mediterranean Fleet, under the Commander-in-Chief, Sir Osmund de B. Brock, K.C.B., returned last Saturday to Malta. The battleships and cruiser squadron arrived from Corfu, and the destroyer flotillas from Argostoli, thus concluding the first part of the summer cruise which was made to ports in Greece, Italy, and the Adriatic. The *Marlborough*, Captain William D. Paton, D.S.O., which left the Fleet at Zara to go to Alexandria in connection with the situation in the Sudan, is being relieved by the *Emperor of India*, Captain Frederick P. Loder-Symonds, C.M.G., as she is to return home to pay off and recommission before the end of September. The fleet is scheduled to leave for the second part of the summer cruise on September 8, and will reassemble at Malta on October 23.

EGYPTIAN INDEPENDENCE.

"EGYPT AND THE ARMY." By Lieut.-Colonel P. G. Elgood, C.M.G. (Oxford University Press. Price, 16s. net.)

Our author sets out to bring the story of Modern Egypt up to date. "Of the early successes of England in Egypt," he writes, in the Preface, "Milner, in his book under that title, has left an imperishable and truthful record; of the early failures, Wilfred Blunt, in the *Secret History of the English Occupation of Egypt*, has bequeathed an equally vivid though bitter account. There remains yet to relate how and why Egypt threw off the yoke. This is the task I have set out to perform." No one who reads this book will accord it the lowest place in the trilogy. Colonel Elgood has spent a large portion of his life in Egypt; he has seen service in the Ministries of War, Interior and Finance; more important still for the purposes of a contemporary historian, he is well disposed towards the Egyptians; while allowing neither his sympathies with them nor any British prejudices he may have to detract from the strict impartiality with which he approaches his subject. If we have any quarrel with the author, it is that the title, although justifying, perhaps, the space allotted to military operations, fails altogether to do justice to his masterly analysis of the events and conditions associated with the declaration of Egypt's independence. A tantalising characteristic of the book, if another grumble is permissible, is the studied omission of official names. Thus the representative of Great Britain in Egypt at the outbreak of the War is *passim*, "the Acting British Agent"; the memorandum that caused Rushdi Pasha to resign his premiership is by "an Englishman holding high office in the Egyptian Government."

The great value of "Egypt and the Army" lies in its careful delineation of the successive phases in the attitude of Egypt towards Great Britain. It would be a profound mistake to suppose, writes Colonel Elgood, that, at the date of the outbreak of the War, British control was welcome to the inhabitants of Egypt. "Unhappily, precisely the reverse was the case. Few Egyptians esteemed the work of England in their country, fewer still desired it to be continued, and those who had profited most from the Occupation were foremost now in denouncing it. Sudden prosperity had destroyed the reasoning faculty of the nation. Unmindful that their good fortune was due to British rule, they saw in every action of England a purely selfish inspiration." It is not difficult to understand how the strain of a long war would tell on such a temperament. Even so, with judicious handling, the Egyptians might have been induced to make adequate allowance for military exigencies, and might have placed, as it were, in cold storage for the duration of the War their feelings towards Great Britain. Unfortunately, British statesmanship was taxed to the utmost in other directions; it had nothing to spare for Egypt, and blunder was piled on blunder. Considerations of space prevent us from following the various stages so graphically described in this book. On the introduction of martial law, the population was assured that it was a measure of precaution only, and at the same time the British Government solemnly declared that Great Britain accepted the sole burden of the War, without calling upon the Egyptian people for aid. That undertaking was broken without any attempt at explanation just at the moment when the Egyptians were tiring of the War, and with the transfer of military operations to Palestine were inclined to suppose that it concerned them no more. "Military authority in Cairo, marking the birth of restlessness, misread its origin and magnified its origin. The old spirit of tolerance, practised so sedulously by General Maxwell, gave place to one of suspicion, and the disinclination of Egypt to share the burden of military operations outside her territory was construed as hostility towards Great Britain. Insensibly martial law became an instrument of repression, and the solemn promise made at its declaration faded from memory." Then came service in the Egyptian Labour Corps. "Unashamedly, the corvée was re-introduced," and ultimately Egypt yielded to the Army her labour, her food, and her money, and to Britain her cotton. Thus it came about that during the closing months of the War fellahin Egypt was stirred into savage hatred of British authority. "Nor did the first days of peace produce a kindlier atmosphere. Military requisition still continued: military rule stiffened, rather than relaxed." The climax came with the requisition of land at Aboukir, near Alexandria, for the purposes of the Royal Air Force. Zaghloul Pasha now steps into the foreground of the picture, and the chief points in the subsequent history of Egypt are well known. Colonel Elgood thus sums up the situation:—

"The clamour of Egyptians in March, 1919, had been misinterpreted. Originally no more than a spontaneous desire to register protest against prevailing conditions, the movement was confused with revolution, and handled in accordance with that incorrect impression. The Army, placed in supreme control, believed that Egyptians desired to overthrow authority, and treated the people as avowed enemies of Great Britain. It was a lamentable misconception of the facts. Egypt at no time desired to injure England, and at first claimed no more than the right to control her own domestic business. Mistaking the sentiment, Great Britain pursued a policy of repression, which caused Egypt to stiffen her demand. . . .

"If Great Britain was slow to confess her blindness, Egypt was equally unmindful of the substantial benefits which the former had bestowed upon her. In the torrent of denunciation hurled by the Nationalist party on England's head, there was no confession that the Occupation in any respect had benefited Egypt. From the omission posterity will judge the honesty of the spokesmen of the nation and the bitterness of the people towards Great Britain. . . . England had given to Egypt upright in place of corrupt government, solvency in place of bankruptcy, and liberty in place of oppression."

There is much more that is good in this book, but we can only refer the reader to a trenchant critique of the Armenian refugees as they showed themselves in Egypt from 1915 onwards, to the tribute paid to the Suez Canal Company and to the shortcomings of Egyptian education.

ANTI-BRITISH PROPAGANDA IN GERMANY.

To the Editor of THE NEAR EAST.

Sir,—Bengal is again the theatre of a movement which aims at committing murder, dacoity and robbery; and collecting funds for the purpose of financing a revolution. If it is a fact that the chief instigator is a Brahman named N. N. Bhattacharji, otherwise known as "M. N. Roy," who is said to have established himself in Berlin, whence he is flooding India with Bolshevist literature, how, then, does it come about that our Government should allow conquered Germany to harbour conspirators of his type?—I am, etc.,

August 26. F. H. S.

THE PRESS IN EGYPT.

To the Editor of THE NEAR EAST.

Sir,—Lady Drummond Hay, in her very interesting article published in THE NEAR EAST of the 21st ult., states that *Alahram* is the only newspaper in Egypt possessing a special telegraphic service of its own. This statement seems to me unfair to other newspapers in Egypt. The *Egyptian Gazette*, the organ of the British community in Egypt, receives special cables from London. *Al Siassa*, the Adlyist organ, whose circulation is greatly increasing, and which is considered one of the best edited newspapers in Egypt, has also organised a special cable service. There are also other newspapers which receive occasional cables from London.

Lady Drummond Hay also says that now "forty thousand is the figure reached by the most popular daily." I should like to point out that the figures of circulation in Egypt are probably open to question. I hear from people who know a great deal about the Press in Egypt that the greatest circulation at the present moment is about twenty thousand copies. Of course, in times of excitement papers sell more.

May I also add that there is not a single Egyptian newspaper that could depend on its circulation being the same for any period. For instance, a declaration by Zaghloul Pasha against the most popular newspaper is enough greatly to reduce its circulation. Since *Alakhbar*—formerly a Zaghloulist organ—tried to express independent views, its circulation has been greatly reduced; on the other hand, since *Almokattam*—formerly a pro-British Arabic organ—expressed sympathy with the Zaghloulist movement, its circulation has increased by three or four times.

The two chief Zaghloulist editors are ex-enemies of the Zaghloulist movement, and Zaghloul does not mind their past history so long as their papers warmly support Zaghloulism.—I am, etc.

INDIAN KNIGHTHOODS.

The King has conferred by Letters Patent under the Great Seal of the United Kingdom of Great Britain and Ireland, bearing date July 10, 1924, the dignity of knighthood on M. R. Ry. Diwan Bahadur Raghupati Venkataratnam Nayudu Garu.

By warrant under the Royal Sign Manual, the Viceroy of India has been authorised to confer the honour of knighthood on:—

Mr. Alexander James Anderson, C.S.I., V.D.; Mr. Montagu Sherard Dawes Butler, C.B., C.I.E., C.V.O., C.B.E., Indian Civil Service, President of the Council of State; Mr. Peter Henry Clutterbuck, C.I.E., C.B.E., V.D., Inspector-General of Forests; Mr. Mahamadbhai Currimbhai Ebrahim, of Bombay; Mr. Provash Chandra Mitter, C.I.E., Vakil of the High Court of Judicature at Calcutta; Mr. Justice (Babington Bennett) Newbould, Indian Civil Service, Judge of the High Court of Judicature at Calcutta; Mr. Justice (Henry) Scott-Smith, Indian Civil Service, Puisne Judge of the High Court of Judicature at Lahore; and Khan Bahadur Sardar Rustomji Jehangirji Vakil.

TROOPING SEASON.

The trooping season 1924-25 began last Tuesday, and will continue until the end of March. The autumn programme, according to present arrangements, is as follows (the port of departure and return in the United Kingdom in every case being Southampton):

Drafts for Gibraltar, Malta, and Egypt sailed in the Derbyshire on September 2, and will leave in the Assaye on November 11.

Drafts for India will sail in the Assaye on September 12, in the Neuralia on September 23, in the City of Marseilles on October 1, and in the Marglen on October 15. After landing other drafts at Aden on October 27 the Neuralia will take the 13th Pack Battery to Port Said.

The 12th Brigade, Royal Field Artillery, together with drafts for India, will start in the Neuralia on November 25.

Drafts for Aden, Colombo, and the Far East will sail by the Derbyshire on October 9, and for Aden in the Neuralia on September 23.

Drafts for Egypt will start in the City of Marseilles on December 2.

The 2nd Battalion Border Regiment, for Malta, and drafts for India, will sail in the Marglen on December 11, and at Malta the 1st Gordon Highlanders will embark on the Marglen for India.

NEW PERSIAN CABINET.

The Persian Prime Minister, the Sardar Sipah, introduced the new Cabinet to the Valiahd (Heir Presumptive to the Throne) on August 30. The principal appointments are:—

MOSHAR-UL-MULK	...	Foreign Affairs
ZOKA-UL-MULK	...	Finance
ADIB-ES-SULTANEH	...	Justice
AMIR IEHTEDAR	...	Interior
SARDAR ASSAD	...	Posts and Telegraphs
SARDAR KHORASSANI	...	Public Works

The name of the undermentioned officer is to be added to those "mentioned" in the Waziristan despatches of January, 1922, which were published in the *London Gazette*, May 30, 1924:—Villiers-Stuart, Col. W. D., C.B.E., 1/5th R. Ghurka Rif., I.A.

The Yugoslav Minister of Foreign Affairs, in agreement with the Minister of Finance, has appointed a committee of experts to examine the possibilities of a commercial treaty with Austria. Negotiations will begin with Austria towards the end of the month.

Sir Milne Cheetham, British Minister in Athens, and Lady Cheetham are staying this week in London

Lady Annabel Dodds has left England to join Major Dodds at the British Consulate, Tripoli, Libya.

M. Politis, the Greek Minister in Paris, is attending the League of Nations Assembly at Geneva.

The Egyptian Minister and Madame Aziz Izzet, with their two sons, returned to London last week from Geneva.

Ismail Sirry Pasha, formerly Egyptian Minister of Public Works, after a short stay in London, left on August 31 for Paris.

M. George Todorovitch has been appointed Counsellor at the Legation of the Kingdom of Serbs, Croats, and Slovenes.

M. Duca, Roumanian Foreign Minister, has been appointed permanent Roumanian representative to the League of Nations.

The Maharajah of Bikaner, who arrived recently in London from India, has left to attend the League of Nations meeting in Geneva.

M. Yovan Yovanovitch, Consul-General for Yugoslavia, who has been in Belgrade for several weeks, returned to London last Thursday.

M. D. N. Ciotori, Secretary, and Colonel Ion Antonesco, Military Attaché at the Roumanian Legation, left London on August 26 for Geneva.

General Lord Rawlinson, Commander-in-Chief in India, who is at present in England, has arranged to return to India during the first week in November.

Phra Sarasas, Third Secretary at the Siamese Legation, has left England to take up the post of Consul-General at Calcutta, to which he was recently appointed.

King George and Queen Elizabeth of the Hellenes were entertained at tea last Thursday by Mr. Frank Buchman, of New York, at Brown's Hotel, Dover Street, London.

The marriage arranged between Captain George Bambridge and Elsie, daughter of Mr. and Mrs. Rudyard Kipling, of Bateman's, Burwash, Sussex, will take place at St. Margaret's Church, Westminster, on October 22.

Prince Nicolas of Roumania visited the British Empire Exhibition on August 26, and inspected the Palaces of Industry, Engineering, and Art, as well as the pavilions of India, Burma, Canada, and Australia. The following day the Prince left London for Bournemouth on a visit to the Infante Alfonso and the Infanta Beatrice of Bourbon Orléans.

The King has given authority for the wearing of the insignia of the Order of the Nile, Second Class, to Mr. Charles Todd, O.B.E., M.D., Technical Expert to the Egyptian Department of Public Health.

Zekiai Bey, Minister of Agriculture in the Turkish Government, who acted as Financial Adviser to the Turkish Delegation at the Lausanne Conference, has been appointed Turkish Ambassador to the Court of St. James's, and is expected to arrive shortly in London.

OBITUARY.

M. NICHOLAS MISHU.

It is with regret that we have to record the death, which occurred at Bucharest on August 31, of M. Nicholas Mishu, Comptroller of the Roumanian Royal Household, formerly Roumanian Minister in London. M. Mishu had been ill for many weeks, and at the beginning of August the serious state of his health had led to the departure for Bucharest of his son, M. Nicholas Mishu, who is a Secretary at the Roumanian Legation. M. Mishu was born in 1858, and after taking a degree at Göttingen University, entered the Diplomatic Service in 1886. He held the post of Minister in London from 1913 to 1920. His charm of manner and scholarly attainments won for him a wide circle of friends in England, and he was greatly missed when he returned to Roumania to take up the post specially created for him by King Ferdinand. M. Mishu was a conspicuous classical scholar, and was familiar with twelve languages, amongst which has to be reckoned Anglo-Saxon, which he studied assiduously during his residence in London.

The Hon. Charles M. Dickinson, for many years American Consul-General at Constantinople, also one-time Minister to Bulgaria, and later American Consul-General-at-Large to the Near East and India, passed away early in July, in his eighty-second year, at his home, South Mountain Park, Binghamton, New York.

The death is announced of Colonel Arthur Octavius Green, formerly of the Royal Engineers, at Camberley on August 26. He served with distinction in the Egyptian Expedition of 1882-4, taking part in the battles of Tel-el-Kebir and Teb, at the latter of which he was severely wounded. He also served in the Sudan Expedition of 1885.

A GOLDEN OPPORTUNITY IN MACEDONIA

The present moment offers an excellent opportunity for statesmanship in the Balkans to take up the Macedonian question with the prospect of finding a workable solution. Something in the nature of a split has occurred in the ranks of the Macedonian Revolutionary Organisation. It is not suggested that the policy of *Divide et Impera* should be applied to this unhappy country, but that advantage should be taken of the first serious indication of willingness on the part of an influential section of the Macedonians to place more reliance on the conference chamber than on the rifle for the purposes of a settlement. The Organisation itself is clearly at the parting of the ways. A year ago the Central Committee issued a declaration defining its objects. The Revolutionary Organisation, it was stated, was not a Chauvinist movement, but a purely national organisation. Its adherents were not inspired with hatred against any nation; it was opposed only to Governments guilty of oppression and their agents; it had absolutely nothing to do with the policy of the Bulgarian Government; it would continue to follow an independent line of conduct, and, relying upon the liberal opinion of the whole world, it announced its determination not to lay down its arms until it had attained its end—the complete liberation and unity of the Macedonian peoples, the constitution of a free and independent Macedonia. Since the date of this declaration, September 6, 1923, much has happened to give the Organisation food for thought. The pressure exercised by the Yugoslav Government has become more systematic, if not intensified; the Organisation's independence of Bulgaria has been endorsed, perhaps almost too literally for Macedonian comfort, by the Bulgarian Government. As a result of these conditions the Central Committee found itself obliged to take stock of the new situation. If the policy of war to the knife was to be continued and reliance placed on help from outside, there was only one quarter from which assistance could be expected, namely Russia. It must be inferred that just at this time—the early spring of the present year—Soviet overtures to the Macedonians held considerable attractions for all three members of the Central Committee—Todor Alexandroff, Alexander Protoguéroff, and Petar Tchaouleff—and that an interchange of views between these leaders and others had the effect of encouraging the pro-Bolshevist element in the Organisation.

There has since been published a Manifesto bearing the date of May 6, 1924, and purporting to be signed by all three members of the Central Committee, which announced the definite abandonment of the policy of September 6, 1923. In this new document the Organisation declared that it was unable to disinterest itself in the foreign and domestic policy of the Balkan States, especially of "Serbia," Greece, and Bulgaria, and proceeded to elaborate its case against the different Governments, in particular against the Bulgarian. After a detailed analysis of the shortcomings of these States, which in the case of Bulgaria made no attempt to disguise the fact that it was written exclusively from the point of view of a Bulgarian Communist, the Manifesto called upon all Macedonians and Bulgarians to begin an energetic struggle against M. Tsankoff's Government. Not content with the liberation of Macedonia, it proposed to extend its aim to the "democratisation" of the neighbouring States with a view to their union in a Balkan Federation, which would put an end to all "Chauvinists, annexationists, imperialists, and oppressors." In a word, the Manifesto bore all the signs of Bolshevist penmanship. Nothing seems to have been heard of it until it was published in the first number of a paper called *La Fédération Balcanique*, issued from Vienna on July 15. This publication contains articles in the different languages of South-Eastern Europe, with a French translation of each. Internal evidence suggests that the funds required for such an enterprise must be entirely, or very largely, Soviet in origin. The repudiation of the Manifesto by Todor Alexandroff and Alexander Protoguéroff, who attribute it to "enthusiastic Communists," has called forth rejoinders in the second number of *La Fédération Balcanique*. The third signatory, Petar Tchaouleff, states that complete agreement was reached between himself and his colleagues, to which "concrete expression was given by the publication (*sic*) of the Manifesto of May 6 and by the issue of other documents, of identical tenour, at the foot of which appeared our three signatures, freely and voluntarily appended in the presence of four other persons." Elsewhere in the same issue one of these four other persons, D. Vlahoff, explains that the "original" of the Manifesto was signed by A. Protoguéroff and P. Tchaouleff, and that the name of T. Alexandroff, who left before signature, had been affixed by his two colleagues by Todor Alexandroff's authority given in D. Vlahoff's presence. From this conflict of evidence it may be inferred that already during the discussions Todor Alexandroff had misgivings on the subject of a Macedonian-Bolshevist alliance, and decided to make a tour in Europe in order to sound public opinion abroad. He spent two days in London in the second week of May, and for the greater part of that month was in France. His tour must have convinced him that Macedonia's best chance of independence lay in the gradual and peaceful persuasion of the neighbouring States rather than in a high-handed attempt of a handful of men, however brave and determined, to dictate their own terms to nations numbering some twenty-five million people.

Here, then, is the basis of a crucial difference of opinion in the ranks of the Macedonian Organisation. The quarrel is not over the goal in view, but over the best method of reaching it. No Balkan people has ever been induced to abandon its national goal of independence, and Yugoslavia, Bulgaria, and Greece have no reason to suppose that they will succeed in regard to the Macedonians any more than the Turks did in their own cases. The alternative before the Balkan Peninsula to-day is to see Bolshevism admitted by a back door or to devise a formula which will satisfy the Macedonian craving for autonomy without prejudice to the interests of the Peninsula as a whole. If the Governments concerned accept the overtures of Todor Alexandroff, they may find the formula easier to discover than they have allowed themselves to anticipate. If, on the other hand, they do nothing to strengthen the more reasonable element among the Macedonians, they must inevitably drive the Organisation into the arms of the

Digitized by Google

Bolshevists to the grave peril of every State in the Peninsula. It would seem suicidal to throw away such an opportunity of bringing peace to the Balkans, but to take the first step towards an understanding with the Macedonians will undoubtedly call for statesmanship of a higher order than that yet shown by any Balkan Government.

THE LAW OF MODERN EGYPT.*

(Continued.)

By SIR MALCOLM McILWRAITH, K.C.M.G., K.C.

Such, then, in general outline is the law in force in Egypt as regards both natives and foreigners. Excluding questions of personal statute—such as those last-mentioned matters of Moslem family law—it will be observed that, both as regards the law administered to natives and foreigners combined by the Mixed Tribunals, and as regards that administered to natives only by the Native Tribunals, it is, in reality, a system of almost pure and unadulterated French law. And this circumstance has been the dominant factor in the legal situation, ever since the establishment of these Mixed and Native Courts, in comparatively modern times. I call particular attention to this factor for two reasons: in the first place, it is little realised, or understood, in this country, most people not unnaturally supposing that, because Great Britain has been for so long in control of Egypt, the law of the country is of the British, or at least Anglo-Indian, type. In the second case, the circumstance itself furnishes the key to many of the difficulties we have encountered in our administration of Egypt, and explains why we have, on the whole, been less successful there in judicial administration than in most other branches of government. The reason for the original adoption of French models in legal affairs was the dominating influence and prestige acquired by France in Egypt throughout the middle of the nineteenth century, and more especially during the reign of Ismail Pasha, when the Mixed Tribunals were founded. One of the principal results of this influence and prestige was that the Egyptian official classes were chiefly educated in French traditions and mentality and by French methods. The only European language they had learned was French, and such of them as had studied law at all had studied it in France. Consequently, when it became necessary to choose a system of European law, to be worked by Egyptians and Europeans in collaboration, no other system than the French could possibly have been adopted. But the difficulties which this situation led to for ourselves, when, after the military occupation of 1882, we found ourselves obliged to assume responsibility for the legal and judicial administration of the country no less than for the rest, will readily be understood. How, and where, were we to find Englishmen competent to administer as judges, judicial functionaries, and legal advisers a system which, in its origin, and largely in its practice, was one of pure French law? The only countries in the Empire where English-speaking lawyers familiar with the principles of French law are to be found are Canada and Mauritius; and only in rare individual instances could any be transplanted from those countries. As a matter of fact, during the first ten years of the Occupation régime there were no Englishmen at all in Egypt in legal or judicial positions save the two or three judges in the Mixed Tribunals. The inconvenience of such a situation—having regard to Great Britain's responsibility for the government of the country—was particularly felt in what is called the "State Legal Department," or "Contentieux de l'Etat"—the body, that is to say, that not only represents the Government in all litigation in the Courts, but also drafts all new projects of law for the Mixed or the Native Legislature.

The whole of this work, for which at that time no natives could be found sufficiently competent as draftsmen, was in the hands of French and Italian lawyers. If I may be excused for intruding a word of personal reminiscence here, in order to illustrate the facts of the situation, I may mention that I was myself the first Englishman to be appointed to this department—and I owed my appointment, which was considered a startling innovation, mainly to the fact that I happened to have studied French law and taken a legal degree in Paris. We endeavoured later to induce other young men to train for the judicial service in the same way and many of them did so, to the subsequent advantage of their careers in Egypt. But the requirement of a French qualification, in addition to the English one of barrister or solicitor, naturally deterred many desirable applicants, and thus constituted in practice a very partial remedy.

But though the original adoption of French law as the basis of the Egyptian system will thus be seen to have been not only intelligible but inevitable, it may, perhaps, be less clear to my hearers why—as time went on, and more and more English lawyers entered the service of the Egyptian Government—the law could not have been more closely approximated to English and Anglo-Indian models. As a matter of fact, a good deal was done in this direction in individual portions of legislation from time to time, as may easily be seen from the volumes of Egyptian Government statutes for the last twenty or five-and-twenty years. But the disadvantages of any attempt at far-reaching changes of principle, or even fundamental alteration in methods, greatly outweighed—in the opinion of those at that time in control—any advantages likely to be derived from it. The question did, however, ultimately lead to an acute controversy, which had important consequences, and of which it is necessary to give some account, since it forms a material part of recent judicial history. After the War broke out and a British Protectorate had been proclaimed, a movement was started by certain British officials having for its object a fundamental break with tradition and a more or less openly avowed Anglicisation of the law and legal institutions of Egypt. Personally, throughout my long tenure of office as Judicial Adviser I had always opposed this policy whenever it cropped up—as it had done from time to time during the preceding fifteen years—believing it to be both impracticable and dangerous. And this for the following reasons: It was not a question of the relative advantages of French and English law, or of the intrinsic superiority of one system over the other in the abstract. One might be fully convinced—I am myself profoundly convinced—that the English system of, for instance, criminal law is both in its principles and its methods preferable to the French system.(1) The same may be said of civil procedure—round which the battle in its later stages mainly raged—as well as of various branches of commercial law. But

* Being part of an address delivered at Cambridge University on August 11 last.

[1] As a typical instance of the fairness of our system compared with the Continental practice I may recall that in the recent Crumbles murder case it was scrupulously concealed from the jury that the prisoner (Mahon) had already suffered several previous sentences, one being of five years' penal servitude for a murderous assault upon a woman. A French *acte d'accusation* relates in great detail every circumstance of the prisoner's career from his youth upwards which may possibly prejudice him in the eyes of the jury, often with gross exaggeration.

Digitized by Google

we had not a *tabula rasa* to deal with, nor a tract of virgin territory inhabited by uncivilised races, to which one system of law could be as easily applied as another. Egypt is a land of a very ancient civilisation, and traditionally of a high degree of intellectual culture. In the past the West owes much in literature and science to the enlightenment, during our own dark ages, of Mahommedan rulers of Arab race. In such a country traditions are not easily eradicated. Moreover, in its modern aspect Egypt is an exceedingly cosmopolitan community, in which the British population is only one—and by no means the largest—of a number of foreign colonies. The law of France—that is to say, the Napoleonic Codes—had been, when this controversy first started, the basis of the modern legislation of Egypt for already a quarter of a century. That law is also the foundation of the legislation of most of the European countries from which the foreign colonies in Egypt are drawn. The Egyptian official classes had been educated in it alone for a generation. Apart from these weighty considerations of use and custom, French law is, by reason largely of the precision and lucidity of the language, clearer in form and more congenial in substance to the mass of the inhabitants of Egypt, both native and foreign, than would ever be, in my opinion, our own uncodified, largely unwritten, more or less inaccessible, and partially archaic system.

Both Lord Cromer and Lord Kitchener, with their unrivalled knowledge of the country—though certainly neither of them prejudiced in favour of French as opposed to English institutions—strongly shared these views as to the inadvisability and even danger of any fundamental change of system. Lord Cromer, indeed, with a view to allaying anxiety on this score, which he apprehended, made a solemn declaration to this effect in his Annual Report for 1905. He there said :—" *There is not, indeed, the smallest likelihood that an attempt will ever be made under British auspices to effect any radical change in the civil and criminal laws which at present generally obtain in Egypt, and which, after an experience of thirty years, have now taken root in the country. Nevertheless, some specific guarantee against any such change may not unreasonably be demanded. I propose, therefore, that both the British and Egyptian Governments should make a formal declaration to the effect that they have no intention of changing the fundamental principles of the existing civil and criminal legislation, which will continue, as heretofore, to be, in general, those of the European Codes, and more especially the Codes of the Latin nations. . . . .*" (See " Egypt," No. 1, 1906, p. 7).

However, after the outbreak of War and the changes in the higher personnel of the Executive in Egypt which it had involved, other counsels prevailed. This policy of Anglicisation in judicial affairs was more or less definitely adopted and persisted in for a time. The results proved disastrous. The policy alienated and alarmed the whole, very powerful body of the foreign judges of the Mixed Tribunals —representing fourteen different European nationalities—as well as the influential community of foreign advocates practising before them. It was little less unpopular with the Egyptian legal profession, the bulk of which, as before explained, had been trained in French traditions and mentality, and to whom Anglo-Saxon principles and methods were wholly alien. The cumulative effect of all these bitterly hostile influences was to add enormously to the difficulties with which we found ourselves confronted when political trouble broke out in March, 1919. At a time, when practically the whole native population was arrayed against us, we found ourselves morally isolated among the European colonies, and largely deprived of the sympathy and support which we should doubtless otherwise have received from the most powerful among them—the French and the Italians—to whom this policy was anathema. The policy in question collapsed completely in the midst of the political uproar and general upheaval to which it had materially contributed, and from which the country has not yet emerged. Lord Cromer's neglected warning has been fully vindicated. Nothing now remains of this fatal aberration save the deplorable consequences it produced. The blow it inflicted on our prestige—which stood so high throughout the Cromer-Kitchener era—and our reputation for consistency in our dealings with Oriental peoples, is not the least of the contributory causes of the collapse of the British regime in Egypt, with all the disastrous results (1) which that event is likely to entail for Egypt itself, ourselves, and the world at large.

(1) *Cf*, the speech of Viscount Grey of Fallodon in the House of Lords: " He was told by people who had been in Egypt lately, and who knew what was going on, that practically all the work and administration of Lord Cromer, of which they were all so proud, had either absolutely gone or was going"—See *The Times*, of June 26, 1924.

Seventeen persons were killed and over 30 injured in an explosion at the powder factory at Makrikeui, near Constantinople, last Saturday.

The body of Major Imbrie, the murdered United States Consul, reached Bushire on August 24 from Basra, and was received by the Persians with full honours. The United States warship *Trenton* arrived the following day, and the body was taken on board with due ceremonial at noon. The *Trenton* sailed for America the same evening.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Future of the Exhibition.

It is as yet undecided whether the Wembley Exhibition shall be continued into 1925 or not. While the balance of opinion is undoubtedly in favour of going on, it is doubtful whether all the Dominions and Colonies will be prepared to continue their participation. The question at issue is how far the results of the Exhibition are likely to justify the expenditure involved. On this point the statement in regard to one of the participants that more has been accomplished so far by means of Wembley than would have been done individually in many years is illuminating. In this case the results have been evident, but the invisible consequences of the Exhibition are likely to be even more important than the visible, and, even if another year means a considerable loss, it would seem to be an expenditure worth while.

The Impending Competition.

The effect of the London Agreement has been to concentrate attention here on the trade situation; and, in general, the view taken as to the outlook is anything but optimistic. To mark the seriousness of the position we have the growing figures of unemployment, which, it may be added, commenced to creep up as soon as the McKenna duties were removed. Naturally, the question is asked if this happens when Germany is still a negligible competitor, what will be the result when this is not the case. An interesting sidelight on the change in opinion brought about by the situation is forthcoming from the speeches at the Trade Union Congress. It has been suggested that ultimately Labour must become Protectionist in its own interests, and it would seem that the leaven is working rapidly, judging by the criticism directed against the Dawes scheme. It is not surprising that there should be anxiety as to the outlook in the coal industry, but it may be pointed out that those who are now so strongly declaiming against impending foreign competition must share in the responsibility for the verdict at the last election, the effect of which was to take away our power to counteract the tariffs that have been raised against us on all sides.

Anglo-Austrian Bank.

At the general meeting of the Anglo-Austrian Bank a very interesting and most encouraging review of conditions in Central Europe was given by the Chairman, Sir Herbert A. Lawrence. He dealt first with Austria, and pointed out that in 1923 there was a general tendency to further consolidation, and that in the present year the process of re-establishment has been carried one step farther. Then as regards Hungary, he referred to the successful placing of the £12,000,000 reconstruction loan by the bank. As a pre-eminently agricultural nation Hungary's recovery, he pointed out, was much less dependent than Austria's on factors outside her own control. He added that the bank's branch in Budapest has enjoyed a most successful year.

Progress in Yugoslavia.

Sir Herbert went on to refer with satisfaction to the settlement of the Fiume question, and pointed out that the bank has a special concern in the existence of good relations and active trade between Yugoslavia and Italy, where its interests are large and increasing. "Yugoslavia," he continued, "now has a balanced Budget, and her economic as well as her political position has been much improved both by the conclusion of the treaty with Italy and by the acquisition of a free zone at Salonika. Both through our own branches and through our participation, which we have this year increased, in the prosperous and successful Kroatische Escomptebank, we were enabled to play a part in the development of this very promising country." Turning to Czecho-Slovakia, he said that the same improving tendency is in evidence in that country, where the bank's interests are represented by the Anglo-Czecho-Slovakian Bank. "Czecho-Slovakia," he added, "has acquired, under the guidance of statesmen like President Masaryk, Dr. Benes, and the regretted Dr. Rasin, a reputation for solidity and stability which some older States might envy." Finally, he mentioned that there has been a great improvement in the business of the bank's branches at Cernauti and Oradea Mare in Roumania.

The Parity of the Rupee.

For some weeks now the rupee exchange has shown a slight tendency to appreciate, and at the time of writing it stands round about 1s. 5½d. This reflects the somewhat improved position in India, but it must be emphasised that there is not much likelihood of any further substantial advance towards what is now generally regarded as the very nominal parity of 2s., and it will probably be found in the future, when conditions have settled down, that the rate will be stabilised, with, of course, seasonal fluctuations, in the neighbourhood of 1s. 4d. It is much to be regretted that a change was ever made in the parity of the rupee, but it is so much to the good to know that it is now the policy of the Indian Government to establish the rupee on a 1s. 4d. gold basis as soon as possible.

British Consular Reports.

VI.—YUGOSLAVIA.—Continued.

Yugoslavia is said to be third in order of importance of the silk-producing countries of Europe; its annual production of raw cocoons being estimated at 2,500,000 kilogrammes. The principal silk-producing districts are the Sumadija district of Serbia, South Serbia, and the Vojvodina.

The cocoons are sent to the State factories at Liubliana, Pancevo, Novi Sad, and Djevdjelija, where they are treated, the raw silk produced being principally sold on the Zurich Exchange.

Foreign Trade.

Great progress has been made during 1923 in Yugoslavia's export trade. Complete statistics for 1923 are not yet available, but from the figures which have already appeared and from material collected by Chambers of Commerce throughout the country, it would appear that for the first time since the war the country is within measurable distance of an "active" balance of trade, and many experts believe that exports will be found to be considerably in excess of imports in value. The increase in exportation is due in a large measure to the low exchange value of the dinar during a great part of the year and to the reduction of export taxes.

Trade with Great Britain.

Yugoslavia's trade with Great Britain has increased as regards both exportation and importation during the post-War years. According to figures published for the first six months of 1923, Great Britain provided for that period 8.6 per cent. of the total of Yugoslavia's imports, while in 1920 the percentage was only 7 per cent.

Statistics of exportation show that in 1920 only 0.25 per cent. of Yugoslav exports went to the United Kingdom, whereas the latter took 2.3 per cent. of Yugoslav exports for the first ten months of 1923.

Textiles (including yarns) naturally hold the first place among the articles exported from Great Britain to Yugoslavia. Czecho-Slovakia and Italy are the chief competitors in this market, and the latter especially is making strenuous efforts to monopolise this trade. Italy enjoys the advantage of proximity to Yugoslavia; one is always hearing of the adaptability of her manufacturers as compared with the alleged conservatism of the British manufacturer; and Italy is now producing, at prices considerably lower than those of the Lancashire product, the special types of yarn suited to the Balkan markets. This trade has hitherto been largely in the hands of British manufacturers. Merchants affirm that the representatives of Italian manufacturers offer to send trial consignments of yarn on the understanding that if the merchandise is not sold within a certain time they will take it back. The importation of printed cotton flannels, mostly from Italy and Czecho-Slovakia, is steadily increasing. Here again the Italian manufacturer is said to be more accommodating than his British rival, as he will print to special order a comparatively small consignment of material, while the British exporter will not do this.

The financial stringency experienced during 1923 affected the sale of British goods in more ways than one. For instance, those who prefer to buy British textile goods in normal times have been driven to purchase inferior articles of lower price, although realising that they obtained less value for their outlay.

So far there has been very little export of machinery and metal goods from Great Britain to Yugoslavia; but with the cessation of reparation deliveries from Germany and the increase in the prices of German-made machinery, prospects of trade in this direction are more promising. Non-ferrous metals continue to find a small but regular market. The importance of the personal element and the desirability of visiting their customers at least once a year is again urged upon exporters interested in Yugoslavia.

The abnormally mild weather experienced during the autumn, which lasted well into the winter months, was productive of difficulties for the wholesale textile importers. The small provincial merchants were unable to dispose of their winter goods to the peasants, and were, therefore, driven to ask for extension of the credit allowed them by the importer.

Railways.

A gradual improvement can again be reported in railway communications. That the railways of the country were able to deal with the enormous increase in export trade during 1923 is in itself evidence of improved efficiency.

The fact that a number of new railway lines are being constructed out of revenues is worthy of notice. Under this heading come the following:—Completed: Subotica-Senta-Velika Kikinda, 96.5 km.; Topcider-Mala Krsna, 66 km.; Paracin-Stalac, 18.5 km. In construction: Gracac-Knin, 65 km.; Veles Stip, 60 km.; Ljutomir-Ormos-Murska Subota, 38 km.; Bihac-Krupa, 33 km.; Titel Orlovat, 28 km.; Pozarevac-Mala Krsna, with bridge, 16.5 km.; Tisa bridge, 1 km.; Vardiste-Uzice, 56 km. In addition, surveys are being made for a number of other lines.

The agreement concluded in March, 1923, at Rome between Yugoslavia, Italy, Austria, and Hungary having been ratified, Yugoslavia took over, together with all rolling-stock and personnel, that portion of the Südbahn Company's system, including local railways worked by the company, which fell to the new State under the Treaties of Peace. During the autumn a new railway direction under the Ministry of Communications was established at Liubliana. By the acquisition of this part of the Südbahn the nationalisation of a further 800 kilometres or so of railways in Yugoslav territory has been effected.

By Article 26 of the Law of Budget Twelfths for the months of July, August, and September, 1923, the S.C.S. Government was authorised to purchase those sections of the railways of the Oriental Railway Company and the Salonika-Bitolj (Monastir) Company "which are of interest to the country." The Government duly acquired by purchase from the companies the sections of these lines in Yugoslav territory; and it would appear from a debate in the Skupstina on February 5 that the purchase also includes the company's interests in the line as far as Salonika.

At a meeting of the directors of Furness Withy and Co., last week, Mr. E. H. Murrant and Mr. H. Smurthwaite, who have been associated with the company for many years, were elected to seats on the Board.

Near East Markets.

CROP CONDITIONS IN IRAQ.

The Agricultural Bulletin of Iraq for the month ended July 15 states :—

The total rainfall for the season at Hinaidi up to the end of June, 1924, is 4.93 ins., as compared with an average of 6.88 ins. for the same period in Baghdad. Very light showers of rain were experienced near Baghdad and Baqubah. These were of no importance agriculturally, but being very unusual for the time of year are worthy of record.

Another unusual feature was the appearance of very heavy clouds throughout the month. These, according to Arab opinion, predict cold weather and early rains. Past experience, however, goes to show that the Arab as a weather prophet is not very reliable. Weather conditions, generally, were favourable to plant growth, and the absence of continuous strong winds, usual to this time of year, materially assisted the progress of summer crops, especially cotton.

Harvesting of wheat has been completed, and threshing commenced as soon as permitted by assessment committees. Owing to the poor condition of the wheat and barley crops, complaints of over-assessment appear to be more numerous this year than in previous years.

According to reports from Basrah, there appear to be good prospects of the date crop coming up to average. The bulk of the Halawi crop is reputed to be free from disease, and in one particular stretch it is estimated that the yield will be as much as 30 per cent. above that of last year. Khadrawi dates are likewise reported free from "Ghubbar" disease, but on the left bank of the Shatt-el-Arab Sayer dates are expected to yield 15 per cent. below average.

On the canal areas of Central Iraq the Dukhn crop bids fair to be well above average. Harvesting of early sown dukhn has commenced.

Cotton promises well so far. Most encouraging reports have been received from all cotton-growing areas. Climatic conditions have been very favourable, but it is necessary to wait until the season is further advanced before making any definite pronouncement as to the crop's prospects. Spotted bollworm made its appearance early in June, but as yet the attack has not become severe. Arab cultivators have made rapid advances in their methods of cultivating cotton. This year there appears to be an all-round improvement over previous years, and quite a number of the more progressive cultivators have succeeded in raising what promises to be first-class crops. Cotton picking is expected to commence about the third week in July.

The Department of Agriculture has undertaken to reel silk at Baqubah at Rs. 3 per lb. in order to encourage the silk industry. The amount of cocoons produced this year as compared with last year is :—1923, 784 kilos; 1924, 1,568 kilos. Valuations have come to hand of the flax grown in 1923 at Baqubah. These are encouraging, although there is a wide range between the lowest and highest. The fibre has been valued from £85 per ton to £140, while the tow ranges from £50 to £60. Arrangements are now being made to deal with the 1924 crop.

Sugar Cane has made satisfactory growth, and tillering has been fairly good in most varieties.

Spotted bollworm has been found on "Jiljil," ladies fingers, and hollyhock in gardens at Fellujah, where no cotton is grown within a distance of six or seven miles.

The July to June exports of wheat from Iraq were 81,898 tons, and of barley 105,084 tons—total 186,982 tons, as compared with 190,741 tons for the same period in 1922-23. The total export of the 1923 crop of dates to the end of June, 1924, was 123,641 tons, valued at Rs. 15,654,808, as compared with 108,045 tons, valued at Rs. 13,103,319, for the corresponding season last year. The July to June exports of wool were 7,720 tons, as compared with 2,091 tons for the same period of 1922-1923.

SMYRNA MARKET REPORT.

Messrs. C. J. Giraud and Co. report as follows for the week ended August 23 :—The arrivals on the Smyrna market are estimated at 4,460 tons and the sales to date are put at 3,910 tons. Closing prices per cwt. c.i.f. London-Liverpool :—Type 12, 42s.; 13, 43s.; 14, 47s.; 15, 50s.; 16, 53s.

The market has ruled firm over the week. Demand has been on an active scale, as is evidenced by the extent of the sales (2,400 tons for the week). Although closing prices were firmly maintained, it is probable that, with the increasing volume of daily arrivals, a lower level of values will gradually be established. The weather is keeping fine, and in another ten days the danger of damage to the crop will be largely eliminated.

RAW MATERIALS OF THE EMPIRE.

Visitors to the British Empire Exhibition at Wembley cannot fail to be impressed, not only by the enormous supplies of raw materials already produced within the Empire, but also by the vast resources which still await development. Almost every variety of raw material required for food or in industry is available in some part of the Empire, and it is one of the objects of the Exhibition to bring home to the people of this country the importance of utilising to the full the products of British countries overseas.

In this connection it is opportune to refer to the work which has been carried out for many years by the Imperial Institute, in co-operation with the Technical Departments throughout the Empire, to promote the use of new or little-known products of all kinds from the Dominions and Colonies. The

ARTHUR MORRIS & CO.
46, Commercial St., Aldgate, London, E.1.

BUYING AGENTS AND EXPORTERS TO ALL PARTS OF THE WORLD.

Let us purchase on your behalf and save you money, we will furnish you with manufacturers' original invoices, and credit you with all discounts, rebates, etc., received by us; we benefit only to the extent of an agreed buying commission. We inspect all goods before despatching and supervise packing, forwarding, etc.

If you are buying at the Wembley Exhibition please communicate with our London office, when we shall be glad to arrange an interview to discuss terms, etc., and if necessary our representative will act as your Guide at the Exhibition. An interview places you under no obligation. Our clients are at liberty to use our offices as their London address.

Institute has an exhibit in H.M. Government Pavilion at Wembley illustrating the nature and scope of its operations, and all who are concerned with the production and utilisation of raw materials will find there something of interest.

The exhibits consist of typical examples of raw materials which have been investigated by the Institute in order to determine their possible uses and value in industry. There is an attractive collection of Empire timbers which have been examined recently, in conjunction with the Timbers Committee of the Institute, with a view to their introduction into commerce. Materials suitable for paper-making are represented by specimens of timbers, grasses, and waste fibrous products, together with samples of the paper made from them. Raw cottons are shown from Tanganyika and Iraq, countries which promise to contribute largely in future to the requirements of the Lancashire cotton spinning industry. An interesting collection of silk cocoons, reeled silk and fabrics made therefrom, calls attention to the endeavours of the Imperial Institute Silk Committee to extend the production of silk within the Empire. The investigations of plantation rubber, in connection with the Ceylon Rubber Research Scheme, are also illustrated. Other sections include seeds yielding oils for edible purposes or industrial use; essential oils used in perfumery; Empire-grown tobaccos; resins for varnish making; tanning materials, and drugs. In addition there is a collection of economic minerals, comprising coals from Nigeria, Nyasaland and Somaliland; raw materials for the manufacture of pottery, bricks and tiles, and cement, with specimens of the products made at the Institute; radioactive minerals from various sources within the Empire; metallic ores; and miscellaneous minerals.

A pamphlet has been issued giving an account of the investigations of these various materials, together with a general description of the principal departments of the Institute. Copies can be obtained without charge at the Imperial Institute exhibit at Wembley, or on application to the Director, Imperial Institute.

COMPANY NOTES AND REPORTS.

Anglo-Austrian Bank.

The report of the Anglo-Austrian Bank, Ltd., for the year ended December 31, 1923, states that the net profit for the year 1923 amounted to £85,032 17s. 10d., to which must be added the amount of the balance carried forward, shown in the last report, £20,620 6s., leaving a balance available of £105,653 3s. 10d. The directors recommend the payment of a dividend on the preference shares of 6 per cent., which will involve the payment of £24,000, leaving a balance to be carried forward of £81,653 3s. 10d. Certain of the Austrian branches proved unremunerative, and it was consequently decided to close those at Bruck a/Mur, Gars a/Kamp, Gmünd, Graz Südbahnhof, Horn, Kufstein, Mürzzuschlag, Schwechat, Steyr, and Villach-Südbahnhof. The sub-branch at Suczawa, in Roumania, was also closed. On the other hand, the bank has received authorisation from the Italian Govenment to open a branch at Milan.

In 1923 the total expenses in Austria were more than double those in 1922, and the current year will show a still further increase. This is in consequence of certain legislative requirements and agreements between employers and staff which, in general, date from 1919. At the same time, the staff is far larger than is now required. It has been decided that drastic reductions must be made, and the matter is engaging the serious attention of the board. The directors have thought it wise to carry forward the substantial sum of £81,653 3s. 10d., so as to be prepared for contingencies in connection with this policy. Apart from the situation arising in Austria from this excessive expenditure, the bank has shown a steady and satisfactory development in London and in its other branches. A Stock Exchange and monetary depression, the natural reaction from the optimism displayed in the previous year, characterised the spring and summer of 1924. The fluctuations of the franc early this year precipitated and aggravated the crisis. The Hungarian reconstruction scheme has been put into operation, and great hopes are entertained of its success.

The stocks, shares, syndicates, and participations appear in the balance-sheet at a figure of £1,898,849 2s. 3d. Of this amount, about £1,000,000 is represented by holdings in allied banks in Czecho-Slovakia and Yugoslavia. The industrial position in Czecho-Slovakia has steadily improved, which is satisfactory in view of the holding of shares in the Anglo-Czecho-Slovakian Bank. The commercial situation in Yugoslavia is also improving, and the bank's interests in that country, among which is the holding in the Croatian Discount Bank, render good returns.

Imperial Bank of India.

The report of the Imperial Bank of India for the half-year ended June 30 states that the net profits of the bank for the half-year amounted to Rs.78,81,700, which, with Rs.10,21,157 brought forward from the half-year ended December 31, made a total of Rs.89,02,857. This sum the Governors of the bank disposed of as follows:— In payment of a dividend to the shareholders at the rate of 16 per cent. per annum free of income tax, Rs.45,00,000; transferred to reserve fund, Rs.12,50,000; transferred to pension funds, Rs.5,00,000; transferred to premises account, Rs.5,00,000; carried forward to profit and loss account of the current half-year, Rs.21,52,857.12; total, Rs.89,02,857.12.

Since the publication of the report for the half-year ended December 31, new branches have been opened at Chandpur, Dhanbad, Farrukhabad, and Godhra, and further branches will shortly be opened at Bhagalpur, Ellore, Gujranwala, Jherria, Katni, Ludhiana, Mirzapur, and Montgomery.

AN IMPRESSION OF WEMBLEY.

The Art of the East.

BY HECTOR BOLITHO.

Wembley is an exhibition of realities. One hundred years ago pioneers sailed from England, and they awakened Canada, Australia, and New Zealand from the romanticism of semi-slumber to the realities of commerce. Then the legends of the aboriginals in Australia and the Maoris in New Zealand and the charm of their uncivilised existence ended. A cruder, more practical life was introduced, and that crude, practical resignation to the commercial slogans of 1924 has dominated the pavilions of these countries at Wembley. Butter, wool, meat, grain, and cheese are here in mountains. These things feed the hunger and the pockets of the time, and that is no doubt a more worthy achievement. But against all the unemotional, obvious expressions of these new lands there are the older places—India, Malaya, and Burma—Eastern miniatures in a Western setting.

I know Wembley very well by now. I know most of the countries displaying their produce there. Dismissing the commercial aspect of the vast Exhibition, it is interesting to see how faithfully each pavilion reflects the mentality and temperament of the country of which it is the expression. The Australian is an unromantic, sentimental, true-hearted, but obvious man. His pavilion at Wembley is his mirror. As a commercial exhibition it is almost without fault. But the decoration of the vast building is disappointing, because Australia is still too young a country to have evolved an art of its own, still too unwise a country to reject the medley of Greek, Roman, French, and English ideas which give it a mixed and bad tradition. It is because India and Burma have not come to England with anything but their own art (the word is hideous through ill-usage) that they have given grace and beauty to Wembley with their buildings.

New Zealand uses English Renaissance architecture and venetian poles and says she is expressing herself. India comes with her own minarets and delicate carving, and she does not need the signwriter's brazen letters to tell the visitor where she comes from. Burma, with her delicate teak-wood pagodas crowned by fairy bells, is the very spirit of the land of which this pavilion is the miniature.

Sweeping all the commercial aspects of the Exhibition aside, it is a matter for congratulation that these Eastern places have come contented with their own architecture. Australia's pavilion has a mixture of Greek, Roman, and Cockney accents. New Zealand has every accent but her own. Canada is similarly cosmopolitan, and only West Africa, South Africa, Malaya, India, and Burma have had the courage and the good sense to come to Wembley contented to speak their own tongue in art.

The East has always been swathed in romance . . . even for those who imagine that it has been manufactured according to the designs of Omar Khayyam and the English theatre. To these it is a romantic muddle of colour and incense. Actually, it is a world which had grown old in all things while this Western Hemisphere was still in its intellectual swaddling clothes. But, even without that emotional and sentimental love for what is described as "things Oriental," the East has an unending lure for everybody. In New Zealand, where I lived for twenty years, I never read any books on the "East" except an occasional volume by Lafcadio Hearn or Pierre Loti, and my knowledge of this vague "East" was very meagre. But I was conscious of its magnetism all the time. It is that almost inherent response that makes one experience a thrilling joy at the sight of the Indian, Burma, and Malaya Pavilions at Wembley. At night Canada becomes a block of blackness—a flat mountain without character.

India, with its frail minarets pointing their Eastern fingers at the western sky, is India all night. The silhouette defies the darkness. Thus it expresses its country as the other buildings can never do. I have been at Wembley very late at night—when the three million lights were extinguished and only the night watchman's lamps pricked little holes in the immaculate black. But even then you could hear the tender tunes of the Burmese bells all the night through.

A building has as much mentality as a man; sometimes more. Looking at the Indian pavilion, I am conscious of the long journey India has made through time, accumulating, eliminating, suffering, triumphing, with no intrusion of mixed ideas, fixedly expressing herself, if it is in a Taj Mahal or a little ivory ball you might toss into the air.

These other lands, Canada, Australia, and New Zealand are in the very chrysalis of self-expression. Out of the half developed will no doubt come the tremendous tornado of realism, distinct from the old tradition. But these newer countries are still sturdy stumbling children. Their hands have grown so accustomed to the heavy curve of the spade that they cannot adapt their touch to the delicate technique of the paint brush. These things are not achieved in one or even five generations.

It is because India is old and grand, mellow with innumerable yesterdays, that she has been able to come across the world, plan out the English acres and build a pavilion which trembles like a spiritual temple—a mirage set among the unimaginative pavilions, pavilions which are buildings in the most concrete sense of the word.

Eastern people have come to Wembley in their thousands. What their pavilions convey to them does not matter very much. What those pavilions convey to strangers, to people who, like myself, have known none but the far-spreading undecorated landscapes of the Antipodes, is deeply important. The impression is divided between the mind and the emotions, that is after you have dismissed the commercial purpose of the whole Exhibition as being obvious enough to take care of itself. Even in those Indian stalls where produce is exhibited, the artists and designers have imprisoned the century old wisdom of their land. To me these Indian and Burmese buildings tell the story of the wisdom of the Eastern people and the emotional courage of their lives. There is repose—which is a grand thing—without restraint—which is a cowardly thing.

India, Burma, and Malaya will no doubt reap many returns for the trouble they have taken to expose their Eastern products before Western eyes. No doubt some skilled statistician, in ten years' time, will be able to tell us exactly how much money these countries made on their outlay at Wembley. But I don't suppose anybody, except people such as myself, who blow the thistledown of their impressions over a rather unheeding field, will trouble to realise how splendidly and completely these pavilions bring beauty into a place which is rather barren of it.

It is reported that Czecho-Slovakia's hop yield this year will be excellent, both as regards quality and quantity.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended July 31, amounted to £E8,940, making the total from April 1, £E85,748.

Company Meetings.

ANGLO-AUSTRIAN BANK.

London Office Well Established.

The second ordinary general meeting of the Anglo-Austrian Bank, Ltd., was held on August 29 at Winchester House, E.C. General the Hon. Sir H. A. Lawrence, K.C.B. (Chairman of the company), presided.

The Secretary (Mr. M. McK. Turnbull) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said:—In the balance sheet laid before you you will notice a general increase in the figures as compared with last year, showing that there has been a satisfactory expansion of our business. On the liabilities side, the current, deposit, and other accounts have risen from roughly £4½ million to roughly £7¼ million. The business of our London office on the one hand, and that of our Continental branches on the other, have contributed about equally to this increase. On the credit side our liquid resources have increased in proportion. Our investments, it may interest you to know, are by no means held in one country alone, but are partitioned approximately as follows:—Austria 33 per cent., Czecho-Slovakia 45 per cent., Yugoslavia 11 per cent., Hungary and miscellaneous 11 per cent.=100 per cent.

The sundry debtors have increased by about £1½ million, as compared with the increase already mentioned in current, deposit, and other accounts, of roughly £3 million. From the profit and loss account you will see that our profits also show an improving tendency; but, following the accepted practice of new institutions in this country, we have decided, especially having regard to conditions in Vienna, to carry forward our whole profit, after, of course, paying the 6 per cent. on the preference shares.

The London office is now well established and shows steady and satisfactory development. This year we show our liabilities for acceptances, guarantees, etc., under separate headings. Our acceptances are growing slowly but steadily, great care being taken in the selection of this business, which is most strictly limited to transactions genuinely reflecting the movement of commodities; and its expansion is, in our view, a fair indication of a general improvement of trade conditions in Central Europe.

Operating as we do in six Continental countries, we naturally watch with sympathy, and assist to the best of our power, any movement towards the restoration of normal conditions and the increase of production. Last year I took the opportunity to recount briefly the story of Austria's transformation in 1922 from her apparently hopeless post-war position to a state of hopefulness and self-confidence. The year 1923 was characterised by a general tendency to further consolidation, and in 1924 the process of re-establishment was carried one step further. After lengthy negotiations, the scheme for the financial reconstruction of Hungary under League supervision was finally approved by all those concerned, and in June and July, 1924, the £12 million Reconstruction Loan was, with the co-operation of the Anglo-Austrian Bank, successfully placed in the different lending countries.

Another very important step forward was the conclusion of a Treaty between Yugoslavia and Italy, which, by settling the Fiume question, has removed a cause of grave economic and political friction. We have a special concern in the existence of good relations and active trade between these two countries, where our interests are large and increasing. In Italy, our Trieste branch has enjoyed a prosperous year, a consequence of the great improvement in the traffic of the port of Trieste. Our Italian business will be extended by the opening of a branch at Milan, for which we have now received the authorisation of the Italian Government.

Yugoslavia now has a balanced budget, and her economic as well as her political position has been much improved both by the conclusion of the Treaty with Italy, to which I have already referred, and by the acquisition of a free zone at Salonika. Both through our own branches and through our participation, which we have this year increased, in the prosperous and successful Kroatische Escomptebank, we were enabled to play a part in the development of this very promising country.

The same upward tendency, based on growing confidence and the experience of stability, is visible in Czecho-Slovakia, where our interests are safeguarded by the Anglo-Czecho-Slovakian Bank. This institution, which is still in its first youth, shows good promise for the future. Czecho-Slovakia has acquired under the guidance of statesmen like President Masaryk, Dr. Benes, and the regretted Dr. Rasin, a reputation for solidity and stability which some older States might envy. Doubts have sometimes been cast upon the wisdom of the financial policy initiated by Dr. Rasin, and continued after his death by Dr. Becka. These should be laid to rest by the fact that this year has seen a slight yet unmistakable industrial revival especially in the glass and sugar industries. The Anglo-Czecho-Slovakian Bank has earned good profits which it is deemed wise at this stage to devote wholly to the consolidation of the institution. We believe it will take its full share in the reviving prosperity of the country. Last May the Czecho-Slovak Government decided to raise the remaining portion of the 8 per cent. loan on the London, New York, and Amsterdam Bourses. In the first quarter of 1924, the revenue hypothecated to the service of this loan exceeded the service requirements by about 12 times.

In Roumania our two branches at Cernauti and Oradea Mare have witnessed a great improvement in their business. The former for reasons of economy has closed its sub-branch at Suczawa, transferring the business to the main office. It is not yet quite clear to what extent the co-operation of foreign effort in the development of Roumania's remarkable natural resources is going to be welcomed.

The report and accounts were unanimously adopted.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.

Annual Ordinary General Meeting.

Mr. J. H. Batty (chairman of directors), presiding over the annual ordinary general meeting of the African and Eastern Trade Corporation, Ltd., at Liverpool, last Friday, said there had been an improved demand for products exported from West Africa, and the quantities exported had materially increased. The outlook was certainly more encouraging. In 1923 there was a striking increase in the exports from Nigeria of palm oil, palm kernels and ground nuts. There were no less than 90,000 tons of palm oil, 225,000 tons of palm kernels, and 60,000 tons of ground nuts exported, and it was anticipated that, although these figures constitute a record, they should see them materially exceeded in the present year. It was satisfactory to report that palm oil was coming more under the category of an edible fat, and during the past twelve months very considerable quantities had been absorbed for edible purposes. He looked to a great future for palm oil in supplying the world's needs in this direction. He was glad to say a great deal had been done in the past year towards the reduction, and wherever possible the removal, of excessive taxation. It was eminently satisfactory that in every instance where relief had been given there had been an almost immediate improvement in trade and increased revenue. However, there was no disguising the fact that competition was very keen, and a large proportion of the trade was done on an inadequate margin of profit; therefore, though the volume of business was increasing, they must not look to profits increasing in ratio whilst the present competition continues.

The Chairman referred to the loss the Corporation had sustained by the death of Mr. Edwin Beazley, one of the directors; the appointment of Sir Hugh Clifford, Governor of Nigeria, to be Governor of Ceylon, whom Mr. Batty described as one of the greatest Governors they had ever had on the West Coast; and of the prospects the Corporation have of finding oil in payable quantities at Half Assinie in the Gold Coast Colony. He also referred to the freight agreement between the West African shipping lines, and said that experience had probably shown them that it was only by such mutual understanding they could obtain an adequate return on the capital employed. This example may give cause for reflection to other interests in the trade.

A final dividend on the ordinary shares of 4 per cent., less tax, was declared, making, with 4 per cent. interim already paid, a total dividend for the year of 8 per cent.

The retiring directors, Messrs J. H. Batty, A. A. Cowan, and Major-General Grey, were unanimously re-elected; and the auditors, Messrs, Harmood Banner and Son, were re-appointed.

Shipping Intelligence.

GRAVOSA: A GROWING PORT.

Yugoslav Trade with Great Britain.

The British Vice-Consul at Gravosa, Mr. R. K. Leeper, in a review of the trade and shipping of that port in 1923, states :—

Before the late War, Gravosa was included in the Austrian Empire, and was of no international importance as a seaport. It was hardly the policy of Austria to develop the Dalmatian Coast, so that the chief trade of Gravosa was in those days with Trieste or Fiume, to which, with the exception of timber, she sent most of her exports and from which she received practically all her imports. Softwood, the chief article of export, was sent mainly to neighbouring countries bordering on the Adriatic. Direct trade between Gravosa and England was non-existent, with the exception of some imports of South Wales coal and coke.

To-day the conditions have changed entirely. Dalmatia is now part of the new kingdom of the Serbs, Croats, and Slovenes, and Gravosa is the chief outlet for the overseas traffic of the kingdom. Whereas formerly commercial houses in the new provinces, now comprising Yugoslavia, received their imports and sold their exports through distributing agents in Vienna and Budapest, they are now, owing to the changed political and economic conditions brought about through the War, eager to find direct markets in foreign countries. The result is that there has been an enormous increase in direct business relationship between these new provinces of Yugoslavia and Great Britain. Most of the increased traffic has passed through Gravosa, so that the port, which ten years ago handled only a relatively small coastal trade, is now the centre of a large transit traffic, and serves a vast hinterland extending to Zagreb, Subotica, Belgrade, and Nish.

Most of the traffic through Gravosa is to-day in transit, very little of it having its origin or final destination in the port or immediate vicinity. The mountainous Dalmatian Coast is, notwithstanding its natural beauty, quite unable to support anything but a poor, thinly scattered population, whose needs are very limited. Amongst the articles which find a market in Dalmatia are flour, sugar, coffee, rice, lard, soap, paraffin petrol, motor tyres, cottons and shirtings, sulphate of copper, fishing nets and sewing machines.

Motor Tyres.—Italian and German products are to the fore, but certain well-known brands of British tyres are frequently to be seen and appear to be popular. There is a fair demand for tyres both in Dubrovnik and Cattaro—the latter in connection with the motor services into Montenegro.

Cottons and Shirtings.—Here the Italians have got practically the whole of the Dalmatian trade in their hands. The Dalmatian peasant demands a special quality of calico for the women's summer dresses and the men's summer suits and shirts, and this the Italian manufacturers have studied to a nicety, whereas the British manufacturer has ignored the Dalmatian market completely. There appears to be no reason why Manchester should not do a good trade in Dalmatia, but for this are wanted, firstly, British travellers on the spot to display their samples and study the local requirements; and, secondly, favourable terms of payment. Yugoslav merchants, as a whole, do not like to pay cash with order, especially to people with whom they are not accustomed to do business. Most importers are, however, willing to give a bank guarantee with order and accept a bill of exchange at 30, 60, or 90 days against shipping documents with a bank in this country, but it seems to be a custom of the country that merchants do not like to have this bill of exchange endorsed by a bank. This is probably due to the very high rates of interest the banks charge for the whole period of the bill on the amount they are called upon to guarantee. British merchants would, however, do well not to turn down too readily offers from this country on the above lines, simply because they do not know the firm which makes the offer. British exporters should refer to British Consular representatives in this country in regard to ascertaining the credit of the local firms with which they propose dealing.

Salt, the second largest commodity imported, is a Government monopoly, and is supplied by public tender, generally from Sicily. British salt firms do not appear to have taken much interest in these tenders. Coke represents the largest import of any single commodity from the United Kingdom. During the last six months of the year, 2,256 tons were imported, as against 5,800 tons of coke and 2,371 tons of coal during the year 1912, and 14,259 tons of coke in 1910. The imports of coke, mostly for the Government ironworks at Vares, in Bosnia, are therefore not yet up to the pre-War figure, though there is reason to suppose that next year will show a considerable increase in the quantity imported. The imports of cottons, cotton yarn,

£435,000

has been expended by the Union Government on irrigating the fertile lands comprised in the

Kendrew Directed Closer Settlement

where free training with a free option to acquire land after training is offered to suitable settlers commanding £1,500 capital (less required if in receipt of pension or income). The

HIGH COMMISSIONER for the UNION OF SOUTH AFRICA

will be pleased to answer enquiries regarding soil, irrigation and training.

Illustrated Brochure from

AFRICAN IRRIGATED LAND CO., LTD.,
14, REGENT STREET, LONDON, S.W.

Digitized by Google

woollens, iron sheets, tin plates, etc., are practically all in transit up country.

The growth of the export trade of this port with Great Britain is even more striking. Here again practically all the traffic is in transit from up-country, the exports of Dalmatia being but small, if one excludes the large cement trade from Spalato district and calcium carbide from Sebenico. The statistics do not distinguish between the exports to various countries, but whereas exports from Gravosa to England in pre-War days were nil, they now amount to about 5,000 metric tons per month. A few items in the exports from Gravosa in the last half of 1923 call for special comment. Slavonian oak was well known in Great Britain before the War under the name of Austrian oak, but not so Bosnian softwood, which now forms a large part of the exports of this country to Great Britain. The ordinary white fir, if perhaps not of such a good quality as the Baltic product, is, however, cheaper and finds a ready market in England at present. It is, however, the black pine and red pine, of which Bosnia has a large supply, that appears to be in greatest demand in Great Britain, both for railway and mining timbers. Ferro-silicon is another Bosnian production which has found a new and steadily-growing market in Great Britain, and appears to be able to hold its own with that from Scandinavia. The Bosnian prune is now marketed in Great Britain under its own name, and it is pleasing to note that, owing to the measures taken by the Yugoslav Government to ensure proper curing and packing, there have been no complaints from Great Britain regarding the condition of the 1923 crop. Whereas in 1922 less than 3 per cent. of Yugoslavia's total exports went to Great Britain, in 1923 the figure amounted to over 11 per cent.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Malia for Port Said, Colombo, Madras, and Calcutta (London, September 6).

Anchor Line.—S.s. Elysia for Bombay (Liverpool, September 8).

British India Line.—S.s. Morvada for Bombay and Karachi (London, September 12); s.s. Merkara for Colombo, Madras, and Calcutta (London, September 13).

Clan Line.—S.s. Clan MacBride for Bombay and Persian Gulf (Birkenhead, September 17).

Ellerman "City" Line.—S.s. City of Exeter for Calcutta (Birkenhead, September 15).

Ellerman's Westcott and Laurance Line.—S.s. Polo for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (London, September 6).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 6); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 20); s.s. Tramore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, closing October 18).

P. and O. Line.—S.s. China for Bombay (London, September 5); s.s. Novara for Colombo, Madras, and Calcuttta (London, September 6); s.s. Caledonia for Bombay (London, September 19).

THE TRADE OF INDIA.

Increase in Imports.

H. M. Senior Trade Commissioner in India (Mr. T. M. Ainscough, O.B.E.), in a survey of the trade of India during the first three months of the current statistical year, viz., April 1 to June 30, states:—

During the three months, as compared with the corresponding period of 1923, the value of the imports into India increased by Rs.1,40 lakhs, or 2 per cent., to nearly Rs.60 crores, while the total exports, including re-exports, decreased by Rs.1 crore, or 1 per cent., to Rs.89 crores. The grand total of imports, exports, and re-exports amounted to Rs.149 crores, being the same as in the corresponding three months of 1923.

The total imports from the United Kingdom declined from Rs.36,50 lakhs to Rs. 34,96 lakhs, and the British share of the total trade was reduced from 62.6 per cent. to 58.6 per cent. Germany, however, increased her share from 5.18 per cent. to 5.98 per cent. owing to a steady increase distributed over all the articles which she normally supplies to India. The Belgian share rose from 2.14 to 2.81 per cent., mainly on account of shipments of iron and steel being expedited in order to arrive before the new Steel Tariff came into force. The Italian share rose from 0.9 per cent. to 1.34 per cent., the increase being largely in coloured piece-goods. The share of the United States advanced from 5.92 to 7.27 per cent. owing to increased shipments of mineral oils, tin plates and hardware. The share of Japan fell from 6.15 per cent. to 5.54 per cent. on account of reduced shipments of unbleached piece-goods and matches.

The quarter is not noteworthy on account of any marked trade movement. The slow but steady improvement in the import trade continues, and considerable purchases of piece-goods for forward delivery have been placed, a steadily rising exchange giving importers more confidence in the future. The new protective steel tariff came into force on June 13. A considerable increase in the imports of the types of iron and steel affected by the tariff resulted from Continental efforts to anticipate the new duties.

The total imports of cotton yarns rose from 223 lakhs to 250 lakhs. The British share advanced from 150 lakhs to 151 lakhs in value, but the weight was reduced from 7 million lbs. to 6.6 million lbs. Japanese shipments rose from 65 to 82 lakhs, and Swiss imports from 6 to 7 lakhs.

The total yardage of piecegoods (unbleached) imported fell from 208 to 201 million yards, but the total value rose from 632 to 684 lakhs. Imports from Lancashire increased from 526 to 602 lakhs, but there was a noticeable reduction in the imports from Japan from 102 to 76 lakhs. There has been a satisfactory increase in the total trade in piecegoods (bleached) from 109 million yards, valued at 401 lakhs, to 145 million yards, valued at 538 lakhs. In this increase the United Kingdom has taken its full share, British shipments having risen from 107 million yards, valued at 385 lakhs, to 142 million yards, valued at 513 lakhs. Imports from Holland were reduced by nearly 50 per cent., but those from Switzerland rose from 6,500 yards, valued at 6 lakhs, to 1,898,000 yards, valued at 16½ lakhs.

The total imports of piecegoods (coloured, printed, or dyed) advanced from 79 million yards, valued at 390 lakhs, to 87 million yards, valued at

Digitized by Google

450 lakhs. The British share rose from 71 million yards, valued at 348 lakhs, to 77 million yards, valued at 397 lakhs. Imports from Holland were reduced from 11½ lakhs to 1½ lakhs, but there has been a noteworthy increase in the case of Italy from 435,000 yards, valued at 3¾ lakhs, to 1,432,000 yards, valued at 10¾ lakhs. Imports from Switzerland doubled in value, and now amount to 8½ lakhs.

The steady reduction in the imports of machinery and millwork which has taken place during the past three years continues. The value of the total imports during the quarter fell from 608 lakhs to 373 lakhs. British shipments were reduced from 531 to 308 lakhs, those of America from 56 to 47 lakhs, and of Germany from 10 to 7 lakhs. Whereas the shares of all the principal competitors are reduced, that of the United Kingdom has suffered most. The British share of the total trade during the quarter under review was 82 per cent., as compared with 87 per cent. in the corresponding period of last year.

The total imports of railway plant and rolling-stock fell from 372 to 248 lakhs. The British share was reduced from 338 to 240 lakhs, and that of the U.S.A. from 15 lakhs to a negligible quantity. Imports from Belgium fell from 4½ to 2 lakhs.

The total imports of hardware rose from 123 lakhs to 135 lakhs. This was mainly accounted for by an increase in the American share from 18 to 27 lakhs, and in that of Germany from 24 to 31 lakhs. British shipments fell from 61 to 53½ lakhs, and those from Japan from 8 to 5 lakhs. American competition is very largely in metal lamps and tools, while Germany is making steady inroads into the bazaar trade in cheap hardware of all kinds.

The total imports of motor-cars during the quarter rose from 1,631, valued at 40 lakhs, to 2,299, valued at 54 lakhs. This increase has been contributed to by most of the supplying countries. The number of British cars imported rose from 106, valued at 6 lakhs, to 247, valued at 10 lakhs. The Canadian imports advanced from 650, valued at 11 lakhs, to 955, valued at 17 lakhs. Those from the U.S.A. increased from 635, valued at 16 lakhs, to 974, valued at 23 lakhs. There were reductions in the imports from Belgium, France, and Italy. The number of motor-buses, vans, and lorries increased from 265, valued at 7½ lakhs, to 451, valued at 9¾ lakhs. Of this total the United Kingdom supplied only 35, valued at a little over 2 lakhs. The United States shipped 160, valued at 3½ lakhs, and other countries accounted for 256, valued at nearly 4 lakhs.

The total imports of motor-cycles rose from 225, valued at 1½ lakhs, to 370, valued at 2¾ lakhs. The United Kingdom maintained its position, and supplied 272, of a value of 2 lakhs. The United States of America shipped 79, valued at Rs. 62,000, while all other countries accounted for only 19.

During the past few years there has been a steady reduction in the imports of coal from abroad, and during the quarter under review the total trade shrank from 200,000 tons, valued at 58 lakhs, to 95,000 tons, valued at 27 lakhs. The British share increased from 21,000 tons, valued at 8 lakhs, to 35,000 tons, valued at 12 lakhs. Imports from South Africa fell from 86,000 to 22,000 tons, and the values from 21 to 6 lakhs. Shipments from Portuguese East Africa were reduced from 50,000 to 35,000 tons, and the values from 13 to 9 lakhs. Imports from Australia fell from 41,000 to 360 tons, and the values from 15 lakhs to a trifling amount. Owing to the efforts which are being made by the Bengal collieries to regain their position in the Bombay market, Indian coal is at the moment largely displacing overseas coal in that market, but the future will depend upon whether the Bengal colliery proprietors are able to maintain the quality.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Decline in Futures.

The Alexandria Commercial Company in their report for the week ended August 21 state :—

The market during the past week has been fairly steady. The net changes since our last report are: Sakellaridis, 0.23 dollar down for November, 0.40 dollar down for January; Ashmouni, 3.25 dollars down for August, 1.32 dollars down for October, 1.20 dollars down for December, 1.02 dollars down for February. Prices of Ashmouni have declined in sympathy with Americans, and show a loss on the week of about 130 points. Sakel, on the other hand, has again been firm, and only marks a loss of about 25 points. The strength of Sakel has been the outstanding feature, and the difference between November Sakel and October Ashmouni is now nearly 1,200 points. There is no explanation of the firmness of Sakel other than that practically the whole of the speculative element of this market is long of that variety, and contracts are accordingly scarce; this long position has been created on the opinion that the prospective supply of Sakel will not suffice for the world's requirements. The volume of business has been considerable, and has included fairly large purchases by commercial houses—a reflection of the rather better demand from spinners. The week's receipts amount to 10,039 krs., against exports 31,065 krs.; the stock stands at 280,329 krs. Spot.—Total sales during the week amount to about 3,400 bales, of which we estimate 2,100 bales Sakel and 1,300 bales Uppers.

Sakellaridis.—The demand continues to be maintained for all grades from fully fair to fully good fair/good. It is only the lack of cotton which has restricted business, and the price of spot, as compared with contracts, has consequently stiffened for these grades. Cotton below fully fair is still to be found in the market, and buyers of these grades can still fill their requirements comparatively cheaply.

Uppers.—We have had about 1,500 bales new crop arrivals during the week, and the premiums paid for this cotton have dropped to about one-third of those paid last week. Apart from the new crop cotton, practically all of which changed hands immediately on arrival, very little business has been done. Spot prices as compared with contracts are very much easier for all grades.

Crop 1924.—There is very little new to report on the crop; it is progressing normally. The attack of the pink bollworm in the Delta varies between 20 and 30 per cent. in the Central districts, and 10 to 20 per cent. in the Northern districts. It is somewhat disquieting to find that Middle Egypt has suffered this year rather more than usual from the ravages of the pink worm, and even the province of Assiout reports more than normal damage.

LIVERPOOL COTTON REPORT.

Sudan Sales Exceed Egyptian.

Messrs. Reynolds and Gibson report as follows for the week ended August 27 :—

Egyptian Spot.—The American Bureau report issued last Saturday served to confirm the "bearish" views which were so prevalent when we wrote last week, and a further substantial drop in prices followed as a matter of course. Since then, an official acreage estimate has been issued from Egypt giving this season's figures as 1, 787,643, of which about half is said to be under Sakel. The general opinion appears to be that the total figure is underestimated, but the percentage of Sakel appears to be rather more than was expected. This latter fact, although affecting new crop months for future delivery, particularly in Alexandria, has had little effect on the spot value of the commodity here where the difference between Sakel and uppers has again appreciably widened owing to the weakening in basis of the latter. The small remaining stock of good Sakellaridis continues in good demand, and there is no sign of any break in the basis for this quality, which obtains from 300 to 350 on contracts.

The fully good fair cotton is practically non-existent, and it is satisfactory to find the inquiry concentrating rather more on the "off" cotton, which has been for so long a "drug in the market." The market for this cotton (fair to good fair) is extremely irregular, both buyers and sellers frequently showing themselves uncertain as to what they ought to pay, or accept, as the case may be. Generally speaking, it is pressed for sale. Uppers have been quieter on the spot—largely, we imagine, owing to the poor selection available, but an increasing business has been done in early new crops. Brown and white cotton has been neglected. In Sudan we again have to record a large business, the total sales exceeding those of Egypts proper by some 700 or 800 bales—a very rare occurrence. This week it has been noticeable that white Sudan has shared more of the inquiry than has latterly been the case, and business in this "outsider" has taken place at from 150 to 250 points on October American. Tokar Sakel One has changed hands in the neighbourhood of 26.00d., and the best Sudan Sakellaridis (which has been responsible for the bulk of the business) at from 25.00d. to 26.00d. C.i.f. business has been more active. Forwardings to spinners for the week ending 22nd instant were returned as 5,743 bales. Estimated sales, 1,500 Egypts and 2,150 bales Sudan. Quotations of brown and upper are reduced 125 points, whilst those of Sakellaridis are only 30 points lower on the week. Fully good fair Sakellaridis to-day 25.25d.

IONIAN BANK, Ltd.

LONDON, GREECE, EGYPT.

The only British Bank or Financial House in Greece originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has agencies throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

In Turkey the Bank has a branch at Constantinople.

For information as to terms of business, etc., apply to the HEAD OFFICE:

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment, of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALIMLI PURE WOOL

Makers of the famous Lali-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Great-coat Cloths. All requirements in Wool at lowest prices consistent with quality.

Cawnpore Woollen Mills Co., CAWNPORE.

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.

The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

Cawnpore Cotton Mills Co., CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO., CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mills Co., DHARIWAL.

NOTES OF THE WEEK.

The Invitation to Zaghloul Pasha.

As soon as the statement attributed to Mr. Ramsay MacDonald by a Press correspondent was repudiated—both its tenour and the source challenged credence at once—opinion in Egypt was in favour of the idea that Zaghloul Pasha should meet the British Prime Minister in order to discuss the subject of negotiations between the two Governments in regard to the "reserved questions." Whether this meeting should be held or not, it may be pointed out, has always been a matter for Zaghloul Pasha himself to decide. An invitation to come to London was sent to him; he was told that it would remain open. In these circumstances it was idle to pretend, as was pretended in Egypt last week, that Mr. MacDonald had bolted and barred the door to negotiations. On the contrary, the dilatory tactics adopted by Zaghloul Pasha in withholding a definite acceptance of a definite invitation, although there may have been for a short time a genuine misunderstanding on his part, proved conclusively that the Egyptian Prime Minister, for reasons of his own, was not anxious to discuss the reserved questions. As it is desirable, in the interests of both countries, that these negotiations should take place, and without further delay, it is satisfactory to know that Zaghloul Pasha, who seems to keep his ear very close to the ground, has allowed himself to be persuaded by the change of opinion in Egypt. He has agreed to come to London, and a meeting with Mr. MacDonald is expected to take place within a fortnight.

The Cart Before the Horse.

Every now and then the question of the Bulgarian claim for an outlet on the Ægean Sea comes up for discussion; it holds the stage for a period, and is then bowed off. The justice of the claim is unchallengeable, as it rests on a definite undertaking given by the Allied Powers in the Treaty of Neuilly. There are, however, difficulties in the way; for attempts have been made to fulfil the Allies' undertaking, but they have not been acceptable to Bulgaria. Each time that the question is raised Bulgaria's neighbours seize the opportunity to point to Bulgarian restlessness as a Balkan danger, and endeavour to keep alive the prejudice against that country created by the War. The Bulgarians, on the other hand, continue to declare—and with some show of reason—that they are most anxious to live at peace with the world, and have no wish to take or claim what is not theirs by right. In the circumstances, and taking into consideration the overwhelming character of the prejudice that is still so easily invoked against them, we are inclined to think that Bulgaria is setting to work in the wrong way. It is very natural that she should say in effect: Give us what belongs to us, and we will show you how peace-loving and loyal to Balkan interests we are. Unfortunately, and as we hold quite unjustly, this plea falls on deaf ears. Prudence, therefore, counsels a different policy. Instead of relying on the acquisition of an outlet on the Ægean Sea as a basis for cultivating good relations, it would be better to concentrate upon the establishment of good relations first and then to aim, as a natural corollary, on the fulfilment of the Treaty obligation in regard to the Ægean port.

The League and the Balkans.

At the instance of the Council of the League of Nations the Permanent Court of International Justice at The Hague has given its decision in the dispute between Albania and Yugoslavia in regard to the possession of the monastery of Saint Naum, on the southern shore of Lake Ochrida. The outbreak of the Great War interfered with the delimitation of the frontiers of Albania, which had devolved on the Great Powers after the Balkan War, and when Albania was admitted into the League of Nations in 1920, the chief Allied Powers became responsible for fixing her frontiers. A special point of dispute was the ownership of the monastery of Saint Naum, which the Serbians claimed had been accorded to them by a decision of 1913, but which came up for consideration before the Council of Ambassadors, and was in 1922 allocated to Albania. The Yugoslav Government challenged this decision, and the dispute was in due course submitted to The Hague Court. That body has now decided in Albania's favour. As there was no reason why the fate of the monastery should

Digitized by Google

disturb Serbo-Albanian relations, the importance of the matter lies in its bearing on the value to Europe of the League of Nations. It is true that the final arbiter was the Permanent Court at The Hague, but it was the League that exercised in the first instance the necessary authority to compel the submission of the question to this tribunal, and it will be the existence of the League that would command respect for the verdict, if it were conceivable that there was any chance of its being challenged. We could wish that the League was at liberty to inquire into all outstanding disputes in the Balkans, without waiting for formal submission by the States concerned, in order that various questions, of no great moment in themselves, which tend to perpetuate bitterness and, therefore, unrest in the Peninsula might be settled once and for all time.

Greece and Turkey.

It will come as a disappointment to those who have been noting with satisfaction signs of an improvement in the relations between Turkey and Greece to learn that the Turkish Government apparently intends to make difficulties over the retention in Constantinople of the Greek population. The Lausanne Convention provided that Greeks who had established their domicile in Constantinople prior to October, 1918, were to be exempted from the compulsory exchange of populations. In view of the fact that there has been time for the Turkish authorities to appreciate the harm already done to Turkey by the elimination of the Greek population in Asia Minor, it would have been thought that in the country's interests the most generous interpretation possible would be placed on the word "established" in the case of Constantinople Greeks. The Angora Government, however, proposes to insist, or makes a pretence of insisting, upon actual registration as the requisite qualification for "established" residence. The opinion of the Mixed Commission for Exchange of Populations is said to be unanimously opposed to this interpretation, and it is only the statement of responsible Turkish officials, who talk of proceeding with the expulsion of Greeks from Constantinople, whatever decision the Commission reaches, that causes uneasiness.

The Turkish Point of View.

Theoretically, there was something to be said two years ago for the Turkish point of view. There was the old enmity between Greek and Turk; the Greek population in Turkey had undoubtedly stimulated Greek designs on Turkish territory. To the Turkish mentality, therefore, it seemed that the one way out of all the country's difficulties would be to get rid of the Greek population. No Turk was capable of appreciating the economic complications that must inevitably follow. If anyone had been able to do so, it is doubtful whether he would have agreed that the advantages to be derived from the step were outweighed by the disadvantages. There has, however, been time to realise that, objectionable as the presence of so many Greeks in their midst may have seemed to the Turks, they were a necessary factor in the material development of the State. That at this date the Turkish Government should deliberately propose to banish as many Greeks as possible from Constantinople can mean only that they are still in the unenlightened state in which they approached the Lausanne Conference, and remain wedded to the policy of indifference to Turkey's progress provided that it is vigorously kept a Turkish preserve. The fullest sympathy will be felt in many quarters with the wish to eliminate foreign intrigue, which has undoubtedly been Turkey's bane in the past, but it is disappointing to find that Turkish statesmanship does not rise above the crudest, and, in the long run, quite ineffective, methods of reaching the goal in view.

Georgia and the Bolshevists.

Another effort has been made in Georgia to overthrow Soviet tyranny in that country, but at present there would not seem to be any likelihood of its proving more successful than the last. An outbreak a year ago led to a sanguinary repression, and the Soviet Government claims to have been equally successful in the present instance. These risings are reminders of what Bolshevism is in practice in contradistinction to the mealy-mouthed assurances advanced by its representatives at the conference table. The toad beneath the harrow knows the way the furrow goes. The more the Soviet organisation is conscious of losing its grip the more ruthless will be its administration. After the failure of the last insurrection, which cost Georgia the lives of many whom she could ill spare, it would have been thought that those who were keeping alight the torch of Georgian independence would be on their guard against another false move. Last time the attempt failed mainly owing to the existence of spies in the "counter-revolutionary" organisation. A similar betrayal may have been avoided this time; but if there is any truth in the statements of the Soviet Government as to the ease with which the movement has been suppressed, it would seem as if the insurrection had been premature or very badly organised.

Afghanistan.

It will come as a shock to public opinion in Europe to hear that an official execution in Afghanistan under the Ameer's orders can be carried out to-day by stoning, after the victim has undergone several months of torture. So much has been heard of the Ameer Amanullah's reforming zeal that no one will have associated the feverish attempts to introduce an atmosphere of Western progress in his dominions with the retention of primitive savagery in certain spheres of the administration. From the fact that Maulvi Niamtulla Khan, who has thus met his death, enjoyed at one time the favour of the Ameer, and that his offence was as much his adherence to a banned Moslem sect as his alleged complicity in political intrigue, it has to be inferred that this reversion to type represents a desperate attempt on the Ameer's part to direct the storm which his measures have raised among his subjects. Afghanistan is not the only country that will have found the transition stage from mediævalism to modern conditions full of pitfalls; but the Ameer, in his effort to lift his people out of the rut of hopeless conservatism, does seem to be unduly handicapped by being entirely unsupported by any substantial body of public opinion.

Trades Unionists and India.

The President's address to the Trades Union Congress appears to register a definite change in the

Digitized by Google

attitude towards India of the organised skilled workers who form such an important section of the English nation. As everyone who knows them will recognise, they are, at heart, inspired by the ideal of fair play, with perhaps just a trifle more for the "little one," but, through no fault of their own, they are not always fully informed regarding the facts of life in distant countries. Many of them have consequently been inclined to accept Indian extremist politicians as representative of the people, and a whole world of misapprehension has grown up on both sides. Now we have Mr. Purcell calling attention from the president's chair to the danger of handing India over to the control of mere politicians, and leaving the workers at the mercy of the same set of exploiters who oppress them to-day. That, as he says, would be no change at all, and he insists, quite rightly, on the need for giving the people, rather than the politicians, fair play. Here we have, at any rate, a definite advance in the direction of reality, and we hope the politicians, on their side, will recognise that English skilled workers now want something more than words.

The Part and the Whole.

The weakness of Mr. Purcell's position lies, of course, in a very natural want of proportion. He is thinking only of the workers in organised industry, who in England make up nearly his whole world, but in India are such a small part of the whole that one almost needs a microscope to detect their presence. If India were endowed with a theoretically perfect representative body of a hundred members, the two, or possibly three, trades unionists would cut but a poor figure alongside the solid body of ninety odd countrymen, peasants and labourers taken together, and on any democratic theory could ask for very little consideration. What we look for now is a further widening of view in this country. It is a great step forward that ordinary men should have looked past the politicians in the front seats to the miners and factory workers behind them. It will be even better when they have managed to catch a glimpse of the much greater crowd huddled in the background, and only just beginning to feel that it may possibly count for something in the scheme of things. Trades unionists in this country are now taking much more interest in agriculture than formerly; it is quite possible that by and by they may realise the claims of the Indian peasant on their attention.

The Indian Railway Report.

The vexed question of Indian railway finance has entered on a new phase with the rejection by the legislative committee of the scheme urged so strongly by the Acworth Commission, and officially accepted by the central Government. The Committee's report is being characterised as farcical, futile, irrelevant, and so on; but it strikes us rather as a muddle-headed expression of a natural, and possibly even a sound, political instinct. In a plaintive letter to *The Times* Sir William Acworth urges, by way of illustrating the position, that it would pay this country splendidly to take the Post Office out of politics and run it on purely business lines, just as he proposed the Indian railways should be run. Probably he is quite right, but, then, why has it not been done? Would the present House, or any other for that matter, consent to abdicate its position to that extent? And if the Mother of Parliaments does not set the example, it is at any rate not unnatural that the youngest, or almost the youngest, daughter, still lacking in knowledge of the great world, should instinctively cling to the methods of housekeeping traditional in the family, rather than imitate the innovations of some of the other junior branches.

THE WEEK AT HOME.

London, Tuesday Morning.

The Trades Union Congress.

The Trades Union Congress, which is being held at Hull, has been without interest, although not without incident. These congresses have gained some reputation for creating "scenes," and it has obviously been the intention of this one to avoid such reproachful happenings, and to show the wide world what sensible, one-minded fellows trade unionists in general are.

But, so far, nothing has been of equal importance, historically speaking, to the spirit of sectionalism that has been displayed. The bigger unions show greater and greater inclination to tyrannise, and the smaller unions increasing resentment of that tyranny. To hear a stevedore upon an N.U.R. man is delightful, though naturally the newspapers get only an abridged version.

One decision has been taken, of certain weight and consequence. The Congress has entrusted to the General Council, of thirty-two men, the power to declare strikes. This may be received in two ways:—either as the granting to a handful of men a decision that may be disliked by millions, or as the securing of a sensible and considered decision before extreme measures are resorted to. There appears to be no reason why it should not cut both ways. The fact remains that mere alterations or even improvements in organisation do not fundamentally touch the crudities of our present industrial system.

Communist and Trade Unionist.

One entertaining and inevitable feature of the Congress has been the disparity between the trade unionist's theory and his practice. On the one hand he is ready enough to "give fraternal welcome" to those arch-foes of moderate trade unionism, the Soviet representatives, and on the other he votes down all resolutions favouring closer relationship with Communist bodies in Russia, and even has decided that Communists in future cannot be adopted as Labour candidates.

This is very refreshing on the part of the hypocritical British working man. He too often is classed as a Bolshevist himself: the truth is that

he is miles and miles away from being such. When such a man as Mr. C. T. Cramp, the railwaymen's leader, who has suffered much abuse at the mouth of our bourgeoisie as being a rebel and an upstart, states that they in Britain could not accept dictation from the rulers of a people "possessing the mentality of a slave," we may get some idea of the real attitude of the British working man towards the Soviets. The shame of internationalism has not really touched the worker yet: he may prate of "solidarity" and the rest of it, but he is far too sensible to be dragged into other people's troubles. Truly, we wrong our strikers much when we call them Bolshevists.

The Fate of the Middleman.

"Oh, for those times again when the middleman was not!" is the commonest of modern plaints. As I hinted in writing of the Covent Garden strike, the elimination—the partial elimination, at any rate—of the middleman is a distinct possibility. And now, in the milk trade, comes the further pleasant prospect of the disappearing middleman. The farmers and the distributive trades are in disagreement upon the proportion which should fall to each of a reduction in milk prices during the winter. The distributors say it should fall wholly on the farmers, which sturdy fellows, rather than accept this, are prepared themselves to distribute to the public. The farmers, moreover, favour a reduction in the price of milk (they suggest 4d. a quart), so that one can only hope for the best from whatever machinery they may be able to improvise.

Certainly there is public irritation with the middleman, and when he interposes rather than intermediates, the public should be strong enough to shift him.

The Russian Treaty.

During the Parliamentary recess the Opposition Press is going great guns against the Treaty with Soviet Russia, and this, indeed, is said to be much the most likely subject of a Government defeat. It is thought that both in the Irish business and in the Continental negotiations the Premier will have the support of the House, but on the Russian Treaty the Liberals officially have already revolted, and although certain of them are in favour of the Treaty, it is anticipated that those whose distrust of this Anglo-Soviet pact is too deep to be dispersed by speeches in Parliament will be in the majority.

It is said—one cannot of course vouch for it—that even in the Cabinet itself dissension over what everybody calls the Russian "fake" exists. Whether that is so or not, it is obvious that its passage through the House will be uncommonly hard. In which case it is probable that the matter will be left to the free vote of the House—there can be no question of "principle" when a defeat is probable.

The R.A.F.

It is not wholly a "stunt" which the newspapers have recently been making over the number of R.A.F. fatalities, and the Government has been wise in hastening to answer the attacks. In that odd kind of way so dear to the departmental mind, the Air Ministry supposes that it has made its case good (instead of which it has merely made out a good case) by remarking that for the number of hours flown, accidents, so far from being on the increase, are diminishing.

This hardly meets the point of the Ministry's critics—that the accidents so plentifully reported are largely due to the employment of machines of old type. The safety of these aeroplanes of old design is variously believed in by flying officers, and the view still prevails that it is a spirit of false economy which constantly endangers the lives of the men of the R.A.F. Something more than this statement of the Air Ministry will have to be done before the public is satisfied that all is as well as it may be.

Barnet Fair.

Every year we hear that the big fairs of England are doomed to extinction, but they turn up as regularly as ever. There is no doubt, however, that they are diminishing, although one would be sorry to see so fine a tradition from old times die out completely. At Barnet last week, for example, the fair, which was, until quite recent years, the largest in England, was comparatively a poor show. It is still reputed to be the biggest cattle fair in the country, but there were only a few hundreds of horses, and a handful of oxen—no pigs, sheep, or goats, such as there used to be.

The Pleasure Fair, the sort of amusement to which Wembley has given some sort of impetus, was also on a smaller scale than usual, and it was manifest that the nature of the showmen, who once with their journeys from place to place made England bright, is steadily changing.

Smallpox.

The smallpox scare, to which these islands are now accustomed, has broken out again, but this time in a new form. It appears that during the last week of August the Minister of Health, Mr. Wheatley, acting upon a report of the Chief Medical Officer of the Ministry of Health, which called attention to the grave risks which the nation was running owing to neglect of vaccination, issued an order which made rather difficult exemption from vaccination. By the end of the month, however, this versatile Celt had, it seems, rescinded this order, and, in fine, prescribed what was in essence a *volte face*.

No one knows the reason for this somersault. There are those, of course, who will think responsible the same people as those who persuaded the Government of the wisdom of the Russian Agreement; but it may just as well have been Mr. G. B. Shaw. In any case, there are in the Labour Party so many kinds of different "consciences" that Mr. Wheatley may be excused for not knowing what he was offending.

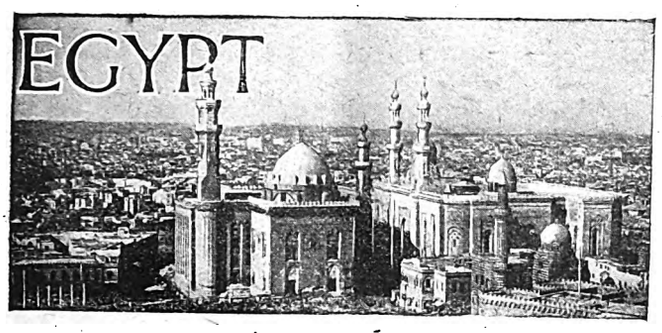
The Near and Middle East.*

From Our Own Correspondents.



Cairo, August 31.

The Invitation to Zaghloul Pasha.

By the time this reaches you, and certainly by the time it is in print, the great question that is being asked everywhere here at the present moment—Will Mr. MacDonald meet Zaghloul Pasha before the former returns to London?—will have been answered. There is, indeed, far more interest taken to-day by the press and the public in what is going on in Paris than in events south of the Egyptian frontier. That does not mean, however, that the question of the Sudan has been set aside. On the contrary, the press still keeps the subject well to the fore, and, particularly the Opposition organs, is publishing very inflammatory matter. Still, in spite of all the efforts of the enemies of the Government to create trouble, the country and especially the towns are remarkably quiet. Indeed, the one thing that redounds to the credit of the Egyptian Government is that they have been able to prevent the disturbances which they feared—if indeed the fears they expressed of popular outbreaks were really justified—and have succeeded in stopping all public demonstrations and pacifying public feeling. This shows that they have control, at least, of the moving spirits, and that fact increases their responsibility for any untoward events that might at any time occur.

It is interesting to note that in prominent Egyptian circles the theory is now being advanced that Khedivist agents are responsible for the Sudan troubles, the outbreak of which, it is pointed out, coincided with the discovery of the Khedivist plot against the present régime in Egypt. It is true that the inquiry into the attempt on the life of Saad Zaghloul Pasha, which by the way is not yet closed, although it started over six weeks ago, is said to have shown that members of the Hasb El Watani were in close relations with Abbas Hilmi Pasha, and that it has been members of that party who have been partly responsible for the agitation in the Sudan. The part played in organising that agitation by persons who certainly have no Khedivist sympathies is, however, too well known for this theory to hold water. Indeed, the main incitement emanated from quarters which are interested in maintaining the present régime in Egypt and extending its jurisdiction rather than in causing its disruption—which is the object of the Khedivist machinations. The fact that this theory is being advanced at the present juncture may be taken as an indication that in the circles in question it is being realised that the present events do not redound to the credit of Egypt nor improve her position abroad, and that an excuse is being sought to shift responsibility for what has occurred.

The Abyssinian Church.

The dispute between the Abyssinians and the Coptic Patriarch with regard to the Deir el Sultan at Jerusalem was successfully settled during the visit of Ras Taffari to Cairo this week. But only, so to speak, at the eleventh hour. The terms are that at least half of the land fit for building within the perimeter of the Deir shall be made over to the Abyssinians; that they shall be given use of one of the two chapels—the one known as the Chapel of the Four Sacred Animals—that the passage leading to the Church of the Holy Sepulchre, which has been shut owing to the dispute, shall be made free for both communities on feasts and holy occasions, and, finally, that if at any time the Abyssinian Church should secede from the Coptic Patriarch the whole of the land ceded under this agreement, together with all buildings that may since have been erected thereon, shall revert to the Coptic Patriarch. Ras Taffari on his side has promised to make over to the latter a fine property in Addis Abeba, the revenue from which is to be devoted to the Coptic poor in Egypt and to the encouragement of the pilgrimage to Jerusalem amongst the Coptic community. The agreement has yet to receive the sanction of the general assembly of the Coptic community; but it is not thought that there will be any difficulty in that respect.

BULGARIA.

Sofia, September 2.

The League of Nations Assembly.

Bulgaria is being represented at the League Assembly by M. Kalfoff, Foreign Minister, and M. Madjaroff, a former Minister. The two questions which interest Bulgaria the most are those of military control and minorities. Concerning the first, Bulgaria would prefer the League to supersede the Allies in the task of watching over Bulgaria's disarmament. But the Little Entente having hinted that they desire to be represented on the League's Control Committee, Bulgaria may prefer that the present system be continued.

The vexed question of minorities is, of course, of first-rate interest to Bulgaria, who has many

Digitized by Google

thousands of her nationals living in neighbouring Balkan States. Bulgaria is unlikely to make any definite protest regarding the treatment of these minorities, but will rather seek through private negotiations a means to improve the present situation. It is, however, reported that the Macedonians will put forward a detailed protest to the Council of the League of Nations regarding their treatment by Yugoslavia and Greece. It is not known how the Macedonians will introduce this protest, as it would place the Bulgarian Government in a delicate situation were it to emanate from them. It is possible that a South American State may be prevailed upon to use its good offices in making known the Macedonian grievances.

A Calmer Atmosphere.

Slowly but surely the political situation has improved. Whereas a few weeks ago all circles of public opinion were seriously alarmed over the idea of a Communist outbreak, there has now come into existence a feeling of confidence regarding autumn possibilities. This optimism is principally due to the very rigorous measures which the Government has taken with a view to preserving the peace. Throughout the country the army, the police, and the civilian authorities have been on the alert for Communist intrigues. The Government's task has been considerably facilitated by the valuable discoveries which resulted from the seizure of arms near Varna. Arrested persons are said to have made disclosures regarding the Communists' plans, whilst at least one large depôt of hidden arms previously smuggled into Bulgaria has been found.

A Governmental Congress.

On October 19 the first Congress of the Democratitchesky Sgovor will take place. Representing as it does all elements concerned in governing the country, the Sgovor has successfully survived fifteen months of office, and has thus rendered vain the criticisms so often levelled against it. Apart from the routine matters due to be discussed at the forthcoming Congress, it may well happen that decisions regarding the future composition of the Cabinet may be arrived at. The combination Liaptcheff-Bouroff is again being talked about, and it is just possible that in the late autumn M. Zankoff may decide to resign in favour of the two above-mentioned statesmen. If this were to occur, a radical Cabinet reconstruction would be the result, and the only Minister certain to remain would be General Volkoff, Minister for War.

Aftermath of Tarlis.

The Bulgarian Press continues to occupy itself with the regrettable massacre of seventeen Bulgarian peasants near the Greek village of Tarlis. Finished though this incident may be, it is to be feared that the consequences may prove somewhat serious. First, because feeling against Greeks living in Bulgaria has, despite all the efforts of the authorities, greatly increased, and, secondly, because certain Greek elements appear determined to exact a *quid pro quo* for the Tarlis judgment. At present the Greeks are pressing for a thorough inquiry by the Mixed Commission into alleged Bulgarian atrocities on Greek citizens. As Bulgaria has declared herself ready to undergo as many inquiries as the League sees fit to ordain, Greek public opinion should be satisfied on this point.

PROGRESS IN IRAQ.

We are glad to be able to announce that permission has been given to Saiyid Talib to return to Iraq. At one time Minister for the Interior, Saiyid Talib decided that the Emir Faisal must be kept out of the country at all costs, and made no attempt to disguise his desire, if not his intention, to prevent the Emir's selection as ruler of Iraq. It was a tribute to Saiyid Talib's personality that he was taken seriously, and for the sake of peace in Iraq he was arrested three years ago and deported from the country. After being detained in Ceylon, he came to Europe, and recently has been staying in England, where his sons are being educated. It has been evident all along that hostility between Saiyid Talib and the British authorities has been in the nature of a mistake; so long, however, as he adopted a certain attitude towards the Iraq Administration there could be no question of his being allowed to prejudice the future of the country. His return, it is to be inferred, will signify two things: first, that Saiyid Talib himself has recognised that the present régime has not only come to stay, but is also in the interests of Iraq; and second, that the fourth year of King Faisal's reign finds him in process of being more and more firmly established in popular favour. In other words, although it may be well to "touch wood" in saying so, Iraq is gradually making good.

THE AHMEDIA MOVEMENT.

The Khalifat Ul Masih, head of the Ahmedia sect of Moslems, was present last Sunday at a reception given by Maulvi Abdur Rahim Nayyar, the representative of the order in London, at the Mosque, Melrose Road, Southfields. After tea had been served in the gardens, the Khalifat Ul Masih gave a short address on the need for religious co-operation throughout the world.

The Khalifat Ul Masih received news last week that Maulvi Niamtulla Khan, an Ahmedia reformer, was stoned to death at Kabul, on August 31, after weeks of torture in prison. Two other members of the Ahmedia sect had previously been killed. The Khalifat Ul Masih has sent a telegram of protest to the League of Nations and to the Prime Ministers of Great Britain, France, and Italy, and the President of the United States.

The September issue of *The Blue Peter* divides its readers' interest over many spheres. Commander F. A. Worsley gives a full account of Sir Ernest Shackleton's famous journey in "Crossing South Georgia," and "An Odyssey of Empire," in its eighth instalment, deals with Malaya and Western Australia. No periodical associated with the sea is now considered complete without a reference to the Cutty Sark, and it says much for the self-effacement of the present owner and his wife, to whom the old clipper ship owes her present happy state, that Press articles appear without any mention of their name. In attractiveness of "make-up," and illustrations *The Blue Peter* leaves nothing to be desired.

NEWS IN BRIEF.

Lieutenant Dimitrios Yanaretos, one of the most able of the Greek Army aviators, was killed on Saturday while trick-flying.

The powder factories near Makrikeui, about twelve miles from Constantinople, were destroyed last week by explosion. There were several casualties.

The Regent, Prince Tafari, arrived at Addis Abeba on September 4 on his return from his European tour, and was received in state by the Government.

The Asiatic Society of Bengal has published (from 1, Park Street, Calcutta) a study of the Prakrit Dhatv-Adesas, written by Sir George Grierson.

Notes have been exchanged by the Swiss and Bulgarian Governments for the mutual extension of the "most favoured nation" clause of their tariff laws.

The U.S. cruiser "Trenton" arrived at Port Said on September 4 with the body of Major Imbrie, who was murdered in Teheran, on board, and sailed for America last Friday.

Admiral of the Fleet Earl Beatty, in his yacht "Sheelah," returned to Constantinople on September 4 from Roumania. He was entertained at luncheon last Saturday by the Constantinople Chamber of Commerce.

Lieutenant L. A. Lawrence, West Yorkshire Regiment, attached to the Yemen Infantry as Assistant Political Agent, was recently murdered at Perim Island, Aden Protectorate, and his property and rifles stolen.

The *Daily Telegraph* Calcutta correspondent reports that an Indian forest officer in Burma has killed a man-eating tiger which, in the past few weeks, had killed twenty-four men and women and had mauled many more.

The first conference to be held with the object of drawing closer the peoples of the Balkans by means of the churches has been fixed for the end of September, at Sinaia. Representatives of Yugoslavia, Greece, Bulgaria, Albania, and Turkey are expected to take part in it.

The Limassol Press Bureau reports that more than twenty square miles of forests in various parts of the Island of Cyprus have been destroyed by fires which, it is believed, were the work of incendiaries. The Government has appointed a Committee to inquire into the matter.

The motor-car of Prince Buhran Ed Din, great-nephew of the former Sultan of Turkey, came into collision at San Remo with a taxicab on September 3. The Prince and the Marquis de Ribera, who was sitting beside him, were not hurt, but his three other guests were seriously injured.

An agreement has been concluded in Athens by which the National Bank will advance the Government 100,000,000 drachmae (about £400,000 at present rates), to be employed for the benefit of refugees in Greece. The claims of these refugees on real estate in Turkey will be set off against the loan.

An Athens message states that fifty-five Greeks were recently arrested by the Albanian authorities at Chimara, that several Greek women who were returning from the vineyards were attacked by the Albanian soldiers, one woman being killed and three wounded, and that twenty-five Greeks have been arrested in the village of Drymades.

Prince Tafari Makonnen has forwarded to the University of Cambridge Library a copy of each of the books which he has had printed in Ethiopia in his printing press, and has asked that they may be placed in the Library as a souvenir of his recent visit. A pair of elephant's tusks is also being sent to the University as a memento of Prince Tafari's visit.

THE NEAR EAST INDEX.

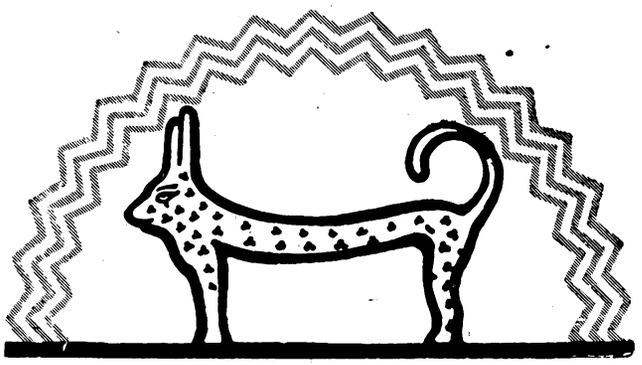
The Index to Volume XXV. of "The Near East" (January 3—June 26, 1924) is now ready, and copies will be sent to subscribers gratis on application to the Manager, "The Near East," 167, Strand, London, W.C.2.

"THE ROUND TABLE."

The reputation of *The Round Table* for dispassionate handling of the questions which it subjects to critical analysis will make the reader turn with special interest to an article headed "Egypt and the Sudan" in the September issue, to see what is probably the best case that can be made for the Egyptians. The writer suffers from no hesitation on the subject. After citing a case tried in 1910 before the Mixed Tribunal of Cairo, an independent international Court, quite free from any pro-British bias, in which it was laid down that the Sudan had become "a new State, distinct from and independent of Egypt and possessing administrative, legislative, and judicial powers," he characterises the demand that Great Britain should entirely withdraw from the Sudan and leave it in the hands of the Egyptians, as "certainly not lacking in audacity." On the other hand, it is beyond question that Egypt has rights and interests in the Sudan which Britain is bound to respect. The Sudan is heavily in debt to Egypt; in regard to Nile water Egypt has every claim to be generously treated. If the problem could be approached in a spirit of mutual goodwill and accommodation, there would be no difficulty in reconciling the different interests. The Anglo-Egyptian Convention ought to be firmly adhered to; the Sirdar of the Egyptian Army should in future be an Egyptian; the Governor-General of the Sudan, as before, British; an army of ten thousand men can be dispensed with, and its place taken by a much smaller force, rather in the nature of a constabulary, the Egyptian Government, if it desires, continuing to station a small detachment of the Egyptian Army in the Sudan; the Nile Commission should consist of an Egyptian, a Briton, and a third member appointed by the United States.

An article on India, entitled "The Economic and Social Aspirations of the Indian Nationalists," is written by an American, who points out that the Indian problem is at bottom economic, not political. Much as Great Britain has done for India, he finds that, if she is to justify her position, she has a great deal more to do. Other articles deal with Imperial Diplomacy, Labour and Capital, and the Irish Boundary Question.

A Sofia telegram states that on September 1 four Greek soldiers and an armed civilian who crossed into Bulgaria and tried to drive off a herd of cattle were fired on by Bulgarian soldiers, two of the Greek soldiers being killed.



THE CALL OF EGYPT

LISTEN to the Call of Egypt, where romance and mystery were born and are deathless still to-day. Pay your homage of wonder to her mighty river and her stately temples. Explore the purple-shadowed streets of her fantastic cities; tread the gilded carpets of her deserts where silence falls supreme and absolute. Dream amid the glories of Thebes and Luxor in the lands of haunting vision. Come when, in the early Autumn, the after-glow of Summer is yet upon the land and the splendour of Egypt's climate is at its zenith.

Particulars of fares, tariffs, etc., of all principal Travel Bureaux and Tourist Agencies. Write for "Egypt and the Sudan," a copiously illustrated brochure, free on application to Egypt Promotion Association, 9, Quality Court, Chancery Lane, London, W.C.2, or Post Box 990, Cairo.

INDIAN PROBLEMS.

"INDIAN PROBLEMS IN RELIGION, EDUCATION, POLITICS." By Bishop Whitehead, D.D. (London: Constable and Co. 12s. net.)

Bishop Whitehead has known India for forty years, first in Calcutta as Principal of Bishop's College and Superior of the Oxford Mission; from 1899 till last year as Bishop of the Anglican Diocese of Madras. In both his appointments he won the affectionate respect of all who knew him, and his wise counsel was much sought after both by his friends of all persuasions and by the Madras Government. A book by him on Indian problems would, therefore, be something from which one would naturally expect instruction, useful information, and sound conclusions.

Nor does this work disappoint us. It is, perhaps, unfortunate that the first few chapters, on Indian religions, are the poorest in the book. It is specially curious that a large-hearted scholar should be content to give so very inadequate a sketch of Hindu religious belief. It would almost seem as if his long residence in the Southern Presidency had blinded him to the fact that India is not only Madras, and that what is more or less true of that Province may be quite untrue for the North and Centre of India and Bombay. In fact, a tendency to identify Madras with India runs through the book, and somewhat diminishes its value. On the necessity for a true Christian Church of India in place of sectarian communities he writes with the fullest knowledge and carries conviction with him. The Indian Christian is with him in this important matter, and we may well hope that the unedifying disputes between the various bodies of Western Christians may not much longer be continued among their converts in India, who are becoming increasingly aware that Christianity is an Eastern religion which may well be their own without undesirable Western accretions. It will be difficult to put this through, but the task will not be too hard if many leaders feel as our author does. His account of the extraordinary success of Christian efforts among the "untouchable" classes in Madras is very striking. While not doubting that these conversions are in great part the result of conviction, we cannot help thinking that perhaps too little stress has been laid on the social advantages which such conversion brings in its train.

On the subject of education, Dr. Whitehead has much of great value to say. He is an out-and-out opponent of the educational policy inaugurated by Macaulay, and, to our mind, while calling justified attention to its defects, he is apt to ignore its good side. Still, its defects have, if possible, to be overcome, and the Bishop's ideas on this subject are of great value. As to educational Christian missions, he is most emphatically of the opinion that, save in exceptional cases, it is now the duty of the Christian bodies to concentrate on the teaching of Christians and on the very urgent problem of training for the teaching profession.

On some political subjects of present interest Dr. Whitehead gives us largely the outlook of a broad-minded man who, mixing with Indians and Englishmen and appreciating both, is, on the whole, inclined to the moderate Indian's side on such questions, specially with reference to the position of India in the Empire. On the whole, he puts both sides fairly, and his conclusions are reasoned conclusions worthy of attentive study.

It is curious that the economical and industrial side of India is hardly mentioned in the book.

C. S. W.

A GREAT RUSSIAN DRAMA.

"CZAR FEODOR IVANNOVITCH." A drama in verse. By Alexis K. Tolstoi. Translated into English verse by Alfred Hayes. Preface and Appendix by C. Nabokoff. (London: Kegan Paul. 5s. net.)

This is a translation of a well-known Russian drama by Alexis Tolstoi. It has all the elements of great tragedy. We feel the climax to be inevitable, and the clash of personality is represented with power. It is the tragedy of the weak, easily swayed, but saintly minded Czar Feodor, a man for whom the responsibilities of his position are overwhelming. He is anxious to live at peace with all the factions of his nobles, happy in his devotion to his wife Irina. He is torn between the determination of his brother-in-law, Boris Godounov, to make himself the real ruler of Russia and the eagerness of his chivalrous and impetuous kinsmen, the Shuiski Princes, to shake off Godounov's yoke. Godounov is the clear-sighted man of action, anxious to pursue the progressive policy in which he sees hope for Russia's future, whereas the Shuiskis are reactionaries. Godounov is triumphant, and the Shuiskis are crushed. Feodor is left still racked by doubt and uncertainty with the cry, "My God! my God! O why, O why didst Thou appoint me Czar?" We are glad to have the chance of reading this play in English, but we cannot agree with the praise which M. Nabokoff, in his interesting preface, gives to Mr. Hayes's translation. We are too often jerked from the interest and beauty of the play by banalities and ugly colloquialisms in the blank verse, the effect of which is sometimes almost comic. Those of us who do not know Russian could follow a performance of the drama in its original language with much more pleasure for having read this translation. But we feel that we should require a worthier translation before we would enjoy seeing it acted in English.

J. B. AINSLIE.

ADVENTURE.

"WONDERS OF THE HIMALAYA." By Sir Francis Younghusband, K.C.S.I., K.C.I.E. (London: Murray. 10s. 6d. net.)

This is a really splendid adventure book. It tells of two journeys taken by Sir Francis Younghusband when he was, as he says, "not much more than a boy," across passes in the Himalaya, which he was the first white man to cross. It is a thrilling story of pluck, resource, and determination to win through. Sir Francis recaptures in his writing all the enthusiasm and hopefulness of youth. He gives his pictures of the marvels of the Himalaya—marvels which have not been revealed to many eyes—with a freshness and vividness that makes us catch our breath. This is a book which it is worth everyone's while to read. There are many wonderful descriptions, such as that of the author's first sight of the main range of the Himalaya, the great watershed between Southern and Central Asia, and that extraordinarily touching picture of the subaltern of twenty-five alone, except for his few Ghurkas, in the stronghold of a mountain robber chief upholding the greatness of the British Empire.

J. B. AINSLIE.

DEVELOPMENTS OF BUDDHISM.

"THE DESIGNATION OF HUMAN TYPES." Translated by Bimala Charan Law, M.A., B.L. (London: Oxford University Press. 10s. net.)

Buddhism is rather a system of philosophy than a religion. Its basic doctrine affirms that every human being is born with a heritage, or "Karma," of evil qualities, which he must lessen by subduing

Digitized by Google

his earthly passions, in view of escape from a long series of re-births into this world of suffering. Five "hindrances" are encountered in the effort to throw off the burden of Karma, namely, greed, cruelty, sloth, anxiety and scepticism. By conquering these lions in the path he may join the glorious company of the elect, and even rise to the condition of Arahant—one in whom sin has been extinguished. Such is the thesis set forth in Baggala Pannapati, or "Notions Concerning Individuality," which in Professor Rhys Davids' opinion was the earliest expression of Buddhistic philosophy. The unknown author's outlook on life resembles that of our eighteenth-century metaphysicians. One notes the same microscopic analysis of moral and intellectual qualities, the same subject tending to become morbid self-absorption. It is easy to trace the influence exercised by Buddhism on the evolution of the world's organised religions. Karma probably suggested the theological conception of Original Sin, and the ascetic practices which Buddhism enjoined as a means of achieving salvation were a leading feature in mediæval Christianity. The Puritanism which still darkens so many fleeting lives finds a parallel in the Buddhistic prohibition of dancing, singing and any form of amusement. The postulant

is satisfied with robes just enough to protect his body, with alms just enough to feed his stomach, taking these with him wherever he goes; just as a bird wherever it flies, flies with just the load of its wings.

The Society of Friends owes much to the quietism preached by the Buddha, and its effect on the development of Eastern Christianity is seen in the present plight of Russia. Nor were the germs of advanced science lacking in the teachings of the Enlightened One. He had a dim perception of the theories set forth by Lamarck and Darwin, and inspired the pessimism of Schopenhauer. His doctrines afford scope to the deeply-rooted instinct which yearns for intellectual growth and is the mainspring of civilisation; but Social Service—destined, perhaps, to be the religion of the future—takes a secondary place in a scheme for securing deliverance from life's intolerable burden.

Mr. Bimala Charan Law has ably performed the ungrateful task of translating a treatise which excels those of our transcendental philosophers in elaboration and aridity.

AN IMAGINARY COLONY.

"THE DEVIL'S RIVER." By Leland Buxton. (London: George Allen and Unwin. 7s. 6d. net.)

At the beginning of the book Charles Beach is private secretary to Sir William Blossom, K.C.M.G., Governor of Mangolia, which is "one of the brightest jewels in the Imperial Crown." He is the perfect private secretary and is also an unfailing ally to Lady Blossom in her ambitious and distinctly shady schemes. At the end we leave him, having discovered that he is made for exploration and travel in wild country and "not for office-stools and drawing-room carpets." Incidentally, he has discovered that this passion is more important to him than his love for Zita Crawley, to whom he has been devoted ever since the fascinating Lady Miranda Pugh preferred an undemonstrative Liberal politician to himself. Beach discovers his liking for a wild and solitary life through several thrilling adventures in the territory north of Mangolia. These adventures take place because of the plots of a gang of unscrupulous financiers who keep trying to stir up the natives to commit atrocities on British travellers in order that Bulaland and the Devil's River Territory may be annexed to the Empire and exploited by them.

Beach also experiences some years of poverty in England, and takes part in an election campaign. The book has, it will be seen, plenty of incident, and also we meet a good many people. These people, with the exception of the financiers—who are too much the villains of melodrama—are very like some of the people one meets in real life. Mr. Buxton evidently has experience of life in various "bright jewels of the Imperial Crown," and has made use of it to produce a most convincing picture of Mangolia.

J. B. Ainslie.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and in Oriental and African History, Religions and Customs.

INDIAN REFORM.

Sir Ali Imam, K.C.S.I., has recently published a pamphlet entitled "The Next Step in Indian Reform," in which his plan to improve the present political situation in India is described. A copy of the pamphlet will be sent post free on application being made to Mr. Henry Edmonds, 12, Linden Park, Tunbridge Wells.

BOOKS RECEIVED.

"The Eastern Road: Travels in China, Japan, and Mongolia." By L. H. Dudley-Buxton. With 37 Illustrations from Photographs by the Author. (London: Kegan Paul, Trench, Trubner and Co. 12s. 6d. net.)

"Tales of Turkey." By Major E. W. C. Sandes, D.S.O., M.C., R.E. (London: John Murray. 5s. net.)

"Pilau: being Lays of East and West." By A. W. Black. (London: Arthur H. Stockwell. 3s. net.)

"Neither Fish nor Flesh." By E. W. Savi. (London: Hurst and Blackett, Ltd. 7s. 6d. net.)

"Napoleon." By Elie Faure. Translated by Jeffery E. Jeffery. (London: Constable and Co. 7s. 6d. net.)

OBITUARY.

Prince Dehashina Moorthy Dorai Rajah of Pudukota, fourth natural brother of the Rajah of Pudukota, who is now in London, died, on Sepetmber 3, at a Brighton hotel. The body was cremated at Woking on September 8.

The death has occurred, after a brief illness, of Sardar Sir Nasrullah Khan, K.C.S.I., eldest son of the Begum of Bhopal, whom he assisted in the administration of her State. Sir Nasrullah, who accompanied his mother on her visit to England for the Coronation in 1911, was created K.C.S.I. in 1920.

The death occurred at Rangoon, on September 2, of Sir Abdul Karim Jamal, leader of the Mahomedan community, and one of the merchant princes of Rangoon. Sir Abdul Karim Jamal, who was knighted in 1920, was the proprietor of Jamal Bros. and Co., Limited, and founder and half-owner of the Indo-Burma Petroleum Company, Limited.

Vice-Admiral William Harvey Pigott died at his residence, Doddershall Park, Aylesbury, on September 1, aged 76. As Lieutenant of the "Monarch" he was present at the bombardment of Alexandria on July 11, 1882, and was promoted for his services. He held the Egyptian medal, the Alexandria clasp, the Khedive's bronze star, and the Order of the Osmanieh 4th Class.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1.

PERSONAL AND GENERAL.

TO-DAY.

September 11, 1924 (New Style).
August 29, 1924 (Old Style).
Saphar 11, 1343 A.H., of the Moslem Calendar.
Ellul 12, 5684, of the Jewish Calendar.

Sir Herbert Samuel, who has been in England on leave, arrived in Jerusalem last week.

Prince Nicolas of Roumania returned to London from Bournemouth last week.

Queen Olga of Greece left London last Friday for Sandringham on a visit to Queen Alexandra.

The Yugoslav Minister left London on September 7 for Belgrade on leave.

Sir Malcolm Stevenson left London on September 6 in the P. and O. steamship Novara for Port Said.

Zekiaï Bey, the new Turkish Ambassador to the Court of St. James, left Constantinople on September 6 for London.

The Earl and Countess Winterton left England for France on September 3, and will not return until the end of the month.

The Bishop of Madras and Mrs. Waller were among the passengers in the China, which left London last Friday for Bombay.

Mahmoud Sabet Bey, First Secretary at the Egyptian Legation, and Mme. Sabet have returned to 24, Cadogan Square from the Continent.

Princess Marie of Greece and her husband, Admiral Ioannides, left London on September 5 by motor-car on a short visit to Harrogate.

Mrs. Waller, the wife of Major R. de Warrenne Waller, D.S.O., 58th Rifles, Indian Army, gave birth to a daughter on August 23 at Abbottabad, India.

King George and Queen Elizabeth of the Hellenes honoured Mr. and Mrs. Philip Martineau with their company at dinner on September 3 at the Ritz Hotel, London.

Mr. H. Charles Woods has left London for Chatel-Guyon. He expects to be absent about three weeks, and to proceed to the Near and Middle East early in the New Year.

A marriage has been arranged, and will shortly take place, between Lieutenant-Colonel J. A. Bald, C.M.G., 1/1 Madras Pioneers (K.G.O.), and Viola, widow of the late Peter Tarbet, M.R.C.S., L.R.C.P., of Stevenage, Herts.

Sir Kay and Lady Muir entertained last week a large house party for the shooting at Blair Drummond. The guests included Sir Herbert Dering, British Minister to Bucharest, and Lady Dering, Sir Montague Barlow, Captain the Hon. and Mrs. Fitzalan-Howard, Lady Ian Hamilton, and Mr. Ivan Stancioff.

Among recent wills proved are that of Sir William Robert Brooke, K.C.I.E. (82), of Knightsbridge, S.W., formerly Director-General of Telegraphs in India, who left £4,753, and that of Sir Frank McCarthy, C.B.E., of Rangoon, President of the Burma Legislative Council, at one time manager and editor of the *Rangoon Gazette*, who left £32,810 (net personalty £21,607).

The christening of the infant son of Prince and Princess Paul of Serbia took place last Thursday afternoon at White Lodge, Richmond Park. Father Leluikhin, of the Greek Church, officiated, and the child received the name Alexander. The godparents were the Duke and Duchess of York (represented by Prince Paul of Greece), the King of Serbia (represented by the Serbian Minister), Queen Olga, King George of the Hellenes, the Infanta Beatrice of Spain, Prince Nicolas of Greece, Princess Elizabeth of Greece, and Prince Arsene of Serbia.

APPOINTMENTS, PROMOTIONS, ETC.

Mr. John C. Howard has been appointed a member of the Executive Council of Cyprus.

Mr. Hyacinth Louis Rabino, O.B.E., H.B.M. Consul in Cairo, has been appointed British Consul-General at Smyrna.

Shuja ud Dowlah has been appointed Afghan Envoy Extraordinary and Minister Plenipotentiary to the Court of St. James.

M. Georges Todorovitch has been appointed Counsellor at the Jugoslav Legation in London in succession to M. C. Fotitch, now attached to his country's delegation at the League Assembly.

The appointment is announced from Athens of M. Exintaris as head of the Hellenic delegation on the Mixed Commission for the Exchange of Græco-Turkish Populations, *vice* M. Pappas, who has resigned.

Major James Hugh Hamilton Dodds, C.M.G., British Consul at Tripoli, Libya, has been appointed Consul for the Provinces of Corunna, Orense, Lugo, Pontevedra, Leon, Zamora, Salamanca, and Oviedo.

Mr. Justice Horace O. C. Beasley has been appointed a Judge of the High Court of Judicature at Madras, in succession to Mr. Justice Victor M. C. Trotter, who has been appointed Chief Justice of that Court.

THURSDAY, SEPTEMBER 11, 1924.

ZAGHLOUL PASHA DECIDES.

After some genuine misunderstanding and very much more deliberate mischief-making, it has now been arranged that a meeting will take place between the British and Egyptian Prime Ministers. In March Mr. Ramsay MacDonald reminded Saad Pasha Zaghloul that Great Britain was at all times ready to negotiate with the Egyptian Government in regard to the four questions which had been reserved for future discussion at the time of the declaration of Egypt's independence, and shortly afterwards it was suggested that negotiations might take place in London towards the end of June or the beginning of July. This invitation was formally accepted by Zaghloul Pasha; but at a later date it was found that both Prime Ministers needed a rest, and that for other reasons as well the end of September would be a more convenient date for the negotiations. The alteration in the time of the London meeting was agreed to by Zaghloul Pasha, and when he left Egypt on July 25 it was expected that he would shortly let the British Government know the precise date of his arrival in England. On August 11 the disturbances in the Sudan occurred, and as the days passed without any communication from Zaghloul Pasha, it was supposed in London that his silence was in some way connected with the Sudan crisis. When, however, it was learned that Zaghloul Pasha was himself under the impression that the British Government proposed to fix the date for the negotiations, a further letter was at once sent to him to clear away the misunderstanding and to place the selection of a date in his hands. To this communication he did not at first see fit to make any definite reply. The only answer that was required was one stating the actual day on which the Egyptian Prime Minister proposed to arrive in London. In its place he sent circumlocutory assurances of his readiness to negotiate. From the fact that simultaneously he let it be known in Egypt that he intended to return to that country before the end of the month, it was to be inferred that he had abandoned the idea of entering at the present time upon discussions with the British Government on the reserved subjects. Better counsels, however, have now prevailed.

If the preliminary meeting should not lead to formal negotiations between the two Governments, or if the negotiations were to be a failure, Anglo-Egyptian relations would automatically revert to the position which they occupied at any period in the two years preceding the British Government's offer to enter upon negotiations in regard to the reserved subjects. This, we imagine, was in Mr. Ramsay MacDonald's mind when he spoke in Paris to a representative of an English daily newspaper, who proceeded to adapt his remarks to the necessary degree of sensationalism required by his newspaper—a step that Mr. MacDonald is stated to have characterised as "an abominable practice of so-called journalism." The words put into his mouth by the journal were that "there can be absolutely no question of the evacuation of Egypt by British troops or the removal of British forces from the Suez Canal region. I may safely say that we have provided fully against any eventualities." To anyone acquainted with the situation and able to approach the subject dispassionately, it is obvious that the first sentence, while literally correct, has no point as coming from the Prime Minister at this time. If an ignorant interviewer, with a hazy idea of the situation in regard to Egypt, chose to ask whether the British were about to evacuate the country, it is conceivable that Mr. MacDonald, disconcerted by the fatuous nature of the question, might exclaim that there could be no question of the evacuation of Egypt at this time, for the good reason that everyone is supposed to know that the only point at issue in this connection is the withdrawal of the British troops to the Canal zone, and that that point is one of the reserved questions which, as far as the Prime Minister then knew, had been indefinitely postponed. It is not difficult, however, to understand how the remarks attributed to Mr. MacDonald would be interpreted in Egypt. In the first place they would naturally be supposed to have some point, and because in themselves they are pointless, a strained meaning is attributed to them. The Egyptian Press and public—neither conspicuous for clear thinking these days—imagined that Mr. MacDonald was hatching a deep-laid scheme for attacking Egypt's independence by altering the *status quo*. Reflection, however, has now disabused them of this erroneous idea.

Although relations between Egypt and Great Britain might seemingly be back again where they were at the beginning of the year, it is clear that in one important particular they will have undergone a change. The belief which was apparently held in Egypt that, in the face of sufficient agitation, Great Britain could be induced to surrender any given position has been rather brusquely dissipated. Egyptians must now realise, it would be imagined, that glib talk about the independence of the Sudan, by which they imply its annexation to Egypt, and its immediate evacuation by the British, is not likely to effect much from the Egyptian point of view. The four reserved questions, however, remain, and three of them are certainly linked up with the rounding off of Egypt's independence. In the outcry over the Sudan the other three have been ignored, but none the less they impinge much more on the everyday management of Egypt's own affairs than anything which happens south of the 22nd parallel. The decision to negotiate, therefore, it is to be hoped, implies recognition of the fact that circumstances alter cases, even Egypt's case. The situation, there can be little doubt, is in the hands of Zaghloul Pasha. If he leads, Egypt will follow. If he lacks the energy or the courage to take up a definite line by preaching and imposing upon the people moderation, the consequent unrest can hardly fail to lead to his own undoing and to the grave prejudice of Egyptian interests. A *modus vivendi* in regard to the Sudan that will satisfy thinking Egyptians is not out of the question, but it can be arranged only when her thinking men are not influenced by mob clamour.

IRRIGATION IN PERSIA.

Persia is one of those countries where over the greater portion agriculture can be carried out only by means of artificial irrigation. Many towns and villages, indeed, are dependent for their existence upon a more or less extensive system of artificial canalisation. The exceptions to this state of affairs are to be found in the two provinces of Gilan and Mazanderan, situated along the southern coast of the Caspian Sea. Here the protection of the lofty ranges of the Elburz Mountains against the hot, dry southern currents of air assures a warm and damp climate with an even distribution of rainfall, and in such quantities as to keep the soil moist. This territory, moreover, is well watered by the rivers and watercourses coming down from the mountains. Vegetation is, in consequence, luxuriant; dense forests cover the hill slopes and a great part of the lowlands. The population is numerous. Rice is the chief article of cultivation, as corn does not grow well. Rice, it need hardly be mentioned, requires intensive irrigation, the fields having to be flooded. For this purpose the land is irrigated by a network of canals and watercourses leading from the main streams.

The tableland of Persia presents a very different aspect. Here, vast arid plains and valleys alternate with ranges of mountains almost entirely devoid of vegetation; only occasionally on the summits of the high mountains are to be found fairly good alpine pastures. Some valleys, it is true, are well watered and have splendid gardens and plantations of trees; many towns and villages also are surrounded by large flourishing fruit gardens and fields, but they remain oases in a desert, and their existence is linked up with artificial irrigation.

During six or seven months in the year, from April to November, hardly any rainfall is registered, and everything depends upon the quantity of snow that has fallen during the winter on the mountains. This snow, melting slowly and gradually, supplies the necessary water for irrigation in summer time, and renews the water supply in wells and underground channels. When, therefore, the snowfall is scarce, wells and underground channels are liable to have too little water for irrigation purposes, and the population runs the risk of famine, as there is rarely more grain in store than is necessary for the year's use and the surplus required for next year's seed.

In some of the more elevated tracts of the country, artificial irrigation for the fields is not needed. The crops ripen towards the end of May, but the grain is inferior to that of irrigated land. Fruit gardens and vineyards in these parts are still dependent on artificial irrigation. Here, after the harvest has been gathered, all that is left in the ground dries up and the soil assumes the same desolate aspect as the rest of the country.

In the spring, the rivers and streams flowing from the mountains bring down a great quantity of water, especially when there has been a heavy rainfall in the mountains. At times the current of water may be overpowering, destroying bridges and sweeping away anything else in its course. Part of this water will be used for irrigation, led by open channels for many miles over the land, but as soon as the water has fallen below the level required to feed these canals, these particular tracts are left without irrigation. As the streams debouch on the plains, they are apt to cut their beds deep into the soft clay or loess of the steppes and continue to flow for the most part through a kind of cañon with perpendicular sides from 50 to 100 ft. high. Moreover, in the case of many rivers and streams, the water, after leaving the mountains for a few miles, absorbs in the plain such quantities of salt from the saline sub-stratum that it becomes brackish and useless for irrigation purposes. Other streams dry up entirely in the summer. At present there is no system in vogue for storing the superfluous water of the spring for irrigation purposes in summer, and a vast amount flows to waste, finding its way to the sea or into the saline *kavir* or salt desert of Central Persia.

Nearly all the mountain ranges in Persia rise abruptly out of the plains without any length of gradually sloping foothills. At the foot of these mountains, and especially where the streams flow down, piling up boulders and sand, the ground consists to a considerable extent of loose conglomerate, broken stones and boulders which gradually change in the direction of the fall of the ground into sand and finally clay and loess. These accumulations of porous material form ideal reservoirs for underground water, dammed up as they are by the clay and the loess schists. At such places the people sink pits until they reach water. They then dig a row of similar pits at distances of about 20 yards apart in the direction of the slope of the ground, so that the bottoms of the pits are on one horizontal line which gradually reaches the surface of the soil. These pits are then connected with each other by underground passages about 5 ft. high and 4 ft. broad, which are driven from the surface of the soil right through to the first pit at the foot of the mountains. As soon as the last passage has been cleared the water rushes through and is distributed by a system of open watercourses on to the fields and gardens as well as to the cisterns of the private houses and other buildings. Such is the principal method of irrigation of the greater part of Persia and some of the neighbouring countries; the underground channels so constructed may bring the water from ten to fifteen miles before it reaches its destination. At the upper and lower end the pits are constructed in the form of a funnel, whereas the central part is a straight tube of about 4 ft. in diameter, and laid out with stones. The mouths of the pits are surrounded by small mounds, consisting of earth and stones brought up when digging the pits and passages. These small mounds may be seen on the surface of the plain in long lines, marking the course of the underground canals, and serve as a protection for men or animals from tumbling down the openings. The pits are afterwards used in the extraction of stones and earth when the canal is cleaned or repaired, with the aid of a wooden windlass and a leather bucket fastened to a rope.

One of the largest underground basins of accumu-

lated water is situated to the north of Teheran, at the foot of the Shemran mountains, which rise to an elevation of about 12,600 ft. below the Valley of Shemran. From this basin over 50 underground canals lead to Teheran and the surrounding villages and gardens, and the rows of mounds cover the whole plain surrounding the city. It would seem that the ancient town of Rhages or Rey, and the present capital of Persia, Teheran, owe their existence to this large accumulation of underground water at Shemran. The American missionaries at Teheran had an artesian well sunk in their garden, but it yielded only brackish water owing to the miocene beds underneath the clay and loess, which are saline everywhere in Persia.

As the canals are simply dug into the ground without the usual finish of stones, etc., a quantity of water is always absorbed by the soil and lost; only at one place, at the village of Raver, north of Kerman, where water is scarce, tubes of kilnburnt and glazed clay are in use. In places where the water supply is limited the Persians construct at the mouth of the canal tanks or basins, in which the water is first collected and then allowed to flow with a rush over the fields and land in order to ensure an even distribution of water.

In ancient times attempts were made to dam up narrow valleys and so preserve water for irrigation purposes. Ruins of such dams, built of kilnburnt bricks and stones, are still to be found near the village of Kohrud, to the south-west of Kashan, and on the Kara-su river to the south of Saveh. Why the construction of these dams was discontinued is a mystery, since they were the only means of preserving for irrigation a great part of the water which at present flows useless towards the saline swamps or *kavir*. The construction of such dams, if well built, certainly costs a good deal of money, but the revenues would doubtless in time be large enough to cover the outlay and also to give sufficiently high dividends, not taking into account the benefit which would accrue to the inhabitants of the land by reason of their being able to cultivate larger tracts of land, which are at present only arid deserts.

Owing to lack of water, not quite 5 per cent. of the plains and valleys can at present be used for cultivation, though the soil is exceedingly fertile and only requires watering to yield rich crops. More cultivated land would also, no doubt, improve the climate to a certain extent.

There are numerous mountain valleys and ravines which are well adapted for damming up, and the accumulated water could be used not only for irrigation purposes, but also as power for the production of electricity. Such enterprises would prove sound investments for capital. As an illustration of how profitable enterprises of this kind may be, may be mentioned the case of a dam which was built in the year 1836 by English engineers over the rivers Coleroon and Cauvery, in India. The canal leading from it irrigated at first 267,600 hectares, but afterwards, in the districts of Tanjore, Trichinopoly, and South-Arcot, 367,816 hectares. The capital invested for this construction amounted to Rs. 1,829,690, and now pays a dividend of about 37 per cent.

Another enterprise of that kind in India is the Godavery system, which cost 11,024,190 rupees, irrigates a territory of 244,800 hectares, and still pays over 12 per cent. dividend.

That the Persian Government is not able to undertake such enterprises is evident, as it has neither the technical engineers, nor money, nor sufficient credit to raise the necessary money in the country. Only foreign enterprise and capital can help to do such work.

Though the plain around is practically the best irrigated in the country, there are still many hectares of land, especially to the north-east and east of Teheran, which could be cultivated if necessary water were at hand. It is quite possible that a part of the water of the Djajerud river could be brought over a watershed to the Teheran plain without too heavy expenses, if an arrangement could be made to ensure that the quantity of water used by the Varamin plain for the irrigation of its fields be not diminished.

SERBIAN RED CROSS SOCIETY.

The Serbian Red Cross Society in Great Britain, which was founded in August, 1914, on the outbreak of the War, has now been dissolved. The residue of its funds have been invested by the Official Trustees of Charitable Funds, and an annual income of about £1,000 has been secured for the maintenance of the orphanage at Uzice and the other charitable work of the parent society in Serbia. To reward their special services a silver medal has been struck and awarded to a number of ladies and gentlemen, British as well as Serbian, connected with the Society's operations in England, including :—

Mr. Frank Hastings (the chairman), Sir George Beatson, the Dowager Lady Boyle, Sir James Cantlie, Brigadier-General C. G. Fortescue, Sir C. L. des Graz, Sir Alfred Keogh, Sir R. Heaton Rhodes, Sir Arthur Stanley, Mrs. St. Clair Stobart, Sir John and Lady Lynn Thomas, Colonel Sir Edward Ward, Mrs. Carrington Wilde, Miss Olga Nethersole, Sir Edward Boyle, Dame C. Guthrie Reid, and Mr. C. E. Osborn, the secretary.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

British Trade and the Loan.

In previous Notes I have dealt with some of the main aspects of the trade position as influenced by the Reparations settlement, but it seems desirable to revert to the subject again, as some quite erroneous views are being put forward as to the probable effects of a loan to Germany. In some quarters, indeed, the fact seems to be overlooked that ever since the Armistice we have been anxiously looking for a European settlement which would once again enable the wheels of trade to revolve normally. There has never been any doubt as to the seriousness of German competition, but equally it has been recognised that only through a general settlement could the way be opened for the development of British trade. But now the view is put forward that the proposed loan to Germany is a method of dealing a severe blow at our commerce, but it is interesting to note no alternative is suggested, and we are left to assume that it would be best to allow matters to go on as they are, with unemployment increasing in this country, until Europe generally is in a state of chaos.

The Question of Competition.

Of course, it was impossible to stand still, and the way in view is the only means that has been put forward that would seem to offer a reasonable prospect of ending the trade impasse. As I have said, German competition, aided as it will be by the long hours worked in Germany and other factors, will be very serious, much more so indeed than before the war. But in the pre-War period British manufacturers rose superior to their difficulties, and are we to assume that in the intervening decade they have lost all their energy and all their initiative? It is true that one might answer this question in the affirmative were one to judge the position solely by British relations with some of the Near East markets, but these have hitherto not been among the chosen hunting grounds of the British manufacturer, though they will have to be in the future if British trade is to reach an adequate volume. Actually, however, with the limited scope at their disposal, restricted as it has been by the vastly reduced purchasing power of the world, British exporters have not done badly, and the statistics certainly do not justify a pessimistic outlook. The difficulty is, of course, that it is not merely necessary now to obtain trade on the pre-war scale, for the population in this country now demands a much greater volume of exports. That, indeed, is the problem.

The Prospects.

In my view, whatever the ultimate outcome as regards German competition, the immediate effect of the settlement cannot be otherwise than extremely beneficial for British trade. The markets where we have suffered chiefly have been those which, like India, mainly depend for their export trade on raw materials. While so many European countries have been out of the market as regards purchases on an extensive scale, the natural result has been that the purchasing power of the regions concerned has declined—to our detriment—for if countries cannot sell it is equally certain that they will be unable to buy. This lack of world purchasing power has been the main factor in our economic discontent. The settlement will mean a marked and immediate demand for raw commodities, and will thus lead to an increase in purchasing power in just those regions where this development will be most advantageous from our point of view.

The Cotton Position.

If the crop estimates are borne out it will have to be admitted that a very great change has taken place in the cotton position. From the latest American Bureau report it would appear certain that a crop of about 13,000,000 bales will be forthcoming, while the yield of the Egyptian crop promises to be substantially in advance of that of last year. When in addition the rapidly increasing production in the Sudan is borne in mind, it will be evident that the available cotton should at least be ample for the season's requirements. Faced as we are with the prospect of an immediate development of consumption as a result of the European settlement, this development is little short of providential, for it will mean that at a time of increasing demand cotton will not only be plentiful but also cheap, the latter factor being all-important, for dear cotton would tend to retard, if not to check, the revival of the demand for Lancashire's productions.

A Turkish Joke?

A report that the authorities at Constantinople are offering a prize for the most practical method of enabling the city to recover its economic position makes very strange hearing. Indeed, if one did not know the Turks too well to believe them capable of such a thing, one might justifiably suspect that here was some strange species of humour.

Digitized by Google

For the ill-advised actions of the Turks themselves, and nothing else, are responsible for the city's present plight, and the only remedy for the existing state of affairs is the adoption of an entirely different line of policy from that which has hitherto been pursued. Constantinople's position as a gateway between East and West, as a port of transit for Anatolia and the Black Sea, is unsurpassed; but it was not due to the Turks that adequate capital was made out of the site in the past, but to the foreign residents who supplied the requisite enterprise which would have been almost wholly lacking if it had been left to the Turks themselves.

Foreign Enterprise at a Discount.

The steps taken by the Turks up to the present time suggest that they have a very inadequate perception of the true position. It is to be assumed that they really are desirous of restoring their country to its pre-war position at the earliest possible moment, but, if so, judging by what has happened at Constantinople, they have adopted the very worst possible means of attaining that end. Their policy has been, in short, to hamper foreign enterprise in every conceivable way by means of regulations and restrictions, and while signs have not been wanting of an improvement in recent months, the position is still most unsatisfactory, and Constantinople is still in a state of commercial stagnation and is likely to remain so until there is an entire change of outlook on the part of the authorities. In the Smyrna region, as I pointed out recently, there really is a revival of business activity, but Smyrna is mainly dependent on its fruit crop, and recovery there was in any case only a question of time, but Constantinople stands in a vastly different position, and its development must depend on foreign enterprise, for nothing in their history suggests that the Turks are likely to display those qualities that go to the building up of a great commercial centre. One wonders how long it will take to convince them of that fact.

The Concession Game.

No more interesting sidelight could be found on Turkish methods than their attitude in the last few years in respect of the granting of concessions. There have been, as the Turks expected would be the case, many would-be concessionaires, but out of all the protracted negotiations that have been carried out how many concessions have actually been granted? Briefly, the Turks have wanted too much. On the one hand, they have over-estimated the attractiveness of concessions in Turkey; on the other hand, they have given the foreigner credit for too great keenness to obtain concessions, and from the combination of these two factors they expected to reap very considerable advantages, and they have been disappointed. The fact is that no one is seriously going to consider concessions which are hedged about with impossible restrictions, and the result of the Turk's methods is that practically nothing has been done.

Rubber and Restrictions.

Despite the reduced output, the price of rubber has not risen much and now stands fractionally below 1s. 2d. As almost half the present quarter has now elapsed it would seem obvious that the prospect of the raw commodity averaging 1s. 3d. for the three months is very remote, and if it fails to do so there will be a further reduction. Like everything else, rubber has suffered from the situation in Europe, and it will not be surprising if in the next few months there is a sharp rise in the price as the European countries are in a position to satisfy their requirements to some extent. An ultimate rise is assured, for the consumption of rubber is continually on the up-grade, and only time is required for consumption to catch up production.

MARKET FOR ELECTRIC FANS IN EGYPT.

The market in Egypt for electric fans, though confined to the larger cities of Alexandria, Cairo, Damanhour, Mansura, Port Said, Tanta, and Zagazig, offers opportunity for trade (says an American Consular report). Warm, humid weather may be counted on during five or six months of the year, commencing with the latter part of April and ending in September or October. Electric fans are indispensable to business houses during the open hours, but they are not used to so great an extent in the homes as they are in the United States, the nights being comparatively cool. Italian and German fans are most widely sold in Egypt at present.

Practically all the larger cities in Egypt now are supplied with electricity. Current for household use is either 110 volts alternating or 220 volts direct. A 440-volt current is available in many cities for use in manufacturing. Rates run from 3 to 5 piastres per kilowatt hour for household use, while the manufacturing establishments pay a fixed monthly rate per lamp or motor. The exclusive sales agents for the different makes of fans carry on an extensive newspaper and billboard advertising campaign. Any new fans, prices considered equal, would have to allot a liberal advertising allowance to the agent to overcome the established trade names now on the market.

NEWS FROM ALL SOURCES.

The Greek Moratorium Law has been further extended to October 31.

The Bank of Athens announces an interim dividend of 5 per cent., free of Greek taxes.

The production of the Steaua Romana (Bucharest) for August was 24,830 tons, as compared with 24,920 tons for the previous month, and 19,094 tons for August, 1923.

Messrs. William Symons and Co., Ltd., Renfrew, have built a cutter, suction hopper dredger—the Liger—for the Anglo-Persian Oil Company for work at Basrah. The dredger has been constructed under the direction of Messrs. Rendel Palmer and Tritton, consulting engineers, London.

Reuter's Belgrade Correspondent, in a message dated September 5, states:—The negotiations which have been proceeding for some time with an American group for the payment of the second part of the loan granted in July, 1922, were concluded yesterday, the American group agreeing to place a portion of the money at the disposal of the Government at once and the balance at a later date. The money will be used for the completion of railway construction.

Near East Markets.

LONDON PRODUCE REPORT.

Small Trade in Dried Fruit.

(FROM OUR OWN CORRESPONDENT.)

London, Tuesday Morning.

Coffee.—A harder tendency has been in evidence. Costa Rica has risen to 155s., an advance of 5s. on the week. East Indian is unchanged at 135s. Kenya is unaltered at 116s., while Santos is the same at 100s.

Sugar.—Home refined has continued in fair request. Tate's cubes have been done at 46s. 3d., London granulated is 40s. 4½d., while Lyle's granulated is 40s. 7½d. Foreign descriptions are steady, with West Indian crystallised at 35s. 6d., White Mauritius at 35s., White Java at 36s. 3d., and Czech granulated at 38s. 9d. Futures have been somewhat irregular. Quotations are:—October, 23s. 9d.; November, 22s. 6¾d.; December, 21s. 1½d.

Maize.—A quiet but steady tone has been in evidence. La Plata spot has been done at 41s. 9d., while October-November sold at 41s. 6d., November-December at 42s. 1½d., and December-January at 42s. 7½d.

Currants.—The crop position has overshadowed the market, and business has been on a quiet scale, and is likely to continue so until the situation is clearer. This year's production promises to be greatly in excess of last year's, so that a sharp decline in prices may be anticipated.

Sultanas.—A fair business has been done in this commodity, the Australian fruit being in considerable favour. With the arrival this week of a consignment of the new crop of Smyrna sultanas there should be more activity in the market.

Figs.—This week will see the arrival of the first consignment of this season's crop, and, in view of the absence of supplies, it is inevitable that prices should rule high at first.

Plums.—Stocks are scarce, and quotations are very hard. It would appear that Bosnian fruit is not likely to figure so largely in this market this season as has been the case in recent years, as the crop is reported to be rather poor.

Oilcakes.—On the whole, the tendency during the week has been for prices to firm up. Linseed cake, exceptionally, is 5s. down at 280s., but coconut cake is 20s. up at 210s.: while cottonseed cake at 185s. is 12s. 6d. up.

Oilseeds.—Linseed has been quiet, Indian being 22s. 4½d., while La Plata is 20s. 6d. Rapeseed has been fairly firm. Toria is 21s. 7½d., while real bold Ferozepore is 21s. 3d Cottonseed has been steady; Indian is 11s., Egyptian black is 13s. 6d., while Sakellaridis is 12s. 9d.

Seed Oils.—Linseed oil has been steady, closing at 43s. Rape oil has been quiet, with crude at 48s. 6d., and technical refined at 51s. 6d. Cottonseed oil has been steady. Refined common edible is 50s., Bombay crude is 42s., Egyptian crude is 44s., technical is 46s., while deodorised is 51s. 6d.

Oranges.—A good demand is still in evidence, and as supplies of South African are now on the small side, the tone of the market is very firm.

The production of the Indo-Burma Oilfields (1920) for July amounted to 4,103.7 barrels (2,715.6 barrels from Yenanma field and 1,388.1 barrels from Padaukpin field.)

It is notified in the Sudan Government Gazette of August 10, that the total import duty on medicated or medicinal wines containing alcohol not exceeding 23 per cent. of their volume is 15 per cent. ad valorem. The allowance made on such wines on which duty has been paid to the Egyptian Customs is 8 per cent. ad valorem.

GREEK EXPORT TAX ON CURRANTS.

Messrs. J. C. Houghton and Company, in their monthly report dated September 1, state:—

Currants.—The chief factor influencing the market has been the decision of the Greek Government to impose an export tax on the 1924 crop. This, coming as a great surprise to the trade, had the immediate effect of advancing all c.i.f. quotations of new crop now in the course of harvesting, first shipments being momentarily expected to leave Greece. The intention of the Government is to utilise the proceeds of the tax for purchasing currants for wine and spirit making purposes, thus keeping prices from falling below a fixed minimum. They consider this will help to foster the industry and keep prices from slumping. Prior to this news being known, contracts on the basis of 37s. c.i.f. for new crop Pyrgos growth had been passed; merchants now quoting 45s. 6d. c.i.f. The August holidays interrupted the early month's trading, but the reported passing of the new law by the Greek Government has stimulated the demand, and we close the month with an advance of 2s. to 3s. on the lower grades. Trading has centred chiefly in cleaned varieties, from 45s. to 48s. Other sales comprise Zante 47s. to 49s., Gulf 51s. to 52s., Vostizza Common 48s., Ordinary 50s., Good 55s. to 60s., up to 67s. for Shade Dried.

There were no arrivals during August, but the s.s. Sea Serpent is on the water with 700 tons, and is expected in a week's time. Quotations:—Pyrgos 44s., Pyrgos cleaned 45s. to 48s., Amalias 45s. to 47s., Zante 47s. to 49s., Gulf and Panariti 51s. to 55s., Vostizza 50s. to 66s. Australian fruit has

£435,000

has been expended by the Union Government on irrigating the fertile lands comprised in the

Kendrew Directed Closer Settlement

where free training with a free option to acquire land after training is offered to suitable settlers commanding £1,500 capital (less required if in receipt of pension or income). The

HIGH COMMISSIONER for the UNION OF SOUTH AFRICA

will be pleased to answer enquiries regarding soil, irrigation and training.

Illustrated Brochure from

AFRICAN IRRIGATED LAND CO., LTD.,

Digitized by Google

benefited very considerably, and quite an active period of trading set in at figures ranging from 50s. to 54s. The following steamers, Nestor, Banffshire, and Suevic, brought additional supplies.

Sultanas.—Making allowance for the Bank Holiday period, when trading is usually exceptionally quiet, a fair amount of progress is in evidence. The scarcity of Smyrna stocks, which are practically finished, is concentrating the attention of traders more on to the Australian growths which have been arriving freely during the past few weeks, and Australasia has not been slow in taking advantage of this temporary shortage to unload all possible, and, as arrivals have been fairly important this month, a considerable quantity of fruit has passed into consumption at 50s. to 54s. The first shipment of new crop Smyrna is afloat per s.s. Gerano, but so far very little business is reported on the overland tin samples that have arrived. Some interest has been displayed in good average quality, August shipment, at 42s. to 43s., September shipment at 38s. 6d. to 39s. October shipment at 37s., on a c.i.f. basis. Greeks cleared 50s. to 52s., Capes sundried 47s. to 50s., Capes bleached 55s. to 60s.

Figs.—S.s. Gerano is bringing the first skeleton cases of the new harvest. Further sales are reported in Genuines at 23s. 6d. to 24s. c.i.f., September shipment.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Mosul, August 8.—Fresh activity is to be noted in the market for wool destined for export. The batman is now quoted at Rs. 13.8, as against Rs. 10—the quotation for the past fifteen days.

Jaffa, August 16.—The new taxes imposed by the Palestine Customs authorities have compelled merchants to adopt an attitude of greater reserve in their sales, which has resulted in a decline in transactions as compared with the previous week.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended August 30 :—

The arrivals of sultanas are estimated at 8,000 tons, and the sales to date are put at 7,000 tons. Closing prices : Per cwt. c.i.f., London/Liverpool, type 12, 44s. ; 13, 47s. ; 14, 49s. ; 15, 51s. ; 16, 55s. ; 17, unobtainable. The market ruled steady until Friday, when slight rain was general over the raisin districts. The consequences could not be immediately judged, and, under the apprehension of damage, Saturday's prices advanced some 2s. to 3s. per cwt. The market closed firm, but is dependent on future weather conditions, and reaction may follow. The damage to date, if any, will mainly affect quality. The estimates of the crop are unchanged. The weather at the time of writing appears to be clearing. There have as yet been no arrivals of fine grades on the market. No rain fell in the fig districts.

The Phœnix Oil and Transport Company has brought in two further large wells in the Moreni Field.

ENGINEERING TOPICS.

CEMENT MANUFACTURE IN THE EAST.

The manifold uses of cement, and especially its employment for the manufacture of concrete, which is so largely used at the present day in place of brick and stone for structural purposes, render it of no little importance that all countries should be able to obtain cement for local use at a reasonable cost. In many overseas countries, particularly those remote from the present centres of production, the use of cement is greatly restricted owing to the heavy cost of shipment and the consequent high price of imported supplies.

Portland cement is already being made in large quantities in several countries of the overseas Empire, such as Canada, Union of South Africa, Australia, New Zealand, and India, whilst operations on a smaller scale are being carried on in the Sudan, Rhodesia, and Malaya. It seems probable that the raw products required for cement manufacture exist in nearly all parts of the Empire, but hitherto little information has been available regarding the possibilities of establishing a cement industry in most of the Crown Colonies and Protectorates. Considerable attention has been devoted to this question in recent years by the Imperial Institute, where a fully equipped cement testing laboratory has been installed, and the first part of an interesting article on the subject is published in the current issue of the quarterly *Bulletin of the Imperial Institute*. An outline is given of the manufacture and properties of different kinds of cements, special attention being devoted to the characteristics required in the raw materials used for the several classes of cement now employed in building. This is followed by particulars relating to the possibilities of cement manufacture in the Crown Colonies and Protectorates; under each country is given an account of the deposits so far known, results of tests carried out at the Imperial Institute, and a discussion of the prospects of establishing a cement-making industry. In the first part, now published, British West Africa is dealt with. It is shown that cement materials occur in Nigeria which are worth further investigation and technical trial, particularly in view of the occurrence in the country of deposits of coal and lignite, which could be used as fuel. Suitable limestones appear to occur also in the Gold Coast, but there seems to be little prospect of finding in Sierra Leone materials in sufficient quantity for cement manufacture.

Many of our readers will be interested in the news that Mr. James Horne has just retired from active service with Messrs. Vickers, Limited. He joined the Barrow factory in August, 1898, as chief hydraulic engineer to the company, and his special work has been the designing of heavy gun mountings and accessory mechanisms, and his brilliant gifts in this direction have won for himself and for Vickers world-wide recognition. Designing genius has not been the only distinguished feature of Mr. Horne's service, for to his technical talents have been added a commercial acumen and a soundness of general judgment which have been of much value to the company. It is particularly interesting to learn that Mr. Horne has acceded to the request of the directors that his services may still be available to them in an advisory capacity.

The British Overseas Bank announces that funds for the payment of the coupon due October 1 on the bonds of the Roumanian Four per Cent. Consolidation Loan, 1922, were lodged with them on September 1 by the Roumanian Government.

British Consular Reports.

VI.—YUGOSLAVIA—(continued).

I.—Zagreb District.

The following extracts are taken from the report of Mr. G. T. Maclean, H.M. Consul at Zagreb, on the conditions in the district of Zagreb in 1923:—

In the report for this consular district for the year 1922 the outlook at the close of the year was summed up as "hopeful but distrustful." It is regrettable to have to report that at the close of 1923 the situation has not improved to the extent that might have been expected.

In a country such as Yugoslavia, where the national welfare depends in so high a degree on the products of the soil, the harvest and the means of export of the surplus thereof are questions of primary importance. While the harvest of 1922 was reckoned a failure, the result being that there was an excess of imports of about 1,500 million dinars, the present year's harvest has been a fairly good one. On paper an "active" trade balance in the year under review is confidently anticipated. In spite of this theoretically favourable position, however, the situation is not, in fact, satisfactory, owing to (a) The extreme shortage of ready money. (b) The shortcomings of the transport system. (c) The export tariffs, the result of which is that trade in general is hindered and the agricultural products of the country cannot compete successfully in the world's markets.

At the beginning of the year most of the banks and business houses were still suffering from the restraining effects of the previous financial régime, but as time went on arrangements began to be made for liquidating and writing off debts and raising new credits, when suddenly the new deflation policy began to be operative, upsetting all calculations and introducing a vicious circle of money shortage. The peasants and working classes, who were always inclined to hoard money, were induced to do this to a greater extent, increasing the scarcity among the banks and wholesalers. This resulted in the calling in of loans, unsuccessful in many cases, restriction of credits to merchants and manufacturers, raising of interest to unprecedented heights, stoppage of new business and enterprise, and finally general stagnation of trade.

The shortcomings of the transport system are often attributed by the authorities to shortage of goods wagons, but it is probable that this can be remedied by better organisation, and by increasing the resources of the repair shops, which are not sufficient to keep level with the work. There has been a considerable shortage of wagons, and the authorities have drawn up a list of the principal exports of the country in order of preference, goods lower on the list being compelled to wait until wagons are available after moving the higher-placed commodities.

Commerce and Industry.

Owing to the financial stringency, the year 1923 was a difficult one for industry, new enterprises falling roughly to about half of last year's totals. Statistics are practically non-existent, but figures have been obtained for Slovenia and show in the first three-quarters of the year 2,652 new firms of all descriptions and 1,373 withdrawals from business.

The export from Yugoslavia as a whole is directed to the following countries, but the percentages are only approximate:—Italy, 29 per cent.; Austria, 22; Switzerland, 9; Germany, 5; Hungary, 5; France, 4. The import was chiefly from:—Italy, 32 per cent.; Austria, 30; Switzerland, 7; Czecho-Slovakia, 6; Germany, 5; Hungary, 4; England, 3; France, 3.

It will be observed that the leading place is held by Italy. As regards the others, Austria is holding her ground, Switzerland tends to improve, and German trade is distinctly slacker. The inability of German firms to compete as strongly as hitherto in these markets should provide an opportunity for British firms. Unfortunately, however, the money shortage and the ingrained conservatism of Croatian firms operate on this side against the opening up of new connections, while on their side British firms do not as a rule appear inclined to agree to the terms of trading usual in this country, and it is only too likely that the opportunity will be seized by Swiss and Czech firms.

The principal articles in demand in this country are:—Agricultural machinery, agricultural and horticultural seeds, leather in skins and patent leather, boots and shoes, luxury articles, especially furs, silks, perfumery, soap powder, etc., railway material (here the demand has been largely filled up to the present by reparations consignments from Germany), chemicals, especially varnish, alcohol, wax, drugs and medicines, ether oil, explosives, and chemical manures, paper and pasteboard, textiles. Further may be mentioned scientific instruments, motor-cars and spares and tyres, rubber and rubber goods, books and printers' materials, electric machinery and fittings, glass and glassware and pottery, articles for sport.

Road Transport.

This is still extremely backward, in spite of the shortcomings of the railway service, and should have a future before it. During the last year several motor post diligences were received from Germany on reparations account, and were placed, among others, on the routes: Karlovac-Plitvica-Bihac-Senj, Gracac-Knin, and Zagreb-Dugoselo-Bjelovar.

The main roads in Croatia and Slovenia were, before the war, distinctly good, but have fallen into considerable disrepair, especially in Croatia. In the mountainous districts, although on the whole the roads are wonderful examples of engineering, sharp turns are many and stiff gradients up to as much as 28 per cent. are met with, while gradients of 10 to 18 per cent. are frequent.

Cars considered suitable for the district should be of sturdy construction, capable of a good performance on hills with a low petrol consumption. The ideal passenger car should be of 20-25 b.h.p., should not weigh more than 1,000 kg., and should be capable of maintaining a speed of 60-80 km. per hour and surmounting gradients of at least 6 per cent. on top without appreciable diminution of this speed. Intermediate gear ratios must be such as will enable the car to surmount gradients mentioned above without boiling. Fuel consumption should not exceed 10-12 litres per 100 km., and the selling price should be between 60,000 and 200,000 dinars—£150 to £500. Motor cycles should be able to maintain a speed of 70-90 km. per hour, with fuel consumption of from 3½ to 6 litres per 100 km. Price should be 30-40,000 dinars—say, £75-£100.

Lorries of 3-ton average capacity are most in demand, price 150-200,000 dinars. Ford cars at 60,000 dinars have a ready sale, but also the small (501) Fiat at 130,000 dinars has had very considerable success recently. There is also a small but extremely spasmodic demand for luxury cars of the really expensive descriptions.

Digitized by Google

It is considered that the general opinion prevailing in the Zagreb area that British cars are unsuitable for the local conditions and are too expensive is not entirely correct, and that there should be a market, even if to begin with a limited one, for them. It must be emphasised that no dealer here could be persuaded to purchase a British car on the chance of finding a market. One or two cars should be sent on consignment, and, judging by the success which has attended a dealer who obtained motor-cars on these terms, good business should be done if the cars are suitable and the price reasonable.

There are in this district (Slovenia, Croatia, and Slavonia) about 1,600 passenger cars, 500 commercial lorries, and 800 motor-cycles.

Miscellaneous.

Satisfactory progress has been made by the lead mines at Mezica (Central European Mines, Ltd.) and the coal mines at Golubovec (Mines and Industries of Yugoslavia, Ltd.), while considerable extensions are being made in the coal-mining concessions at Pragersko (Podloz-Hrastovec Premogovna Druzba z.o.z.).

A well-known British firm has established in Zagreb a representative for the Balkans, and has good hopes of competing successfully with German and other firms in agricultural machinery, portable boilers, etc.

It is expected that in the course of 1924 an automatic telephone system will be installed with a capacity for 10,000 subscribers. The contract for this has been given to Germany. The installation of the central system will involve a new extension of the present General Post Office.

The question of a wireless broadcasting station has been mooted, and land is said to have been obtained near Velika Gorica for the purpose, but the matter is still in the preliminary stage.

Owing to the financial stringency, there has been a great slackening of building activity during the past year, there being only three important buildings under construction, viz., the new Esplanade Hotel, the new Bourse building, and the new building for the Municipal Savings Bank (Gradska Stedionica).

The housing question is becoming gradually less serious. For residents house and flat accommodation is still very restricted, and for new buildings the prices are extremely high.

It cannot be said that the trade and traffic between Yugoslavia and the United Kingdom has made any great advance in 1923. It is in a way unfortunate that the general restriction in purchasing capacity should have supervened at a time when Germany was becoming increasingly unable to deliver goods at less than the world level of prices and in general when Great Britain's opportunity for successful competition was increasing. It must be confessed, however, that British firms, taken all round, do not appear anxious to extend their business relations with this country, or at least are not prepared to make any concessions in order to obtain an entry into the Yugoslav markets.

For the benefit of the firms who do make inquiries as to openings here, it should be stated that it is impossible to give any definite opinion unless prices and terms of trading are sent with the inquiry. The local importer takes no interest whatever in an academic proposal of a new source of supply when no details are given of how this new source will compare with his present one from the point of view of his personal profit. There is furthermore no hope of initiating new business on a basis of confirmed credits in London before delivery and little on that of payments against documents. It is considered that the most satisfactory method of doing business with Yugoslavia is for a firm or group of firms to send out a suitable general representative with power to appoint *del credere* agents in the various districts. When this is impossible, a firm wishing to enter this market must be prepared to grant credit. Risk may be minimised by careful inquiries in advance and by adopting all available measures of assurance, such as bank guarantees, but without a modicum of risk there can be no new business. Finally, this market is worthy of more attention than it at present receives.

II.—BOSNIA-HERZEGOVINA.

The following extracts are taken from the report on some aspects of the agricultural, industrial, and commercial situation in Bosnia-Herzegovina during the period 1918-23, by Mr. C. A. Greig, H.M. Consul at Sarajevo, and Count H. Stenbock, Secretary to the Consulate :—

Owing to extreme drought, 1922 was perhaps the worst season recorded in the past twenty years. Autumn sowings of wheat, barley, and rye yielded respectively 43, 56, and 39 per cent. less than in 1921. In 1923 there was a marked improvement, the collective harvest falling little short of pre-war figures, though maize suffered from the scanty rainfall.

Plums are an important asset, claiming from 8 to 10 per cent. of the area devoted to fruit culture. The exceptionally plentiful crop of 1823, amounting to 254,743 metric tons (compared with the annual average for the period 1920-22 inclusive of 139,442 metric tons), was comparable with the bumper yields of 1898, 1904, and 1918, notwithstanding the almost unbroken drought which set in before the budding season and continued, aggravated by inordinately high temperatures, especially in the Posavina Plain, the principal plum-growing district, throughout the period of development. From January till September the rainfall was much below the normal, and consequently the fruit was of medium size. It was, however, of good quality and abundant, the dried plums containing 41.60 per cent. of sugar. Of the total crop 50 to 55 per cent. was dried, as compared with 65 to 70 per cent. in 1922; 37 per cent. was used for the production of plum brandy; 7 per cent was made into fruit paste, about half of which was exported; and 3 to 4 per cent. was exported raw, mainly to Austria. At Brcko, the traditional centre of the plum industry, the price of this season's dried plums has ranged from 3½ dinars at the opening of the selling period to 7 to 8 dinars per kilogram, or 40,000 to 50,000 dinars per wagon of 10,000 kilograms.

Whereas last season 1922-23) the qualities most in demand for export were those averaging 60-65, 70-75, and 80-85 plums to the kilogram, in the present season (1923-24) a preference has been shown for the qualities containing 80-85 and 90-95 units to the kilogram. The British, French, and German markets require plums twice dried and of the best quality. Other purchasing countries are Austria, Czecho-Slovakia, Denmark, Holland, Italy, Norway, Sweden, and Switzerland.

In the case of the 1923 crop great care seems to have been taken to ensure the conscientious drying of the exported fruit, shortcomings in this respect in 1922 having favoured French and Californian competition.

Viticulture is carried on to a much greater extent in the comparatively equable climate of the Herzegovinian valleys than in Bosnia, where alternations of raw damp and intense cold often prevail for five months in the year. Since 1913 the ravages of phylloxera have appreciably reduced the area

Digitized by Google

under cultivation, which, from 5,640 hectares in 1910, fell to 4,200 in 1923. To counteract this evil 500,000 American plants were recently distributed among the growers by the Agricultural Department, which has also combated *peronospera* and *oidium* by means of sulphur and copper-sulphate. In 1923 the vintage amounted to 113,640 hectolitres, as compared with a yearly average of 102,720 hectolitres during the period 1920-22 inclusive.

Herzegovinian wine is rich in sugar and alcohol. About two-thirds of the amount produced in 1923 was white and one-third red. It is estimated that half of the total output was made in the Mostar district, the remainder coming from Konjic, Stolac, Ljubuski, and Trebinje. Mostar wine, white and red, contains 11½-13½ degrees of alcohol, and is more highly esteemed than other local blends, which contain 10½-11½ degrees. Approximately three-quarters of the entire yield is sent to Bosnia and the other parts of Yugoslavia, the remainder being consumed in the producing regions. The export of Herzegovinian wine to Czecho-Slovakia and Austria, where it was used to strengthen weaker kinds, has ceased since the adoption by those States of prohibitive customs and railway tariffs.

Tobacco is grown mainly in Herzegovina, where it plays much the same part in agricultural economy as the plum in Bosnia. Some 3,650 hectares are under cultivation in Herzegovina and 600 in Bosnia. The crop of 1923, amounting to 2,800 metric tons, exceeded the average yearly yield for the period 1920-22 inclusive, which was in round figures 2,300 metric tons. The crop is purchased of the growers by the State Monopoly, which owns factories at Sarajevo, Mostar, Banjaluka, and Travnik, the collective output of which was in 1923 1,198,425,000 cigarettes and 5,048,000 kilograms of tobacco in packets. During the year 257,075,400 cigarettes and 1,280,900 kilograms of tobacco in packets were consumed in Bosnia and Herzegovina, whilst 813,751,000 cigarettes and 1,593,500 kilograms of tobacco in packets were sent to other parts of Yugoslavia.

Agricultural Machinery in Use.

Light ploughs with a single share weighing 30-33 kilograms are most generally used, being best adapted to the standard of the teams available. In Northern Bosnia, in the Banjaluka and Tuzla regions, heavier ploughs with more than one share are, however, in favour. In mountainous districts "turning ploughs" ("Wendepflug") have recently been introduced. Machine sowers, reapers and binders, and threshers are used in the country bordering the Save, mainly by German colonists. Hand-operated maize-cleaning mills, threshers, straw-choppers, and vine-presses are in general use.

It is estimated that the annual demand for the items of agricultural machinery most generally used is approximately as follows:—Hand-mills for cleaning maize, 1,000-2,000; hand-mills for chopping straw, 500; fruit-presses, 200-300; threshers (mainly hand-operated machines and a few for horses), 10-150; reaping machines, 50; flour hand-mills, 20; steam-driven threshers, 10.

Bosnia and Herzegovina are rich in minerals, especially coal and lignite, iron ore, manganese ore, chrome, copper, sulphuric iron ores, aluminium, lead, and zinc. Exploitation has hitherto been more particularly active in the case of coal and iron, the output of which is an important factor in the balance of the foreign trade of the region.

Traffic on the Bosnian railways is hampered by a shortage of rolling-stock; by the defective harbour equipment and storage accommodation, inherited by Yugoslavia, of the three southern Dalmatian ports of Gruz (Gravosa), Metkovic, and Zelenica, where collectively, in 1922 and 1923, 29,000 and 35,000 wagon loads of merchandise respectively were handled, as compared with 29,700 in 1909; and by chronic congestion at Brod-on-the-Save, which is at present the only junction connecting the narrow gauge system of Bosnia-Herzegovina with the Belgrade-Zagreb normal gauge line. The number of truckloads of merchandise transferred from the one gauge to the other at Brod has greatly increased since the war, amounting to 69,200 in 1922 and 97,100 in 1923, as compared with 40,000 in 1909, the last pre-war year for which data have been received.

With a view to relieving this state of things, the Sarajevo Chamber of Commerce recently advocated the construction of a new port capable of accommodating steamers of 8,000 tons draught at Ploce (Tolero), to be connected by a new line with Metkovic, which, lying as it does in shallow reaches some 20 kilometres above the estuary of the Neretva river, is kept open, even to coasting craft, only by dint of costly dredging, and is inadequate for Bosnian exports of timber and iron ore. It is claimed for this scheme that it would substantially reduce freights between the southern Dalmatian littoral and the middle Save, Ploce being 85 kilometres by rail nearer than Gravosa to Sarajevo, whilst the run, not beset by the same forbidding gradients, would involve less wear and tear of rolling stock.

Other recommendations made by the Chamber of Commerce included the elimination of the rack-and-pinion railway over Mt. Ivan (between Sarajevo and Mostar), which, in 1922 and 1923, was used by 36,700 and 48,100 trucks respectively, as compared with 37,000 in 1909, and the construction of the Tuzla-Sabac and Pribinic-Maslovare sections.

Small British Trade.

British participation in the import trade, always very limited, has been severely tried by the competition of countries less heavily handicapped by the cost of production and the exchange. In the import of cotton and woollen goods the most striking feature has been the hold on the market secured by Italian and Czecho-Slovakian manufacturers, who treat directly with customers, waive practically all packing charges, and give 60 to 120 days' credit or 3 per cent. discount for cash, constantly maintaining personal touch with clients by means of commercial travellers and displaying great adaptability to local requirements. The cotton and woollen goods now on sale are, with few exceptions, of a quality patently "dear at any price," and discriminating buyers will certainly eschew them when British products are able to take their place normally in the market. Cotton trouserings from Poland and cotton yarns from Greece have appeared, it is believed, for the first time.

In 1923 British imports included 200 tons of tin, tinned sheet-iron, tin-plate, copper-plate, and brass-plate; and in 1922-1923 some 90 tons of cotton and woollen yarns and piece-goods. These figures refer, however, only to direct imports, and do not take into account consignments of British origin bought of wholesalers in Belgrade and Zagreb.

The encouraging results obtained recently in Sarajevo by a commercial traveller representing a British soap and perfumery firm suggest that home manufacturers might well resort more frequently to this method of securing orders.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Further Decline in Futures.

The Alexandria Commercial Company in their report for the week ended August 28 state :— Since our last report the market has been rather nervous. The net changes on the week are :— Sakellaridis : $3.15 down for November, $2.85 down for January, $3.03 down for March ; Ashmouni : $1.13 down for October, $1.12 down for December, $1.38 down for February.

The feature of the week has been the reversal of ideas as to the prospective supply of Sakel for the coming season. On Tuesday the Government issued its report on the acreage ; the total shown as planted is 1,787,843 feddans, and the proportions of the various varieties :—Sakellarides, 48.8 per cent. ; Ashmouni and Zagora, 44.6 per cent. ; Pilion, 2.8 per cent. ; Brown, 1.2 per cent. ; Sundries, 2.6 per cent. The proportion of Sakel was a good deal higher than speculators anticipated, and they at once started to get rid of some of the long position which they have for some time past been accumulating, with the result that the difference between Sakel November and Ashmouni October has narrowed to 982 points, against about 1,200 points a week ago. Nobody takes the Government's total figures seriously, and the general opinion is that the true acreage is near the two million mark. It is extremely difficult, if not impossible, for an individual to determine accurately the proportion of varieties planted ; we have gone as exhaustively into the matter as anybody, and maintain our estimate of May 1 last of 30 to 40 per cent. of cotton other than Sakel planted in the Delta, on which figure the acreage under Sakel works out very close to the proportion of the whole as estimated by the Government. The volume of business during the week has been fairly large, and with the selling out by speculators the supply of November contracts is considerably increased and dealings accordingly are easier. There has been a good deal of inquiry from consuming markets, but the actual business concluded has not been in proportion to the inquiry, spinners apparently looking for lower prices. The week's receipts amount to 43,451 kantars, against exports 37,977 kantars : the stock stands at 285,803 kantars.

Spot.—Total sales this week amount to about 4,400 bales, of which we estimate 900 bales Sakel and 3,500 bales Uppers.

Sakellaridis.—All grades from Fully Fair to Fully Good Fair to Good have been in demand, but, except for the low grades, so little cotton remains that business is extremely difficult. The price of spot as compared with contracts for cotton below Fully Good Fair is, if anything, rather easier ; for the better grades, however, the premiums have been maintained.

Uppers.—New crop arrivals now average something over 1,000 bales a day, and most of this cotton has changed hands. Sellers appear rather anxious to get rid of their cotton, and premiums have consequently dropped slightly. With regard to old crop, very little business has been done : there has been a small demand for Fully Fair and Good Fair, but the price of spot as compared with contracts for these grades is slightly easier.

Crop 1924.—Crop news is without much change. Both crops are progressing normally, but our private information confirms that the yield of some districts in Upper Egypt is likely to be affected by the somewhat heavier pink boll worm attack mentioned in last week's report.

COTTON TRADE REVIEW.

Reduced Activity.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended September 6 states :—

The increased activity referred to in our last two reports has given place to a quieter condition of affairs during the past week, and the turnover has shown a considerable reduction. This is thought to be partly due to a desire to await the American Bureau report, which is due on Monday next, and partly to the belief that we shall see lower quotations later on for both American and Egyptian cotton, with a consequent fall in the prices demanded for both yarn and cloth. In the meanwhile, however, spinners have maintained their firm attitude, and are not disposed to give away much of the advantage which lower quotations for the raw staple have already given them.

Yarn.—Prices show no reduction on those prevailing a week ago. The stoppage of work for the annual holidays in Oldham, the principal producing centre, has reduced stocks in hand, and in some special varieties of yarn there is an actual shortage, of which spinners feel they are entitled to take advantage after the thin time they have experienced for so long past. Although the demand from overseas markets has not been negligible, there are no special features to report apart perhaps from the steady demand from the Near East for the special varieties of yarn in favour in those markets.

Cloth.—There has been a distinct pause in buying activity, which, as mentioned above, is probably due to the anticipation that the official Bureau report regarding American cotton may lead to lower quotations for the raw material, with a consequent reduction in the price of finished goods. India has again placed the biggest volume of actual business, though less than was hoped for, and the United States has been prominent with orders for some of the finer qualities. Nervousness is felt regarding the position in China, and the stoppage of the weekly Shanghai auctions is a very discouraging feature. Egypt and the Levant generally have done less business than of late, and home trade transactions have been restricted to the buying of stock lots for immediate delivery.

Raw Cotton.—In a general atmosphere of reduced activity prices have again shown a tendency to droop, without, however, any drastic changes on the week. Buyers complain that the residue of old crop American cotton lying in Liverpool is of poor quality, and for special grades quite substantial premiums have to be paid on nominal quotations. There has been some disposition during the week to modify the estimates regarding the size of the new Egyptian crop, though confidence is felt that it will still be a substantial one. Incidentally, the stock of cotton lying in Alexandria is reported to be less than a quarter of the amount at this time last year. Closing quotations yesterday were as follows :—American Middling 15.16, Egyptian Fully Good Fair 24.90.

The following is taken from the report for the week ended August 30 :—

The cheerful atmosphere previously reported has continued during the past week, though probably less actual business has been done. Constant talk about lower-priced cotton can hardly fail to make buyers both at home and abroad feel inclined to refrain from committing themselves too far in

Digitized by Google

their purchases. According to the latest report of the United States Agricultural Bureau, the American crop is expected to approximate to 13,000,000 bales, which, if realised, will certainly dispel the bogey of anything approaching a cotton famine, quite freely talked about not so long ago.

LIVERPOOL COTTON REPORT.

Steadier Markets.

Messrs. Reynolds and Gibson report as follows for the week ended September 3 :—

Egyptian Spot.—Steadier markets have been the rule during the past week, although the tendency has continued on the down grade. Belief in lower prices still prevails, and it is only the scarcity of cotton at the mills, and the consequent "bridging over" that has to be done by spinners, that has accounted for the comparatively good business which has taken place. The drop from August into the price of the September contract has had the effect of further weakening the basis for all classes of Egyptian cotton, but particularly has this been noticeable in the case of Uppers. The reported improvement in the staple of this year's American crop, coupled with the rumour that certain mills which have latterly been spinning Egyptian Uppers are already reverting to American cotton, has caused something in the nature of a panic amongst holders of Upper cotton in this market, and the basis has broken so badly that many would-be sellers appear quite at a loss as to what to ask for their cotton. Fully Good Fair Upper is officially quoted to-day at 21.05d., but it is doubtful if 2.00d. per lb. less could be obtained actually on the spot here. Alexandria appears to be in much the same state for old crop cotton, and sellers of new crop are becoming easier to deal with every day.

A certain amount of re-selling on spinners' account has been noticeable, both here and in Manchester, during the week. Presumably this comes from those mills which are being put back into American cotton. Needless to say, the appearance of this cotton at the present juncture has had a pronounced sentimental effect on prices here, even though the quantities offered have been small and the prices asked (in many cases) considerably higher than those already ruling. Spinners have continued to weed out the better lots of Sakel from the poor selection remaining, and a fair business has been done. To-day, a line of some 1,200 bales is reported to have changed hands for delivery next month; up to 24.00d. was paid. Inquiry for Sudan cotton has continued good, the Sakel cotton changing hands at from 23.50d. to 25.50d. per lb. White Sudan has been more freely asked for at from pass price American contracts to about 450 on; the selection, however, is poor. Other growths have been neglected. C.i.f. business showed some improvement at the beginning of the week, but has become rather quiet latterly. Forwardings to spinners for the week ending 29th ult. were returned as 7,901 bales. Estimated sales 2,800 bales Egyptians and about 1,250 bales. Sudan. Quotations for Sakellaridis are reduced 40 points, whilst those of Upper and Brown are 100 to 125 points lower on the week. F.G.F. to-day, 24.90d.

SHIPPING INTELLIGENCE.

SAILINGS TO THE NEAR EAST.

The London office of the Italian State Railways and Steamship Lines announces that during September and October a service of special fast sailings will operate from Trieste to Piræus and Constantinople which will accomplish the journey in quicker time than the Simplon-Orient Express; moreover, the inconvenience of passing the various Balkan frontiers will thus be avoided.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Valacia for Port Said, Colombo, Madras, and Calcutta (London, September 13).

Anchor Line.—S.s. Scindia for Bombay (Liverpool, September 25).

British India Line.—S.s. Morvada for Bombay and Karachi (London, September 12); s.s. Merkara for Colombo, Madras, and Calcutta (London, September 13).

Clan Line.—S.s. Clan MacBride for Bombay and Persian Gulf (Birkenhead, September 17).

Ellerman "City" Line.—S.s. City of Exeter for Calcutta (Birkenhead, September 15).

Ellerman's Westcott and Laurance Line.—S.s. Mardinian for Gibraltar, Malta, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (London, September 20).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 20); s.s. Tramore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 18).

P. and O. Line.—S.s. Caledonia for Bombay (London, September 19); s.s. Narkunda for Bombay (London, October 3); s.s. Khyber for Colombo, Madras, and Calcutta (London, October 4).

Sir John Ferguson, of Lloyds Bank, has been elected Deputy-Chairman of the Council of the Institute of Bankers for the coming year.

The Government of Turkey has announced irrigation projects for the Meander Valley, the Adana Plain, and the Sousirlik and Broussa areas. The Minister of Agriculture has stated that he is in a position to discuss details of these projects with foreign construction companies with a view to granting concessions, says an American Consular report.

Stock and Share Markets.

QUIET AND STEADY TONE.

(From Our Own Correspondent.)

London, Tuesday morning.

On the whole the markets closed last night on a fairly steady tone, though in a few directions a little irregularity was in evidence. Judging by the course of prices since the Reparations settlement, it cannot be said that the fears expressed so freely in some quarters have had any repercussion on the Stock Exchange. On the contrary, the future is looked forward to, if not with optimism, at any rate without undue apprehension. After all the changes and chances since the late summer of 1914, the Exchange prefers not to cry "wolf" without very evident grounds. It is felt, indeed, that the doctrine of pessimism can safely be left in the keeping of Fleet Street, which, as in the past, is sure to be fully equal to all the demands made upon it in this direction.

Seriously, however, the danger of German competition, it is thought, may be rather discounted, for the time being at any rate, since the revival of commerce should mean trade for all at first, and the effect of that will be an advance of prices in a number of groups, notably Industrials and those that come under the commodity heading. Industrials, as a matter of fact, were among the first of the markets to firm up, and I shall expect to see Rubbers follow suit, while Tea shares, which have already enjoyed so substantial a rise, may be expected to go much higher once Europe is again absorbing its usual supplies.

Gilt-Edged Steady.

Gilt-edged securities have made a fairly firm showing. Consols are 57⅛, the Conversion Loan is 77½, War Loan Fives are 101 11-16, while Fundings are 90⅛. Indian stocks have been dull, and yesterday there was a slight decline in nearly all cases. The Three per Cents. shed ¼ at 55¼, the Three and a-Half per Cents. lost a similar amount at 65¼, while the Seven per Cents. at 109 are ½ down.

Foreign Stocks Firm.

There has not been so much activity in the Foreign market of late, but yesterday a fair amount of business was done. French stocks were steady, with the War Loan Five per Cents. at 24½ and the Four per Cents. at 19¾. German stocks have made an irregular showing during the week, and yesterday fell away somewhat. The Three per Cents. at 40s. shed 3s. 3d., the Three and a-Half per Cents. were 1s. 6d. lower at 34s., while the Four per Cents. at 34s. also showed a similar decline. Italian Rentes are steady at 20½. In Near Eastern securities Egyptian Unified have been rather weak, closing at 74¾, a decline on the day of ¾. Greek bonds have been very firm, with Monopolies a point up at 48½. Chinese stocks have fluctuated somewhat on the political situation, but yesterday there was a general recovery.

Industrials Rather Featureless.

A somewhat quiet tone marked the Industrial group yesterday, though there were some strong features, notably Tobaccos. The underlying tone in this section is very good, and it is evident that there should be a general advance in prices as soon as conditions improve.

Tobaccos have been very firm, Bats being 108s. 9d., while Imperial Tobaccos are 28s. 3d. Textiles have been on the dull side. Coats are 60s. 9d., Courtaulds are 52s. 6d., while English Sewing Cottons are 56s. Iron and Steel shares have been rather quiet. Armstrongs are 14s. 3d., Guest Keens are 34s. 6d., while Vickers are 8s. 9d.

Shipping securities have been steady. P. and O. Deferred are 300, Cunards are 18s. 4½d., Furness Withys are 32s. 9d., while Khedivial Mails are 1 11-16.

Banks Quiet.

Banking descriptions have been rather quiet. Westminsters are 17 3-16, Lloyds are 59s. 3d., P. and O. Banks are 10⅞, National of India are 4¼, Chartered of India are 20, while British Trade Corporations are 2¼.

Oils Dull.

There has been very little activity in the Oil market, and a rather dull tone has developed. Anglo-Persian Ordinary are 2¾, Burmahs are 4 15-16, while Lobitos are 10⅜. In the Roumanian group Phœnix are 22s. 3d., Steaua Romanas are 8s. 6d., while Hamilton's Concessions are 1s. 6d. Among Egyptians Anglo-Egyptian B are 1 1-32.

Egyptians Steady.

Egyptian securities have made a fairly steady showing. Aboukirs are 18s. 3d., Beheras are 10¾, Egyptian Markets are 24s. 6d., Gharbieh Lands are 1⅜, New Egyptians are 26s. 6d., and Union Foncieres are 2½.

THE DYESTUFFS SITUATION IN GREECE.

The importation of dyestuffs into Greece has varied considerably in recent years, reaching 245 tons in 1920, dropping to 149 tons in 1921, increasing to 181 tons in 1922, and falling to 119 tons in 1923. These fluctuations are attributed to the fact that during the War, when even the immediate requirements were difficult to obtain, the usual stock carried became practically exhausted (says an American Consular Report).

In 1920, when the favourable exchange value of the drachma gave an additional impetus to foreign purchases, an effort was made to replenish stocks. The rising foreign exchange in 1921 put a stop to this tendency, and, on the other hand, stimulated to a large extent the domestic production of textiles, so that in 1922 the importation of dyestuffs reached a greatly increased figure. This latter year, therefore, might be taken as a fairly correct gauge of the importance of this market for foreign dyestuffs, while the year 1923 was abnormal for the textile industry, which, owing to the heavy fluctuations of exchange, worked for a considerable period on part time.

About sixty tons of dyestuffs, delivered by Germany on reparation account according to the Treaty of Versailles, are still held for disposal by the Greek Government. Sooner or later this quantity will be taken up by the local consuming industry, and during the next 12 months at least will offset any increase in the consumption of dyestuffs resulting from the newly-established and growing Oriental carpet industry in Greece.

The only important Greek dyestuff works are the Manufactures de Matieres Colorantes du Piree, S.A. Oeconomides, Piraeus, which started manufacturing in 1899, and gradually increased its production to 107 tons of complete dyestuffs in 1922. In 1923, owing to the crisis in the textile industry, it produced only 63 tons.

The foremost consumer is the cotton-textile industry, whose staple products are cheap ginghams, oxfords, or vichys, for the working and peasant classes, besides a line of medium-priced dress goods for men and women. Except a small proportion of plain clothes, all the cotton dyeing is done in the yarn, and the daily consumption of dyes in the eight more important dyeworks is estimated as 200 kilos of sulphur dyes, 70 kilos of direct dyes, and a small quantity, perhaps 1 per cent., of vat dyes. Sulphur dyes are largely used for producing blacks and some blues, and direct dyes for other colours. Vat dyes are obtained from Germany and Switzerland, and the other groups are furnished in about equal quantities by foreign and local dyestuff works.

The so-called "Congo red," formerly received in small quantities from the United States, is now made by the local industry. Alizarine red, with other alizarine colours, is finding a growing outlet in the newly established Greek Oriental carpet industry. Indigo for cotton dyeing has been replaced largely by the so-called "Hydron blue," imported from Germany. The total production of the woollen industry is given as 1,000,000 yards of cloth per year, and there are six moderately sized mills in this district producing mostly blankets and a line of coarse woollen cloth and very few styles of a better class. Campeachy logwood is used in the silk-dying industry, besides the usual direct dyes. The few smaller and two larger silk factories have a yearly output of 14,000 kilos of silk cloth.

The paper industry is represented by two factories not having an important use of dyestuffs. The upper leather industry is small and uses some aniline colours, mostly black, brown, and red, all of which are imported from Germany. The shoe polish made locally is of a very low quality, for which the dyestuffs are obtained entirely from the Greek dyestuff factory.

The Greek import business in aniline as well as alizarine dyes is monopolised practically by the four largest German dye manufacturers. They maintain local depots from which the immediate requirements are satisfied. The larger users, however, order direct from the factory, thereby hoping to insure a fresher supply. Besides, they are adverse to making yearly contracts and generally purchase their immediate requirements, as the competition among the agents of the German manufacturers is keen, although they are supposed to have uniform Cartel prices. Their products are so well known that no advertising is done. Against their competition the various Swiss, Netherlands, and French manufacturers only do a small business in specialties.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Telephones.—The General Manager, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 500 wall telephones. October 1.

Motor Boats.—Tenders are invited by the Egyptian "Conseil Sanitaire, Maritime et Quarantenaire" at Alexandria for the supply of two motor boats (oil driven) for service in the ports of Alexandria and Suez, and one motor launch to be used in the port and roadstead of Alexandria. The vessels are to be constructed under the supervision of the Bureau Veritas or Lloyd's. Quotations are to be in Egyptian £'s for vessels delivered c.i.f. Alexandria. October 15. (D.O.T.)

Tu key.

Wire.—The Direction Générale, des Postes et Télégraphes, Stamboul, invites tenders for the supply of 25 tons of galvanised wire. (D.O.T.)

Voltmeters.—The Direction de l'Intendance de la Direction Générale de la Postes et Télégraphes invites tenders for the supply of 100 large and 500 small voltmeters. The first adjudication takes place on November 4 next, and the final adjudication on November 17. (D.O.T.)

Czecho-Slovakia.

Locomotives, etc.—A new scheme is being undertaken by the Czecho-Slovak Government for the electrification of the State Railways, and tenders are invited by the Czecho-Slovak Ministry of Railways for locomotives and materials in connection with the project. October 21. (D.O.T.)

India.

Wagons.—The South Indian Railway Co. invite tenders for the supply of 109 wagons. October 10.

Dredgers.—The India Store Department invite tenders for the supply of two self-propelling suction dredgers, with radial heads and pumps having 20 in. suction and delivery, also floating discharge pipes, terminal pontoons, anchor lifting pontoons, and floating high-pressure hydraulic pumping plants.

NOTES OF THE WEEK.

Wahhabis on the Warpath.

The capture of Taif by the followers of Sultan Ibn Saud of Nejd may well be the forerunner of striking developments in the Arabian Peninsula. When a few weeks ago a Wahhabi detachment appeared in the neighbourhood of Amman and was easily dispersed by aeroplanes and armoured cars there was nothing to show that the incident had anything to do with one of those periodical movements which have characterised Wahhabi history. Ibn Saud was understood to be, or to have been until recently, in favour of keeping his followers within bounds, and he dissociated himself from the raids that the Akhwan made into Iraq two or more years ago. He posed as being anxious to consolidate his kingdom, and to this end desired to have the frontiers of Nejd clearly defined. It is possible, however, that the assumption of the Khalifate by King Hussein has stirred afresh his enmity or that of his people against the Hejaz. Certainly the appearance of a body of Wahhabis in sufficient strength to occupy Taif and threaten Mecca suggests something more than the restlessness of a border tribe. Taif lies seventy-five miles south-east of Mecca; it is the summer residence of King Hussein, and, more important still, is Mecca's main or only source of supply for fruit and vegetables. Its distance from Riyadh, the capital of Nejd, is about four hundred and fifty miles, while Amman lies rather less than half that distance from Jauf, the chief town in the north-west of Ibn Saud's territory. The closeness with which the capture of Taif has followed upon the attack on Transjordan points to a concerted movement although it is difficult to understand Ibn Saud's motives in countenancing hostilities against territory which comes under a British mandate.

The Weakness of the Hejaz.

The ease with which Taif fell to the invading force does not speak well for the military strength of the Hejaz or for the organisation of its defence. A ruler who claims the headship of the Arab world, who is prepared to quarrel with Egypt and tries to interfere in Palestine should be more sure of the situation at home. Unless the Hejazi army is at once able to reoccupy Taif and to dispose of the invaders, some credence is likely to be given to the reports of the insecurity of King Hussein's position. It would have been expected that all the tribes owing him allegiance would have rallied immediately to the defence of the country and given short shrift to the "heretic" Wahhabis. Instead we have an admission of defeat and a pathetic appeal from Mecca to "the civilised world" complaining of "atrocities" accompanying the occupation of the town. Where Great Britain has definite obligations to Arabs, as in the case of Transjordan and Iraq, she has shown her readiness to defend those under her charge, and it is unlikely that the Wahhabis will be tempted to face a further advance on Amman. The situation in regard to the Hejaz is different. King Hussein has deliberately rejected all attempts on the part of the British Government to negotiate a treaty with him, and, consequently, has no claim for assistance in the defence of his country. The immediate outcry against excesses at Taif suggests an attempt to prejudice British opinion against the Wahhabis with a view to securing the support that has been so effective in Iraq and Transjordan. Great Britain, however, is under no illusions as to the manner in which desert warfare is conducted, and has no authority to require Ibn Saud's followers to conform with codes that have never been applied by the Arabs amongst themselves. On the other hand, there is no reason to suppose that Wahhabi rule in Mecca would be more effete than that of King Hussein, which has failed to take advantage of its opportunities and has gone out of its way to estrange the friendship of a country which has done so much for the Arabs in general, and far the Hashimite House in particular.

The Anglo-Egyptian Meeting.

Zaghloul Pasha is due to arrive in London on September 23, and his meeting with Mr. Ramsay MacDonald is to take place the same week. The discussion will be of a strictly preliminary character. The Egyptian Prime Minister is to find out whether there is any chance of Egypt's claims being met. So far no attempt has been made to explore any of the four reserved subjects, with the sole exception of the Sudan. In regard to that point it is obvious that what have been stated to be Egypt's ambitions have no likelihood

Digitized by Google

of being granted. On the other hand, an exchange of views between the Egyptian and British Prime Ministers can hardly fail to enlighten the former; it may show him that there are more sides to the Sudan question that he has discovered, and it may give him entirely new ideas regarding the value of an agreement with Great Britain which would accord to Egypt perhaps three-fourths of what she wants, and remove misgivings on the remaining quarter. Even in this event, unfortunately, there is no guarantee that Zaghloul Pasha would return to Egypt and attempt to win his country over to his own way of thinking. He has never shown any inclination to stand up to public opinion and to seek to mould it to his will. It is far more probable that he will adopt the attitude of the most insignificant of his extremist followers, will declare his inability to accept any terms that do not grant the whole of the Egyptian demands, and will return to Egypt to win the plaudits of the unthinking section of his countrymen for the splendid way in which he has defied "British tyranny."

Croats and Serbs.

The letter that we publish this week from our Liubliana correspondent gives an illuminating account of the present situation in Yugoslavia. Written before the meeting of the Croatian Peasant Party, it sets out at length the dilemma in which M. Raditch found himself. The meeting has now been held, and the Croatian leader has definitely identified himself with the Government of M. Davidovitch, which he declares himself willing to enter. Any other course would have completely stultified him, not only in the eyes of the Yugoslav people, but also abroad. The world is getting tired of leaders who show no constructive ability and have not sufficient sense to realise that the surest way of reaching any goal is to take one step after another in the given direction, and not to sit down doing nothing, in the expectation that some contrivance will make its appearance to enable one to reach the goal in a single jump. By entering the Davidovitch Government and loyally co-operating with it in administering the country on sound efficient lines the leaders of the Croatian Peasant Party will gain a much clearer insight into the needs of Yugoslavia as a whole, and will be able to bring their policy more closely into line with Croatia's real interests. M. Raditch has declared that his party remains Republican; but as the Monarchy is still a factor to be reckoned with, he is willing to enter a Monarchist Government. This is a perfectly reasonable attitude, but honour demands that, while he identifies himself with the Monarchy, he should accept it and refrain from any steps that could be interpreted as an attempt to undermine it.

The Death of Todor Alexandroff.

The murder of Todor Alexandroff, the chief leader of the Macedonian Revolutionary Organisation, will probably be found to be a blow to the cause of an early peaceful solution of the Macedonian question. It is true that he was himself a man of blood, and that M. Pashitch's Government had adopted the attitude that it could have no truck with a man who had so many murders on his hands, but the excuse was not one that carries much weight in the Balkans. Alexandroff was inclined to make a stand against Bolshevist propaganda in the Balkans, and had set his face against using Communist support for the Macedonian movement. If it had been possible in Yugoslavia to take advantage of this attitude peace might have been secured at an earlier date in the Peninsula. If it is true that Alexandroff has fallen a victim to Bolshevist hostility, his death will be a gain to the Communist element in the Macedonian Organisation. It is not in the interest of any Balkan State to have Communism encouraged in its midst, and rather than allow the Macedonians to become identified with Moscow, it would be wiser on the part of the Belgrade Government to try to come to terms betimes with the saner element in the Organisation. Alexandroff's successor will presumably be General Protoguéroff, who has already identified himself with Alexandroff's anti-Communist attitude.

Indiscipline in Greece.

In most countries the Government's sins of omission or commission are the subject of denunciation on political platforms or in the Press, and an attempt is made to force the authorities to the required line of action by the pressure of public opinion. In Greece the method of procedure that has found most support in recent years in dealing with official shortcomings is for the Army or Navy to start a revolution. It must be regarded, therefore, as a favourable symptom that the latest military revolt appears to have enlisted the support of only two generals and eight subordinate officers, of whom five thought better of their action before the plot was discovered. This fiasco seems to imply that even the Army is getting tired of militarist interference with politics; the civilian population, since the execution of six ex-Ministers, has not counted for much in Greece. The trouble, without doubt, will gradually right itself; but the return to more normal conditions would be expedited if the civilian politicians could sink their differences and work together, without thought of party, for the good of the State. The people grow tired of Ministry after Ministry failing to effect any improvement in the country's affairs, and the hotheads turn instinctively to the revolution idea, in the hope of proving themselves a second Venizelos.

Sofia's Memorial Cathedral.

A delay of eleven years in the consecration of a completed church is an apt commentary on the chequered history of Bulgaria. The Alexander Nevsky Cathedral, which was consecrated only last week, has long been Sofia's most notable building, and its golden dome the most conspicuous landmark for great distances around the capital. Yet the first stone was laid forty-five years ago. In those days it was intended to be a memorial church in honour of the Tsar Alexander II., the "Liberator" of Bulgaria; but the building was interrupted when the enthusiasm for Russia lapsed under Stambuloff, and it was not until 1894 that the work was continued. The Cathedral was completed in 1913. The second Balkan war, however, interfered with its consecration, and a year later came the great European struggle. As a requital for the bombardment of Bulgarian territory by Russian men-of-war, King Ferdinand resolved that the name of the church should be changed, and that it should be dedicated to Saints Cyril and Methodius, the patron saints of Bulgaria, to whom the country is indebted for its alphabet. Stamboulisky changed the name back to Alexander Nevsky, and in that name it has now been consecrated.

The Revolt in Georgia.

There has probably been no more cynical exhibition of the Bolshevist attitude than that provided by the history of Georgia in recent years. In common with other countries that were supposed to be held down against their will by the Tsarist régime, the Transcaucasian States were to recover their independence under the Soviet millennium. In May, 1920, a Treaty was signed between the Moscow Government and the Georgian Republic, by which the independence of the latter was recognised and the Soviet undertook to abstain from interference in the internal affairs of the country. The Treaty merely provided the means for Com-

Digitized by Google

munist intrigue, and when this was not as successful as was anticipated, Soviet armies invaded Georgia and established a Russian occupation. After one abortive rising, the Georgians have now made a further desperate—and this time more comprehensive—effort to free themselves from the Soviet yoke. From the scanty information received it is not easy to tell with any degree of certainty how the revolt is progressing. The Soviet claim that it had been summarily suppressed is proved to be false, although it is probable that Georgian hostages have been seized wherever possible and executed. The Red armies, known to be worthless for serious military operations, ought to be able, by sheer force of numbers, to quell the Georgians in course of time, but for the moment it looks as if the suddenness of the rising had taken Moscow unawares, and the Reds are left with only a precarious hold on Batoum.

The Indian Services.

As everybody expected, the Indian Legislative Assembly has refused to have anything to do with the recommendations of the Lee Commission regarding the composition and remuneration of the public services. The vote may fairly be described as academic, since the effective decision rests with the India Office, and not with the Assembly, and it should be read as the expression of sentiment rather than responsibility. It need not hamper the Secretary of State, though presumably there will be difficulties at Budget time if he decides to put the Commission's recommendations into force, and, even as an expression of sentiment, its importance may easily be overrated. It will, of course, strengthen the position of the Service Associations, which have appealed for the protection of Parliament against the spite of politicians, and to some extent it may operate to discourage recruitment in this country; in Indian political circles we suspect the prevailing feeling will be one of relief, following on the discharge of a secretion which was interfering with the normal activity of the organism.

THE WEEK AT HOME.

London, Tuesday Morning.

The Clyde Rent Strike.

It is now many weeks since I referred to the strike of the tenants of certain Clydeside tenements, who have availed themselves of the muddling Housing Acts to avoid all payments of rent. The matter had reached the acutest stage, for cycle scouts and handbell ringers were urging the lions of Clydebank to resist policemen and, in fact, to use violence towards them. At the eleventh hour a conference held at Glasgow agreed to a fortnight's truce in the dispute.

During this week over a hundred ejection orders were to have been enforced. This will not be done; tenants in a position to pay rent will be asked by Mr. Kirkwood, M.P., to do so; others will be requested to come to terms with their factors. It would seem that the Government has really shirked the problem—not only this Government, but three Governments. The Scottish Labour members appointed last month to report on the position urged the setting up of a special rents tribunal, which should consider all cases of arrears and assess ability to pay. It was in such arbitration that the last hope of a peaceful settlement in what is perhaps the most dangerous quarter of Great Britain lay, and late in the day justice has entered upon the scene.

Class Politics.

The movement of the more prominent Labour M.P.'s to saner ways of thinking grows with gratifying rapidity. Much attention, for example, has been given to the preface which the Premier has recently written for an old book of his on Socialism, in which he states a certain disapproval of such methods as doles, Poplarism, limitation of output, unreasoning strikes, and so on. This confession has been hugged to the bosom by our capitalists, who think that a split in the Labour Party is now certain. They say that no extremist will stand these wise words of Mr. Ramsay MacDonald, and that class politics are becoming less and less of a nightmare. The Prime Minister, they are so pleased to think, is really an evolutionist, not a revolutionist, and round the evolutionaries they can always find a way. The stars are fighting for them once again in their courses, and all may yet be well with the country.

And even Mr. Newbould, the only Communist in the late Parliament, has confessed that revolution is impossible for the present in this country. He has retired from the Communist Party, and although he still talks hectically about the necessity of keeping Soviet Russia as a revolutionary arsenal for Europe, his steps in the way that he should go are patently being more decisively trodden. We may yet see Mr. Newbould as a Cabinet Minister.

Ireland.

It is now being taken for granted that Parliament will have to re-assemble at the end of this month to pass the one-clause amending Bill which will provide for the appointment of a representative on the Commission by the British Government. Meanwhile, things are fairly calm. It is expected that the Ulster Cabinet, which meets to-day, will endorse Sir James Craig's refusal to appoint a Boundary Commissioner, but in spite of that it is anticipated that matters will take their course.

In connection with the function of the Boundary Commission, about which Ulster and the Free State hold contradictory views, Lord Birkenhead and Mr. Lloyd George, who were both signatories to the Irish Treaty, have stated their opinion that it is limited to defining a boundary. If this be all that the Commission means, it would appear strange if Ulster were to attempt to derail it and so cause disorder in all the border districts. The outlook is still far from hopeful.

The Loan to Russia.

Of the Russian Treaty there has in the past few days been much talk about it and about; Sir Walter Runciman's letters to Mr. E. D. Morel and Mr. Morel's letters to Sir Walter on the subject have occupied much of the space in the Press; and Mr. Lloyd George has said that if the Labour

Party go to the country over the issue they are courting disaster. None of this perhaps matters very much. What is more important, the attitude of the City, is not so definitely known at present, though it is vaguely being assumed that it is extremely hostile.

Without professing to have gone deeply into the matter, one cannot see that the opposition to the Treaty amounts to much. The Runciman-Morel correspondence proved little except that agreement was reached in a thoroughly unsatisfactory manner —a nasty fact, which calls to mind the Agreement with Ireland, but not wholly damning; and of Mr. Lloyd George—well, he has hardly been accounted an authority on Russian affairs after his "bulging cornbins" speech. Those who are supporting in a moderate fashion the Premier's resolve to resume national relations with Russia are suggesting that the conditions on which Parliament is to be asked to sanction the proposed loan to Russia should be published, so that we might all know exactly where we stand. As it is, there is danger that when the much more important (from a domestic point of view) question of Ireland arises the Liberal and Labour parties may find themselves divided.

Fallible Government Departments.

The affair of the Latter-Day Druids, to which I recently referred, has fizzled out, but in that most delightful of all spectacles, the admission by a Government Department that a mistake had been made. In July the First Commissioner of Works proposed to permit the Latter-Day Druids to bury the ashes of one of their members within Stonehenge; in September he states in effect, "Come back all I said." Would that all such permissions be changed so quickly into such refusals! One wonders whether the dashing example of Mr. Jowett will affect Mr. Walsh and the War Office in the still undecided matter of Lulworth Cove.

The Franciscan Friars.

It must have been a wonderful scene and experience last week at Canterbury when hundreds of the Friars of St. Francis, priests, and lay pilgrims assembled to do reverence to the memory of the nine poor Friars who, 700 years ago, sought Canterbury's hospitality, and, in the name of St. Francis, the Saint, who is one of the most popular and loved in our generation.

There was much significance in this gathering, which was brought about as the result of no mere fashionable cult. In a very peculiar and insistent way, the spirit of St. Francis appeals to the men of this age, who, though tired of materialism and luxury, are yet unable to find any spiritual avenue of escape. It is claimed—and it is difficult to resist the claim—that only by a return to the spirit of St. Francis, who preached the doctrine of poverty in that glorious flowering time of the Middle Ages, the Thirteenth Century (possibly the best century yet experienced by the world), can the industrial system which impels and yet enchains the modern world be substituted for something better.

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 312 of this issue.

All this point of view and much besides was explained last week at Canterbury, and the impression created by the pilgrims appears, by all accounts, both public and private, to have been remarkable.

The Cricket Season.

The most disappointing cricket season that one remembers for a long time is now at an end. Not only has the weather been execrable, but disappointment has been felt at the lack of success which attended the South Africans, and at the non-discovery of any new men of note in England. Further, there is scarcely a single amateur, with the exception of A. E. R. Gilligan, who has increased his reputation.

However, it is better to forget these things and to hope for victory in Australia. At the moment interest is being centred on the proposal which Lancashire are bringing forward for an alteration in the system of scoring points next season for the county championship. They propose, and Yorkshire are supporting them, that first innings points shall be abolished, and that only matches played to a finish shall count. This scheme, in view of the fact that the championship is a national competition, and that county teams depend on public support for their existence, has the obvious drawback that the public would not attend if no issue were possible. One proposal that I found popular recently in the North of England is that the team winning on the first innings should have the option of taking three points, as now, or of ignoring the match altogether. But there is no perfect system of scoring in the county championship.

The Discipline of Cricket.

Cricketers, who hold out to others that their sport is, above all other sports, the prince of games, are passing this year through difficult times now, when prominent players appear to be falling over one another to vent their supposed grievances on the Press and the public. There have been far too many unsporting incidents this season not to cause serious disturbance among lovers of the game. Everyone will remember the heinous Parkin affair; but the bowler was a professional, and we, I am afraid, let it go at that. But then came an amateur, Mr. M. D. Lyon, who has played for Cambridge University and for Somerset, with a red-hot public grievance. He sent in his resignation to the M.C.C., published his correspondence, and in general tried to hustle the issue. He should, he thinks, have been chosen to go to Australia.

It is all distressing. There is no question that the ways of the authorities, in all games, are often difficult to follow; no one suggests that the M.C.C. is infallible. But to attempt in this way so to undermine and bring into contempt *the* authority of cricket is sheer Bolshevism, and is quite insupportable. Individualism and personal ambition are fine things, but of the last importance in cricket.

The Revival of the Music Hall.

One always knew that those omniscient young dramatic critics who asserted that the revue had permanently usurped the place of the musical comedy and of the variety turn were wrong, but one has had to wait a long time. Now, however, the tide has definitely turned. Those fine old theatres, the Oxford, the Empire, and the Alhambra, which have been defamed with films, revues, and plays, have all gone back to their first love—variety, so that the world is really getting right again. For so many post-War years the so-respectable Coliseum, the Holborn, and the Victoria Palace have been the only variety theatres in

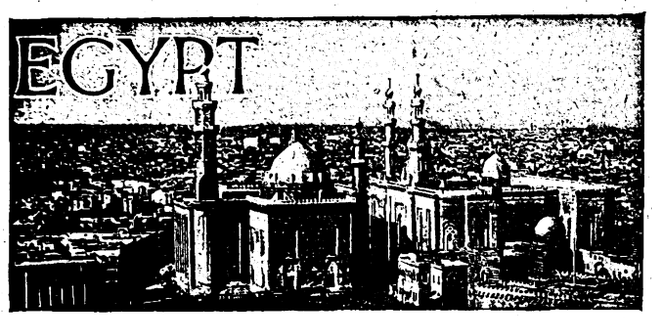
The Near and Middle East.*

From Our Own Correspondents.



Cairo, September 6.

The Anglo-Egyptian Negotiations.

This has been an eventful week, in a way one of the most eventful that we have had since Parliament rose two months ago. First we had the news that Saad Pasha Zaghloul had cabled to the Cabinet that he intended renouncing negotiations and returning to Egypt on September 17. No reason was given, and we were left completely in the dark until the agencies two days later brought us the summary of the London Press, from which it appeared that there had been a misunderstanding between Zaghloul Pasha and the Foreign Office with regard to the invitation to London.

Three days later we were startled by the interview which it was alleged Mr. Ramsay MacDonald gave the Paris correspondent of one of the London papers, in the course of which he accused members of the Egyptian Government of having been concerned in the troubles in the Sudan, and declared not only that we had made up our minds not to budge over that country, but that there could be absolutely no question of our removing the troops from Egypt or the Suez Canal, and that we had made preparations for all eventualities. It was in every respect a most astounding statement, particularly as up to then there had been no question of the "reserved points" other than the Sudan, and Mr. MacDonald seemed perfectly gratuitously to shut the door to the negotiations which he had so evidently had so much at heart.

Old stagers amongst us waited for confirmation of what we felt sure must be a mistake or a misrepresentation, and we have been well repaid for our caution. Not so the local Press, which, as usual, taking for gospel truth everything that comes from London over the wires, and never stopping to make allowance for telegraphic mutilation or to question the authenticity of the views thus reproduced, rushed wildly into the fray with a furious onslaught on Mr. MacDonald, whom they held solely and entirely responsible for the failure of the attempt to engage negotiations, and who, they said, was worse than Lord Curzon—he has always had a bad Press in Egypt—Lord Milner, or Mr. Lloyd George, since he had deliberately spoilt the chances of a settlement by playing the game of the capitalists.

The interview came as a terrible shock to everyone out here. To those who had been working hard to bring about negotiations it was most disheartening, and to the Egyptian element particularly it was a great blow, since it came from the quarter whence it had been least expected. The relief, when Reuter informed us that Mr. MacDonald had emphatically repudiated the interview, was enormous, and everywhere there were smiles where but a few minutes before there had been stern expressions, showing plainly the extent to which the terms of the interview had depressed and disappointed everyone. What we all now want to know is did Mr. MacDonald ever give an interview at all, and how came it that such a glaringly false version of what he had said was published? I suppose we shall hear in due course the explanation of this extraordinary journalistic blunder.

For the time being, however, that incident is closed, and all attention is directed towards Zaghloul Pasha and the possibility that, as so many think, a way will be found for the much-talked-of meeting between him and Mr. MacDonald. If the sole reason for Zaghloul Pasha's renunciation of negotiations is the absence, according to him, of any definite invitation fixing time and place for the interview with Mr. MacDonald, it should not be difficult to overcome the obstacle, and for a meeting to take place. In fact we may be certain that the misunderstanding in that respect will be removed. If, however, the meeting does not take place and Zaghloul Pasha embarks for Egypt, then we may take it for granted that, as has been rumoured, there are other obstacles, and that the Egyptian Prime Minister has decided that circumstances have become unfavourable even for a personal conversation with Mr. MacDonald. At the present moment an atmosphere of uncertainty as regards the future reigns everywhere, and Egyptian circles are by no means as optimistic as they were a week ago.

The Sudan Riots.

The Egyptian Cabinet having refused to give publicity to the reports of the boards of inquiry appointed by the Sirdar and Governor-General of the Sudan in connection with the recent incidents in that country—on the ground that it could not take cognisance of any such board that had been appointed without its approval, the Residency this

week issued a *communiqué* giving the result of the inquiry into the Atbara mutiny. From the *précis* of evidence it is perfectly clear that the mutineers were fired on by Arab troops, who did so spontaneously and without orders, and that British officers had nothing to do with that action, that in fact they had given definite orders that no firing should take place without orders; and the Acting Sirdar, in submitting this report, adds his opinion that the circumstances would have justified an order to fire, and that the Railway battalion, by its disregard for orders and its violent attack on the cordon, was alone to blame for the casualties that occurred.

Jerusalem, August 30.

The Wahhabi Raid.

More detailed and trustworthy information about the Wahhabi raid of August 14 considerably reduces its gravity and the likelihood of immediate repetitions. It would seem that Transjordanian tribes played a very modest part indeed in repelling the attackers, and that it was thanks only to the assistance of the British aeroplanes and armoured cars that the Wahhabis were so effectually and promptly driven off. So that episode may now be considered closed.

Unconfirmed reports are still floating about in the local Arab Press to the effect that this raid is but one of a large number of similar attacks planned by Ibn Saud on his neighbours, but nothing has happened to substantiate these rumours.

Brigandage on the Syrian Frontier.

The statements that the acts of brigandage near Deraa were inspired by certain high officials of the Transjordanian Government turn out to be partially true. These officials were promptly banished from the country as soon as the facts were proved, and no recurrences of brigandage have since been reported. In a speech to his notables a week ago the Emir Abdullah referred to the unpatriotism of those officials who aimed at embroiling him with the two great Powers entrusted with the Arabs' welfare. (Rumours, very widely current, alleging that Ali Rida Pasha er-Rikabi, the Chief Minister of the Emir, connived at the frontier disorders with ulterior motives prove to be baseless; they were probably circulated by the since dismissed officials.) The British forces—the cavalry at Amman and the gendarmerie at Irbid—are, according to the Emir's statements, to be withdrawn to the other side of Jordan as soon as public security is assured.

The Aftermath of Non-Co-operation.

A new Customs Ordinance, gazetted on August 15, raising slightly most of the import dues, is provoking mild resentment. It coincides with a considerable number of dismissals among the junior officials in the Customs Department. The anti-Arab Executive newspapers (i.e., every paper in Palestine except two) are taking this opportunity of girding at the harmful futility of the past policy of the Moslem-Christian Associations in boycotting the elections to the Legislative Council eighteen months ago. The result, they allege, has been to set up a Council comprised solely of British paid officials, with the further result that native officials in the Government are either dismissed or their salaries reduced, while the British high officials, with doors closed against the appeals of the native population and their acts protected from effective criticisms, coolly vote heavy taxation on an already overtaxed people, the better to secure their own bloated salaries. And this is how the *Mirât esh-Sharq* winds up a tirade on the subject: "Was this the end aimed at by the policy of those who call themselves the people's representatives—to leave the Government to do just what it pleased, with none to say it nay? . . . Is anyone pleased with the present condition of things? The Government pours forth laws and ordinances, while the nation remains placid and careless and says nothing. Are the nation's leaders pleased with things as they are? Does the people believe that this Legislative Council, composed of British officials, the heirs in Palestine of Abdul Hamid, has any feeling for the people's sorrow and sickness? And are not these but the beginning of sorrows?" The writer finally apostrophises the Legislative Council: "Go on piling up heavy taxes, for the nation will not stir out of its lethargy till it starves, and starvation will be the beginning of changes and a reversal of the present order; go on publishing your statutes and levying your taxes on the nation's head—till Allah turns and has compassion on us!"

This type of argument need not be taken very seriously; the new Ordinance is only being used as another stick with which to beat the largely discredited Arab Executive policy. The increased Customs dues are, on the whole, perfectly reasonable, and their incidence falls on those best able to bear them. The additional import dues on building materials are most open to criticism, but their possible harm is counterbalanced by the protection they afford to young local industries engaged in the manufacture of building material.

There has been a great outcry against the heavy tax recently imposed on local tobacco, on the grounds that it must cripple a new, very large, and very promising local agricultural development. But the taxation, the Government has been at pains to point out, is so levied as to touch only the consumer, and not the grower, and it will not be high enough to handicap Palestinian tobacco in the competition with imported tobaccos.

PERSIA.

Teheran, August 27.

Resignation of the Cabinet.

Last Saturday all the members of the Cabinet tendered their resignation to the Prime Minister, Sardar Sepah, who accepted them and is now forming a new Ministry. It is not yet known who the new Ministers will be, and, although it was expected that the Cabinet would be presented to the Mejliss yesterday, this did not take place, and the crowds waiting outside the Parliament House were disappointed. It appears that the Premier was confined to his house suffering from tonsilitis. Rumour had it that the new Government would be almost entirely composed of military, with the exception of the ex-Minister for Foreign Affairs, Zoka ul Mulk, who will probably retain his portfolio (and there is little doubt that Sardar Sepah would like such a Cabinet); but this appears hardly likely, and the majority of Ministers, from what one can gather, will be mostly civilian. The resignation of the Cabinet was quite unexpected, following as it did almost immediately on the vote of confidence passed on the Government by the Mejliss at the interpellation last Tuesday, though it is supposed that in return for the Parliament's support the Prime Minister undertook to reconstitute the Cabinet. The interpellation itself, at the instance of the Minority Party, fell rather flat. In the morning two of the members of this party were roughly handled by the crowd in the Parliament Square, and the rest of the party, apparently fearing similar treatment, failed to put in an appearance, and when the motion was put to the House the result was a unanimous vote of confidence in the Government, the Opposition being non-existent.

The Murdered American Consul.

Last Sunday week, in the morning, the coffin containing Major Imbrie's body, which had been deposited in the American Church overnight, was taken from there on a motor-hearse to the Drill Square, where, amid a large parade of troops of all classes, the final military honours were rendered to the murdered Consul in the presence of the Cabinet Ministers and all the foreign diplomatic representatives in uniform, and after a salute of eleven guns had been fired the coffin, draped in the Stars and Stripes, was driven through the streets, lined with troops and police, to the Bagh-i-Shah Gate, whence the cortège, consisting of several cars, left for Bushire viâ Baghdad. Major Miles, American Military Attaché at Constantinople, who had been dispatched specially from the latter place, and who happens to have been a great friend of the late Major Imbrie and his widow, accompanies the latter to America, and half a dozen Persian officers were attached as a guard of honour as far as Bushire. The cortège was accorded military honours at all the Persian towns *en route*, and the coffin was met at the railway station at Baghdad by the High Commissioner and the Vice Air-Marshal, and a wreath was placed on it by the American Consul. The remains were embarked on August 25 at Bushire, on board the American cruiser *Trenton*, sent from Naples (probably the first occasion on which an American warship has been seen in Persian waters), with full military honours, the bazaars and European business institutions being closed as a sign of respect. The British gunboat in the Persian Gulf landed twenty bluejackets as a guard of honour. At first their landing was objected to by the local Governor, but representations by the British Chargé d'Affaires here to the Prime Minister produced a telegram which soon removed this obstacle. There was also apparently some reluctance on the part of the Persian officials to salute the American flag, but the salute was ultimately accorded. There now remains only the fixing of the amount to be paid to Mrs. Imbrie as compensation, and the punishment of those responsible for the outrage. The other American, Seymour, who was with Major Imbrie when he was attacked (and who, I hear, will also receive compensation) has recovered sufficiently from his wounds to be removed from hospital, and the authorities are waiting to hear his version of the event before proceeding with the punishment of the persons arrested. I understand, however, that three men have been condemned to death, and an inquiry in the case of many others is proceeding. The American Legation are relentlessly pursuing the matter, as they insist that the utmost penalty shall be paid by all those who had any direct connection with the murder.

The American Advisers.

As I have hinted in previous letters, things are not running very smoothly between Dr. Millspaugh and his staff of advisers and the Persian Government, and relations have recently become very strained. The papers (including the semi-official *Iran*) continue their attacks and criticism, and there has been much talk in the town of the Americans' resignation, which is, however, officially denied. It would indeed be disastrous should the advisers decide to leave the country now, just when the fruits of their labours of the past two years are beginning to be apparent, and it is, therefore, earnestly to be hoped that the present differ-

An Egyptian Night

NIGHT has fallen on Cairo. The streets of the Mousky are crowded—look closely, for the scene carries with it the glamour of the Arabian nights. Above the tric-trac of the dominoes in the cafes will be heard the sound of cymbals where the houris lead the dance—weird Salome dances which hold the senses spellbound. Across the desert, where the Sphinx and the Pyramids keep their eternal watch, silence and the miracle of stars enthral with mystery and imagination.

Come when, in the early Autumn, the after-glow of Summer is yet upon the land and the splendour of Egypt's climate is at its zenith.

Particulars of fares, tariffs, etc., of all Travel Bureaux and Tourist Agencies. Write for "Egypt" special tourist number, free on application to Egypt Promotion Association, 9, Quality Court, Chancery Lane, London, W.C.2, or Post Box 990, Cairo.

EGYPT—THE ETERNAL WONDERLAND

Digitized by Google

ences may be quickly settled and a *modus vivendi* arrived at.

The Weather.

The summer has, for a short spell, been unusually hot this year, the temperature having reached over 104 degrees in the shade a few days ago. A violent thunderstorm, accompanied by a heavy downpour of rain for an hour or two, last Sunday night (rather exceptional at this time of the year) seems, however, to have effectually dispelled the heat, and the weather has now become decidedly cooler. Places on the Gulf have, I hear, been experiencing exceptional heat, as much as nearly 130 degrees being registered at Basra.

The total eclipse of the moon last week was clearly visible here, and lasted about three hours. As the moon was at its full and the sky almost cloudless the sight was a most arresting one, and the fact that the moon appeared red caused no small forebodings among the superstitious natives, who foretell much bloodshed in consequence!

YUGOSLAVIA.

Zagreb, September 12.

The Internal Situation.

The Radical party is now beginning to reap the consequences of the mistake committed by it on the occasion of the last meeting of the party's chief Committee, when M. Yovanovitch's proposition was rejected in favour of M. Pashitch's point of view.

M. Davidovitch's Government is holding its own strongly against all attacks, and any eventual success of the Opposition depends no longer upon the latter, but rather upon its arch-opponent, Stjepan Raditch. Should M. Raditch decide upon a fresh *salto mortale*, and again begin to cry out when he isn't hurt, the Opposition will be strengthened and Ljuba Davidovitch's Government endangered. But if Raditch plays his cards well, and, politically speaking, behaves sensibly, contenting himself with what is practical and possible, then the position of the present Government (the former Opposition *bloc*) will be assured, and the Radical Party ousted from its place of predominance.

The fourteenth of this month will decide the issue. That is the day upon which the representative leaders of the Raditch Party are bidden to Zagreb to define their attitude towards current political events. Incidentally, the party leaders will also have to decide in regard to the eventual participation of the Raditch Party in the Government. Originally the Raditch deputies would have nothing to say to any coming into the Government on their part; but now even they are gradually beginning to realise that, in order to be successful, a given policy must be pursued, not without, but within, the ranks of the Government, and that there is not much sense or satisfaction in merely giving their support to the present Government, while declining to exercise direct influence in the affairs of government.

For this reason the Raditch deputies demanded from the Government that a special Minister for Croatia be appointed, with such powers as used to be vested in the so-called *Landmannminister* in the old Austro-Hungarian Empire. This Minister was not to be selected from among the deputies in the Skupshtina, but a non-responsible political man from Zagreb was to be appointed to the post. In this way M. Raditch would seek to secure his line of retreat with his electors. He could always argue that, after all, his party was not in the Government, and that therefore he could not be responsible for the latter's mistakes.

But the Raditch Party would find a Minister for Croatia very useful in other ways besides. How easy it would be to say to the peasant electors: See, the Croatian Republic is on the way towards being realised. Already we have got a Minister of our own who must dance to our tune. Before long we will have several, and the independence of Croatia will become a fact!

In view of this, it is perfectly intelligible that the Government cannot be in favour of the appointment of a special Minister for Croatia, and that it should demand of M. Raditch that he no longer hesitate half-way, but come definitely into the Government. Unquestionably, the Government point of view is correct, because it is inadmissible that persons who are not responsible be appointed Ministers.

M. Raditch and the Government.

We cannot in fairness assume that M. Raditch will not have sufficient insight to realise that the Government is justified in its demand. But there is another snag in the way. The Opposition papers, and especially those of Zagreb—which M. Raditch cannot fail to get a sight of—are explaining at length and in detail that the Government has no other end in view save to compromise M. Raditch. The plan was devised, so they say, by Nastas Petrovitch, Minister for Internal Affairs. Raditch is to come into the Government so that his followers may be compelled to take the Oath on the Constitution and become members of a *Royal* Government. Then Raditch would be classed with "the enemy," and the moment would have come to discredit him with his electors. The procedure is, in fact, to be similar to that followed by the Magyar Ban of Croatia, Tomasitch, many years ago, when he at first won over the two brothers Raditch to his proposition, and then summarily let them fall when they had served his turn, proved themselves supporters of the Hungarian Government, and so compromised themselves. And so it is quite possible that M. Raditch will regard the Government proposal with distrust, and decline to take the decisive step.

It is certain that among the Raditch Deputies there are a good many who would gladly become Ministers of the Crown. On the other hand, it is equally certain that M. Raditch's authority with the mass of his electors is so strong that any opposition to him would entail the loss of his mandate for the Deputy who tried to thwart him.

The Croatian Intelligentsia.

Hence the key of the situation lies for the moment with Stjepan Raditch in Zagreb. Whatever his decision, it will not be an easy one to take, because he himself is in something of a blind alley. It is a fact that the present Government has so far observed a very loyal attitude towards all M. Raditch's demands, and that a new orientation is noticeable in Zagreb. The Croatian intellectuals are satisfied with the Davidovitch Government, and would risk anything sooner than a return of the former Government, with which they would be hopelessly out of favour. Therefore, it is certain that if M. Raditch were to bring about the fall of the present Government without adequate cause, he would from that moment have the Croatian intellectuals against him to a man. True, at this moment they have no mandates; but that is a matter of their own seeking. It was to their interest that Raditch should do the hard work and organise the whole of the Croatian populace against the predominant position of Belgrade. But as soon as Zagreb comes into power:

Digitized by Google

as soon as the Croatian peasant shall have done his job for the Croatian intellectuals, his help will be no longer required, and he may go his way. And then Raditch may suddenly find the Croatian *intelligentsia* transformed from a negligible ally into a formidable opponent, and the struggle with Belgrade and the revolt in his own camp could scarcely fail to break him between them.

It will, therefore, not be easy for Stjepan Raditch to come to the right decision, and, despite the peasant leader's usual preference for extremes, he will find a compromise desirable.

One is tempted to believe that the Opposition is counting so surely upon Raditch's blundering, because without that the situation is hopelessly lost for it. If Raditch comes into the Government, the latter may find itself unable to carry on until the next regular General Election in 1927. And as the consolidation of the State is everywhere progressing apace, the Government parties would be able to point with pride to their achievements, and a General Election would hold no terrors for them. Their return to power would not be at all improbable, because in Parliament the Government majority would be strong and assured.

But, apart from all this, the new Government is doing all it can to make itself popular. The law against corruption will do very much to enhance its prestige, and greatly weaken its opponents. Popular feeling is enthusiastically in favour of the fight against corruption, and in taking this into consideration the Government is showing that it rightly comprehends its task.

It would be rash to prophesy regarding forthcoming events. One thing seems certain, however. A return of the former Government is out of the question for good, and Yugoslavia is moving towards a new phase which can bring her nothing but good.

Central London. But now we are getting back to standard. There is something very English about the variety turn—a something which no cosmopolitan revue could supply.

One drawback to the newly improved state exists, however. Most of these music halls are under the same management. This means that artists are booked up by the syndicate for many months ahead, and that they may, therefore, become stereotyped and lacking in inventiveness. The very *raison d'être* of the variety turn is its bubbling and spontaneous individuality, a thing which, of course, is the special foe of syndicates the world over.

Yachting.

Few things since the War have been more gratifying than the enthusiasm shown for yachting, the season of which has just closed. I do not refer merely to the big yachts, such as the Britannia, which mostly occupy the attention of the public, for the record of sport in little six-metre boats and yet smaller one-designers has been splendid. The older yachtsmen, who for the most part sold their craft at the outbreak of War, have returned in great numbers, and new recruits to one of the first sports existing have been large. For a year or two after 1919 one feared that all our young men had either gone a-motoring or had become immersed in the Great Golf Stream, but the record for the past season shows that many of the saner-minded young men have become lovers of sailing, of cruising, naturally, rather than of racing.

NEAR EAST BOOKSHELF.

THE KHALIFATE.

Since 1914 we have seen the Khalif calling Islam to arms against the enemies of Imperial Germany, who were nevertheless able to array most of the Muslims of the world against him; we have seen some members of a once-loyal community excited almost to rebellion by the suggestion that the Ottoman Sultan should pay the natural penalty of folly and defeat; and, finally, we have seen the man banished from his native land and his office almost contemptuously abolished by a local assembly representing, or misrepresenting, an infinitesimal minority of those whom he claimed as his followers.

To those who are curious to learn something of the office of a dignitary who could thus pose as a world potentate and within a few years be quietly dismissed like a disobedient lackey, whose place was not worth filling, we recommend a study of Sir Thomas Arnold's book on the subject*, for it may be doubted whether there is, in any language, a fairer, more lucid, more concise, or more scholarly account of the evolution of the political theory of the Khalifate, and of the history of the office. The author has no theory of his own to propound, and his work contains no important statement of doctrine, principle, or historical fact for which chapter and verse are not cited. We have not only a full and unbiased record of what theologians of various schools have held that the Khalifate should be, and of what it was, but a critical account of the scanty substructure of tribal precedents and doubtful traditions on which they based their theories. So many are the views of the office and the vicissitudes through which it has passed that it is far easier to say what it is not than to define what it is. The highest view, strangely enough, has been taken by Christians, who, ignorant of the principles of Islam, have sought an analogy in their own system, and have seen in the Khalif a kind of Pope, with spiritual jurisdiction over Muslims throughout the world. "How entirely misleading and incorrect such a comparison is may easily be judged by consideration of the fundamental differences between the two faiths, Christianity and Islam," for, as the author shows, no trace of any such powers as are claimed and exercised by the Pope is to be found in the Muslim history of the Khalifate; the Khalif has never been held to be the depository of divine faith, and there is no priesthood in Islam.

To this view, erroneous as it is, may be traced the acknowledgment by Christian powers, either expressly or by implication, of some degree of extra-territorial authority in the Ottoman Sultan over their Muslim subjects, and it is not improbable that it has fostered the popular ideal of the

office as a world-sovereignty in which the Khalif of Islam, as vicegerent of God, should rule all peoples, propagate the faith, and wage holy war against unbelievers, until there should be no government in the world but that of Allah—an ideal which, though there remains no possibility of its attainment, is yet cherished by visionaries and by such as are blinded by zeal or ignorance, and may still, as we have seen, be exploited to serve political ends.

The historic Khalifate began, as some, not without good grounds, hold that it ended, with the four "rightly guided" Khalifs, and fell in turn into the hands of the Umayyads and the Abbasids, with the latter of whom it died a lingering death. To pretend that it survived the establishment of two rival Khalifs, an Umayyad in Spain and a Fatimid in Egypt, and was even resuscitated in the Abbasid dependants of the Mamluks, is but to admit that the word had lost its signification, as, in fact, it had. Sir Thomas Arnold traces this change. The etymological meaning of the word is "successor," as in the original title, "Successor of the Apostle," but when "God" was substituted for "the Apostle," "successor" could no longer stand, and the idea which the word then connoted was that of vicegerency. When, again, the title was not only assumed by Turkmans in Fars, Uzbegs in Transoxiana, Timurids in Khurasan and India, Saljugs in Asia Minor, Khaljis in India, Hafsids and Marinids in Africa, and petty kings in Spain, but was accorded to many of them by contemporary Muslim princes, including, in at least two instances, the Ottoman Sultan, it was clear that it meant little more than "king" or "ruler," and it was in this sense that it was borne by the Ottoman Sultans, for Sir Thomas Arnold has demolished the generally accepted fiction of the resignation of the office by the last of the phantom Khalifs of Egypt in favour of Salim the Grim. It has ever been the view of orthodox theologians that membership of the Koreish was an indispensable qualification for the office, and it was with a view to remedying the defect in the Sultan's title that the story of the resignation was fabricated, but Sir Thomas has proved, not only that there is no evidence of the resignation, but that the title was used by Salim and his ancestors for 130 years before his conquest of Egypt.
